INDIAN AFFAIRS.—The Indians are well armed with guns and supplied with ammunition. About six thousand warriors, composed of Sioux, Cheyennes and Arrapahoes, are now concentrated north of Fort Phil. Kearney, and demand as a condition of peace that the soldiers be withdrawn from the country, posts abandoned and roads to Virginia City given up, as the country belongs to Crow Indians, with whom we are at peace. This demand, if complied with, it is thought may suspend, but will not settle the difficulty. Probably the next demand will be to suspend work upon the Pacific Railroad, which is being built through the same country without the consent of the Indians.

MEXICO.—Late reports from Mexico say the massacre of the Imperialists at Queretaro is denied. Gen. Ortega is in close confinement at Monterey. The army is soon to be reduced to 18,000 men. The French and British Ministers with their suites have left Mexico. Santa Anna still remains a prisoner.

NEWS PARAGRAPHS.

THE recent State Election in Vermont shows a large Republican majority,—some twenty thousand. The vote of both parties is reported as quite light.

FRED A. HOWE, Meadville, Pa., decoyed to Rochester by a telegram, where he was arrested, has obtained a verdict against the Western Union Company of $200 damages.

THE five-mile regatta at Springfield, Mass., recently, six-oared boats—J. F. Topley and Wm. H. Baker—was won by the former in 33 minutes and 27½ seconds.

OVER eight hundred applications for admission for scholarship in the Illinois Industrial College, have been already received. The institution is in a flourishing condition.

THE French Government is going to do a Life Insurance business. A Commission, instituted by the *Legislatif*, is to pay a certain sum, not to exceed $3,600, to the heirs of each assured person.

GERRIT SMITH lately addressed a large concourse of citizens at Portland, Me., in favor of the Portland, Ogdensburgh and Oswego Railroad, and advocating the construction of the Niagara Falls Ship Canal.

A SHOCKING accident occurred in a steam saw mill at Douglas, Mich., on the 17th ult. Mr. Kermeen, one of the employees, was thrown upon a circular saw, while working a lever, and immediately severed in two. He was an industrious man and much respected.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, September 10, 1867.

GOLD continues firm and rather advanced last week. The average price of gold so far, this year, is only 2½ ₱ cent. below the average price for the same period in 1866. The situation of affairs at Washington probably has some effect to keep the price up, but stocks have scarcely been affected at all by rumors from the Capitol. The shipments of gold are heavy. The price in New York, yesterday was 143½.

The Eastern money market is still easy. Money lenders, however, are not as willing to discount paper of long date as they were some time since. Paper having more than three months to run is not in favor, and notes of 30 and 60 days are much preferred. The currency movement to the West is large.

Judge Barnard, of the Supreme Court, has given an opinion in the case of Waterbury *vs.* The Merchant's Union Express Company. He denied the motion for a Receiver. He finds the Company perfectly solvent, owing no debts, and several hundred thousand dollars in the Treasury. He speaks in terms of commendation of the Executive Committee, and states that there is no denial in the plaintiff's papers that the old Companies were not the real parties to the suit as charged by the defendants. The war between the Express Companies cannot be profitable to any party.

WOOL.—There is no material change in the price of wool since last week. The sales in Boston for the week amount to 1,000,000 lbs. at 30@60c for fleece. Woolen goods now sell quite freely, but there is no essential advance in prices. Though wool is 20 ₱ cent. cheaper than last year at this time, goods are correspondingly low, and wool cannot be expected to sell much higher until goods shall advance.

WHEAT.—There is an active demand for wheat both in this market and at the East. Prices have advanced since last week; red wheat sold in this city, yesterday, at $2,10 @2,15. The amount coming in is small, farmers being disposed to hold on in anticipation of higher prices.

A FARM OF 125 ACRES, ON THE EAST bank of Seneca Lake, five miles from Geneva, is for sale. Apply A. V. B. DEY, Geneva, N. Y.

THE COLLINS AND SHATTUCK Combined Clover Thrasher, Huller & Cleaner, MANUFACTURED BY GLEN & HALL, ROCHESTER, N. Y.
We beg to call the attention of Farmers to the superior characteristics of the Collins and Shattuck Clover Machine made by us, which we are now prepared to supply.
Our Machines have two bolts with counter reciprocating motion, which have proved *indispensable* in keeping the Machine still, preserving it from racking and preventing it from clogging. We will WARRANT them with proper management to Thrash, Hull and Clean Clover or Grass Seed at one operation, more rapidly and in a much better manner than any other Machine made. When thrashing grass seed they can in a moment be so arranged that the seed and chaff will pass directly from the bolts to the fanning mill without going through the huller—*an advantage possessed by no other machine.* The ratchet from off the upper bolt in our machine insures a thorough separation of the heads and seed from the straw before the latter is allowed to pass into the stack. Our machines are constructed of the best material, in the most thorough manner, handsomely painted and ornamented, and have in all cases given entire satisfaction. Persons purchasing these machines to do custom thrashing will find them even much more remunerative than Grain Thrashing Machines.
We are also prepared to supply Horse-Powers, Truck Waggons, &c., to be used with our machines, or they will be adapted to run with any other Horse Powers.
Descriptive Catalogues, containing full information, with testimonials from persons using our Clover Machines, sent free to all applicants. Address GLEN & HALL, Rochester, N. Y., or Detroit, Mich. J. D. EASTON, Gen'l Western Agent, Chicago, Ill. 921-10t

THE GREAT NEW ENGLAND REMEDY! Dr. J. W. POLAND'S
WHITE PINE COMPOUND
is now offered to the afflicted throughout the country, after having been proved by the test of twelve years in the New England States, where its merits have become as well known as the tree from which, in part, it derives its virtues.
The White Pine Compound
CURES
Sore Throat, Colds, Coughs, Diptheria, Bronchitis, Spitting of Blood, and Pulmonary Affections generally. It is a remarkable Remedy for Kidney Complaints, Diabetes, Difficulty of Voiding Urine, Bleeding from the Kidneys and Bladder, Gravel, and other Complaints.
For PILES and SCURVY it will be found very valuable.
This medicine is *free from anything deleterious,* pleasant to the taste, safe, yet sure and effective in its action.

(From the Boston Journal, Jan. 20, 1866.)
POLAND'S WHITE PINE COMPOUND.—After having given it a thorough trial, we can confidently recommend *Poland's White Pine Compound* as a very valuable article for the cure of colds, coughs, and pulmonic complaints generally. In several cases we have known it to give prompt relief when all other remedies which had been tried had failed. It is an article which, in a climate so promotive of sudden and severe colds, as is that of New England, ought to be in every family; and we are sure that those who once obtain it and give it a fair trial will not thereafter be willing to be without it.
A VALUABLE MEDICINE.—*Dr. Poland's White Pine Compound,* advertised in our columns, is a successful attempt to combine and apply the medicinal virtues of the White Pine bark. It has been thoroughly tested by people in this city and vicinity, and the proprietor has testimonials to its value from persons well known to our citizens. We recommend its trial in all those cases of disease to which it is adapted. It is for sale by all our druggists.—*Independent.*
The WHITE PINE COMPOUND is now sold in every part of the United States and British Provinces.
PREPARED AT THE
New England Botanic Depot, - - Boston, Mass.

THE GREAT AMERICAN TEA COMPANY
HAVE JUST RECEIVED
TWO FULL CARGOES
OF THE
FINEST NEW CROP TEAS.
22,000 HALF CHESTS by ship GOLDEN STATE
12,000 HALF CHESTS by ship GEORGE SHOTTON
In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivalled for fineness and delicacy of flavor, which they are selling at the following prices:
OOLONG (Black,) 50c., 60., 70c., 80c., 90c., best $1 ₱ lb.
MIXED (Green and Black,) 50c., 60c., 70c., 80c., 90c., best $1 ₱ lb.
ENGLISH BREAKFAST 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,20 ₱ lb.
IMPERIAL (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
YOUNG HYSON (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
UNCOLORED JAPAN, 90c., $1, $1,10, best $1,25 ₱ lb.
GUNPOWDER $1,25, best $1,50 ₱ lb.

Coffees Roasted and Ground Daily.
Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound Hotels, Saloons, Boarding House Keepers and Families who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the
THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5613 New York City.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

Through our system of supplying CLUBS throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by post-office money orders, or by Express, as may suit the convenience of the Club. Or, if the amount ordered exceed $30, we will, if desired, send the goods by Express to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third **beside the Express charges,** by sending directly to "The Great American Tea Company."

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to
GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street.
Post-Office Box, 5613 New York city.

WHISKERS.—Dr. Lamonies Corrollin will force Whiskers on the smoothest face, or Hair on Bald Heads. Never known to fail. Sample sent for 10 cts. Address REEVES & CO., 78 Nassau St., New York.

PLASTIC SLATE ROOFING
JOINT STOCK COMPANY,
OFFICE 157 [Room 19] *BROADWAY,*
NEW YORK.
W. C. POTTER, *Vice-Pres't.*
J. M. ALLEN, *Sec. & Treas.* **Licenses Granted.**

PLASTIC SLATE FOR
ROOFING & OTHER PURPOSES.
The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of
Pulverized Slate and Viscous Matter,
(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.
AS A ROOFING MATERIAL IT STANDS UNRIVALLED.
A mastic—it adapts itself to every shape and slope Non-combustable, impervious, non-expansive, and undecaying.
FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.
The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and
PERFECTLY FIRE-PROOF.
It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

WANTED.—A General Farmer who thoroughly understands the purchasing and selling of stock with a capital of from $3,000 to $5,000, to take the management of a stock farm of 1,400 acres, joining Enon, Clarke Co., Ohio, for which an interest in the stock will be given. Good houses and barns. Any one wishing such situation can apply in person, from Sept. 1st to Nov. 1st, 1867, to A. H. SMITH,
919-1t Enon, Clarke Co., Ohio.

THE Central Pacific Railroad,
THE WESTERN HALF OF THE
Great National Trunk Line Across the Continent,
Being constructed with the AID AND SUPERVISION OF THE UNITED STATES GOVERNMENT, is destined to be one of the MOST IMPORTANT AND VALUABLE RAILROADS IN THE WORLD, as it is the sole link of communication between the Pacific Coast and the Great Interior Basin, and the
Principal Portion of the Main Stem Line between the Two Oceans.
The present western terminus is at Sacramento, on the navigable waters of the Pacific; but it will ultimately extend from San Francisco across the richest and most populous parts of California, Nevada, and Utah, contiguous to all the great Mining Regions of the Far West. The Company are authorized to continue their line eastward until it shall meet and connect with the roads now building east of the Rocky Mountain ranges.
Assuming that they will build and control half the entire distance between San Francisco and the Missouri River, as now seems probable, the United States will have invested in the completion of **855** miles **$28,592,000,** or at the average rate of **$35,000** per mile—not including an absolute grant of **10,000,000 acres** of the Public Lands. By becoming a joint investor in the magnificent enterprise, and by waving its first lien in favor of the First Mortgage Bond holders, THE GENERAL GOVERNMENT, IN EFFECT, INVITES THE CO-OPERATION OF PRIVATE CAPITALISTS, and has carefully guarded their interests against all ordinary contingencies.
The Central Pacific Railroad enjoys all the privileges, grants, and subsidies conferred by the Acts of Congress upon the other parts of the through line, and has, in addition, SEVERAL SPECIAL, EXCLUSIVE ADVANTAGES applicable only to the Western Half.
I. The Company has received from the State and chief cities of California, *assistance in money, credit, and valuable property, worth over* $3,000,000 in gold, in addition to the full benefit of the Government subsidy.
II. *The hardest and costliest part of its construction has been successfully overcome* within the first 150 miles. In a few weeks the track will be completed entirely across the Sierra Novadas, after which progress to Salt Lake will be easy and rapid.
III. The local business alone of this road establishes its complete financial success, independently of the vast through traffic which must pass over it. The gross earnings for the months of June and July, upon the 94 miles then open for business, were *upward of* $297,000 *in gold;* of which *four-fifths* were net earnings.
IV. It can have no competition, but will carry, beside its own lucrative local traffic, the *whole volume of through business* which is shared among its Eastern connections and their branches.
V. The road lies wholly in territory yielding the precious metals, *and its revenues are collected in coin.* Its rates for transportation are very advantageous, being more than three times those of roads lying east of it; and the ratio of operating expenses is less than 25 per cent. of the gross earnings.
VI. In consequence of the aid it receives from the General Government, from the State of California, and from municipal corporations, the annual interest obligations which the Company are called upon to assume are very light. The net earnings upon an average of about 75 miles, in 1866, were nearly three times the amount of annual interest liabilities to be assumed in building it, and were $235,000 more than the annual interest on the entire amount of First Mortgage Bonds which the Company can issue upon the first 150 miles.
The Company offer for sale, through us, their
First Mortgage Thirty Year, Six per Cent. Coupon Bonds,
PRINCIPAL AND INTEREST PAYABLE IN GOLD COIN, in New York city. They are in sums of $1,000 each, with semi-annual gold coupons attached, and are selling for the present at **95** per cent, and accrued interest from July 1st, added, in currency, at which rate they yield nearly
Nine per Cent. upon the Investment.
These Bonds, authorized by Act of Congress, are issued only as the work progresses, and to the same amount only as the Bonds granted by the Government; and represent, in all cases, the first lien upon a completed, equipped, and productive railroad, in which have been invested Government subsidies, stock subscriptions, donations, surplus earnings, etc., and which is worth more than three times the amount of First Mortgage Bonds which can be issued upon it.
The agreement of this Company to pay principal and interest of their Bonds in coin, being made under the Specie Contract Law of California, authorizing and enforcing contracts to pay gold, is legally binding, unlike similar agreements made by companies in States where no such legislative sanction exists.
In these important particulars the Securities of the Central Pacific Company offer an unusual degree of safety, stability and profit combined.
The First Mortgage Bonds of this Company are destined to occupy a prominent place among FIRST-CLASS SECURITIES in the money markets of this country and Europe, and will, without doubt, be eagerly sought for, and anxiously dealt in hereafter, at rates materially in advance of the price at which they are now offered.
Having carefully investigated the resources, progress, and prospects of the road, and the management of the Company's affairs, we cordially recommend these Bonds to Trustees, Executors, Institutions, and others as an eminently sound, reliable and remunerative form of permanent investment.
Conversions of Government Securities
INTO
CENTRAL PACIFIC FIRST MORTGAGE BONDS
now realize for the holders about TWELVE PER CENT. ADVANTAGE, with the same rate of interest.
For sale by Banks and Bankers generally, of whom descriptive Pamphlets and Maps can be obtained, and by
FISK & HATCH,
Bankers & Dealers in Gov't Securities,
AND FINANCIAL AGENTS OF THE C. P. R. R. CO., NO. 5 NASSAU ST., N. Y.
N. B.—All kinds of Government Securities Bought and Sold; Deposits and Accounts of Banks, Bankers, and others received on favorable terms. [919-3toam.

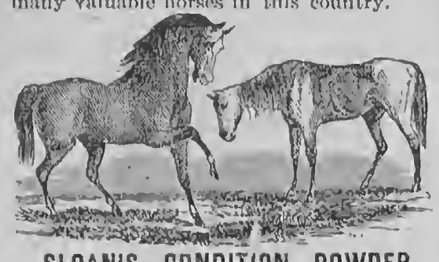
For particulars, inquire of MILFORD HARMON at Medina, OSCAR FOLSOM at Buffalo, or
905-tf F. A. MACOMBER, Rochester, N. Y.

YOUNG LADIES' INSTITUTE, AT MAPLEWOOD, PITTSFIELD, MASS. One of the oldest and most successful schools in the country, widely known for its superior facilities and splendid location. Commences its Fall Session Sept. 19th, 1867.
916-4t C. V. SPEAR, Principal.

THE ALBANY COTTON GIN MANUFACTURING CO.,
ALBANY, N. Y. (POST-OFFICE DRAWER 162.)
Office and Factory on Thacher St., near Broadway, North End of City.
MANUFACTURERS of Agricultural Machines of *the best* and most approved kinds and patterns in use, comprising
"Star" Cotton Gins and Condensers,
"Star" Railway Powers, (Emery Patent,)
"Star" Lever Powers, "Star" Threshers & Cleaners,
Threshers and Separators, Circular and Drag Cross-Cut Saw Mills, Vegetable Cutters, Dog Powers, &c.
OUR "STAR" THRESHER AND CLEANER
as now made by us, unites more valuable features and possesses qualities far more superior than were ever before combined in such a machine. Comparatively small, —compact and easily portable—it will at all times, *thoroughly separate all the grain from the straw,* so that the cylinder may, at all times, be fed to its *fullest capacity* without danger of wasting grain, or clogging of straw in the Separator, for the reason that the *separating power is more than double* that which has ever before been produced in the same amount of space. The Machine will, therefore, *do more work* with a given size of cylinder than any other Machine of much larger dimensions; because, whatever be the length of our cylinder, we can feed *all it will take* and be sure that the straw and grain will all be *properly taken care of* without clogging or waste, while all other Machines, having less powerful separating apparatus, have to be built *much wider* in proportion to the *quantity of straw* to be threshed, in order to give the straw the necessary room for separating, which is often very imperfectly accomplished.
We have made some important improvements in this Machine during the past two years, which enable us to *thoroughly clean the grain* under almost any combination of difficulties. We have also introduced and are now using an entirely new and completely effective device for retleving the feeder of dust. By this arrangement all of the dust from the cylinder is carried through with the straw and discharged at the extreme end of the Separator in a condensed state, so that it cannot cause annoyance to any of the operators about the machine. The Machines are made of suitable sizes for a Two-Horse Railway Power, and also for our Six or Eight-Horse Sweep Power. With regard to
OUR RAILWAY POWER,
we may say that everywhere the "EMERY POWER" has been considered the best Power of its kind in use, but recently we have modified and improved it in some points where changes seemed desirable, and now as
THE "STAR" RAILWAY POWER,
it surpasses its former self and stands without a rival as regards durability, economical use of the strength of the horse (admitting an easy gait of the animal with a very moderate elevation of the platform,) facility of moving about, setting up, &c., &c.
OUR "STAR" LEVER POWER,
though always a favorite machine, and one of the best of its class, has likewise been much improved this season and cannot fail to give the highest satisfaction in its use for all the purposes to which it is adapted. It combines in its construction great strength, with extreme simplicity and consequent upon its simplicity there is but small loss of power by friction, so that a single horse may be used upon it with great advantage for the lighter work of a farm, while for the heaviest work required of it, it is amply adequate.
Our extensive works are under the immediate Superintendence of Mr. WM. B. EMERY, (Survivor of EMERY BROTHERS,) which fact, from his long personal experience in the Manufacture of Agricultural Machines, gives additional guarantees of the superior character of the machines made by this Company, and confident, of our ability to give the highest satisfaction in the use of our machines, we solicit the continued patronage of Farmers, Dealers and others, assuring such that all orders with which we may be favored shall be executed with the utmost promptness and fidelity.
☞ Our complete Illustrated Descriptive Circular and Price List will be sent *free of charge,* on application, and all information cheerfully furnished.
Agents, both Traveling and Local,
are wanted all over the country to sell our manufactures. To active and competent men liberal commissions will be paid. 913

USE PRATT & BUTCHER'S
CELEBRATED MAGIC OIL.
Warranted in cases of Rheumatism, Neuralgia, Bruises or Pains.

The Best and Cheapest Horse and Cattle Medicine in the World!
WALTER B. SLOAN'S IMPROVED CONDITION POWDER
THE GREAT STANDARD MEDICINE
For Horses and Cattle,
Used throughout the United States and Canadas during the last 23 years.
For the cure of the various Diseases to which Horses and Cattle are subject; such as Founder, Distemper, Hide Bound, Loss of Appetite, Inward Strains, Yellow Water, Fistula, Poll Evil, Scratches or Grease, Mange, Inflammation of the Eyes, and Fatigue from Hard Labor; also, Rheumatism, (commonly called Stiff complaint), which proves fatal to so many valuable horses in this country.



SLOAN'S CONDITION POWDER
Has the largest sale of any Horse and Cattle Medicine in this country. It is composed of herbs and roots, and for mildness, safety, certainty and thoroughness, stands pre-eminently at the head of the list of *Horse and Cattle Medicines.*
It carries off all gross humors, prevents horses from becoming stiff or foundering, purifies the blood, loosens the skin, and gives it a smooth and glossy appearance cleanses the water and strengthens every part of the body. It is also a safe and certain remedy for coughs and colds, which generate so many fatal diseases.

The Cow requires to be supplied with an abundance of food—not to make her fat—this is not desirable, but to keep up a regular secretion of milk, and all owners of cows will find by giving them
SLOAN'S CONDITION POWDERS
twice a week, a large increase in quantity and quality of milk and cream. It carries off all fever and impurities of the blood. The effect is seen throughout the season by a rich and abundant flow of milk.
The farmer is beginning to be aware of the valuable properties of **Sloan's Condition Powder,** in promoting the condition of his sheep and preventing many of the diseases of all the domesticated animals.

☞ A fifty cent package of **Sloan's Condition Powder** put into a barrel of swill is better than a bushel of corn to fatten a hog, and is a certain preventive of Hog Cholera, Blind Staggers, and other diseases common among hogs.
CAUTION.—To protect ourselves and the public from being imposed upon by worthless imitations, the genuine will bear the *fac simile* signature of the proprietors on the wrapper.
PRICE 25 & 50 CTS. PER PACKAGE.
For sale by Druggists and Merchants everywhere.
Walker & Taylor.
Sole Proprietors, Chicago, Ill
P. O. Drawer 5826.

H. P. WESTCOTT'S ADJUSTABLE DASH CHURN.
First Pat'd Aug. 1863, *Improvements Pat'd April,* 1865 *and Nov.* 1866.
This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $13; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.
H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN
Has received the highest approval of Practical and Scientific Men and the Press.
"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*
"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*
Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.
"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*
"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag'l Ed. N. Y. Times.*
"The very best Churn extant."—*Prairie Farmer.*
"It is perfectly common sense in its structure."—*Ohio Farmer.*
"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*
☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.
☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

MALTBY HOUSE,
A. B. MILLER, PROPRIETOR,
BALTIMORE, MD.

Written for Moore's Rural New-Yorker.

AMBITION.

BY A. A. HOPKINS.

Our life is but a meagre thing,
If into it there never creeps
A longing that we soon may wing
Our flight to nobler grander steeps;
If with the plains where now we grope
We feel a satisfied content,
Nor care to climb the upward slope
Where broader growth and life are blent.

All living is a sorry cheat
That has no earnest, hoped-for aim—
No cherished purpose to complete;
A sorry cheat, a very shame.
The blood that courses in the veins
Which feel no warm, incentive fire,
Flows slowly at the best, and wanes
From lack of vigorous desire.

Speed on the heart that beats with strong
Pulsations born of good to win,
That labors on with cheerful song
To finish what it dared begin;
Aye, speed it onward to its goal,
With hopeful word, and faithful prayer,
And know that with it bides a soul
Deserving of a crown to wear!

The simple faith which little asks,
But willing works, and willing waits,
Which bravely sets about its tasks,
Nor vainly pines for kinder fates,
Shall full reward for labor find,
And to its perfect works attain,
For willing hearts and hands combined,
The grandest victories may gain!

The Story Teller.

Written for Moore's Rural New-Yorker.

THE WIFE'S RESOLUTION.

BY MAY MAPLE.

Ten years!—yes, it's just ten years since Mattie Glenn became Mrs. Charles Mosier. Very pretty she looked, in her bridal dress of light blue silk and dainty lace; almost etherial as she glided into the parlor on the arm of her attianced husband. Her golden curls fell in careless grace over shoulders that vied with the drifted snow; add to these sparkling blue eyes, and a most bewitching little mouth, well furnished with small, pearly teeth, and surrounded with dimples, and you may imagine it was a pleasant sight to look upon her fair young face. The marriage ceremony was performed, the solemn promise given, the "God bless you, my children," said by the fond parents, and then the proud young husband led her down to the carriage, and they were whirled away towards the new home which he had provided for her who was to be the sharer of his future joys and sorrows.

Everybody prophesied great happiness to the newly wedded pair; and Mattie and her husband thought they should be as happy as the "ancient couple" were before they ate the forbidden fruit. And for the first twelve months they were happy—which is about as long as honeymoons can be expected to last. During all these months Mattie kept herself and everything about the house in "apple-pie order." Charles often boasted to his friends that he had the best housekeeper in the State; and when his bachelor friends came to visit him, and found such perfect order and happiness, they would go away strongly tempted to make love to the first pretty face they saw.

But such perfect bliss cannot last always: more's the pity. About this time a young stranger applied for admission into their paradise—a little baby girl. This should have brought them increased happiness; but certainly it was far otherwise. They were not able to keep a domestic long, and many things about the pretty cottage were left without the careful adjustment they had been accustomed to receive; for Baby must and would have so much care, and it never would do to have the pet of the household neglected.

From being careless about her house, Mattie at length grew careless of her toilet. Now her husband on coming home frequently found her in her morning wrapper, which looked the worse for coming in contact with cooking utensils; and her beautiful curls, which he had always admired, were straightened back and twisted in a rough knot at the back of her head. Sometimes he would speak to her about her careless dress and badly arranged,—for he was very proud and it mortified him exceedingly to have his friends call in and see *his* wife in a negligent dress and everything about the house at "sixes and sevens;" the rooms unswept or, if swept, the dust lying upon the furniture, and every chair more or less occupied with wearing apparel. But she always answered him with a frown, and "If the house does not suit you now, you can regulate it yourself. I'm sure I've no time, with cooking, washing and taking care of baby, to keep everything in order and myself dressed for the parlor. And you know you are not able to hire assistance yet; so you need not fret at me all the time."

"I do not wish to fret at you all of the time, Mattie, but it does seem to me you might manage your work so as to make less of it; then you would have some time to dress and sit down and rest awhile after tea, as we used to. I'm sure little Pet need not make *so much* difference, for she is most always good, you'll allow."

"That's no sign she does not make work," said Mattie, beginning to cry. Charles knew then there would be a waste of words to say any more, so putting on his hat he would go back to his work with a sad heart,—while Mattie would spend half the morning weeping and trying to think she was very ill used, so the dinner hour would find her behind time with her work, and Charley would find the house looking the same as when he left it. The only pleasant sight in the sitting-room was little Pet; she always had a bright smile for papa now she was old enough to notice things; and many an otherwise tedious hour did she help to while away, by her artless prattle and cunning ways, while he was waiting for dinner. Their dinner hour might have been very pleasant, if it had only been in season; for Mattie was an excellent cook, and her husband appreciated the good things that were set before him to tempt his rather fastidious appetite. But as he would have to *wait* for his dinner, so he must feel in a hurry while eating it; thus the meal was often passed in silence, and Mattie was left to finish her dinner alone.

Of course she had been obliged to over-exert herself, in her haste to lay the dinner table; so now she must sit long enough to rest afterward: and this rest would be longer, or shorter, according to her fits of reverie,—for she always had a habit of building castles in the air, but not energy enough to bring any of them into action—or little Pet's call for a frolic or care. Thus often passed two hours; then there was the dinner to clear away and half of the morning's work yet to be finished,—and ere she would be aware of it the hour for supper would be approaching. So her work was never done. At night when her husband would come in so weary with his labors, she had no time to sit down and talk, read or sing. Little Pet would go to sleep early, and rather than spend the evening alone in his not over-tidy sitting-room, he would go wherever he could find agreeable company. Mattie did not dare to complain; her own conscience needed no other accuser.

In this way passed five years of their married lives. Now there were three little ones to make their home bright and happy. Charles had been prospered in his business, so they were able to keep a domestic and the house looked rather more tidy; but Mattie still clung to her slovenly habits of dress, and Charles had lost much of that neat, tidy look that was once his pride—for that one cannot always live in a smoky house, etc., is an old and true saying, and *he* was no exception to the general rule. Yet how was it possible for *him* to always look nicely when half the time his clothes went without the necessary repairs. He had learned to let everything pass in silence, for he found talking only irritated his wife without doing any good. Oh! how he longed for the happy days to return, that had passed during the first year of their united lives. He loved his wife, for she had many redeeming qualities, and if she would only get back some of the pride and winning ways that he knew she once possessed, he would be willing to do almost anything in his power. *Then* he enjoyed the society of his friends; he liked to have them come in at any time, for he was proud of his wife and his home: *now* he never dared invite a friend to dine with them. Mattie had no time nor ambition for calling on her neighbors, so they learned in time to pass on with only a glance at the house.

Another period of five years had nearly passed, and people began to remark how fast Charles Mosier was growing old and careworn, while Mattie looked ten years older than she really was: so much for careless habits in dress.

One morning about a week before the tenth anniversary of their marriage, Charles asked his wife to make preparations to go on a visit to his only sister, who was married about the same time that they were. She lived in one of our large western cities, about two hundred miles distant. He knew that Mattie and his sister Lucille were very intimate at the time of their wedding, and had corresponded regularly for a number of years. And when he asked her to go with him he thought it would be a real pleasure. But she declined going in a very decided manner; when asked for a reason she would give none, only that she did *not wish to go*, and she *wouldn't go* to please any one; he could go without her just as well. Charles felt the disappointment keenly. He knew, as Mattie had told him, that he *could go* without her, but he did not desire to do so; besides he had hoped a change of scene would do much in effecting a change in Mattie for the better, for she had grown morbid in her utter seclusion. Now, the reasons why she would not go were, first, she had shut herself away from society so long she knew or rather felt that she must appear very awkward; then his sister lived in a fashionable city and went into society and received a great deal of company. She had sent them a *carte de visite* a short time previous, where she appeared almost as young as she did ten years before, and handsomer than ever—while Mattie's mirror told her she had faded and grown old. She did not wish sister Lucille to see the contrast; for Mattie in her youthful days had been called the beauty of her native village, while Lucille had been called rather plain.

But Mattie would not tell this to her husband, and allowed him to leave the house feeling perfectly disheartened. He went to the shop, as was his custom, and began his work, but he did not enter into any conversation with his companions, merely answering in monosyllables when any one addressed him. After awhile he sat down, folded his arms, and laid his head upon them. He sat thus for a long time, scarcely changing his position. His co-laborers went to their dinner and returned, and still he sat there. Finally one of them went to him and inquired what the trouble was that he did not go to his dinner; he started up, saying "I believe I will go now," at the same time clapping his hand to his head and uttering an exclamation of pain. As he was passing out of the shop his companion noticed that it was with difficulty he could keep from falling, and offered to go with and assist him, which offer was gladly accepted.—[Concluded on page 297.

Discernment.—Discernment is a power of the understanding in which few excel. Is it not that owing to its connection with Impartiality and Truth? For are not Prejudice and Partiality blind?—*Greville.*

Wit and Humor.

PREMIUM SEWING MACHINE.

One of the kind that a man can love,
That wears a shawl and a soft kid glove;
Has the merriest eye and the daintiest foot,
And sports the charmingest gaiter boot;
And a bonnet with feathers, ribbons and loops,
And an indefinite number of boops.

One that can dance, and possibly—flirt,
And make a pudding as well as a shirt,
One that can sing without dropping a stitch,
And play the housewife, lady, or witch,
Ready to give us the sagest advice,
And do up our collars and things so nice.

We like the sort that can laugh and talk,
And take our arm for an evening walk;
That will do whatever the owner may choose,
With the slightest perceptible turn of the screws;
'Tis the cleverest thing that ever was seen,
Our wonderful family sewing machine.

Storms generally are a mystery, but you can always see the drift or a snow-storm.

An insurance company heads its advertisment thus:—"Best lives taken at lowest rates."

A rainy day is "damp," but when a young lady refuses to marry you it is a "damper."

Why is a sawyer like a lawyer? Because whichever way he goes, down comes the dust.

"How sharp your toe-nails is!" said Paddy, when he caught a hornet and held it in his hand.

When is a train of cars in danger of running over an old man with a scythe in his hand? When it is behind time.

One editor in Georgia asks another "whether he can bite the bottom of a frying-pan off without smutting his nose."

It was a pointed remark of Franklin's when he said, "If a wife is only half the scissors, she is often the half with the point."

Mrs. Partington asks, very indignantly, if the bills before Parliament are not counterfeit, why there should be so much difficulty in passing them.

An unwashed street boy, being asked what made him so dirty, replied, "I was made, they tell me, of the ground, and I reckon its just working out."

Josh Billings says:—"I never bet enny stamps on the man who is always telling what he would have did if he had been thare. I have noticed that this kind never git thare.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,

IS PUBLISHED EVERY SATURDAY

BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, In Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2.50 per copy. Also manufacturer of Cast and Wrought Iron Screws, Presses, Grinders, Road Scrapers, Feed Cutters, &c., &c.

AN EDUCATIONAL CHALLENGE.

Which Is the Best Practical School for Young Men and Boys? A Popular Eastern Institution asserts its Supremacy—An Honorable Proposition, not Easily Disputed.

A CARD.

The public, especially our Young and Middle-aged Men, and the guardians of our youths, are interested in any effort towards a practical reform in our system of education. In the past, the young man, leaving school, and starting in life, found himself ignorant of nearly everything necessary to the successful prosecution of any pursuit by which he could obtain a prosperous support. This I saw to be a great evil, and I knew that the sound practical sense of our American people would correct it at no distant day. I therefore founded my National Business College as an important step in that direction, and my past success, and present prosperity, are but the harbingers of still greater progress in the future. I adopted for my motto that wise suggestion of the Spartan King, "Teach your boys that which they will Practice when they become men," and established an institution purely American and Characteristic of the Age, devoted exclusively to an education that should qualify a person in the best manner, in the shortest possible time, and at the least expense, to insure success in the Active duties of life, and its operations to be conducted in the most practical, interesting manner possible.

From the day it was founded in this beautiful City on the Hudson it has grown in favor, and I have labored earnestly to increase its usefulness. My plan of practical training produced a revolution in the Commercial College system, and the great success of my Institution, induced the organizing of Small Schools and "Chain Colleges," in all parts of the Country, the majority of them copying my title and claiming to teach my System of Business Education. This produced a rivalry, which has been bitter in some cases, and has led some to believe that there is not the merit in this System of Education that is claimed, and that there is found to be on investigation. Some of these Institutions have displayed a very bitter spirit of jealousy, and I regret to say that none have been more regardless of the truth, when speaking of my Institution, than the Schools known as the "Bryant and Stratton National Chain." To establish the supremacy of my Institution and its superiority over all other Commercial or Business Colleges, and to answer the reckless misstatements of Bryant Stratton & Williams in the Rural of August 31st, I make public the following EDUCATIONAL CHALLENGE.

A Committee of three shall be appointed. One by the competing Institution, one by me, and the two shall select the third. The Committee shall be composed of one Educator, one Business man, and a Clergyman. They shall be men of ability and of high character, and entirely disinterested. They shall, on the 1st day of October next, enter upon an examination of my Institution and any or all others who accept this challenge, and investigate thoroughly their claims to public patronage. They shall make a written report in favor of the Institution, which is the best in each of the following particulars: 1st. The most reasonable in its charge, has the best and most extensive facilities in buildings and accommodations, is the best furnished and has the cheapest and best boarding accommodations for its students. 2d. The best corps of Professors and Assistants, and the greatest number. 3d. The most extended patronage, the largest number of students in attendance, and showing the most improvement for the time attended. 4th. The best rules and systems of government, and the best moral influence. 5th. The best course of study, and the best plan of instructions in the Theory or Elementary departments. 6th. The most extensive and best system of Actual Business training. The best plans of operations. The best system of Banking, Merchandising and Office business. The best Office and Actual Business books, and the most competent instructors and thorough students in any department. 7th. The best Course for Farmers and Planters. 8th. The best penmanship Department. 9th. The best instructions and lectures in Letter Writing, Business Forms and Usages, Advertising, Commercial Law, and all branches necessary for a thorough, practical education. 10th. The most thorough examination on completing the Course in each department, and at the time of graduating. 11th. The best and largest number of complimentary letters from graduates and patrons, endorsing the Institution. 12th. The largest number of graduates in successful business, and the largest number assisted to situations by the Institution during the past year. 13th. The Institution that carries out to the letter the terms of its advertisement and lastly, the best Institution, everything considered, and the best entitled to the confidence and patronage of the public.

Previous to the examination each Institution competing shall place in the hands of the Committee the sum of three thousand dollars, and at the time of the decision, which shall be given by the 20th of October, they shall appropriate the entire sum paid by the defeated parties, after deducting a reasonable amount for their services and expenses, in purchasing an appropriate library, which shall be presented to the successful Institution, to be free to the Young Men of the College and those of the city where it is located. This Challenge must be accepted within ten days from date.

I have no desire to speak disparagingly of any opposition institution. There are many excellent ones and a young man will certainly be well paid by attending them, but I have a right to claim a superiority for mine, and I have aimed to do it in a manner that cannot be questioned. Will Messrs. Bryant, Stratton and Williams of Rochester, (and all others) accept my challenge, and let the public understand where the *merit* really is.

The statement of Messrs. Bryant, Stratton and Williams in the Rural that the "Chain Colleges were absorbing individual institutions, and that The Eastman College was on a decline by competing with them" is so foolish as to be hardly worth noticing, but to show the untruthfulness of such a statement I will say there are more students in attendance at my College here to-day than in the Bryant and Stratton Colleges of Rochester, Auburn, Syracuse, Utica, Ogdensburg and Troy, and I believe in any ten more. I have a larger faculty and better and more extensive facilities than all of the above schools combined, and do exactly as I advertise in the matter of furnishing positions for my graduates as well as in every thing relating to my College. If this is not found to be true on investigation I will present their College with a thousand dollar library. I have assisted more graduates to situations than the entire "Chain of Colleges," and have more in successful business in New York city.

In conclusion, I earnestly invite Young and Middle-aged Men, Educators, and those interested, to visit my Institution, and judge for themselves of its merits. I offer better advantages, at a more reasonable expense, than any other Commercial or Business Institution in the country, and guarantee situations to those who desire and merit them on completing the Course.

H. G. EASTMAN, LL. D., President.

AGRICULTURAL NOTES

FROM FRANCE AND SWITZERLAND.—No. III.

BY H. D. L. SWEET.

PARIS, August, 1867.

THE route from Berne to Geneva lay through rather a rough country, if heavy cuts, extensive hills, mighty bridges and long tunnels, are any indications,—but the glimpses of their cultivation showed the same perfect and thorough tillage of everything. The vines seemed to climb a little higher up the hills, and to be a little more forward, as the trimmers were in many places busy, and the harvester in the valley of the Rhone was cutting spring wheat, barley and oats. Some little patches of Indian corn looked as though they might furnish a few ears of green corn by-and-by, and several plantations of tobacco, of a few square rods each, looked as good as is usual in Onondaga at the same time of year.

Round Geneva all was loveliness. Up the valley of the Arve to Chamnony, by diligence, gave another excellent opportunity to see the people at various kinds of labor, and as the stream was ascended the effect of altitude again upon the same productions and same soil was easily observable in every hour's travel. For the first thirty miles the country was principally cultivated in grain, much of which had been gathered, and in many instances women were spading up the stubble and planting cabbages. In some instances women were wielding a heavy hoe, scarifying the surface of what was a meadow, taking off about an inch of the turf, which in other places was dry enough to be piled up and burned. Further up were some meadows on flat land, the first I had seen where a mowing machine would have worked splendidly—but women were mowing swaths about three feet wide, in grass that would cut about a ton per acre. Some was being loaded upon carts and drawn to the barns quite respectably. The grass usually was of the wild kind apparently, although French clover or Lucerne was the kind usually cultivated in connection or alternation with grain. Although clover seed was for sale in the market of Berne, I had thus far seen no field of clover, but on this route I did espy a little, mixed with other grass.

Above the baths of St. Gervais we left the valley proper and entered a gorge in the mountains, and for eight or ten miles the agriculture was nothing to brag of. We emerged at length in the little valley of Chaumony, beautiful to view and fruitful withal. Its great altitude, over 3,500 feet, bounded on the south-east by the Mont Blanc chain, with its gigantic ice cataracts, and five immense glaciers, that creep or crawl even down among the habitations of men, and on the north-west by mountains of immense magnitude, it seems almost impossible to raise anything in the cereal line. Here were growing about all the kinds of grains that are usually cultivated. Wheat nearly ready to cut, heavy and good; grass, better than in many places; oats rank, and potatoes covering the ground, though widely planted; flax, pretty good, and only hemp that looked light and rather short.

From the summit of Montanverte I looked upon the *Mer de Glace*, a frozen sea two leagues in length, one of the most sublime things in Nature. I turned to the left and the fruitful valley of the Chaumony met my gaze, thousands of feet below, one of the most beautiful and enchanting spots that it has ever been my good fortune to see.

A deep, dense fog, that hovered in the vale,
Rose slowly upward and revealed to sight
The fearful beauties of the *Mer de Glace*.
Near me, and on my right, in silence stand
The frozen waves, sharp, clear, and well defined,—
The glassy peaks, the Alps in miniature,—
Beyond, more rounded grown, as though a storm
Had only just been hushed; and further still,
Where all seems calm and quiet as a lake,
Or ripples frozen by the passing breeze,
That put the flush upon its tranquil face.
More nearly scanned, the deep blue valley, 'twixt
The toppling crests, grows a crevasse; beyond
The lighter tinge, a crevice, or a seam,
Down which the brooks descend and disappear,
But come again to light as Arvelron.
How cold the scene, how cheerless, yet how grand!
Nothing like life; nothing to cheer the heart;
And yet, entranced and awed, I stand and gaze
Upon this emblem of a cheerless death,
Where desolation savage reigns supreme.

And then upon the vale of Chaumony,
The little village, and the village church,
Whose vesper bell just bends the ambient air;
The golden fields of every varied hue,
The little squares of every tinge of green,
The vine-clad slope, with foliage rank and dark,
The strip of flax, just blossoming in blue,
The yellow wheat, that, waving, seems to ask
Some stalwart harvester to try his scythe,
The noisy herdsman, with his blatant horn,
That calls the goats from off their rocky cliffs,
The merry tinkle of their little bells,
That scatter music like a noisy rill,—
All speak of life, all speak of joy and hope,
While the descending sun, that seems to tip
The mountain-tops with crowns of molten gold,
Adds a transcendant beauty to the scene.

From Geneva the route down the Rhone valley was a continual panorama of pleasant pictures, rural and otherwise. The harvest was going on splendidly, and the weather was all that the husbandman could ask. Large quantities of grain stood in the field in shocks—some put up rather slovenly and some capitally—just as it is done probably the world over. Those who were drawing in seemed to bind on the loads with cords, which, under ordinary circumstances, seemed useless. Women were doubling up gavels, ready for the men to bind, and they made their bands by twisting; very few had rakes, but many were gleaning by hand in the fields where the bundles had been removed. It all seemed *slow*.

As we were leaving the valley of the Rhone, up a lateral valley, we crossed a marsh for some distance, which gradually grew dryer, and finally we came to an immense meadow and several smaller ones. In some from two to five teams were loading at once, but in the largest there were twenty-three loads being loaded at once. There was a spot for a mowing machine trial. It was now night, but the next morning we were in the valley of an affluent of the Seine, in an immense harvest field. No sooner was it light enough to see clearly than men, women and children were out and at it. There were not enough, by any means, and much will suffer for a lack of labor in a land that has a million able-bodied men under arms, dressed in gewgaws. Perhaps, in traveling 150 miles, nearly all in grain fields, we saw a dozen old-fashioned, straight cradles, with fingers about two feet long, and handled very clumsily. The grain was heavy and in places badly lodged, with poppies and vines growing through it. No reapers, no horse-rakes, no horse-forks, *no nothing*—mostly being cut by women with sickles; it seemed as though they had gone back one hundred years, and were verging on barbarism. I might excuse such things in the mountains of Switzerland, but within sight of the Pantheon in Paris, on the plains of Fontainebleau, 'tis worse than folly, 'tis wickedness. I hope the time will come when civilized nations will cease to war, when *men* will cultivate the earth, and *women* not be made beasts of burden.

RURAL FARMERS' CLUB.

Fruit and Sheep in Missouri.

CLARKE IRVINE sends us the following statement from Holt Co., Mo.:—"Seeing in your journal an article on emigration to Missouri, I feel it my duty to speak of this particular county in connection with the growing of grapes and dwarf pears. An experience of many years in the growing of dwarf pears in Holt Co. enables me to say that no country that I have ever heard of equals this in that respect. The trees seem to be entirely exempt from disease, and the fruit grows in abundance and of the largest and most luscious kind. Curiously enough the region twenty miles north or south and east or west of us is not so favorable as this particular spot. Our prairies are remarkably exempt from destructive pests. It is no new thing for us to see peach bloom covered with a white frost, yet the fruit not affected thereby. This is explained by the extreme aridity of the atmosphere. A frost which in Ohio would destroy everything in bloom, will here be harmless. Within a few years several persons have turned their attention to grape culture with marvelous success. The Concord seems to be the favorite. I have been here thirteen years and have never seen frost injurious to gardens or fruits.

"That same dryness of atmosphere which protects us from frost is favorable to the health of sheep, and I have wondered at wool growers in the East who invest thousands of dollars in sheep, and pay out large sums annually for pasturage in those damp regions, while here are millions on millions of acres of free range in a high, dry latitude, perfectly exempt from all causes of disease to the animal. Wolves may be an objection in Nebraska and Kansas at present, but there are none here. I write this, believing that anything that may tend to increase the knowledge of so valuable a new country as this will be gladly read by your patrons. I am careful to state nothing but facts ascertained by long residence."

AILANTHUS SILK WORM MOTH—(Bombyx Cynthia.)

SOME considerable effort has been made to introduce and acclimate the Ailanthus Silk Worm in the United States. The Chinese have employed it for ages to fabricate a species of silk from the leaves of the ailanthus tree, which product, however, is of a coarser texture than that furnished by the mulberry worm, but of so durable a character that garments of it are said to have been worn by three generations. Some cocoons of this insect were introduced into France in 1857 where it has since become naturalized, and promises to develop into a profitable industry. As yet the efforts to introduce it into this country have not been as successful. There are more natural enemies for it to contend with,—but extended and thorough experiments have not yet been made in our regions that are most favorable to its success.

The ailanthus tree, the leaves of which form the chief food of the worm, is well known here, and is a vigorous grower and easily propagated. For the use of the worm it should be trained low and in the form of hedges or thickets. The worms live and work in the open air, and are hardy as the tree itself. They hang their cocoons on the foot stalks of the leaves, where they are handily gathered. No costly nursery houses will be needed, and it has been estimated that a quarter of the expense that is required to produce a pound of silk from the mulberry will make as much from the ailanthus. We apprehend, however, that cheap labor, also, will be required to make a profit, though if successful, like bee-keeping, it might furnish some profitable employment to those with little capital and unfitted to do hard work.

Orchard Grass.

A SUBSCRIBER asks for information about orchard grass. We reply that it is one of the most valuable and widely cultivated of all the pasture grasses. It is peculiarly valuable for pasture, especially on rich, moist soils, of vigorous, quick growth, and abides long in the land. It blossoms with red clover and should be sown with it. It is not considered exhausting to the soil, yet it will, on account of its fibrous roots, endure shade and drouth well. As it is a rapid grower it endures close pasturing, and should be thus treated, and also sown thickly to prevent the formation of tussocks or bunches, to which it naturally tends. The seed weighs twelve or fourteen pounds to the bushel, and should be sown at the rate of one bushel per acre when mixed with clover, or double that quantity if alone.

Notes from Ohio.—Rural Advice.

T. B. PICKTON furnishes us some notes on farm prospects from Akron, Ohio. He says the drouth has been severe and cows are for sale at $20 to $25 each. The crops are good except corn and potatoes—the latter being very light. Apples are falling from the trees. Our correspondent writes that he "took counsel from the RURAL and planted an extra patch or two of sweet corn that comes on now *very sweet*. Hogs, chickens, horses and cows all thrive on the corn and fodder." He recommends feeding bituminous coal to swine once or twice a week as a preventive of hog cholera.

Formation of Bee Comb.

J. B. S. writes us on this subject thus:—"I notice in your paper of Aug. 31st an article in relation to the formation of bee comb. M. W. LELAND of Rochester, Minn., says that the comb is not made mechanically but grows. How, then, is it, that we always find the comb ready made to receive the honey before any has been deposited in the comb? If the comb is formed from the oil extract of honey, does it not seem reasonable that as fast as the comb grew it would be filled with honey? Yet such is not the case. We find the comb ready and perfectly formed before a drop of honey has been deposited in it!"

THE BREEDING OF SWINE.

EDS. RURAL NEW-YORKER.—No subject is so much neglected in our Agricultural papers as that of swine breeding. The breeding of sheep, cattle and horses receives abundant attention, and is fast becoming a science, but ignorance and erroneous opinions in regard to swine breeding prevail very generally. I propose to offer some hints on the subject which do not all apply to other animals.

What we desire in a hog is that he mature at an early age, and make the most and best pork possible from a given amount of food, with the least possible refuse. In other stock two or three qualities are to be bred for, which are antagonistic. Cattle are kept for their labor, their milk and their flesh. While you are breeding them for their flesh you are destroying their milking qualities. Horses are kept for their speed, and also for their strength in draft. When you breed them for the latter quality you lose in the former. Sheep are kept for their wool and flesh, and those that are valuable for wool are not valuable for flesh. The case is similar with all animals, except the hog, which is bred for its flesh alone. Farmers are strangely ignorant here. I have been breeding swine, and exhibiting them at our State Fairs and fairs of other States, for ten years, and the common expression of farmers has been:—"Your hogs are too fat to breed." Even the usage of our Ag'l Societies has been against the successful breeding of swine from fleshy animals. They have given their premiums for hogs that would not carry flesh while growing and breeding. I claim that we can just as well have swine that can carry flesh, grow and fatten, and at the same time breed and mature early, dressing 300 to 400 lbs. at seven or eight months old. They will reach this weight at this age, kept on less feed than would be required to bring our lean hogs to the same weight in eighteen months or two years. We need not go to England to get them; they may not be of any particular shire. We can obtain them by selecting the best specimens of our native stock, and then breeding them skillfully, with judicious crossing and persevering attention. This course will produce a breed that will seem miraculous. It is more easy with the hog than with any other animal, which breeds twice where other animals breed once, and has a much more numerous progeny to select from.

But it would take a long time to perfect a breed in this way, and as much time should be gained as possible. Select, therefore, from swine that have been well bred for years, and are the nearest to perfection. Be sure to get them from a stock that runs even, as this shows good breeding better than all the pedigrees that can be gotten up. After you have selected give your breed good care and attention. For, as Mr. WAITE said in his address of June 22d, 1862, before the N. H. Ag. Society and Mechanics' Association, "No farmer can afford to breed from inferior animals, or from good ones in an improper way." Although he may follow closely the well established rules of breeding and crossing, his animals will not be superior unless they are given proper food, care and attention. If the dam is poorly fed and cared for while carrying her young, the progeny will be a starveling, and its life will not be long enough to erase from it the evidence of the ill treatment or neglect of the parent.

In breeding and crossing we should have a definite idea of the improvements we wish to make, and then steadily pursue our object. If our hogs are too large or too small, we should procure a boar a little smaller or a little larger, as the case may be, but be careful to have the difference slight, as we cannot effect a cross where it is considerable. You can take but a step at a time; if you take more the progeny will be uneven, some taking after the sow and some after the boar. I agree with Mr. YOUATT on this point. He says:—"It will not do for the farmer to breed too long from close affinities; he must introduce a little different and yet congenial blood; he must select a male with points as much resembling his own stock as may be—quite as good as his own, superior if possible in some points, and inferior in none; and he must dismiss his own male for one year and

make use of the stranger. His purpose will be completely answered; he will have infused a tone and vigor among his stock; they will keep their propensity to fatten, and re-acquire that health and hardiness which they used to exhibit. Then the farmer is enabled to go on satisfactorily for a certain number of years, when experience tells him that a stimulus in the form of a little foreign blood is again wanted. Careful selection, with judicious and cautious admixture, is the true secret of forming and improving a breed."

I know from experience and personal observation that this is all true, and I also know that most of the talk about many hogs being too fat to breed is sheer nonsense. I have now pigs from pairs of hogs that will not weigh less than 1,700 or 1,800 pounds. The pigs are now four and five weeks old, and look finely. They came in litters of 8 to 13, which I think enough. I admit that hogs may be too fat to breed, but while they do breed and breed well, they are not too fat. And I believe it necessary that they should be fleshy, and kept so—never allowed to run down in order to secure a breed that will run to flesh, as like will produce like in a well bred animal, and flesh will become natural.

A. C. CLARKE.

Henderson, Jeff. Co., N. Y., Sept. 10, 1867.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

THE FALL AND WINTER MANAGEMENT OF SHEEP.

LAMBS are weaned before this, in all well managed flocks. Now is the time to prepare them for winter. They should be kept growing every day. There is a difference of opinion whether they will do best on old pasture, or on the after growth of meadows and new-seeded stubbles. Our opinion is that they will do well enough on either, provided there is an abundance of fresh, sweet feed. If put on old pastures, they should be those which have been well fed down, and then allowed to start up fresh and green. It is the opinion of most successful flock masters that as soon as the grass begins to be rendered innutritious by frost, it is expedient to give tegs a little extra feed. They grow finely on pumpkins or roots. Wheat bran is one of the very best feeds for them, and it can be mixed with a few oats as the grass grows poorer.

It is a decided mistake however, in our judgment, to *pamper* tegs in the fall. If fed high at this season, they feel their winter feed less; and it must be increased to an extent which renders their wintering less safe. We have, it is true, seen many a flock of them very highly kept in winter which went through "splendidly," and were of the size of ordinary two-year olds at their first shearing. Indeed, this is the ordinary course of those who breed tegs to sell at high prices. With great care and judgment, and especially in *small* flocks, it may ordinarily be safe enough—but we have known too many severe disasters to grow out of the practice not to caution the mass of sheep growers against it. We esteem *pampering* sheep at any age, except when they are being fattened to kill, injurious—and especially so before they reach their second year. Their natural habits are unfitted to it, and their constitutions will not safely bear it. When they are appearing best, the destroyer sometimes comes so suddenly and fatally as to defy all discovery of *proximate* causes and baffle all remedial measures.

We have a striking case in our mind's eye. An uncle of the writer, the late WM. RANDALL, Esq., was a large wool grower—his flocks often reaching 10,000, and sometimes considerably more. His appointments were admirable, and a man of sounder practical judgment we never knew. He understood sheep perfectly. His head shepherd—possessing the strength, will and capacity to work of three common men, thoroughly experienced in his business and faithful as daylight—had the winter charge of the sheep, saw every flock daily, and fed all of them their winter grain. So no care or skill was wanting. Some twenty-five years since, his tegs, several hundreds in number, went into winter uncommonly large and fleshy. On a bright day in February we joined the shepherd in his swift gallop from sheep barn to sheep barn "over the flats." Everything was in the usual first rate order. Every sheep looked healthy. The tegs were a sight to see. They looked almost as large as grown sheep, and were as fat as wethers ready for the butcher. We saw them fed their grain, and it was half a pint of good sound *corn* to the head! We asked the shepherd if he had been in the habit of feeding thus, in other seasons. "No," he replied, "but they are so extra that your uncle is going to see what he can do with them." The ides of March came. He then found what he could *not* do with them, viz: save their lives. Some of them, from apparent good health, would stagger a few steps, fall and die. Some would leap into the air or twist round their heads and fall in the death struggle. Medicine was of no avail. There was scarcely time to give it between the attack and death. We do not remember the number of deaths, but it was very large. Those wiseacres who have about three names for all the diseases which sheep are heir to, cried out, of course, "grub in the head." WILLIAM RANDALL knew better than that. We asked him once what he thought about it. He replied, with a significant look, that "he guessed they had the *corn disease*." In other words, they had eaten too much corn! They died of "grub in the belly."

Corn, by the way, is fed on the stalk very freely, almost or quite as much as they will eat, to sheep of all ages, in the West—and, it would seem, safely enough. A *small* allowance of shelled corn is esteemed good feed here in some cases; but to give it extra quantities, and especially to tegs, is not regarded as prudent and safe by a great majority of New York and other eastern flock-masters. Whether there is any difference between the large corn of the West and the small, solid, yellow corn of the East, in this particular—whether the free, open-air management of the West has any effect*—or what other cause operates in producing such different results, we will not now make a subject of speculation.

For both the fall and winter feed of tegs we prefer, among the grains, oats and bran. Both (unlike corn) tend to the production of muscle (lean meat) instead of fat, and therefore promote *growth* instead of unnecessary obesity. They afford ailment in a less concentrated and therefore less stimulating form. They are, in popular phraze, less "heating" and less "feverish" feed, i. e., they do not so much predispose the system to inflammatory tendencies and attacks. If fed separately, equivalents of them in weight are probably about equivalents in nutriment—but we much like the plan of feeding them mixed, say one part oats to two of bran: and to Merino tegs well brought into the winter, a gill of bran and half a gill of oats, per head, with a little green feed (say a gill of turnips,) with a full allowance of *bright, fine, early cut hay*, ought under ordinary circumstances to be a sufficient daily allowance for "store" tegs in winter. By "store" tegs we mean those not fitted up to sell, or show at fairs, or raise "brag fleeces from—but those intended to be kept in the flock for regular wool growing purposes.

Fine, green, early cut and well cured hay is almost indispensable in wintering tegs. No grain or root feed can properly supply the want of it. We would rather winter tegs on it without any grain, than on coarse, dry, over ripe timothy, with any amount of grain and roots. We esteem fine, red *clover*, cured "as green as tea," a very important, if not necessary ingredient in hay for tegs. We would prefer to have it form from a third to a half of the mow.

The Woburn experiments of SINCLAIR, by demonstrating that nearly ripe timothy contains more nutriment than when it is cut earlier, handed down a legacy of evil to the sheep breeders of our country—if not indeed to the breeders of all stock, unless perhaps horses, mules and asses. Sheep farmers are learning that nutriment must be presented in a form palatable enough to be eaten!

Cold, severe autumn rains benefit no sheep, and are perceptibly injurious to tegs, especially if they are thin and backward. When these rains begin to fall, the tegs should be brought near the barn, and run in during their continuance and as winter approaches, also during cold, raw nights. If kept up more than half a *day*, they should be fed hay in a rack. But we had rather they should remain out of doors than to be crowded into some little, stinking (that we should use such a word!) hole, with mud or wet dung up to their fetlocks, and there stand fasting for twelve or twenty-four hours.

It is useless to talk about ventilation, and perfect dryness under foot, in a sheep shelter of any description. These topics are stale. But we suspect some men who are not used to it *in their own houses*, do not know what proper ventilation is. We propose the following tests: When a night's confinement of the flock in the sheep house produces even a slightly disagreeable animal smell, or a temperature above 60 degrees, the house is not properly ventilated.

But there are two points on which we wish to take very serious counsel with our readers—namely, the degree of confinement to which tegs and breeding ewes should be subjected in winter, and the importance of their receiving green feed. Diseases are increasing in our flocks. Tegs die unaccountably under what is esteemed good management. It is getting to be unusual for a farmer to raise good lamb drops for any considerable number of years in succession. Goitred lambs, or miserably undeveloped and feeble ones, are common. It did not use to be so. We can speak "by the card" on this topic,—for we have been a sheep owner steadily *fifty-six years*—i. e., the whole period of our life.

If we look to the care given our sheep for the causes of these maladies, they are, taking all kinds, more cared for than formerly. They, as a whole, are better sheltered. They are fed quite as good and wholesome feed. They are no more crowded into great masses than formerly. Nobody thinks of putting them on low, wet land, or other *known* unhealthy situations. Greatly more attention is given to new dropped lambs, if we except the breeders of the Saxons whilst that feeble variety were in vogue. Whence, then, the change?

Five years since, we believe it was, we gave *our* answer to this question in the Country Gentleman. It was repeated in the Practical Shepherd, and has again and again been reiterated in these columns. It was that our sheep do not receive sufficient green feed and exercise in winter,—that our breeding ewes, in an especial manner, are too much confined to dry feed during the period of gestation, and that, when pampering is practiced, it adds materially to the injuriousness of the preceding conditions. The sheep, in its natural state, is a restless, roaming animal, like the deer and the goat, accustomed to range for its food and loving to scale the mountain and the rock in pursuit of it. In Spain this traveling was kept up. Its best flocks were driven, on the average, 800 miles a year, going and returning between its southern provinces and the mountains. They got green feed every day in the year. They got nothing else, and were never, therefore, pampered. If they suffered from those special diseases which we have mentioned as now affecting their descendants in this country, we are not aware of the fact. Our sheep library, once embracing a large number of standard foreign works, is now scattered,—for we gave them to friends who could not elsewhere obtain them. But among all of these—many of them treating very fully on the Spanish Merinos, and written by persons who had carefully studied their characteristics in Spain,—we do not remember one which described them as subject to these diseases; and we feel very certain, not only that we should now remember the fact if it were so, but that we should have published it in our works on sheep, the earlier ones of which were written with these authorities under our eye. YOUATT, the most copious of veterinary authors, mentions nothing of the kind, nor does our own well-informed LIVINGSTON, who prepared a work on Merinos soon after their introduction into this country, expressly for popular information; and his work has a chapter devoted to their diseases and remedies.

We have not *heard* of these maladies in Australia, where the sheep travel much for their feed and get green feed the year round. The same is true of Texas. We *know* of no country in which the same conditions exist, in which these or other constitutional diseases are common. On the other hand, we *know* of no country where sheep are confined to dry feed and close quarters during a considerable portion of the year, in which they are habitually free from serious and fatal constitutional maladies, most of which, too, are liable, under unfavorable circumstances, to become desolating epizootics. And we *know* of no *pampered* race of sheep—those which are prematurely forced forward and constantly kept fat by high keep—which are not, even without reference to the conditions previously stated, subject to frequent and fatal maladies. The reader will observe that we only attempt to state what we have *heard*, and what we *know* or do *not know*, without attempting to say that there are not exceptions to our assertions. If there are exceptions, we would be glad to learn where they exist.

In the above respects, sheep but exemplify laws which, to a greater or less extent, affect most, if not all, of the animal creation, and illustrate the natural and inevitable consequences of violating those laws. Man, not being purely a herbivorous animal like the sheep, the analogy between them in regard to the necessity of eating *green* vegetables is imperfect,—but too continuous a deprivation of these is hurtful even to man, and they form a part of his most healthful, regular diet. The want of exercise is fatal to the integrity of the human body and to the healthy performance of its functions. Pampering, or excess of food, particularly of rich food, is equally destructive to the human system. Each of these bad causes acts as an auxiliary to the others, without losing any of its own individual force; and, accordingly, when they are united, the progress of physical degeneration is rapid, the seeds of disease are both "*planted*" and "*watered*," and premature death becomes inevitable.

The highly injurious and dangerous effects of abstinence from usual exercise, and excess of rich, stimulating food, to the pregnant human female, we have on a previous occasion shown to be an established conclusion among the most eminent medical authorities. In fact, nobody disputes it. And if common sense does not show, common observation certainly does, that the same rule applies to pregnant females among brutes. Can the mare or sow be treated thus with impunity to herself and her offspring? That the sheep cannot, the miserable, feeble, diseased lambs, now so often produced by naturally hardy, healthy dams, are giving convincing proofs.

Now as the winter approaches, let our sheep farmers prepare, by making each sheep yard or stable open on a separate field, to break up that system of unnatural confinement which is so dangerous to tegs, so injurious to breeding ewes, and so fatal to their progeny. Walking at least a mile a day would highly benefit tegs and breeding ewes, until an advanced period of pregnancy, when less would suffice. Where a store of roots has not been provided for winter use, arrange to let the sheep pick a little daily at grass, when the weather permits,—or, if the earth is long covered deeply with snow, either buy roots or draw proper browse frequently—once a week if practicable—into the sheep inclosures.

Are we asked if we suppose the treatment we recommend will prevent the teg and lamb maladies under consideration. Doubtless not—certainly not at once,—for the results of a vicious system once inbred, cannot be immediately removed. And, furthermore, all know that the best possible habits are not a sure safeguard against prevalent diseases. But all equally well know that such habits are the most efficient preventives of disease, and that bad habits produce or invite it.

Many sheep farmers who had previously practiced the contrary system, have begun, within the last three or four years, to give their sheep exercise and green feed in winter. We know of hundreds of such cases and their results. In nearly every instance the evil has been more or less alleviated,—in many, promptly removed or cured. We know of no intelligent and continuous experimenter who does not think his sheep and their offspring healthier for the change.

FRAUDS IN SELLING WOOL IN CALIFORNIA.—The San Francisco Bulletin, Aug. 2d, states that extensive frauds have been discovered in selling lots of wool purchased and weighed at Red Bluff, Marysville and other places. They were found to have lost from seven to thirteen per cent. on being again weighed at San Francisco, and careful investigation disclosed that the growers or packers at the first named places sprinkled water on the fleeces before baling. The fraud is said to be difficult to detect without careful examination. It is to be hoped the perpetrators of it will be adequately punished, and their names should be published to hold them up to public contempt.

* We are inclined to think that the exercise and green feed (grass) generally obtained in winter by the prairie sheep have a great influence in counteracting the injurious effects of such stimulating food.

Dairy Department.

ABOUT A CROCK OF BUTTER.

NOT long since a friend of ours said he had ordered a crock of butter, and when it came he would show an article of the right stamp. The crock came, but in transferring to the cellar, it got badly broken, involving the necessity of a new one and the labor of re-packing. But what of the butter? Was the boast of its being of the "right stamp" made good? It was not. It failed in several respects. In the first place, there was a want of uniformity in the texture and finish of the several layers composing the crock. Some of them were seamed with blue looking rivulets, or cavities filled with a mottled liquid, showing a lack of manipulation in working out the buttermilk. Other portions were streaked with veins of undissolved salt, evincing great carelessness or a lack of judgment in the use of that article. Then, again, there were occasional hairs, threads or strings meandering through the mass, all tending to detract from the character and value of the butter.

These faults are too common, and should be corrected, — for, of all things entering into family consumption, dirty or poorly manufactured butter is the least endurable. There is no excuse for these shortcomings on the part of butter makers. If persons in the dairy business lack the knowledge necessary to success, let them acquire it from those in possession of it. This can soon be done by those anxious to excel and sufficiently honest to aim at doing justice to others.

In putting down butter, there should be an effort at uniformity throughout the operation. This is not hard of attainment, hence a failure should not be imputed to bad luck, but to a negligent disregard of the conditions of success. Work the butter clear of the milk to begin with. See that no hairs or threads meander through it. In salting, if in doubt as to the quantity to be used, prepare a pound, or less, by trial, till the proper quantity has been ascertained. When the taste is satisfied, observe the same proportions in successive churnings till the tub or crock is filled. The result will be a mass of uniform character, free from veins of milk or undissolved salt, of hairs or strings, and fit to be eaten with the eyes open and the senses of taste and smell active in the performance of their allotted functions.

The Cheese Market.

THE Cheese Market at Little Falls on the 9th inst. is reported to have been quite active. The sales were principally confined to farm dairies, and according to the Utica Herald, increased animation was observable in all descriptions. Prices improved some upon those of the previous week. Dealers from New York, and some from Canada, were in attendance. Sales of dairies opened at 12c. to 13¼c., going up, for certain lots, to 15¼c. The bulk of the sales, however, were made at about 14c.

The Liverpool market reports are to Aug. 24th. Sales of cheese, for the week, 27,750 boxes, and a rather heavy market except for best descriptions. These showed considerable activity. American good, 52s.@56s. Extra fine 56s. to 60s.

The Canadian production, owing to the protracted prevalence of drouth, will fall considerably short of the spring estimate. The same is likely to prove true with respect to the States.

A Valuable Dairy Cow.

THE Practical Farmer publishes a communication from ISAAC W. VAN LEER, giving an account of the butter product of a grade Devon purchased from a drove. After her first calf had been sent to the butcher, she made 13 lbs. of butter per week on grass alone. In June, 1866, after her third calf was disposed of, she was milked separately—feeding upon grass and a small quantity of corn—for seven consecutive days, when the cream was churned and produced 16½ lbs. of high-colored and excellent butter. The pasture in which the cow was kept was white clover and blue grass.

Milking Before Calving.

A DAIRYMAN writes the Practical Farmer that the best cows he ever raised had to be milked several weeks before the period of calving. This practice was a preventive of garget, and tended to the general health of the animals. It sometimes happens that the udders of cows become greatly and painfully distended weeks before calving, and but few persons resort to the sensible practice of relieving them by milking. If this were practiced more there would probably be less complaint of garget than there now is.

A LARGE COW.—According to the Portville Mirror, (Chaut. Co.,) WILLIAM F. WHEELER of that place has the largest cow known of in that region. She weighs 1,475 lbs., and gives about 40 quarts of milk per day.

RUSTY STRAW—EFFECTS ON ANIMALS.—B. MCCLURE states in the Practical Farmer that feeding rusty straw to cattle and horses has a very injurious effect upon their health and efficiency. The class of diseases induced by this ailment are marasmus, glanders, farcy, skin diseases, catarrhal affections and watery swellings of the body and legs. He adds that during the last eight months, out of 700 horses fed upon such straw, from 45 to 50 were on the sick list.

BIRDS AND INSECTS OF ILLINOIS.—The Steuben Co. (N. Y.) Courier mentions as among the novelties to be exhibited at the Fair in Bath, a collection of over 1,000 specimens of birds and insects, native to the State of Illinois, prepared and owned by Dr. J. VELIE of that place.

Rural Notes and Items

NATIONAL TRIAL OF PLOWS, &c.—A National Trial of Plows and Ag'l Implements, under the auspices of the N. Y. State Ag. Society, commenced at Utica on the 11th inst. According to our advices the entries were unexpectedly small in number, while the attendance has been far less than anticipated. The entries of Plows were as follows:

Class 1.—A sod plow, for stiff soils. F. F. Holbrook, Boston.

Class 2.—A plow for stubble land in stiff soils. F. F. Holbrook, Boston, and Collins & Co., N. Y.

Class 3.—A sod plow, for sandy soils and light loams. A. L. Braley & Co., Trenton, N. J., F. F. Holbrook, Boston, Mass.

Class 4.—A plow for stubble land, which will cut a furrow twelve inches deep, with three horses, which will raise the lowest soil to the surface of the furrow. F. F. Holbrook, and Collins & Co.

Class 5.—A Michigan sod and trench plow. F. F. Holbrook, Boston.

Class 6.—A sub-soil plow in connection with an ordinary plow. R. J. Wheatley, DuQuoin, Ill.

Class 7.—A ditching plow for opening drains. A. P. Rourt, Somerset, Va.

Class 8.—A machine for exavating ditches for underdraining. E. Heath, Flowerville, N. Y.

Class 9.—A steel plow for alluvial and unctuous lands. Collins & Co.

Class 10.—A swing or side-hill plow. F. F. Holbrook, Boston, and L. D. Burch, Sherburne.

Several plows not entered for trial were on the ground, some of which attracted much attention.

The Swivel Plow of F. F. HOLBROOK was first tried, and, according to the Utica Herald, did pretty fair work. BUSH'S Improved, or Chenango Clipper, followed and was quite a favorite. A Turf Plow, cast from cast-steel, entered by COLLINS & Co., New York City, performed well, and is simple in construction and easily repaired. A novel Sub-soiler was operated by R. J. WHEATLEY, Ill. The "Universal" Plow—so named because adapted to all kinds of plowing—by F. F. HOLBROOK, cutting a furrow from ten to fifteen inches deep and from ten to sixteen wide, at the option of the plowman, received much commendation. The REMINGTON Steel Plow, called the Valley Plow, performed very well, turning the sod quite as perfectly as the noted Michigan Plow. On the second day four Stubble Plows were tried, those of Mr. HOLBROOK of Boston, and COLLINS & Co., of Connecticut. The first was the Sod Plow, used the previous day, divested of its skimmer attachment, the same as the "Universal," and performed well in stubble, as it did also in turf.

The dynamometer tests took place on the second day, but the result had not been made public at our latest advices. The attendance was small and the interest manifested but of an indifferent character.

The entries of Harrows and Cultivators was comparatively small. They were:—WM. H. BURTIS & Co., Watertown N. Y., one in each class; J. E. MORGAN, Deerfield, one; FOWLARD HOUSE, Oneonta, N. Y., two-horse Cultivator; N. NISHWITZ, Williamsbugh, N. Y., Pulverizing Harrow; N. HOOKS, Appleton, Maine, one-horse Cultivator; BROWN, SCHERERLING & Co., Massilan, Ohio, a Shovel Plow and Cultivator combined: F. F. HOLBROOK, Boston, Mass., a Cultivator; ALDEN & Co., Auburn, N. Y., Cultivator.

RURAL HOLIDAYS.—The labors of spring and summer on the farm, always severe and exhausting, are very properly supplemented by the relaxation and hilarity attendant on the Autumnal Fairs. These are properly the farmer's holidays—a season in which those so disposed can combine pleasure with profit, while intermitting for a few days the toils incident to an agricultural life. Many abstain from visiting fairs under the plea that they do not pay. If the amount of a premium be the sole consideration of attendance, the plea is probably valid. But is this all of an agricultural exhibition? No, nor even a main feature of one. Fairs have other aims than simply to deserve and secure premiums. They bring into small compass the varied experiments of widely separated parties: provoke comparison—the spur and incentive to improvements—and thus lead to them. They do more than this: they serve to brighten the chain which should link together a common brotherhood, soften asperities, incite to emulation and enlarge the circle of human sympathies.

STATE FAIR—ENTRIES.—The Assistant Secretary of the State Agricultural Society, S. R. EARLES, reports that the entries for the Fair are larger and of a class superior to that of any previous State exhibition. The fine herd of the Hon. EZRA CORNELL of Ithaca is among the entries. Canada is also largely represented. The implement entries are also numerous, embracing the States of Illinois, Michigan, Ohio, Pennsylvania, Massachusetts and Connecticut. It would appear, from these indications, that New York is to be confronted by numerous and able competitors, hence it will require the best efforts of our farmers and mechanics to preserve the reputation of the State intact. But a comparatively brief period of time remains to complete the arrangements necessary to this result, as the Fair is to be held Oct. 1—4.

MORE ALDERNEY STOCK IN MONROE.—We are glad to learn that Messrs. S. W. CLARK and J. M. WEBSTER of Parma, this county, have recently purchased of THOS. GOULD, Aurora, N. Y., a fine Alderney bull. "Trojan Emperor," bred by E. O. EATON of Troy, from stock imported by J. A. TAINTOR of Hartford, Conn. Also, an excellent cow of the same breed. We presume these are the best specimens of Alderney stock in this region, and trust they will be the progenitors of many fine animals.

NO RINDERPEST ON LONG ISLAND.—The reported existence of rinderpest among the stock of CHARLES H. JONES, L. I., has elicited a note from A. LAINTARD, V. S., stating that the disease is known as *Cerebro Spinal Meningites*—infectious, and most fatal to horses, but not considered contagious. Mr. J. lost nine horses and two mules by it.

SENECA COUNTY FAIR.—We learn, from the Ovid Bee, that HUGH T. BROOKS, Esq. of Wyoming county, is engaged to deliver an address before the Seneca Co. Agricultural Society at Ovid. The selection is a good one, as will no doubt be made manifest by the result. The Fair will be held on the 8th, 9th and 10th days of October.

STEUBEN COUNTY FAIR.—The Courier, Bath, states that preparations for the Fair at that place, Sept 25th—27th, are progressing finely. A new and commodious hall with ample galleries is completed. The driving park is in order, and a new sheep house is being erected.

MONROE COUNTY FAIR.—The arrangements for the coming Fair of the Monroe County Ag. Society, commencing Sept. 25th, are progressing favorably. If the Fair is not successful it must be in consequence of unpropitious weather or of decreasing interest.

AG'L FAIRS.—For lists of State, County and Local Fairs see our issues of August 17th and 31st.

HORTICULTURAL.

AUTUMN PLANTING.

MANY persons of limited experience are bewildered by the contrary opinions expressed as to the feasibility of autumn planting. If the circumstances which affect the success or failure of this operation were well understood, a great waste of money and labor might be averted.

As a rule, it is better to use the autumn in thoroughly preparing the land, and then plant in the spring,—but if it is desirable to do otherwise, perfectly hardy trees may be put out in the fall. The setting of all very small and tender plants is best deferred until spring. Those who advocate fall planting do so mainly on the theory that the roots of plants exercise their functions as soon as put in contact with the earth in their new positions, and continue to grow all winter, thus giving the tree a start which it could not have if spring planted. But the theory is often upset by the action of frost on the soil drawing the roots, and by the severe cold withering the bark, and striking hard at the vitality of the plant. It is only where a long, mild autumn follows the period of planting, and the soil is well drained, either naturally or artificially, that it is generally advantageous to plant before spring. In northern regions, where the winters are long and severe, we should certainly prefer to prepare the ground in the fall and plant the trees in the spring.

But if fall planting is resolved upon, it should be done early and well. See that the leaves are all stripped from the trees before removing them, if possible,—for they will exhale a large amount of moisture, and cause shrivelling of the bark. Provide thorough drainage from the roots, as well as from the surface, and heap a little mound of earth around the the trunk for the purpose of steadying the tree against the wind, to throw off water, and to protect it against the depredations of mice.

Peaches, plums, nectarines, apricots, cherries, and the berries, are surer of success if planted in the spring.

AMERICAN POMOLOGICAL SOCIETY.

THIS Society held its eleventh biennial session at Polytechnic Hall, St. Louis, Mo., commencing on the 10th of September and adjourning on the 13th, to reassemble in Philadelphia two years hence. There were exhibitors from the States of Missouri, Illinois, Indiana, Ohio, Kentucky, North Carolina, New Jersey, New York, Iowa, Pennsylvania and Massachusetts. The fruits exhibited comprised 680 dishes of grapes, 82 of apples, 745 of pears and 212 of peaches. The President, MARSHALL P. WILDER, said the exhibition of fruit greatly exceeded expectation, rivaling anything heretofore seen in the way of pomology. The fruit was sold at auction and commanded high prices.

The address of the President, issued in pamphlet form, is an able and interesting document, which will be adverted to hereafter. After the reading of the address the Treasurer made his report, showing a balance of $265.93 in the treasury.

The Report of the Committee on Officers was then read and adopted, as follows:

President—MARSHALL P. WILDER.

Vice-Presidents—California, R. T. Perkins; Connecticut, Daniel S. Dewey; Delaware, E. Tatnall, Dist. Columbia, Wm. Saunders; Florida, Joseph J. Weed; Georgia, P. J. Berckmans; Illinois, Arthur Bryant, Sr.; Indiana, I. D. G. Nelson; Iowa, D. W. Kauffman; Kentucky, Lawrence Young; Maine, S. L. Goodale; Maryland, W. C. Wilson; Massachusetts, C. M. Hovey; Michigan, William Bost; Mississippi, J. M. Stone; Missouri, B. F. Edwards; Minnesota, D. A. Robertson; New Hampshire, Fred. Smythe; New Jersey, Wm. Perry; New York, Charles Downing; Ohio, John A. Warder; Pennsylvania, Robert Buist; Rhode Island, Silas Moore; Tennessee, M. S. Frierson; Texas, William Watson; Vermont, E. C. Worcester; Virginia, Yardley Taylor; Wisconsin, J. E. Plumb; Alabama, L. F. Mellen; Arkansas, J. H. Ingram; Louisiana, D. M. A. Swasey; North Carolina, Wm. M. Steele; South Carolina, Wm. Summer; Kansas, Charles B. Lines; Oregon, Simeon Francis; Utah, J. E. Johnson; Nebraska, Dr. H. Link; West Virginia, Z. Jacobs; New Mexico, Col. Ruyther of Massillon; Montana, Nicholas Waugh; Colorado, Chas. Pauls; Province of Ontario, Canada, Charles Arnold.

Treasurer—Thomas P. James.

Secretary—F. R. Elliott.

Further notice of the proceedings and discussions is necessarily deferred.

TOMATOES.—MY EXPERIENCE.

EDS. RURAL NEW-YORKER:—I have tried three varieties of tomatoes the present season and give you my experience with them, grown as nearly under the same circumstances as possible.

Tilden.—Ripened a few specimens earlier than Large Smooth Red. It then held up for a short time, and the general crop seems to hold on a little later. Quite variable in size; very handsome in appearance; sells well in market; firm flesh; good quality; rots some. On the whole a very valuable sort.

Large Smooth Red.—Comes with a rush when it commences to ripen. From present appearances will not hold out as long as Tilden. Rots some; uniformly of good size; sells well in market. Best for general crop.

Keye's Early Prolific.—No earlier, if as early, as either of the preceding. Very prolific bearer; fine flesh; entirely free from rot, but too small for cultivation unless freedom from disease is an object. A "thirty days" humbug.

Since writing the above, a little woman in the house, who is supposed to know something of the qualities wanted in a tomato says Keye's is very nice for pickling and preserving, because it has firm flesh and few seeds, but if she had the marketing of it, doubts whether she would recommend it. I have had to sell several baskets of it in this market for a less price than either of the other varieties named. Objection is always made to its small size. Several cultivators with whom I have conversed, state that it is no earlier than older, well known sorts. Let other cultivators give their experience.

MARK D. WILLSON.

No. 195 North St., Rochester, N. Y.

HALE'S EARLY PEACH.

THIS variety is universally esteemed among peach growers, and ranks, perhaps, as the best all things considered, of the extreme early kinds. It is said to have originated in Portage county, Ohio, from seed planted by a German. It ripens very early, from the middle of July to August, and since its introduction into New Jersey and Delaware, the peach season begins at a period very perceptibly earlier than before. It is a fair, healthy grower, the leaves are glossy, flowers large, and it is an abundant bearer. The fruit is of medium size, nearly round, skin mottled red, dark red cheek, flesh white, melting, high flavor, and parts free from the stone.

PEACHES GRAFTED ON CANADA SHRUBS.

EDS. RURAL NEW-YORKER.—We in the back woods cannot always keep posted in all that is going on in the outside world. The latest thing in horticulture that has been introduced to our credulous people is a novelty in the peach line, viz., the "Stump the World," grafted on a Canada shrub so that it will never winter-kill. Now, Mr. Editor, this promises to be a great acquisition if the agent's story is true, and a great many believe it is. "Stump the World" we know is a splendid peach, but it has the bad fault, common to other trees of this kind, of freezing on our cold prairies in winter. But this new comer promises to avoid the difficulty in future. I think, Mr. Editor, you should have informed us of this before this time through the RURAL, and we might have been enjoying our peaches now when we have none, and not have waited for a traveling nurseryman to be the first to circulate the good news(?)

Please tell us if this is a humbug, as the agent is taking his thousands of dollars' worth of orders in this section. In this connection let me say our corn crop in this county is a failure, owing to a protracted drouth; other farm crops were splendid, fruit just middling.

ROBERT MILLIKEN.

Indian Creek, Monroe Co., Mo.

REMARKS.—The agent that sells you peach trees, pretended to be grafted on a "Canada shrub," is playing a very stiff game of humbug. Peach trees are seldom grafted, the operation being rarely successful, and no nurseryman would undertake to get up a stock in that way. Budding peaches on plum stocks tends to dwarf them somewhat, and by making slower growth and maturer wood, they may withstand the winter better; but the buds are just as liable to be destroyed by cold as those on others.

HORTICULTURAL GLEANINGS.

About Champagne.—Vin Mosseux, or champagne, hardly dates beyond the year 1800. In 1780, 6,000 bottles was a large year's manufacture for Moet & Chandon, who now sell 150,000 dozen. At Hautvilliers, an hour's ride from Rhelms, lived Dom Perignon until 1714, the *procureur* of the Abbey, and the inventor of champagne; he, too, inventedthe champagne cork. The average cost to the manufacturer is 2 to 2½ francs per bottle, but it costs 7 francs at the Rheims hotels. The Germans control much of the champagne trade at Rheims. The Hiedsiecks, Piper de Saehs, the Mumms and Roderer, are all Germans, and every wine establishment in all Champagne is, more or less, under their management. The soil which grows the champagne is very poor. Rheims is a desert. The wine district is more attractive. There are about 41,030 acres, shared between 16,095 proprietors. They live in stone-built villages. The pressing of the grape, mixing of the varieties, and bottling and storing, are all very delicate duties, and in 1857-8 the loss by breakage from gas was 25 per cent. of the whole. It averages 10 per cent., and is controlled by employing a lower temperature. The wine is nursed from two to four years, and is in constant motion. Commercial Champagne is rarely kept more than two years; that of '58, the best ever made, is just perfected. When the wine is sold, each bottle is opened and a *liqueur*, composed of white sugar, white wine and spirit of cognac is added to suit the market. France and the continent want a light, sweet wine; Russia, sweet and strong; England, dry and vigorous, and America something between the French and English. Dry champagne must be made from the finest raw wine, sweet can be made from any material. The very best go out to England. A bottle of ordinary champagne contains from 30 to 40 per cent. of *liqueur*; dry, fine wine, 10 to 15 per cent. The cork is put in by a machine. Champagne should not explode noisily or frothily. Good wine absorbs carbonic acid, and its sparkle will continue for twenty-four hours. In 1846 a manufacturer saved but 120 bottles out of 6,000, owing to the poor quality of his bottles. The connoisseur must rely upon taste and smell in forming his judgment. If his sight shows that the wine flows smoothly, sparkles briskly, is transparent, glistening, and of a pale amber color, he may believe he has a good and old wine. Wine to be tested should have a temperature of 50° to 54° Fahrenheit. If good, a drop or two on the hand will have an aromatic odor; if bad, a mixed sugary and spirituous smell. The *bouquet* is only to be detected by the palate. Champagne does not improve by age.

Asparagus Beds.—The Gardener's Chronicle, referring to the cultivation of asparagus in France, says:—"In some places it is planted in trenches like celery, ridges of soil being thrown up between the rows. The trenches are about eight inches deep, ten inches wide, and four feet apart. The young plants are deposited in their places with the greatest care, the roots being spread evenly, and some well-rotted manure placed over them. They remove the soil every autumn from around the roots, and replace it with well-decomposed manure, and the plants being in trenches the rain is constantly washing manure to the roots. Every spring they pile up a little heap of fine earth over each crown. When the plantation has arrived at its third year they increase the size of the little heap, and pile up a small mound of light, rich soil over the crown. By this means they obtain shoots much longer than by the usual plan practiced in the United States, and it is thoroughly blanched, a condition in which it is best suited to the Parisian market.

Newman Plum.—Mr. ELLIOTT of Cleveland writes the Horticulturist that he has "received samples of the 'Newman Plum' from D. L. ADAIR, Esq., of Hawesville, Ky., and that the variety so sent is of a roundish-oval form, about one inch in diameter, clear light red, with a blue bloom, and until the fruit is fully ripe there are numerous white specks or dots; flesh yellow, sweet, somewhat stringy, yet tender, and adheres to the stone, which is quite large for the size of the fruit. In my earlier days I frequently met with wild plums in Ohio, and have often done so in Missouri, that were almost if not quite identical, and in the years 1836 to '45, or thereabouts, they were abundant in the markets of all the western towns and cities. Mr. ADAIR claims for it perfect exemption from the curculio—a matter of course of which he should know; but, unfortunately for its chances in Ohio, I am disposed to think it would be no more free than any of our wild varieties."

A Grape Experiment.—Mr. PETER KEHL, the pioneer vine grower on the Wisconsin, favors the Sauk City Pioneer with an account of an experiment made by him:—"Taken by surprise by the early cold weather last fall, before he could press all his grapes, he was forced to winter them over in some manner. He put them up in boxes and allowed them to freeze. On the 3d of April he began to press them, and found that the wine is one hundred per cent. better than that made from the same quality of grapes last fall. Out of about 5,000 pounds of grapes thus wintered, he made 625 gallons of wine. Mr. KLEIMPELL, who examined the grapes, says they were in good condition, and that he did not taste any better last fall."

The Apple Worm (Carpocapsa Pomonella.)—The Practical Entomologist says:—"This imported pest is ruining the apples and pears in all quarters this year. From Pennsylvania to Iowa, all accounts agree that it was never so destructive before. What is very remarkable, the same species, as I have experimentally proved by breeding the moth, has attacked the native crab-apples near Rock Island, Ill. I have proved in the same manner that the species attacking the pear is identical with that which attacks the apple."

Grape Soils.—Dr. J. A. WARDER, alluding to grape soils, states that it is the very common opinion, after many years' experience, of those who have been eminently successful in the culture of the vine, that the clay cannot be too hard and compact for the roots of the grape to penetrate. Among the plants which are an indication of good grape lands is the blue grass or *Poa compressa*, which always takes possession of such clays, particularly if they contain lime.

Origin of the name "Scuppernong Grape."—CALVIN JONES, in Southern Planter, writes:—"This grape and wine had the name of Scuppernong given to them by HENDERSON and myself, in compliment to JAMES BLOUNT of Scuppernong, who first diffused a general knowledge of it in several well-written communications in our paper, and it is cultivated with more success on that river than in any other part of the State, perhaps, except on the Island of Roanoke."

A Tough Garden Story.—The Dunkirk Journal sets up the garden of E. KEYES of that village, pretty steep. Strawberries, a second crop, nearly ripe and blossoms for a third one just opening. Bean pods three feet long! Cucumbers, in the same garden, planted about the 25th of June, with fruit on the vines from four to six feet four inches in length, and still growing! There is no use in talking garden after this.

Bulbs.—Procure your stock of bulbs early, as you will then stand the best chance of securing good ones. Those of medium size are best, if well matured. They should be planted at once. Well rotted cow manure mixed with a portion of fine sand is the best fertilizer. Plant about four inches deep, and be sure the soil is well drained and worked up finely.

Frogmore Early Bigarreau Cherry.—The London Florist describes a new cherry under the above name, as being "large, obtuse heart-shaped; skin with a brilliant red cheek, dotted with minute yellow points; flesh delicate, translucent, tender, melting, juicy, with a rich sweet flavor," and ripening before any of the so-called Bigarreaus are in market.

Fruit Crop in California.—An estimate made of the value of the fruit crop of California places the apple at about $400,000, the peach at $300,000, the plum at $160,000, cherries, apricots and pears at $230,000, and grapes at over $1,000,000.

Strawberries.—Mr. Pardee of Illinois, has found that lime slaked in salt brine, sown broadcast, had kept insects from strawberries.

UNPRODUCTIVE PEAR ORCHARD.

A YOUNG orchardist informs us that some years ago, observing the reports of the high profits obtained from pear trees, he was induced to set out several thousand—that he has given them good cultivation—that they grow well, but that they refuse to bear, or make him any returns. Some of his friends at the time regarded him as running into a wild speculation, and now remind him frequently of their prediction. He wishes to know what he can do to induce his trees to bear, and to give him at least some slight return, if it be only a small part of the immense profits which he once expected.

We would advise him to keep his orchard in a moderately growing, healthy condition, by a proper degree of cultivation, and not to be in too great a hurry for heavy crops. Extraordinaries excepted, he would doubtless thus provide for himself a valuable and handsome piece of property in the future. It is important to preserve a medium degree of growth. If the trees are too thrifty, they will be more liable to injury from winter, and to fire blight in summer. If too feeble, they will still be liable to disease, and not attain good size, nor bear the best fruit. In order to gradnate properly the degree of culture which they should receive, the rule which we have elsewhere given should be kept in view, namely: to observe the length of the annual shoots, and if much less than one foot, to increase the cultivation, by mellowing the surface, and manuring if needful; and if much more than a foot in length, to neglect cultivation, or even allow the ground to be covered with grass. If a young orchard can thus be kept in a healthy state, it will doubtless bear abundant and profitable crops in time.

There may be some conditions of soil which good management cannot obviate. Probably a quicksand subsoil is bad for a pear orchard, and a good strong clay well drained subsoil the best. These particulars should be examined before going into heavy expenditures for the purchase of trees and planting. If an orchard of some years' standing is found now to occupy soil not properly drained, no time should be lost in placing tile at a depth of two and three-fourths to three feet, and midway between the rows, unless these are quite near together, as with dwarf pears, in which case each alternate space may receive the drains.—*Country Gent.*

Domestic Economy.

CULINARY FAILURES AND SORROWS.

"BLUE BELLE" sends us a *rather* long communication, detailing some of her mishaps in the culinary department. We regret to abridge the favors of our correspondents, but are frequently compelled to do it or omit them altogether. This is one of the cases where retrenchment is a necessity. The following extracts disclose our correspondent's difficulties while operating in the cake line. She says:

"I obtained the receipe from 'Miss BEECHER'S Receipe Book,' and thought it would not fail to be good from such a reliable source. After taking extra pains to ensure success, I placed it in the oven, and not long after looked in to see how it was getting along, when I found that it was literally *boiling*. Well! thought I, this is the first time I ever saw cake boiling! However, I wisely concluded to let it alone, and at length it simmered down until it looked like—really I don't know *what*.

"The next discouragement I encountered was in making fruit cake. That it might be just right I used a great deal of fruit, and every kind of spice—among which was an unusual quantity of mace. The cake was mixed and baked, and as I drew the rich brown loaves from the oven and saw how nicely they looked I breathed a sigh of profound satisfaction, thinking I had hit it at last, but was not certain until I had tasted it. On eating a portion, I discovered that it left a smarting sensation in my throat—a fact noticed and commented on by other members of the family, who partook of what was designed to be a crowning effort in the fruit cake line. Upon investigation I found that the mace, used so freely, was in reality Cayenne pepper!

"My efforts to make white cake have been truly Herculean. I have tried again and again, but all to no purpose. As soon as one error is corrected, another is committed. At first every one proved *yellow* instead of *white*. I made inquiries in regard to this, and was told that I used too much soda. The next time I used less, and every cake was heavy and not half baked. The last I made was like my fruit cake in one respect—it *looked* well; but on trial I found that it tasted slightly of *paregoric*, instead of the delicate flavor I had anticipated. Some one had, *maliciously*, no doubt, changed the bottles, and hence this mortifying mistake. I begin to think that it is indeed 'a long lane that has no turn.' Why should *I*, of all others, be so unfortunate? Is it thickheadedness, or is it 'just my luck?'"

BRONSON, GRAVES & SELOVER,
Washington Street Nurseries,
GENEVA, N. Y.,
Offer for the present Fall a large and well grown stock of
Fruit and Ornamental Trees, Evergreens, Shrubs, Roses, Small Fruits, &c.
—ALSO—
NATIVE AND FOREIGN GRAPE VINES,
Very healthy and strong. Hedge Plants, Plum and Cherry Seedlings, and a full supply of general Nursery articles. We invite correspondence or a personal examination of our stock. 922-2tco

THE NEW GRAPE, SALEM.—This Grape is the most successful result of the Hybridizations originated and carried on by Mr. E. S. Rogers of Salem, Massachusetts, whose well known character for probity and modesty of statement affords every guarantee for the unsurpassed excellence of this, his favorite variety. His published statement is as follows:—"The subscriber now offers for sale for the first time, a new grape, named SALEM, from the place of its origin. This is a variety considered not only superior to any of the former well-known numbers, but also to any hardy grape at present before the public, combining, as nearly as possible, every quality desirable in an out-door grape, being one of the hardiest, healthiest and most vigorous of vines, and producing enormous crops of beautiful and high-flavored fruit. Like other well-known kinds, Nos. 4 and 15, this is a hybrid between a native and the Black Hamburg; bunch large and compact, berry large as Hamburg, of a light chestnut or Catawba color, thin-skinned, perfectly free from hard pulp, very sweet and sprightly, with a most exquisite aromatic flavor, not equaled by any other out-door grape for wine or table; as early and hardy as Delaware or Hartford, having never failed to ripen its fruit, in the most unfavorable season, for the past six years.

Taking all its qualities into consideration, earliness, hardiness, and great vigor of vine, size and quality of fruit, it is pronounced by the best judges who have tried it, to have no equal among all the numerous varieties now before the public; and I can, with confidence, recommend it as the best of all my collection, and now offer it for the first time." E. S. ROGERS, Salem, Mass.
Salem, February, 1867.

NOTICE.—The subscriber would here state that he has disposed of his entire stock of vines and wood of the Salem Grape to J. L. WARING of "Amenia Vineyard," Amenia, Dutchess Co., N. Y., to whom all orders for the same must be hereafter addressed. E. S. ROGERS.
Salem, Mass., March 2d, 1867.

In addition to the high merits of the "Salem," the undersigned is able to say, from personal experience and knowledge, that the claims put forth in favor of the Salem are in no respect exaggerated. During the present season it has made uniformly a most vigorous and healthy growth, and proved itself impervious to mildew, where vines of most of the new and high priced varieties, growing by its side and receiving equal care in culture, have been seriously affected. It is believed that as a paying grape, especially for market purposes, the Salem is without a competitor among out-door varieties.
J. L. WARING.

I take pleasure in announcing that, since purchasing the Salem Vine, I have disposed of my Vineyard and Propagating Establishment, including the entire stock of the Salem, to JAMES A. REQUA, Esq., who will hereafter carry on the business with every facility for its successful prosecution. J. L. WARING.
Amenia, N. Y., August 21, 1867.

Having purchased the above, and having secured the services of a most experienced and successful Propagator, with able assistants, I design to make the growing of vines for sale a specialty, and hope to furnish the public with a class of plants unsurpassed in quality, and in every instance warranted up to standard and true to name. Price List and Engraving sent on application to
922-1t JAMES A. REQUA,
August 21, 1867. Amenia, Dutchess Co., N. Y.

Ladies' Department.

A FALSE STEP.

BY MRS. E. B. BROWNING.

Sweet, thou hast trod on a heart,
Pass! there's a world full of men;
And women as fair as thou art
Must do such things now and then.

Thou only hast stepped unawares,
Malice, not one can impute;
And why should a heart have been there,
In the way of a fair woman's foot?

It was not a stone that could trip,
Nor was it a thorn that could rend;
Put up thy proud under-lip!
'Twas merely the heart of a friend.

And yet, peradventure, one day
Thou, sitting alone at the glass,
Remarking the bloom gone away,
Where the smile and its dimplement was,

And seeking around thee in vain
From hundreds who flattered before,
Such a word as, "Oh, not in the main
Do I hold thee less precious, but more!"

Thou'lt sigh, very like, on thy part,
"Of all I have known or can know,
I wish I had only that heart
I trod upon ages ago!"

WONDER-WORKERS.

'Tis said that Time works wonders. So, indeed, it does; wonders without number, very many of which approach almost to miracles. Time does a great wonder business, and might do more, perhaps, if only there were more opportunities for it to improve. But it has a whole troup of co-adjutors, wonder-working no less busily than itself. They are all around us. They keep pace with the years, and surprise us at every turn in life. And a hearty welcome to them all, say we!

Workers of every class — masculine, feminine or neuter,—ought to receive a cordial greeting from all man and woman kind. Wonder-workers are by no means to be excepted. We are not quite certain as to the gender of all of them, but as we are not going to parse them it doesn't matter. If masculine, they are good; if feminine, better; and, we say it not ungallantly, if neuter, best. There are occasions when a distinction as to sex is detrimental, or would be, and then the lack of sex is a happy thought. Home is neither him, nor her, but *it* — home. It is where the masculines and feminines are, but is in itself neither.

Love is a great wonder-worker. It does its work with a subtleness that fairly charms us. It builds more "castles in Spain" than could ever find people to fill them, and adorns them with more laces and damask than looms ever wove. It rears more kingly palaces than ever princes dwelt in; jewels with rare diamonds more crowns than ever were placed upon regal brows; paints pictures beside which Raphael's are as naught; carves beautiful figures more ravishing in their perfection of loveliness than any Michael Angelo every released from their marble prisons; creates a new earth, where are only blossoms and beauty; sets new stars in the heavens that are brighter than any astronomers know of; and is equal to Aladdin's Lamp improved by a first-class reflector! Why, we have known it to transform the plainest, homeliest person into one actually good-looking; and invest a character had in the extreme, with a halo of nobleness almost unheard of.

And Love,—thank Venus and all our other stars!—is neuter. What if Cupid *is* set forth as being masculine? That fact signifies nothing. Whoever is responsible for the existence of that personage is guilty of gross inconsistency, any way. Cupid is pictured with wings; and who has ever had any intimate knowledge of masculine angels?

Imagination is a wonder-worker which goes hand in hand with Love, and does not a little of its most delicate and charming work. It puts in the finest touches, and the prettiest tints. Close beside them walks Hope; and Patience ought never to be far behind. Beside these there are an hundred others. We haven't space to speak of them. Look into your own living, and you can easily determine what has wrought out the greatest transformations there.

But perhaps the greatest wonder-worker of all is that material one — that one which may be seen, even felt — the Sun. There is no use in telling our country lady readers to arise early, on a clear morning, and see it as it produces its most gorgeous effects. They do not need such advice. There are some, however, who might be profited by it, if they would. To these we would commend it most earnestly. An early morning's ramble, "just at the peep of day," to some neighboring hill-top, whence you can look down upon a valley overhung by fog, will show you such wonder-working as will well-nigh enchant you. How well we recollect such a ramble, made on a crystalline September morn years ago; when we left the sleepers in the valley, and climbed the "Knob" alone, to see the sun rise. We had glorious payment for our pains — gold and silver sunbeams enough to enrich and make glad a monastery! Below us stretched the valley, winding far away to the north and south, and covered, in all its extent, with a dense fog-bank. Directly the wonder-worker came up from behind the eastern range of mountains and shimmered its rays into this dark, dreary mass, instantly transforming it into a lake of silver dazzling in its magnificence.

There was some wonder-working done after the fog lifted, and drifted away in clouds against the horizon. There were domes, and minarets, and temples, all set in *basso relievo* against the blue sky; and an army of "red-coats" marching away beyond them, with a movement as stately as though made to "the music of the spheres!"

OUR WIVES AND DAUGHTERS.

How many husbands treat their wives with constant and tender care for their happiness? How many who do not make it unpleasant for their wives to ask for money? How many who do not shrug their shoulders when a trip to the sea-shore and mountain is mentioned? How many who do not return from their business at night, cross and disagreeable? How many husbands who spring to their feet when there is an opportunity to save a step for the wife? How many who seek daily and hourly to add to the happiness of the one whose happiness they have declared to be so essential to their own? How many who do not begrudge the expense of servants who think to take home the little appliances that can make a housewife's work light, who plan for recreations and amusements, who praise the taste and care which make for them so attractive a home? How many husbands could pass the test of interrogatories like these?

The fact is, six men out of ten treat their wives most shamefully. Instead of that tenderness for her which marked the first burst of their interest, they are apt to be sour, petulant and imperious. They make little else than slaves of their wives. They compel them to *ask* for money; they feel they must frown down every plan for pleasure, and, least of all, ever think to speak in praise of that which the wife has done for their happiness. The lives of most husbands are one long train of grumbling and fault-finding. They are blind to the happiness of the one whose life is to them a never-failing joy and inspiration. In many cases they are more courteous and pleasant to the wives of their neighbors than to their own.

There never was a man who did too much for the happiness of woman, and never did a man devote his thought and care to the taste of a true woman who did not reap a rich harvest in return. It is because wives are slighted and neglected that homes are so unpleasant. Women lose all heart and drag out sad and unpleasant lives. Men who promise all sorts of good things, turn upon their reiterated vows and crush the hope and heart of a life that might be to them a never-failing source of joy.—*New York Gazette.*

A KISSING PARTY.

A good story is told of a young married man who, with his wife, helped to make up a large "kissing party" soon after the happy event.

Every girl was called on and kissed except the beautiful young bride aforesaid, and no youngster present cared to kiss her in the presence of her herculean husband, who stood regarding the party with a sullen look of dissatisfaction. Suddenly, however, rolling up his sleeves, he stepped into the middle of the room and burst forth:

"Gentlemen, I have been noticing how things have been working for some time, and I ain't half satisfied. I don't want to raise a fuss, but——"

"What's the matter, John?" inquired a dozen voices. "What do you mean? Have we done anything to hurt your feelings?"

"Yes, you have; all of you have hurt my feelings, and I've just this to say about it:—Here's every girl in the room has been kissed near a dozen times apiece, and there's my wife, who I consider as likely as any of them, has not had one to-night, and *I* just tell you now, if she does not get as many kisses the balance of the night as any gal in the room, the man that slights her has got me to fight—that's all. Now go ahead with your plays."

The young wife was not slighted again that evening.

Beautiful and True.—In an article in Frazer's Magazine this brief but beautiful extract occurs:—"Education does not commence with the alphabet. It begins with a mother's look—with a father's smile of approbation, or sign of reproof—with a sister's gentle pressure of the hand, or a brother's noble act of forbearance—with a handful of flowers in green and daisy meadows—with bird's nests admired but not touched—with creeping ants and almost impossible emmets—with humming bees and glass bee-hives—with pleasant walks and shady lanes, and with thoughts directed in sweet and kindly tones and words to mature to acts of benevolence, to deeds of virtue, and to the source of all good—to God himself."

Modesty and Docility in the Young.—Goethe was in company with a mother and daughter, when the latter, being reproved for something, blushed and burst into tears. He said:—"How beautiful your reproach has made your daughter. That crimson hue and those silvery tears become her much better than any ornament of pearls; these may be hung on the neck of any woman, but those are never seen disconnected with moral purity. A full-blown flower, besprinkled with purest hue, is not so beautiful as this child blushing beneath her parent's displeasure, and shedding tears of sorrow for her fault. A blush is the sign which nature hangs out to show where chastity and honor dwell."

Tribute to Woman.—Daniel Webster once paid the following beautiful tribute to woman: "There is nothing upon this earth that can compare with the faithful attachment of a wife; no creature who for the object of her love is so indomitable, so persevering, so ready to suffer and to die. Under the most depressing circumstances, woman's weakness becomes fearless courage, all her shrinking and sinking passes away, and her spirit acquires the firmness of marble—adamantine firmness—when circumstances drive her to put forth all her energies under the inspiration of her affections."

Choice Miscellany.

TO THE SUMMER WIND.

BY ELIZA O. CROSBY.

Blow on, O cooling wind! through these long summer hours,
And break the waves of heat
That quivering rise, and with oppressive powers
Around us closely beat.

Blow on, and catch the breath from tufted meadow sweet,
From fields of clover-bloom,
From tassled pines, and lonely fern-brake at their feet
Deep in the forest gloom;

And mingled with the hum of bees, the song-birds' trill,
Bear them with love afar
To gladden some sad heart with country-longing filled,
Mid city crowd and jar:—

To stir within some heart sweet memories of yore;
To touch some brow of care,
Some like the mother's gentle touch of old, or more
Like breathings of her prayer.

With gentle fingers raise the hair from brows of youth,
Unmarred by care or shade,
But not the flowers displace—the blooms of love and truth
May all too quickly fade.

More gently lift gray hair from brows that long ago
Were fair and daisy-crowned,
Now soon to lose care-furrows, and time's drifted snow,
Beneath the daisied mound.

Linger with breathings low round mounds o'er soulless clay,
Where starry flowers are set;
The grass grows there, and graves in hearts that grieve to-day
Will bear joy-blossoms yet!

To-day we feel thy touch, and catch thy breath of flowers,—
We would thy presence keep!
When these earth-senses, this earth-life no more is ours,
Then linger where we sleep!

Orangeport, N. Y., Aug., 1867.

HOME AND FOREIGN TRAVEL.

Perhaps we say nothing new in asserting that the "Yankee nation" is ubiquitous. We are a people of travelers. The restlessness of our human nature renders quiet staying at home almost an utter impossibility. We want change, and as soon as we acquire a little, of the "loose" specie, we set out for somewhere. Exactly where, matters little. We beg pardon — it matters a good deal. The tendency is to find something dating back to a past age. We go into raptures over the antique, the ancient. Cover a miserable painting with dust and cobwebs, and Americus pronounces it "splendid." Be-fog an old tumble-down castle with legends, and the same ingenuous youth considers it a delightful place. Nothing but age, and dirt, and ruins, and hobgoblin adventures will satisfy.

For all these, Americus goes to Europe. This great Western country is young, and is but a stale place any way. It isn't classic — it isn't particularly worth seeing. So he thinks. He must make the "grand tour." He must go abroad. There is a charm in the thought. Maybe the charm lasts all the way across the water—possibly it clings around the whole term of foreign wandering. Americus comes back. He has "done" everything, and every place worth "doing," from Paris to Constantinople. He has crossed the Appennines, and if he be a genuine type of his class has tramped over the Alps, and probably lunched a-top one of the Pyramids. While abroad he was as ignorant of his own country as were the people among whom he sojourned, and even some of them might have helped him up in his native Geography. Arrived at home, he knows nothing but foreign lore and foreign lands. Of our magnificent Western world he is as profoundly, sublimely ignorant as ever.

We frankly admit that we have not been abroad. We have had our dreams of ramblings over sea, and if we don't die too young some of them may be realized. But as a very desirable preparation for making transatlantic journeyings really profitable, we intend to acquaint ourselves pretty thoroughly with our own land before migrating to another. The Alps may be ten-fold more sublime than the Rocky Mountains. If we see the latter, first, we can judge more correctly concerning the former.

Bayard Taylor, in his second series of sketches collected and published in book form under the title "At Home and Abroad," confesses that until the summer of 1861 he had not seen the White Mountains, the St. Lawrence, the Saguenay, and Lake George. The tone of his confession has somewhat of chagrin in it, we fancy. After years of wandering over distant countries, and writing volumes descriptive of strange sights and people, the famous American (no, *anti*-American) traveler deigned to look upon what he ought to have felt a pride in making a pilgrimage to a decade previous. There are hundreds, yes, thousands, whose experience is similar. Our exchanges give column after column of foreign letters. Of these, many are indifferent enough, and a few are really good. Of the writers thereof, doubtless two-thirds are of the class to which Americus belongs — men with money in abundance, who had an itching to see their names figure among the newspaper list of "sailed in the Arago," and who will return to flavor their conversation with frequent repetitions of "when I was in Europe."

Literary men, who supplement their foreign travel with home wanderings, and sketches of home scenery, are much inclined to give us the old world in parentheses. George William Curtis went abroad. He was then an exquisite young gentleman, so somebody has told us, much given to pomade and kid gloves. He traveled much. He wrote exquisitely. In his "Nile Notes of a Howadji" he pen-sketched the Nile and its surroundings with a voluptuousness of style purely Oriental. A dreamy languor pervaded the whole book. We could almost fancy it written by an indolent Howadji, sitting under a palm tree, and smoking his *chibouk*. A smoky haze mellowed the atmosphere. Not unfrequently the atmosphere was so smoky, in fact, that not a bit of the country could be seen. There was much dreaming, and smoking, but little description.

"The Howadji" came home. A few years later he treated himself to a summer vacation, and the good public, not long afterwards, to "Lotos Eating." The book is a volume of comparisons. Mr. Curtis went the round of the Catskill, Saratoga, Lake George, &c., and every point of interest he set in contrast with some far-away object which he deemed more worthy of admiration. While ostensibly describing native scenes, he persistently drifted over the water. Reaching Lake George — the lovely Horicon—he was immediately reminded of Lake Como, in Switzerland, and proceeded to give his reasons for considering that more beautiful than the sheet of water we supposed he was going to describe. Of Lake George itself, "the Howadji" had very little to say. He might have treated of it most glowingly. We were disappointed in his failure to do so. But his was a traveled pen; it had been abroad. We have said that literary men give us the old world in parentheses. "Lotos Eating" is an exception. In that the old world gets the lions share. The lotos eating is the parenthetical part.

Ours is a magnificent country. It has mountain, river and lake scenery in wonderful profusion, and grandeur sufficient for an export trade with all the rest of mankind. We don't need to leave it, to find the beautiful, the unique, or the sublime. But in the face of all this we suppose our friends will continue to patronize the ocean steamers, and send home ornate descriptions of abbeys, and castles, and ruins, until we get abbeys, and castles, and ruins of our own!

WISDOM AND WEALTH.

John McDonough, the millionaire of New Orleans, has engraved upon his tomb a series of maxims he had prescribed as the rules for his guidance through life, and to which his success in business is mainly attributed. They contain so much wisdom that we copy them:

Rules for the Guidance of my Life, 1804.—Remember always that labor is one of the conditions of our existence. Time is gold; throw not one minute away, but place each one to account. Do unto all men as you would be done by. Never put off till to-morrow what can be done to-day. Never bid another do what you can do yourself. Never covet what is not your own. Never think any matter so trifling as not to deserve notice. Never give that which does not first come in. Never spend but to produce. Let the greatest order regulate the transactions of your life. Study in your course of life to do the greatest amount of good. Deprive yourself of nothing necessary to your comfort, but live in an honorable simplicity. Labor, then, to the last moment of your existence. Pursue strictly the above rules and the Divine blessing and riches of every kind will flow upon you to your heart's content; but first of all remember that the chief and great duty of your life should be to tend, by all means in your power, to the honor and glory of our Divine Creator. The conclusion to which I have arrived is, that without temperance there is no health, without virtue no order, without religion no happiness, and that the aim of our being is to live wisely, soberly and righteously. John McDonough.

LOST TIME.

Let any man pass an evening in vacant idleness, or even in reading some silly tale, and compare the state of his mind when he goes to sleep or gets up next morning, with its state some other day, when he has spent a few hours in going through the proofs, by facts and reasoning, of some of the great doctrines in natural science, learning truths wholly new to him, and satisfying himself, by careful examination, of the grounds on which known truths rest, so as to be not only acquainted with the doctrines of themselves, but able to show why he believes them, and to prove before others that they are true; he will find as great a difference as can exist in the same being — the difference between looking back upon time unprofitably wasted, and time spent in self-improvement; he will feel himself, in one case, listless and dissatisfied—in the other, comfortable and happy; in the one case, if he did not appear to himself humble, at least will not have earned any claim to his own respect; in the other case, he will enjoy a proud consciousness of having, by his own exertions, become a wiser, and therefore a more exalted nature.—*Lord Brougham.*

GOOD ADVICE.

If you your lips
Would keep from slips,
Five things observe with care:
Of whom you speak,
To whom you speak,
And how, and when, and where.

Dining.—Before dinner, men meet with great inequality of understanding; and those who are conscious of their inferiority have the modesty not to talk; when they have drunk wine, every man feels himself happy, and loses that modesty, and grows impudent and vociferous; but he is not improved; he is only not sensible of his defects.—*Johnson.*

Sabbath Reading.

Written for Moore's Rural New-Yorker.

SUMMER-PRAISE.

BY ETTIE BROWN.

Softly sing, oh! radiant bird,
In yon drooping greenwood tree,
While the quivering leaves are stirred
To the sweet wind's melody.
Every bird so softly singing,
Every voice so sweetly ringing,
Speaks, my God, of Love and Thee.

Grandly bend, oh! summer skies,
To the hills with white clouds crowned!
Domes of unknown Paradise
Droop and circle me around.
For no black mists foil my vision
Of the far-off bright Elysium—
Home—where Love and Thee are found.

Days of glory—summer-praise!
Incense from earth's censer swung!
Hopeful hearts their anthems raise—
Alleluiahs glad are sung!
Let me kneel at Nature's altar,
Neath God's banner ne'er to falter
Till Life's victory is won.

Newfane, N. Y., 1867.

THE EARLY HOME OF JESUS.

Four miles south of the strong Greek city of Sephoris, hidden away among the hills, then covered from the base to the crown with vineyards and fig trees, lay a natural nest or basin of rich red and white earth, star-like in shape, but a mile in width, and wondrously fertile. Along the sacred and chalky slope of one of the highest of these hills spread a small and lovely village, which, in a land where every stone seemed to have a story, is remarkable as having no public history, and no distinguished native name. No great road led up to this sunny nook.

No traffic came into it, no legions passed through it; no trade, war, adventure, pleasure, pomp, passed through it, flowing from west to east and from east to east, along the Roman road. But the meadows were aglow with wheat and barley. Near the low ground ran a belt of gardens, fenced with stones, in which myriads of green figs, red pomegranates, and golden citrons ripened in the summer sun. High up the slopes, which were lined and planted like the Rhine at Bingen, hung the vintages, purple grapes. In the plain, among the corn, and beneath the fig and mulberry trees, shone daisies, poppies, tulips, lilies, and anemones, endless in their profusion and brilliant in their dyes.

Low down on the hillside sprang a well of water, bubbling plentiful and sweet; and above this fountain of life, in a long street, straggling from the fountain into the synagogue, rose the homesteads of many shepherds, tradesmen and vinedressers. It was a lovely and humble place, of which no ruler, no historian of Israel had ever taken notice. No Rachel had been met and kissed into love at this well; no Ruth had gathered up the sheaves of barley in yon fields; no tower had been built for observation on this height; no camp had ever been pitched for battle in that vale. That one who would become dearer to the fancies of men than either Ruth or Rachel, then walked through those fields, drew water at this spring, and passed up and down the lanes of this hamlet, no seer then could have surmised.

The place was no more than obscure. The Arab may have pitched his black tent by the well; the magistrates of Sephoris must have known the village, but the hamlet was never mentioned by the Jewish scribes. In the Bible, in the Talmud, in the writings of Josephus, we search in vain for any record of this sacred place. Like its happy neighbors, Nain and Endor, it was the abode of husbandmen, and oil and vine dressers, whose lives were spent in the synagogue, the vineyard and the olive grove, away from the bright Greek cities, and the busy Roman roads. No doubt it had once been possessed of either an Arab or a Hebrew name, but we do not know the name except by its Hellenic form. The Greeks called the town Nazaret or Nazareth.—*Selected.*

In the World and Not of It.—If men loved this world less, and another better, they would be more quiet here, and more careful to prepare for that better state. If our conversation were in heaven, as it ought to be, with what contempt should we look down upon the busy designs, the restless cares, the vain hopes, and the perplexing fears of the greatest part of mankind? Then we should have more peace and tranquility in our minds while we live, and greater satisfaction when we come to die. For integrity and innocence will keep us most from giving disturbance to others, and from finding any in our own breasts. "Whoso hearkeneth unto wisdom shall dwell safely, and shall be quiet from the fear of evil."—*Bishop Stillingfleet.*

A Change in the Ritual.—George Francis Train suggests that our modern marriage ceremony should read thus:—Clergyman—"Will you take this brown stone front, this carriage and span, and these diamonds for thy husband?" Lady—"Yes." Clergyman—"Will you take this unpaid milliner's bill, this high waterfall of foreign hair, these affectations, accomplishments and feeble constitution for thy wedded wife?" Gentleman—"Yes." Clergyman—"Then, what mammon has joined together let the next best man run away with, so that the first divorce court may tear them asunder."

Divine knowledge fills a man with spiritual activity. It will make a man work, as if he would be saved by his work; and yet it will make a man believe that he is saved only upon the account of free grace.

Various Topics.

THE UNION PACIFIC RAILROAD.

THE accompanying Map of the Union Pacific Railroad was prepared expressly for the RURAL NEW-YORKER, and will, with the annexed description, convey a pretty clear idea of the extent of that gigantic and world-famous enterprise, as well as of the vast region of country which it traverses.

The Union Pacific Railroad, which only a few years ago was talked about as among the possibilities of the remote future, is now not only a "chartered institution," but being constructed with a celerity almost unparalleled in the history of human enterprises. The Company building the road was organized and ready for business on the 2d day of July, 1864—having on that day complied with the conditions of the charter granted them by Congress. The road proper commences at Omaha, and extends to the California State Line, a distance of 1,594 miles. From Omaha to the base of the Rocky Mountains is 517 miles, the mountainous region 150 miles, thence to the California line 927 miles. The grade between Omaha and the base of the Rocky Mountains does not exceed 30 feet per mile. From that point to the summit or divide of the Continent, at Bridger's Pass, it does not exceed 80 feet, and from that to the California line the greatest grade to be overcome does not exceed 116 feet to the mile.

The capital authorized by the charter of the Company, by which the road is being built, was one hundred millions of dollars, of which it is supposed about twenty-five millions will be required—five of which is already paid. Besides granting the charter for the road Congress also gave the right of way; the privilege of taking construction materials from the public lands; and, in alternate sections of land, on each side of the road, twelve thousand eight hundred acres of land per mile. In further aid of the road and telegraph line, Congress made a loan of thirty-year six per cent bonds of sixteen thousand dollars per mile on five hundred and seventeen miles of the road, forty-eight thousand on one hundred and fifty miles, and thirty-two thousand on the balance of the distance, or nine hundred and twenty-seven miles.

In 1866 the Company completed 305 miles of the road in a substantial manner, with machine shops, rolling stock and telegraph line. During the present season the track has been laid at the rate of two miles per day, giving assurance that the whole line will be completed in eighteen months.

The total grant of money from the initial point at Omaha to the eastern base of the Nevada range, fifteen hundred and sixty-five miles, is $44,208,000, issued in instalments of $16,000 per mile upon the completion of each section of twenty miles of road.

Of the route of the road it may be said that the Platte Valley, east of Fort Kearney, is a delightful section of country, presenting no obstacles to a rapid construction. Over the Black Hills and Laramie Plains the country is rough and broken by rocky canons and gorges, but it has the advantage of plentifulness of timber and building stone. West of these hills the road will follow mainly the valley of the principal streams whose banks supply a sufficiency of timber for construction purposes. From Salt Lake to Humboldt Valley, a distance of 200 miles, are dry deserts and broken ranges, but not presenting very serious obstacles to road construction. This valley is a delightful one, and of superior agricultural promise. The only serious impediment is found in the passage of the Rocky Mountains, the distance on the eastern slope to the crest being 31 miles, and that of the western about the same. Of this distance the average ascent per mile is 73 feet. The grading of the heavier portion of this section is to be made in advance, so that when the general constructing force reaches this point, track laying will be but little retarded.

That the work of construction will continue to be vigorously pushed there is no doubt, as there is no lack of means for this purpose—the Government aid alone being equal to the cost of the entire construction. The average cost per mile, for the whole distance, 1,565 miles, will be about $66,000, exclusive of equipment, or about $103,000,000 for the entire road. It is a gigantic undertaking, but is full of promise for the future of the country—an iron band spanning a Continent and bringing into ready communication people three thousand miles apart. The grants made, supposing the whole loan to be taken, are:

Rights of way and material	$4,695,000
U. S. Bonds, equivalent to money,	44,208,000
First Mortgage Bonds,	44,208,000
Grant of 20,032,000 acres of land,	29,700,000
Aggregate	$122,811,000

This alone would give an aggregate of $78,000 per mile for the entire road, or ten thousand more than the estimate.

The business or profits of the road may be approximated with reasonable exactness by a consideration of what has been done between the Atlantic and Pacific States with the roundabout means of communication hitherto possessed. By opening up, as the completion of this road will do, a direct communication between the United States and China, it is deemed safe to assume that the passenger travel will be 300,000 per year, giving, at $150 each, $45,000,000, while the freight receips will be $10,000,000 more, or $55,000,000 in all—leaving an estimated clear profit of nearly eighteen millions of dollars annually.

The preceding facts, figures and estimates are mainly derived from pamphlets issued by the Union Pacific Railroad Company; but it is proper to add that the western portion of the great iron thoroughfare is being built by the Central Pacific R. R. Co.,—the latter working east from Sacramento, while the former is proceeding west from Omaha. We annex a table of distances, and elevation of points, between New York City and San Francisco by the Pacific Railroad route, derived from official sources:

	Total Distance.	Elevation in feet.
San Francisco	—	Tide.
Sacramento	124	56
Cisco	216	2,911
Crest	229	7,042
Humboldt Lake	352	4,047
Reese River	506	4,550
Nevada State Line	700	4,830
Point on Salt Lake	775	4,290
Bridger's Pass	1,155	7,534
Evans' Pass	1,297	8,242
Fort Kearney	1,655	2,123
North Bend	1,785	1,458
Omaha	1,848	968
Chicago	2,340	625
Cleveland	2,607	585
Dunkirk	2,840	585
New York	3,300	Tide.

LARGEST CITY IN THE WORLD.

A VERY erroneous idea is indulged in by many people, in relation to the largest city in the world; many confidently assert that London, or as it frequently is termed, the Great Metropolis, is far superior, both in size and the number of inhabitants. But such is not the case; Jeddo, the capital of Japan, is, without exception, the largest and most populous city in the world. It contains the vast number of 1,500,000 dwellings, and 6,000,000 of human souls. Many of the streets are nineteen japaneseries in length, which is equivalent to twenty-two English miles. It has commerce of the world, and the sea along the coast is constantly white with the sails of ships. Their vessels sail to the southern portion of the Empire, where they are laden with rice, tea, sea coal, tobacco, silk, cotton and tropical fruits, all of which can find ready market in the north, and then return freighted with corn, salt, isinglass, and various other products of the north which have a market in the south.

COMMON SENSE.

NEVER give way to melancholy; resist it steadily, for the habit will encroach. I once gave a lady two-and-twenty receipts against melancholy. One was a bright fire; another to remember all the pleasant things said to her; another, to keep a box of sugar plums on the chimney-piece, and a kettle simmering on the hob.

Never teach false morality. How exquisitely absurd to tell a girl that beauty is of no value; her whole prospect and happiness in life may often depend on a new gown or a becoming bonnet, and if she has five grains of common sense, she will find it out. The great thing is to teach her her just value, and that there must be something better under the bonnet than a pretty face for real happiness. But never sacrifice truth.

I am convinced that digestion is the great secret of life, and that character, talent, virtues and qualities are powerfully affected by beef, mutton, pie-crust, and rich soups; I have often thought I could feed or starve men into many virtues and affect them more powerfully with the instruments of cookery, than Timotheus could do formerly with his lyre.—*Sidney Smith.*

I DO not mean to expose my ideas to ingenious ridicule by maintaining that everything happens to every man for the best; but I will contend that he who makes the best use of it, fulfills the part of a wise and good man.—*Cumberland.*

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., SEPTEMBER 21, 1867.

NEWS OF THE WEEK.

New York State Items.

In the Constitutional Convention a resolution was adopted requesting the Attorney General to immediately commence legal proceedings to vacate certain canal contracts, which it appears by testimony on the files of the Convention were, by a corrupt combination, let to the highest instead of the lowest bidders, and to take such proceedings in relation to State officials who may be implicated in the frauds as shall vindicate the honor of the State and protect its interests.

The National Trial of Plows and other agricultural implements, began at Utica on the 11th inst., on the gronnds of John Butterfield, Esq. Seven plows were tried first on green sward. Entries were made from the New England States, and one plow with subsoil attachment came from Illinois.

The Inspector of Customs at Buffalo seized a splendid metallic coffin recently, which came to the city on the Grand Trunk Railway, supposed to be filled with smuggled goods.

The Inspectors of Customs for the Port of Genesee seized several kegs of whisky on the 12th inst., which were being smuggled through.

Dudley's large fruit canning establishment at Keyport, N. J., was burned on the night of the 12th. Loss $100,000.

A man named Livingston forged Commodore Vanderbilt's name and obtained $75,000 from the City Bank in New York.

From Washington.

A CLAIM involving $1,500,000, has been rejected by the State Department. It is said to have been for an island in the South Pacific, which a certain Baltimore Company claimed by right of discovery, but which was subsequently taken possession of by our naval vessels.

It is said that the Committee for investigating the treatment of Union prisoners in rebel prisons, is daily receiving a large number of letters from men who have partaken of rebel prison hospitalities, all of which are being arranged and briefed,

Rumors of Cabinet changes are abundant.

The amount of coin in the vaults of the U. S. Treasury on the 14th inst., was $99,867,000, of which $14,673,000 was in coin certificates. The amount of currency was $46,189,000, making a total of $145,069,000.

The U. S. Treasurer held in trust for the National Banks, Sept. 14th, $379,033,950, of which $340,660,000 is held in security for circulating notes; $38,373,950 for deposits of public moneys. The amount of National Bank currency issued during the week was $716,608; total amount to date $303,907,660. From this is to be deducted the amount returned, including worn out notes, amounting to $4,793,295, which leaves in actual circulation at the above date $299,114,371.

Gen. Grant has issued an order to the District Commanders to co-operate with the Commissioners of the Freedmen's Bureau in reducing the number of employes and volunteers in service in that Department, by giving details of soldiers to take their places when it can be done without detriment.

There is some prospect of a new trial in the case of Gen. Fitz John Porter. The President favors it.

It is said that Gen. Grant disapproves of the new Amnesty Proclamation. He thinks the President had no right to issue it.

From the West.

FOUR HUNDRED soldiers arrived at Omaha to fight the Indians, but before leaving for the plains they broke into the American Transfer Company's Warehouse, and helped themselves to whisky and wine so as to become grossly intoxicated.

The recent California State Fair—the first industrial display ever held in the State—was largely attended.

There was a very destructive fire in Cincinnati on the night of the 14th inst. It broke out in a block of warehouses, and destroyed five of them; also, a row of tenement houses adjoining. Total loss probably $400,000.

One hundred and seventy lodges of northern Arrapahoe Indians, under Little Shield, offer to surrender if the Government will protect them and feed their families.

A Salt Lake train was attacked some days since, on the Big Laramie River. The Indians were repulsed.

A band of Indians made a raid on Mora, New Mexico, on the 3d inst., killed three men, carried away five boys and drove off a lot of stock.

The Peace Commissioners are still endeavoring to quiet the hostile feeling among the different tribes.

From the South.

A DEMOCRATIC Mass Meeting was held in Baltimore on the evening of the 10th inst., to ratify the new Constitution of Maryland. From 15,000 to 20,000 people were in attendance. Speeches were made by Gov. Swann and others.

There were thirty-two deaths from yellow fever in Galveston on the 9th.

At Fort Jefferson, Tortugas, all the officers are down with yellow fever. It has somewhat abated at Key West.

There is much suffering in Pensacola on account of yellow fever. Work in the navy yard has been partially suspended, as all the heads of departments and clerks are sick. The Mayor of the city has appealed to the neighboring cities for aid in physicians, nurses and money, to meet the distress. Mobile has responded by a donation of one thousand dollars.

A Convention of Republicans of the Border States assembled at Baltimore at noon on the 12th inst., to advance, as the Call says, the cause of manhood suffrage, and demand of Congress the passage of the Sumner and Wilson bill. There was no distinction as to race or color. Delegates were present from Delaware, Tennessee, Missouri, Kentucky, District of Columbia and Maryland. Hon. Horace Maynard was permanent President.

Gen. Griffin died of yellow fever at Galveston on the 15th inst.

The negroes voted for the first time in Virginia on the 16th, at Richmond. The vote was on the question of a subscription of two millions of dollars to the Chesapeake and Ohio Railroad.

From New England.

THE Republican Convention of Massachusetts, which convened on the 11th instant, re-nominated Gov. Bullock for Governor, and also re-nominated the other incumbent State officials.

An International Boat Race took place on the Connecticut River at Springfield on the 11th inst., between the rival crews of St. Johns, N. B., and Newburgh, N. Y., for $1,000 a side. The Ward Brothers of Newburgh, were the winners. They made the six miles in 39 minutes and 28 seconds. Upwards of 30,000 people witnessed the race.

Foreign Intelligence.

ADMIRAL FARRAGUT, with his squadron, arrived at Stockholm a few days ago, and was greeted by a national ovation from the Swedes. The King gave a grand fete in the Imperial Palace, which was attended by the American Commander and the officers under his command.

His Holiness, Pope Pius IX, has resolved to call a General Council of the Roman Church. The preliminaries for such Council are to be arranged by seven Cardinals.

The harvest in Spain has been very abundant. Large amounts of wheat have been raised.

The first steamer of the British expedition against Abyssinia has left India. Other steamers have left England for India, whence they will transport troops and munitions of war to Abyssinia.

Greece is making preparations for war. A third iron-clad has been purchased in England by agents of the Grecian Government, and is to be armed with five Armstrong guns.

FROM MEXICO.—The N. Y. Herald has advices from the city of Mexico to Aug. 25. Considerable excitement followed the call made by President Juarez for a general election. Factions are busy at work to defeat him. Juarez is in favor of amending the Mexican Constitution similar to the Constitution of the United States; of allowing all of the clergy to vote and be voted for, to have two Houses of Congress, and to require Ministers of State to report their official actions to the Executive. Santa Anna's trial was daily expected to take place. The impression prevailed that he would not be executed, but his estates would be confiscated. The roads to Vera Cruz had been cleared of robbers, and a large amount of specie had started seaward.

NEWS PARAGRAPHS.

THE Rev. Dr. Cummings finds that he has made an error in his calculations of the last day, and that it will not come for a million years yet.

A CALIFORNIA cucumber raised in Rock Island County, Ill., measures three feet two inches in length, and one foot one inch in circumference at the butt.

A LOT of land forty feet front by one hundred and ten deep, on the corner of Lake and Clark streets, Chicago, was sold last week for $120,000. This included a building on the lot worth about $20,000. It is the highest price ever paid for real estate in Chicago.

A DISASTROUS fire occurred in Petroleum Center on the Boyd Farm, the terminus of the Oil Creek Railroad the 2d inst. The shipping yards of Brown & Sons, Catz & Co., Cook, Tibbets and Gilbert, and twenty cars, were destroyed. Estimated loss $175,000.

ADMIRAL FARRAGUT'S party are being very extensively lionized in Russia. At last accounts they were at Moscow, and that grand, old half-Asiatic half-European city, was being exhausted of its resources to do honor to these representatives of a republican power.

THE work of removing the rock from the Rock Island Rapids, in the Mississippi River, has commenced. The powerful chisels were tested a few days ago, and at one drop sank four feet into the solid rock. The chisel weighs over eight thousand pounds, and drops thirty feet.

HON. OAKES AMES of North Easton, Mass., has contracted to build nearly the whole of the remaining portion of the Union Pacific Railroad—some six hundred miles, passing through the Rocky Mountain region—receiving therefor over $47,000,000. This is believed to be the largest contract ever entered into by one man.

OUR western military posts in 1864, cost the Government $25,000,000, and in 1865, $57,000,000, of which last sum the pay of the troops took only $1,642,000, while the subsistence department swallowed up $31,523,880, and the quartermaster's $23,374,209. It is stated that $150,000,000 will scarcely meet the expenses of last year.

A BOY was in Peoria the other day, who, about two months ago was shot, speared, stabbed, and scalped by the Indians and left for dead. He was picked up, and is now in a fair way of recovery. He lost almost the whole scalp, a mere ring of hair having been left above the ears, and in front and at the neck. The horrible wound is now healing.

NOTES FROM OHIO AND INDIANA.

TERRE HAUTE, INDIANA, Sept. 7.

EDS. RURAL:—Thirty years ago I knew this place as a frontier hamlet; now it is a city of 22,000 people, beautifully located on the Wabash, with a lovely prairie reaching eastward to the encircling forest in the distance, and attractive beyond most cities in the ample yards, abundant foliage and fine taste of its homes. In the rear yard of the "Terre Haute House," my home for the day, is a well *eighteen hundred feet deep*. CHAUNCEY ROSE sought oil, found it sparingly, went down until sulphur water welled up at the rate of over 6,000 barrels daily, and flows still with unabated force. A bath-house is building, the sick bathe and drink, and are made well; but beware! Metal tubs cannot be used, and ladies after a bath have found their *blooming* faces suddenly some shades darker than the style—the effect of sulphur on metallic paint! So let all paint, but Nature's, look out for this counterfeit detector.

On my early visit here I crossed the State and a part of Ohio, from Columbus, past Indianapolis on the old "National Road," and well remember the great Indiana forests, the new clearings and the *awful* mud in the streets of the rude Capitol City. Now no fairer or richer belt of farms can be found than that through which the railroad passes, and the pavements have conquered the mud in that city—grown to 45,000 people and full of life. Two days ago I was there while the great Saengerfest was going on, and in the evening near 4,000 persons filled a hall built for the occasion to hear 700 deep-voiced Germans (all men) sing the songs of the "Faderland." Wonderful, indeed, it was.

The great resources of Indiana, in soil, and mines, and forests, are hardly understood, and I think that a generation hence the verdict will be that it stands equal to the richest of the States.

And Ohio—past the pioneer stage—with its railroads reaching almost every county, its noble farms, its growing factories, its towns full of taste, and culture, and thrift, and its great cities telling as cities do, of the wealth of fields, and the products of skill and industry. What changes in thirty years I saw there! Cleveland with its 75,000 people, its wide trade, its great factories and iron mills—Columbus in the center, on the broad meadows of the Scioto, justly famed for its richness, its 30,000 people, the State Capitol (a pile of stone covering two acres, and the Rotunda 120 feet to the painted ceiling)—Cincinnati, with over 200,000 people, with thousands of workmen in its shops, and great warehouses; and the Suspension Bridge with its roadway near a hundred feet above low water in the Ohio, and its great Opera House, unsurpassed in size and costly elegance. All this wealth of purse and life have these toiling pioneers made possible. All honor to their brave hearts and busy hands, to their manhood and womanhood, wearing labor as a crown of highest glory.

Everywhere drouth,—the tall corn battles bravely with sun and heat, but will not yield over about half a crop in the regions I have seen. People in the west are quite disturbed by the prices of railroad freights on their live stock and produce, high and still higher as they are, with no corresponding increase in costs of railroading that can be seen.

ST. LOUIS, Sept. 9th.

SATURDAY night I left the beautiful Wabash Valley, took a sleeping car, and at early morning looked out on the broad prairies, and we were soon rolling along the Mississippi and in sight of this city, which makes an imposing show from the eastern bank—its warehouses rising tier above tier as the ground slopes up, miles of buildings, and many domes and steeples beyond, and the encircling hills along which are the pleasant suburbs in the distance. Some sixty or seventy steamboats were along the levee. The stir of preparation for the yearly festival of the goddess Pomona—in plain English, the Annual Meeting of the National Pomological Society—is beginning.

The Pacific Railroad carriages, and the talk at table of the Plains and Mountains, makes me realize that this is the gateway to California and distant Asia. I saw on the river bank the first pile-driving for the foundation of the great railroad bridge over the Mississippi—an immense work. Will send a word of Iowa and Wisconsin soon. G. B. S.

FROM SOUTH AMERICA.—The Brazilian Army is meeting with reverses in the Paraguayan War. San Salono has been fully fortified by the Paraguayans.

MANY churches out of the limits of the city, are suffering in their devotional services for the want of good music, when a reasonable amount of money will purchase a fine organ, with which the voices may be supported in full harmony. With a poor instrument, the singing will deteriorate, and with none at all neither will a choir or congregational singing flourish. Messrs. S. D. & H. W. Smith of Boston, have just introduced new styles of AMERICAN ORGANS, with upright cases and gilt imitation pipes, having remarkable volume of tone, containing the manual subbass, super octave coupler, tremolo and knee swell. We take pleasure in calling the attention of churches in need of good instruments, to the American Organs.—*Watchman and Reflector.*

WILLIS' STUMP MACHINE—AGAIN.—Last week Joseph Medbury, Esq., of this city, made a trial of one of these machines on his farm in Gates. The stumps pulled were green ones, consisting of beech, maple, ash and basswood. They were removed with great facility much to the surprise of the owner of the premises. He considers the machine one of great power, and unequaled in execution.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, September 17, 1867.

OUR local money market is without material change. Good paper is readily discounted, if the funds are wanted for legitimate business. Notes having long to run are not in favor. In New York, during the past week, there was a gradual rise in the rate of interest. This was to be expected as the season advanced. On Saturday the Financial Bulletin says:—"The best discount quotations are 6@7 ₱ cent., most of the business being on the basis of the full legal rate of 7 ₱ cent." The Public Funds were dull at the close of the week. The speculative demand for the present has nearly ceased, and the inquiry for investment is just now small.

Gold during the past week has been excited, and rose to a figure higher than it has been in many months. The shipping demand was moderate, but speculators ruled the market. Sales of gold were made in New York yesterday at 144¾.

There has been a decline in cotton at Liverpool and on this side. Dry Goods are more active at the East, and a fair business was done last week, prices were a little irregular in consequence of the decline in cotton.

Samuel B. Ruggles, delegate at the recent International Coinage Congress, which met in Paris, explains the action of that body. He says that the proposition is not to substitute the five-francs piece for the gold dollar, but to reduce the weight of the minimum gold coin of each nation to that of the French five-franc piece, each being of nine-tenths fineness. This plan contemplates the retention, by each nation, of its own names and emblems on its coinage—the only change proposed being uniformity in weight and value—so that they may pass without impediment throughout the world.

WOOL.—The market is flat in this section. Farmers are selling but little, and buyers are indifferent about taking ordinary lots at 40c. At the East there is a steady demand, at about former rates. The sales in Boston last week were to the amount of 850,000 lbs. at 30@62½c for fleece, and 38@38c for the various grades of pulled.

WHEAT AND FLOUR.—The market for wheat and flour has been excited during the past week, particularly at the East. It was rumored that receipts were falling off, but the amount of wheat arriving at the lake ports is large. Farmers in Western New York are not selling freely. The price of red wheat has advanced, and $2,25 was paid yesterday. Probably extra lots would bring something more. Flour has advanced 50c ₱ barrel in this market, and from 50c to $1 in New York and Boston.

Rochester Wholesale Prices Current.

TRIUMPH OF A GREAT INVENTION.

From the "Philadelphia Daily News," February 6th.

ON Saturday afternoon in the presence of a number of Agriculturists and other distinguished persons, who feel an interest in the progressive destiny of inventive genius, the wonderful power of W. W. WILLIS' Tree Extractor was exhibited to the entire satisfaction of all. Two large trees were pulled down with perfect ease, and tree stumps that had been rooted in the ground for perhaps a century were drawn out with wonderful facility. The time occupied in performing the work was from ten to fifteen minutes. The machine is simple in its construction, and possesses an indefinite amount of leverage power. Whole forests may be made to fall before it, and huge rocks be drawn from their firm foundations.

We, the undersigned, citizens of the city and county of Philadelphia, having witnessed several exhibitions of W. W. WILLIS' Stump Extractor, cheerfully endorse the encomiums expressed in the notices of the press of our city and elsewhere.

A FARM OF 125 ACRES, ON THE EAST bank of Seneca Lake, five miles from Geneva, is for sale. Apply A. V. B. DEY, Geneva, N. Y.

THE COLLINS AND SHATTUCK
Combined Clover Thrasher, Huller & Cleaner,
MANUFACTURED BY
GLEN & HALL, ROCHESTER, N. Y.

We beg to call the attention of Farmers to the superior characteristics of the Collins and Shattuck Clover Machine made by us, which we are now prepared to supply.

Our Machines have two bolts with counter reciprocating motion, which have proved *indispensable* in keeping the Machine still, preserving it from racking and preventing it from clogging. We will WARRANT them with proper management to Thrash, Hull and Clean Clover or Grass Seed at one operation, more rapidly and in a much better manner than any other Machine made. When thrashing grass seed they can in a moment be so arranged that the seed and chaff will pass directly from the bolts to the fanning mill without going through the huller—*an advantage possessed by no other machine.* The ratchet from off the upper bolt in our machine insures a thorough separation of the heads and seed from the straw before the latter is allowed to pass into the stack. Our machines are constructed of the best material, in the most thorough manner, handsomely painted and ornamented, and have in all cases given entire satisfaction. Persons purchasing these machines to do custom thrashing will find them even much more remunerative than Grain Thrashing Machines.

We are also prepared to supply Horse-Powers, Truck Waggons, &c., to be used with our machines, or they will be adapted to run with any other Horse Powers.

☞ Descriptive Catalogues, containing full information, with testimonials from persons using our Clover Machines, sent free to all applicants. Address GLEN & HALL, Rochester, N. Y., or Detroit, Mich. J. H. EASTER, Gen'l Western Agent, Chicago, Ill. 921-10t

920-4t HUBBELL & PARSONS, Unadilla, N. Y.

THE CHAMPION POTATO DIGGER.—This great invention is now offered to the public. Those wishing the machine should send their orders at once, as the potato harvest is at hand. The price is $70, and may be sent by draft to my order, at my risk. All machines warranted to work in a superior manner.
Address H. J. KINTZ, Rochester, N. Y.

THE GREAT PRIZE!
THE ONLY
Grand Cross of the Legion of Honor
AND GOLD MEDAL

Awarded to AMERICAN SEWING MACHINES at the Paris Exposition of 1867, was given to us as per Imperial Decree, published in the "Moniteur Universel" (Official Journal of the French Empire,) Tuesday, July 2, 1867.

The Howe Sewing Machines
MANUFACTURED BY
THE HOWE MACHINE CO.,
ELIAS HOWE, Jr., President,
699 BROADWAY, NEW YORK.

FOR FAMILIES AND MANUFACTURERS.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine.

The New Improved Family Machine is without a rival, and cannot be surpassed,—a Hemmer, Feller, Braider, Quilter and Guide go with each Family Machine free of charge.

Every Machine is as near perfection as the best machinery in the world can make it.

They are adapted to all kinds of Family sewing, and Manufacturing of every description, making a beautiful and perfect Stitch, alike on both sides of the articles sewed, and will neither rip nor ravel.

The parts being exactly alike, if any part needs to be replaced, the operator can replace it.

Loss of time and expense of sending to a machine shop rarely occurs.

THE BEST MACHINE IN THE WORLD!

THE
GREAT AMERICAN
TEA COMPANY
HAVE JUST RECEIVED
TWO FULL CARGOES
OF THE
FINEST NEW CROP TEAS.

22,000 HALF CHESTS by ship GOLDEN STATE,
12,000 HALF CHESTS by ship GEORGE SHOTTON

In addition these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivalled for fineness and delicacy of flavor, which they are selling at the following prices:

OOLONG (Black,) 50c., 60., 70c., 80c., 90c., best $1 ₰ lb.
MIXED (Green and Black,) 50c., 60c., 70c., 80c., 90c., best $1 ₰ lb.
ENGLISH BREAKFAST 50c., 60c., 70c., 80c., 90c, $1, $1.10, best $1.20 ₰ lb.
IMPERIAL (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1.10 best $1.25 ₰ lb.
YOUNG HYSON (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1.10, best $1.25 ₰ lb.
UNCOLORED JAPAN, 90c., $1, $1.10, best $1.25 ₰ lb
GUNPOWDER $1.25, best $1.50 ₰ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound Hotels, Saloons, Boarding House Keepers and Families who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the
THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

Through our system of supplying CLUBS throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by post-office money orders, or by Express, as may suit the convenience of the Club. Or, if the amount ordered exceed $50, we will, if desired, send the goods by Express to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third **beside the Express charges**, by sending directly to "The Great American Tea Company."

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to

SMALL FARM FOR SALE—Containing 18 acres, situated half a mile west of the Colleges at Geneva, N. Y. There is an excellent Gothic Dwelling, with nine rooms, besides kitchen and two bed-rooms. Good barn, stable and carriage house, and an Orchard of two acres, well watered by pipes from White Spring Farm. The land is thoroughly underdrained with tile, and as productive as any land in Western New York. The house is on elevated land, with a view of Seneca Lake and part of Geneva. Price for the whole $10,200, or the buildings with four acres, including the orchard, will be sold for $6,800. Apply to
917-6t JAMES THOM on the Farm.

WANTED,—A General Farmer who thoroughly understands the purchasing and selling of stock with a capital of from $3,000 to $5,000, to take the management of a stock farm of 1,400 acres, joining Enon, Clarke Co., Ohio, for which an interest in the stock will be given. Good houses and barns. Any one wishing such situation can apply in person, from Sept. 1st to Nov. 1st, 1867, to A. H. SMITH,
919-4t Enon, Clarke Co., Ohio.

GOLDEN FLEECE STOCK.—I Will SELL four yearling Rams, by Col. E. S. Stowell's "Golden Fleece" Dams, thorough-bred Atwood ewes.
H. W. BECKWITH, West Granville Corners, N. Y.

AN INVALUABLE MEDICINE FOR THE PURIFYING OF THE BLOOD.
DR. J. W. POLAND'S
HUMOR DOCTOR,
A Positive Remedy for all kinds of Humors,
PARTICULARLY
Erysipelas, Nettle Rash, Salt Rheum, Scrofula, Carbuncles, Boils, and Piles.

This excellent medicinal compound was first prepared by Dr. J. W. POLAND, in 1847, and was then employed with great success in expelling Humors from the blood; but in 1848 a medical friend, who was quite celebrated as a physician, especially in the treatment of humors, suggested some important improvements, which were adopted, and which has made it (so the people say) the very best remedy for all kinds of humors known to "the faculty."

The HUMOR DOCTOR cures Scrofula, Salt Rheum, Erysipelas, Canker, Piles, Nettle Rash, &c. Numerous individuals, who have used this remedy for Erysipelas, give it the most flattering recommendations.

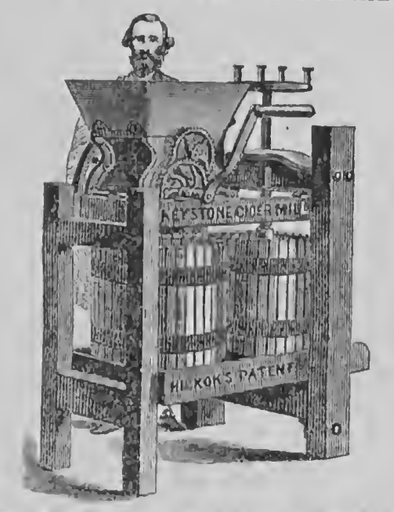
This preparation is composed entirely of vegetables, among which are Sarsaparilla, Yellow Dock, Noble Pine, Mandrake and Bloodroot.

When the originator lived in New Hampshire, at Goffstown Center, for the space of thirty or forty miles around, and in Manchester particularly, the Humor Doctor was well known and highly valued for the numerous and wonderful cures which it effected. Though manufactured in large quantities the supply was frequently exhausted, and purchasers had to wait for more to be made. In that region some very severe cases of Erysipelas were treated with,—and they were cured! Erysipelas sores, or carbuncles,—those ugly, painful ulcers,—were entirely removed wherever this medicine was faithfully used. So it was with Scrofula and Salt Rheum. The Humor Doctor cured them.

Within the last ten years this valuable remedy has so increased in popularity that now it is more largely used all over New England than any other one preparation for cleansing the blood, and restoring the system to its healthy condition. Throughout the Western States it is now meeting with great success wherever it has been introduced. It is *free* from any dangerous drugs, is pleasant to the taste, safe, yet sure and effective in its action.

PREPARED AT THE
New England Botanic Depot, - - Boston, Mass.
And for sale by all Dealers in Medicine.

THE CHAMPION.
HICKOK'S PATENT PORTABLE.



KEYSTONE CIDER AND WINE MILL.
OVER 15,000 IN USE AND APPROVED.

This admirable machine is now ready for the fruit harvest of 1867. Is made in the most perfect manner with either one or two tubs, and is well worthy the attention of all persons wanting such a machine. It has no superior in the market, and is the only mill that will properly grind grapes.

FOR SALE BY ALL RESPECTABLE DEALERS.

H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.
First Pat'd Aug. 1860, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn ever offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (½ bbl.,) $14; No. 3, (¼ bbl.) $12; No. 4, (⅛ bbl.,) $10; No. 5, (1-5 bbl.,) $8.
H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*

MR. ROBINSON also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag'l Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

BATCHELOR'S HAIR DYE.—THIS splendid Hair Dye is the best in the world. The only *true* and *perfect Dye*—Harmless, Reliable, Instantaneous. No disappointment. No ridiculous tints. Natural Black or Brown. Remedies the ill effects of *Bad Dyes*. Invigorates the hair, leaving it soft and beautiful. The genuine is signed *William A. Batchelor*. All others are mere imitations, and should be avoided. Sold by all Druggists and Perfumers. Factory 81 Barclay St., N. Y.
☞ BEWARE OF A COUNTERFEIT. 882-26teo

AGENTS WANTED—For J. T. HEADLEY'S Great Work on our Navy, entitled "FARRAGUT AND OUR NAVAL COMMANDERS," comprising the early Life and Naval Career of Admirals Farragut, Porter, Foote, Dupont and a host of others. In one volume, 500 pages—the only work of the kind published—agents find no competition. This work is highly recommended by the leading Naval Officers, and endorsed by Secretaries Seward and Welles, Governors Fenton, Buckingham and Burnside and leading men throughout the country. Our Agents, in connection with this work, can take orders for four other standard works by the same author. Our terms are nowhere excelled.

THE BLUE AND THE GRAY.

"The women of Columbus, Mississippi, animated by nobler sentiments than are many of their sisters, have shown themselves impartial in their offerings made to the memory of the dead. They strewed flowers alike on the graves of the Confederate and of the National soldiers."—*New York Tribune.*

By the flow of the inland river,
Whence the fleets of iron have fled,
Where the blades of the grave-grass quiver,
Asleep are the ranks of the dead:—
Under the sod and the dew,
Waiting the judgment day;
Under the one, the Blue;
Under the other, the Gray.

These in the robings of glory,
Those in the gloom of defeat,
All with the battle-blood gory,
In the dusk of eternity meet;
Under the sod and the dew,
Waiting the judgment day;
Under the laurel, the Blue;
Under the willow, the Gray.

From the silence of sorrowful hours
The desolate mourners go,
Lovingly laden with flowers
Alike for the friend and the foe;—
Under the sod and the dew,
Waiting the judgment day;
Broidered with gold, the Blue;
Mellowed with gold, the Gray.

So when the Summer calleth,
On forest and field of grain
With an equal murmur falleth
The cooling drip of the rain;
Under the sod and the dew,
Waiting the judgment day;
Wet with the rain, the Blue;
Wet with the rain, the Gray.

Sadly, but not with upbraiding,
The generous deed was done;
In the storm of the years that are fading,
No braver battle was won:
Under the sod and the dew,
Waiting the judgment day;
Under the blossoms, the Blue,
Under the garlands, the Gray.

No more shall the war-cry sever,
Or the winding rivers be red;
They banish our anger forever
When they laurel the graves of our dead!
Under the sod and the dew,
Waiting the judgment day;
Love and tears for the Blue,
Tears and love for the Gray.

The Story Teller.

Written for Moore's Rural New-Yorker.

RETTA GILBERT'S CHRISTMAS GIFT.

BY CLIO STANLEY.

It was Christmas morning, and nowhere was there a merrier face, or a lighter heart, than in Retta Gilbert's little parlor. It was a cheerful, cosy room, with a bright fire burning in the grate, pleasant pictures greeting you from their places on the pearl-tinted wall, and books in their cases, ready for the bright recognition which they never failed to receive when Retta's eyes rested on them. One picture, hanging just over the low mantle, arrested her wandering gaze. It was the face of a young girl—a face with a gentle, quiet look about it, the mouth tender and sweet, the dimpled chin lifted a little, and in the soft, brown eyes, a look of eager expectation, such as we all love to see on a young face anywhere. The eyes reminded you somehow of Retta's own, and, as she looked, she half sighed, while the merry smile faded from her face, as she said, aloud,

"Yes, that's like me, sure enough! *I* am just wishing for something, too, though what it is, I scarcely know."

The door opened and closed as she uttered this exclamation, and she glanced up to meet her Aunt Witherell's loving eyes.

"Are you sure you don't know what it is you want, pet?" she said, laughingly.

The brown eyes fell shyly, as she replied in a low voice, "I suppose I want, really, to make up my mind to something, and I fear to do it."

"Why, Retta?"

"Because, I am not sure that I know my own heart yet, Auntie Kate!"

"And who *else wants* to know it, darling?"

Mrs. Witherell sat down on the lounge, and Retta's slender hand stole confidingly into her's as she told her trouble.

"You remember you were to take me to Mrs. Harrison's to-night, auntie, and last week I received two proposals which I must answer there, and that is what puzzles me."

"May I know who they are, these rival friends?"

"One is Charlie Gorham, and the other Elwood Torrance. Each, when I failed to answer them, made the same proposition; that when I should appear at Mrs. Harrison's I should wear the gift which would be brought to me this morning, if there was any love in my heart for the giver."

"And have the gifts come?" Mrs. Witherell asked, curiously.

"No."

But the words had hardly fallen from her lips, when the servant came in with two snowy boxes on a silver plate.

"Ah, here they are! Well, now we shall see which is the choicest gift!"

The box nearest her hand was opened first, and within lay a small casket which opened with a spring, revealing to the eager eyes above it, a bracelet of rare value—sapphires linked in a delicate chain-work of gold—and underneath, a card, on which was written "A Merry Christmas for the lovely Retta!—E. T." A look of pleasure crossed the maiden's face as she carefully lifted it from its velvet cushion, and clasped it on her fair arm.

"Hasn't he exquisite taste, auntie? I think I should have guessed it was *his* if I had not seen his name; blue is so becoming to me, too!"

Mrs. Witherell looked a little anxiously at her niece as she lifted the other box and laid it on her lap. Retta hesitated a moment, while a delicate flush warmed her cheek, then resolutely lifting the cover, she looked within. She gazed at the contents so long that her aunt finally leaned toward her to see what had put such a spell of silence on the red lips. No jewels, flashing in the sunlight, met her gaze, but up from the open box stole a subtle fragrance that reminded one of bright summers with glints at green fields, and songs of happy birds; and down on the green moss, with which the box was lined, rested a tiny bunch of blue violets. A simple gift, but one which brought the tears into Retta's eyes.

How curiously they carried her back to those days when her richest treasures were a mother's smile and loving words; when wealth, with all its attendant cares, was a thing unknown, and she found her chief delight in roaming over the meadows and by the sunny, rippling brook she remembered so well, plucking blue violets like these. She looked up at her aunt, with the bright drops yet clinging to the long eyelashes, but with a smile glimmering through the mist of happy tears.

"Well, darling, which will you wear?" said her aunt, as she touched lightly the sapphire bracelet, which was still clasped on the rounded arm.

For all answer the jewel was replaced carefully in the little casket, and put aside on the tiny work-table in the corner, while the contents of the other box were carefully lifted, placed in an exquisite little dish lined with gold, sprinkled with fresh water, and left just beside her where she could look at them as often as she pleased.

When the early shadows began to steal into the room where they sat, talking, Retta went up stairs to her own room, and was there alone for half an hour, coming down finally to Mrs. Witherell, who, accustomed as she was to her loveliness, could not repress an exclamation of pleased surprise. Retta had chosen a soft, silken fabric, just the shade of her violets, with no ornaments save the bunch of flowers; half of them hidden in the folds of her soft, brown hair, the others resting on her bosom. Delicate lace shielded her neck and arms, half-hiding, half-revealing her womanly charms. No one knew of the tiny note hidden away close to her beating heart; of the glowing words which told of a love strong, and true, and pure, vowed for a life-time; yet many, as they watched her in the crowded rooms that night wondered at the new look of happiness that had blossomed in her eyes, the glad smile which lingered around the beautiful mouth. She was queen of the festival, sought by all with merry word of welcome and looks of delight, for Retta had won friends by her gentle, winning ways more than by her beauty or her talents.

It was late that evening when two men entered the room. Elwood Torrance, with his usual look of assured welcome, greeted his hostess and then paused a moment while his eye roved over the groups of fair women and brave men, until it rested on Retta Gilbert, who, just then, stood a little apart from the gay throng. Hastening to her side, he said, impetuously,

"I have already wished Miss Retta a 'Merry Christmas,' yet I may wish her once again many returns of the gala day."

"Thank you," came in a low voice from Retta's trembling lips. It was all she could say.

"Will you join the promenaders?" he asked, offering his arm, yet leading her a moment later away from them all into the quiet of the conservatory. As they passed through the door, she half-glanced back toward the silent figure framed in the opposite doorway, but Charlie Gorham's eyes were cast down, and he failed to see the timid glance. He dared not look up lest he should betray his grief to careless eyes, for Torrance had said to him the moment before they entered the room, "I want you to look at Miss Gilbert's sapphires to-night, and tell me what you think of them." Much against the latter's credit, the fact stood forth that he had boasted to not a few that Miss Gilbert would probably wear his gift that night as sign of betrothal. Just then, as he was thinking of all this, Elwood Torrance was saying,

"My dear Retta, I am glad to see you so happy to-night, and hope you may be so all your life; but why would you not wear my bracelet?"

"Surely, Mr. Torrance, you comprehend all that my wearing it to-night would imply."

"And your delicacy shrank from the public avowal; but even in absence of *that I* may rejoice. I would—"

"You have mistaken me strangely," interrupted Retta, "I only did not wear it because I wished to return it," drawing it from her pocket and placing it in his hand. "I cannot be your wife, Mr. Torrance."

"Not be my wife! And may I ask why not, Miss Gilbert?"

"Simply because I do not love you as a woman should love the man she promises to marry."

"But you would learn to love me in time," he replied.

"Could you trust to such a belief?" she asked, faintly. "I am quite sure I never could."

"Perhaps you love another?" he asked, half-incredulously; "you may even be wearing the sign of bondage here under my very eyes."

She drew her slight figure up haughtily as she replied, "No sign of *bondage*, Elwood Torrance, as your jewel would surely have been, but sign of a sincere love for a true *man*."

Her voice died suddenly into a startled silence, for before she could say more, she found herself alone. She hesitated a moment, while tears of mortification filled her eyes; but she brushed them hastily away after a glance toward the open door; then stooped over a tiny cluster of lilies gleaming out from among their dark-green leaves at her feet. Close at her side she heard the softly-spoken words,

"Retta, may I hope that you are wearing *my* violets?"

"Not *yours*, certainly! They were my Christmas gift!"

He looked down into her lifted eyes, and the story he read there, though it was as old an one as the world has ever known, was so sweet that he fain would have gathered her up close—this fair blossom—to wear on his breast forever. Perhaps she *read* this feeling in his face, for she said, as the little white hand nestled a moment in his,

"I love you very dearly, Charlie."

"My darling! Then has God blessed me, indeed!"

"And has he not blessed me, too?" she asked, softly.

"Ah! little Retta, if my love, and care, and tenderness can avail aught in blessing and content, it is all I ask."

"I *am* happy now," she said, quietly, "happier than ever in all my life before."

A sweet silence fell between them for a moment, till he lifted her hand to his lips; then bending down he left a kiss upon the clustering blossoms in her hair. Retta blushed and smiled, as she said gently, "You have consecrated my Christmas token, dear. Hereafter, it will be my chiefest treasure."

Years have passed away since that happy Christmas night, and Retta and her husband are still glad and contented in their home, and more than glad in the dear little ones already gathered about their warm fireside. Retta has never repented of her choice, and she often takes out from the little white box, her withered bunch of violets, smiling to think there are no jewels in the world so precious as these, and none for which she would be tempted to exchange them.

THE ENGLISH HOUSE OF COMMONS.

A correspondent of the Boston Journal writes from London, under date of April 5th, as follows:

"The House of Commons is composed of 635 members. By a strange oversight, the hall will not hold more than half of them. They draw seats for one night, and that after prayers. The drawing consists of the members putting their cards in a little groove on the back of the bench. Those who cannot get seats below have to go into the gallery, and those who cannot sit have to stand. The House has a literal bar, below which is the Peers' seat, and no Peer of the realm is allowed on the floor of the House of Commons.

While the House of Lords has a gallery for ladies, and its debates are attended by ladies of quality as well as others, the House of Commons will not allow a lady within its walls. Above the reporter's seat, and behind the Speaker, is a caged closet, capable of holding sixteen persons, with an iron grating, not unlike a nunnery, is found the gallant accommodation for ladies connected with the House. Within this den, and behind the grating, having obtained a written permission from the Speaker, which is regarded as a great privilege, ladies sit and hear the debates, although they are invisible to the debaters.

The Speaker embodies the dignity of the House. He is chosen for life. He usually serves for about six years, then takes a pension, and goes into the House of Lords. He has a salary of $35,000 per annum. He occupies a sumptuous house, most magnificiently furnished at the expense of the nation. The plate belonging to the house, at which he gives ceremonial dinners, cost the nation $850,000. Every night, on the opening of the house, crowds assemble to witness the procession from his house to the chair.

The division of the House is very curious. It operates frequently like a snap judgment. A call is made for a division. A three-minute glass in front of the Speaker is immediately turned. When the sands run out the doors are closed, and no one is admitted until the vote is taken. Members are in all sorts of places—in the library, in the smoking-room, in the eating-room, in the lobbies, and in the committee rooms. To reach these absent ones, and get them in the House within three minutes, is often a difficult task.

There are 36 bells leading from the House of Commons to all parts of the great building. Immediately on a call for a division, these bells are rung. Whippers-in are busy, and men scramble from all imaginable places to get inside the House before the three minutes expire. The rule is inexorable. The doors are closed promptly on the second. The Queen herself could not get in. Men file out from different ends of the room, go through different passages, have their names written twice, and come back by different doors.

TRUE VIRTUE.

The creation of the sculptor may molder in the dust; the wreath of the bard may wither; the throne of the conqueror may be shivered by an opposing power into atoms; the fame of the warrior may be no longer hymned by the recording minstrel; but virtue—that which hallows the cottage and sheds a glory around the palace—shall never decay. It is celebrated by the angels of God. It is written on the pillars of heaven and repeated down to earth. The rock breaker who possesses it is more noble than the intriguing statesman. I would rather be in his place; I would rather have the inward glory with which the poor man is crowned, than overshadow the world with martial banner. I would not exchange his lot for the reputation of a Byron, the eloquence of a Mirabeau, or the intellect of a Bacon. I may be despised here, but if I possess true virtue, then I shall tower above them all, when the guilty shall tremble in their secret places as they behold the heavens roll together as a scroll.—*Exchange.*

Wit and Humor.

Bunsby lucidly explains the present system of raising revenue as follows:—"Now you see, in the first place they git the amount of a feller's business. That is taxed. Then they find out how much he earns every month, and that's taxed. Then they find ont all about his profits, and on that they lay their tax. Then they manage to get some tax on what he owes. Next comes what they call income, and that's taxed. Then, if anything is left the preacher calls round and gits it to sustain the church and convert the heathen."

Milton, though he had been so actively engaged in the civil wars, was suffered to live in peace after the restoration, and was even admitted sometimes to an interview with Charles II. One day the good natured monarch said to him, "Pray, Mr. Milton, don't you think the loss of sight is a judgment upon you for writing so much against my father?" "Please your Majesty," replied Milton, "if these things are judgments, you should consider that your father lost his head."

A certain Judge was once compelled to double in with an Irishman in a crowded hotel, when the following conversation ensued:—"Pat, you would have remained in the old country a long time before you could have slept with a Judge, would you not?" "Yis, yer honor," said pat, "and I think yer honor would have been a long time in the old country before ye'd been a Judge, too."

A genuine "paldee" quite aged, living some miles ont of town, came into a telegraph office one day to sell some "pratics," and seeing the instrument, battery, etc., wondered if that was the telligraft. After gazing steadily for several minutes, he said he had always wanted to ask one question; and this is it:—"Is the wire hollow on the inside or on the outside?"

"Why is the letter D like a ring?" said a young lady to her accepted, one day. The gentleman, like the generality of his sex in such a situation, was as dull as a hammer. "Because," added the lady, with a very modest look at the picture at the other end of the room, "we can't be wed without it."

Perhaps the best pun recorded was that inscribed on a tea-chest, viz:—"*Tu doces.*" These words are the second person singular of the verb *doceo*, to teach, and when literally translated become, "Thou Tea-chest."

Who were the first newspaper subscribers of whom we have any account? Cain, who took Abell's *Life*, and Joshua, who ordered the *Sun* to be stopped.

"Sam, why am Members of Congress like de fishes?" "I don't meddle wid de subjec, Pomp." "Why, don't you see, nigga, dey's so fond of debate."

Candor, in some people, may be compared to lemon drops, in which the acid predominates over the sweetness.

MISCELLANEOUS ENIGMA.

I am composed of 41 letters.
My 19, 39, 18, 14 is an esculent grain.
My 11, 7, 35, 25, 41, 29 is a number.
My 3, 23, 37, 15, 14, 24 is a boy's name.
My 22, 23, 1, 10, 33 is a kind of bird.
My 38, 20, 10, 6 is to labor.
My 13, 17, 19, 39, 2, 27 is a portion of time.
My 4, 31, 20, 33, 3, 11 is a kind of flower.
My 9, 5, 18, 34 is a species of animals.
My 16, 8, 12, 21 is one that is conceited.
My 36, 26, 38 is something worn on the head.
My 28, 23, 37 is an insect.
My 30 and 37 are vowels.
My whole is a true saying.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,

IS PUBLISHED EVERY SATURDAY

BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, In Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2.50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2.70 is the lowest Club rate for Canada, and $3.50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

SEND FOR IT!

THE CLIMAX BEST

CRAIG MICROSCOPE

Combines instruction with amusement.—Best, simplest, cheapest and most powerful microscope in the world. Magnifies 10,000 times. Made on an entirely new plan, hence its low price and high magnifying power. Requires no focal adjustment, therefore it can be readily used by every one—even by children. A beautiful gift to old or young. Adapted to the family circle as well as to scientific use. Shows the adulterations in food, thousands of animals in a single drop of water, eels in vinegar, globules in milk, blood and other fluids, tubular structure of hair, claws on a fly's foot, also the celebrated "trichina spiralis" or pork worm, which is causing so many deaths among pork-eaters, and in fact the objects which may be examined in this wonderful microscope are without number. All are invited to call and see its great magnifying power. It took the first premium at the Ohio State Fair. Liberal discount to Agents, Booksellers and Stationers, Fancy Goods Dealers, Toy Dealers, Jewelers, Opticians, Druggists, &c. Price, $2.50. Packed in a neat box and sent pre-paid to any address on receipt of $2.75. Money can be sent by mail at our risk. Address GEO. MEADE, Racine, Wis.

AGENTS WANTED—FOR the MOST thrilling work ever published, "MYSTERIES OF THE NEAPOLITAN CONVENTS." A faithful account of the iniquities practiced under the guise of religion; showing also the eminent services rendered by the authoress to the Italian Liberals, complete in one volume, of nearly 500 pages. Prospectuses now ready. We offer also the Cottage Cyclopedia and Domestic Bible, both are selling rapidly. Send for Circulars, with terms, which will be found very liberal.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

Hon. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

Hon. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

The Rural New-Yorker is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the Rural a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a Family Journal it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete Agricultural, Literary and Family Newspaper in America.

☞ For Terms and other particulars see last page.

AGRICULTURAL.

HARVESTING POTATOES.

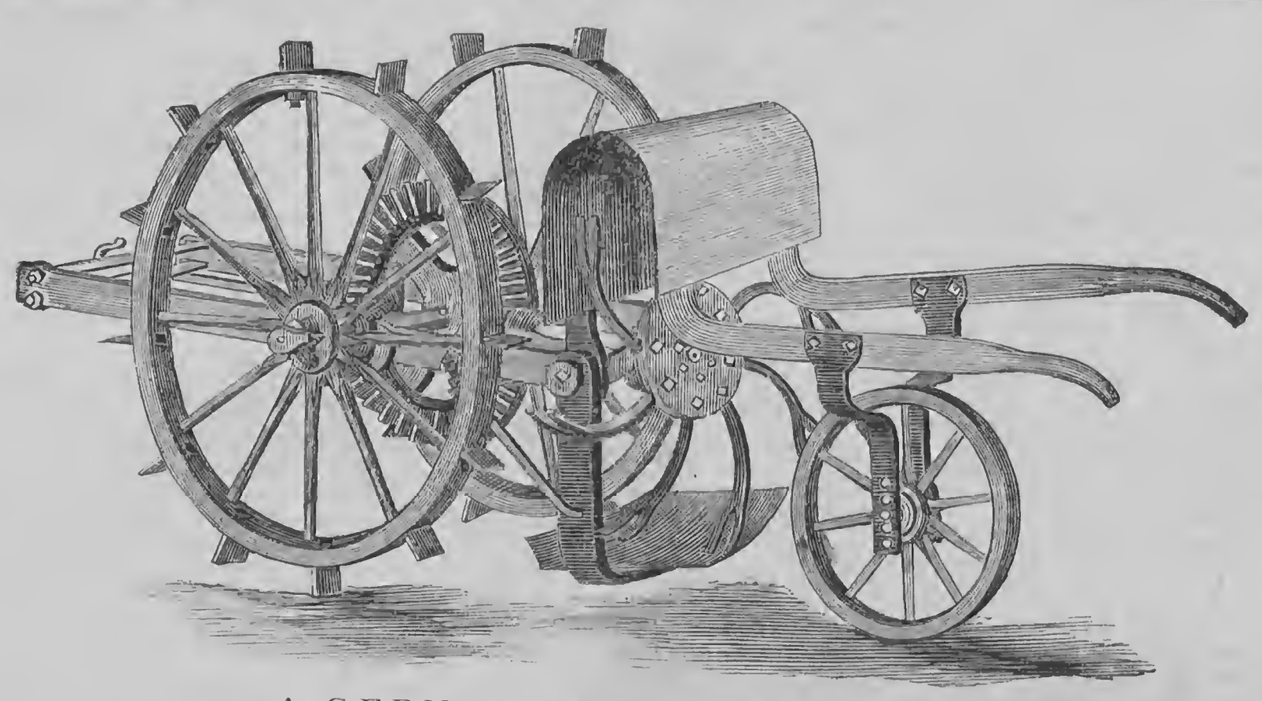
Perhaps the greatest want of the farmer in the line of agricultural implements which inventors and manufacturers as yet have failed to supply, is an efficient horse-power potato digger. True, there are some machines in the field that promise well, and we have great hopes of them; but none have yet proved themselves complete and reliable, though, doubtless, the coming potato harvest will give us more information, and we hope and expect more confidence, also, in their ultimate success. What we want is a machine that, drawn by two horses, will throw out four or six acres per day, in as good a shape and as clean as can be accomplished by laborers with hooks. Large vines should be no serious impediment to the working of the machine. Farmers would be satisfied with such, and it would bring a fortune to those who controlled the sale and manufacture.

In the meantime, although one of the most profitable crops which the farmer grows, and yearly increasing in importance, the potato is also one that requires great labor, which comes chiefly in harvesting. In other respects no more is required than to grow the corn crop—if as much. Every farmer must be guided partly by circumstances as to the means he can best employ to lighten and facilitate this work; the most we can do in this article is to offer a few hints which may be improved by some.

It is of considerable advantage to run a five-tooth cultivator along the rows before digging. The two rear teeth should be of the mould board form, and placed so as to haul away the dirt from the hills. This operation, which takes but little time, smooths the ground between the hills, levels the weeds and grass and removes some of the soil from the tubers. In large fields, where many hands are employed, the labor should be systematized. On fine days the potatoes need little airing—just enough to loosen the dirt on them—they are better if gathered without feeling much sun. The feebler hands and even children could pick them into baskets, which should be emptied and replaced by men. Some find it economical to provide a large number of baskets, which, when filled, are loaded on a wagon fitted with a suitable rack, and drawn to the market or cellar; this course saves handling, and the potatoes look better, and are, perhaps, less liable to decay. Before being closely stored for the winter, the crop should be under light cover until the sweating stage is passed. This may take place in lightly covered pits provided with ventilators, on the barn floor, or in some out-building. After this process is completed they may be placed safely in dry, cool cellars, or covered with an air-tight layer of earth to a suitable depth; light should be excluded from them. It is also better to store potatoes low in a cellar than near the ceiling.

In digging potatoes, the best hand implement for universal use is the hook, made of the best steel. Round tines draw through the earth easier than flat ones with their broadest sides at right angles to the handle. In all cases avoid injuring the tubers with the implements.

From appearances, we judge the price of the present crop of potatoes will rule high. In the large portion of the country which has been seriously affected by dry weather, the crop will probably fall below the usual average. In other extensive potato growing districts disease prevails. The Northwestern States are great sufferers from the ravages of the Colorado bug. Taken altogether, circumstances indicate high prices for this important staple.



A GERMAN POTATO DIGGER.

Our engraving represents a potato digger which has been used two years in Saxony, without any material injury to the machine. The digging part is made of cast-steel. It is operated by a man, boy and two horses, and works well in the heaviest soils, as well as in light ones. With suitable help it digs about four Saxon acres per day—the ground being first dragged over with a harrow to loosen the tops. The German paper from which we condense the above, (the *Illustrirte Landwirthschaftliche Zeitung*, of Leipsic,) states that the projector sold twenty machines in one day, at an agricultural exhibition. We give the illustration to show Rural readers a novelty in the line of potato diggers, and in the hope that it may prove suggestive to some of our farmers and mechanics—at a season when the back-aching labor of unearthing potatoes will be likely to stimulate the inventive faculties. Though we have several potato diggers a perfect machine is still a desideratum.

SOW TIMOTHY GRASS SEED.

The best time of the year to sow timothy or herdsgrass seed to be certain of a good catch, is the autumn. So if you wish to lay your field of winter grain down to grass for meadow, without running any chance of failure, sow the seed liberally as soon as possible. The cool, moist autumn weather will enable it to make root enough to endure the winter well, and the same kind of weather in the spring will place it far enough ahead to bid defiance to any summer drouth. Sow thickly, and repeat the operation with clover seed next spring. One cannot grow too much clover on a farm, and the great trouble with most farmers is to grow enough.

In sowing timothy seed with winter wheat we prefer waiting until the grain has started some before scattering the grass seed; the latter will grow enough before winter, and will not get so rank the next season as to injure the wheat. Timothy seed sown early in the fall alone on ground well prepared, at the rate of half a bushel per acre, will furnish a very good crop of hay or good pasture the following season. Much is lost by not sowing timothy seed in the fall; sow it by all means now unless you intend to harrow your field in the spring, and at the proper time put on the clover seed without heeding that you have sown herdsgrass.

PROPER DEPTHS FOR COVERING WHEAT.

As appropriately illustrating the subject of wheat seeding, the Canada Farmer refers to a suit brought in Ohio several years since to recover damages from a man who contracted to sow a certain field to wheat. The field was sown, but either from carelessness or want of judgment, the seed was drilled in from six to seven inches deep. But a small quantity of it pushed plants above the surface, and these were of so feeble and exhausted a character that very little wheat was harvested from them. Damages were claimed on the ground of improper sowing, and witnesses introduced to substantiate the truth of the complaint. It appeared that on the stony and stumpy portions of the ground, where the drill could not penetrate deeply, the yield of wheat was good, hence the claim for damage on account of improper seeding.

Among the witnesses examined was one who said:—"Eight years ago I made an experiment to ascertain the proper depth of sowing wheat—depositing fifty seeds at the depth of eight inches; a like number, seven, six, five, four, three, two and one inches, and fifty grains I raked in on the surface. Of those deposited eight inches, two came up, but formed no heads; of those deposited seven inches, about one-fourth came up through the ground, but formed no heads. Ten of the fifty seeds covered five inches deep, made defective heads. A few perfect heads resulted from the four-inch planting. All the three-inch ones germinated, but the two-inch row was *best, and came up sooner than the rest.*" Another witness:—"I should prefer to deposit the seed at the depth of one inch—certainly not deeper than two. It is a mistake to suppose that deep seeding is any security from winter-killing. The roots of plants form at the surface, whatever may be the depth of the seed. But, from frequent examinations, I am satisfied that wheat, not planted deeper than two inches, will start out better than that deposited at a greater depth—that is, will produce more plants and grain."

CUT-WORM—FALL AND SPRING PLOWING.

The question of fall or spring plowing, with reference to their comparative influence in destroying the cut-worm on corn ground, is very lucidly treated by "Agricola" in the Germantown Telegraph. His theory is that frost has nothing to do with destroying the eggs of the cut-worm whether the ground be plowed in the fall or early spring, but that, done at either season, the eggs are buried so deep as to place them beyond the influence of the sun and air, hence preventing them from hatching. If these eggs are undisturbed, they will hatch between the first and fifteenth of May, and if they are, as is assumed, destroyed by being turned under, it makes no difference whether the burying is done late in the fall or early in the spring. This is probably true, still, though both are alike effective, it is safer to do the work in the fall, leaving out of view the supposed favorable action of frost upon ground turned up late in autumn, because there is generally more time to do it then, and the soil in better order for the operation.

AGRICULTURAL PREMIUMS.

It requires judgment, thought and some honesty, to make up such Premium Lists, for Agricultural Fairs, as shall prove incentives to improvement in the culture of the more important farm products. In too many instances premiums of importance fall to those who supply the tinsel of the exhibitions, rather than to such as furnish the important or more solid material. An illustration of this is furnished by the Boston Watchman and Reflector from the premium list of the New England Agricultural Society. For example, $52 are offered for foreign grapes requiring hot-house development, and but $30 for those ripening in the open air, and $49 for apples. Green-house plants get $24, and potatoes $17. Maple sugar gets two premiums, one of $5 and another $3, while, for floral designs for the dining table, the premium is $20. For growing root crops, $9 are offered in these premiums, while flowers get $320. Wheat, rye, barley, oats and corn get each $10, while the premium on a single trot exceeds the amount assigned to grain, vegetables, fruits, grapes, butter, cheese, maple sirup, cranberries, swine, poultry, fat cattle and native stock! For butter the premiums aggregate $50, cheese $30, while for trotting horses the sum offered is $5,700! This method of making premium lists, the Reflector justly argues, if persevered in, will do much towards destroying, or rendering unpopular, the Agricultural Fairs of the country. The subject is worthy of the careful consideration of all who participate in the management of Agricultural Fairs.

STONE ON LAND.

The New England Farmer, of recent date, had an article on the stone found on many sections of farming lands. The point considered was whether the small stone, dotting a field, were injurious to cropping or the reverse. This is a question we have often pondered on with the general result arrived at by the N. E. F., to wit: that these small stone aided the fertility of the soil, and hence increased the quantity of its products. They are "living stones"—that is, they prevent the ground from parching while keeping it in a lively state, whereby food is supplied more readily and in greater profusion to the plants seeking nourishment from the soil. Land that is to be used for meadow and the small grains, harvested by machinery, will require to be disburdened of its stone, but, in all such cases, a fertilizing power, of which the soil readily avails itself when under cultivation, departs with the stone removed. The stone, to the mower and reaper, are a nuisance, to be removed, but to the soil a friend whose retention in it would be a blessing.

POULTRY—KILLING AND DRESSING.

Poultry killed and dressed by some persons resembles the breaking up of a hard winter, rough and dirty, while in the hands of the experienced the defunct fowls look as smooth and unruffled as though slain by touch ethereal. In Geylins' Poultry Breeding the following excellent directions for dressing poultry are given: "Open the beak of the fowl, then with a pointed and narrow knife, make an incision at the back of the roof which will divide the vertebræ and cause immediate death; after which hang the fowl up by the legs till the bleeding ceases; then rinse the beak out with vinegar and water. Fowls killed in this manner keep longer and do not present the unsightly external marks as those killed by the ordinary system of wringing the neck. When the entrails are drawn immediately after death, and the fowl stuffed, as they do in France with paper shavings or short cocoanut fibres to preserve their shape, they will keep much longer fresh. Some breeders cram their poultry before killing, to make them appear heavy; this is a most injudicious plan, as the undigested food soon enters into fermentation, and putrefaction takes place, as is evidenced by the quantity of greenish, putrid-looking fowls that are seen in the markets."

FALL PLOWING.

Morally, man is said to require "Line upon line and precept upon precept," and not less does the farmer require his attention to be called, in season and out of season, to his duty of thoroughly preparing his soil for the future crop. The frost of winter works wonders upon a stubborn clay soil when turned up in the autumn. No implement, hand or horse, can so thoroughly disintegrate it; besides, it sweetens and purifies the soil from unfavorable weeds, and thus enables the farmer to plow his land deeper than in spring. Every farmer, especially one who owns heavy land, should endeavor, gradually, to deepen his surface soil from six to twelve inches. And the fall is the true time to do this. Some years since we plowed in the fall a piece of heavy clay ten inches deep, which had previously been plowed only five or six inches, turning up four inches of a light colored clay, never before disturbed. Neighbors, who saw the field in spring, thought it useless to sow any grain upon it, as it would require several years seasoning before anything would grow. Regardless of these prophecies, we drilled in two and a-half bushels of oats per acre, and had a yield of forty-five bushels per acre through the field of ten acres.

An excellent way to plow deep in fall, on land too heavy for one team, is to use two teams and two plows. Let the first plow turn six inches and the second four inches from the bottom of the first furrow, leaving it on top of the first. This leaves the last four inches in looser condition and more favorable for the action of frost. The second plow should, to work easy, be a little narrower than the first. This is undoubtedly better than to turn the ten inches with one plow, and would, perhaps, pay the extra expense.

Another important feature of fall plowing is, that it destroys many insects and noxious weeds. By reversing the roots of weeds and exposing insects to the frosts they are destroyed to a large extent. Then, it is done at a season of comparative leisure with the farmer, making it much less expensive. Besides, the crop may be sown in spring from two to four weeks earlier than on spring plowing. This is so important that it often saves a crop which would otherwise be lost. And more, the crop will average a fourth better with fall than spring plowing on clay land. Light sandy soils are not benefited by fall plowing, as they are loose enough without frost. When practicable, fall plowed land should be sown to spring grain when the frost is out of the surface sufficiently to cover the seed, with the frost still remaining under—which on coming out will leave the soil very loose; and to this loose and pulverulent condition of the soil is owing the larger crop realized on fall plowed land. It is also allowable to plow clay land wetter in fall than in spring, as the frost will mellow it. This is also a gain, for the work may be done late in the fall, just before winter sets in. But early fall plowing is preferred. Fall plowing makes all the difference between profitable and unprofitable farming.

E. W. S.

Management of Manure.—A correspondent (W. D. S., Chester Co., Pa.,) writes sensibly and suggestively to the Practical Farmer concerning the impolicy of exposing manures to the action of the weather while accumulating in the barnyard. He keeps his manure in a pit or cellar, where it receives the wash from the stables and the suds from the kitchen. This keeps the mass moist, and for the purpose of perfect decomposition, a quantity of plaster is added. The result is a manure so well rotted and minutely divided that when mixed with the soil every young rootlet, putting out in search of food, finds a supply which can be readily appropriated and absorbed.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

THE MAUCHAMP MERINOS.

We have been looking through the accounts of the Paris Exposition for something in regard to that wonderful new family of Merinos, claimed in various agricultural publications to have been started nearly forty years ago in France by Mons. J. L. Graux. The story ran that in 1828 an ewe belonging to Mr. Graux produced a ram lamb having a different shape from the usual Merino, (smaller head, broader flanks and more capacious chest,) and long, *straight*, silky wool, remarkable for its combing qualities. Others were bred from him resembling him in these particulars, though a portion of his progeny retained the old characteristics. At last M. Graux, by breeding in-and-in between the former, obtained a flock exhibiting the same qualities. We took the liberty, in the Practical Shepherd, to express the opinion that the ram thus described was a mongrel got by a ram of some Long Wool breed,—and that the assumption that he was a pure blood Merino was "an amusing case of credulity or a gross attempt at imposition."

We have since seen a different description of the origin of the Mauchamp Merinos. The ram from which they are descended was "badly and even monstrously formed, having a head of unusual size and a tail of great length." M. Graux prized him for his remarkably soft, silky, lustrous wool, and, by the means above stated, obtained a small flock from him "whose wool was perfectly silky." He then sought to modify the form and increase the size (originally quite small) and succeeded in both particulars. Like other improvers he encountered detraction and opposition. The other sheep farmers insisted that the "silky type" could not be preserved except on the farm of Mauchamp. Even the manufacturers complained that the wool "was so pliant and slippery that nothing could be done with it"—i. e., they were so stupid as to quarrel with what constituted its special excellence! M. Graux probably "would have renounced the development of this magnificent race," had not M. Yvart, the Inspector-general of the Imperial sheep folds, interfered and obtained for him an annual subvention from the Government. At length, in 1853, M. Davin, a manufacturer, experimented on the wool and succeeded in making "magnificent stuffs which excited the admiration of all connoisseurs. They exhibited in the tender colors reflections of light which had never before been observed, and a softness which never had been found in any material of wool of any degree of fineness." The silky luster was so decided that some fabrics containing seven-eighths of this wool and one-eighth of silk were as brilliant as pure silk. A commission of savans reported to the Imperial Society of Acclimation that "the silky wool is destined to replace completely in our industry the Cashmere which comes from Thibet." They declared it fully as brilliant and soft as Cashmere. In 1857 a medal of the first class was awarded to M. Davin for "his industrial application of this material," and the Society above named proposed a prize of 2,000 francs for a flock of one hundred sheep of the silky type.

M. Graux's three-year-old rams weighed "as much as 80 kilogrammes, and a flock of six hundred head produced on an average two kilogrammes of wool, washed on the back."

These statements, derived from the "Bulletin de la Société Imperiale Zoologique d' Acclimatation," we condense from an address delivered by John L. Hayes, Esq., before the National Association of Wool Manufacturers, at Philadelphia, 1865.

These facts, if they are facts, present a wholly different case from that commented on in the Practical Shepherd. Nothing here is said about *straight* wool, or the "smaller head, broader flanks and more capacious chest" of the original ram. All these are characteristics of Long Wool sheep—while *straight* wool is so peculiarly uncharacteristic of the Merino that we cannot conceive of it in connexion with purity of blood. It is noticeable that the nearer Merino wool is to being *straight*, the coarser, less pliant and less glossy it is, precisely the qualities, in the last two particulars at least, in which the Mauchamp wool is claimed to excel other Merino wool. Under the present showing, this new sub-variety *may* be of pure Merino blood. We have waited some time for further developments, and, as already said, have looked to the Exposition for them, but in vain. We confess we would like to know how far the glowing account of the French journal named, is sustained by further observation and experiment, before we allow ourselves to form any definite opinion in the premises.

The practical questions involved are probably of no great importance to American sheep farmers. Flocks, the three-year-old rams of which average over 160 lbs. in weight,* and which (flocks) average but a fraction over 4 lbs. of wool "washed on the back," (a French kilogramme is 2 lbs. 5⅓ drams,) are not likely to attract much attention here—for however choice the wool, it would not in our markets fetch enough to make up, in comparison with our Merinos, the miserable disproportion of fleece to carcass—especially as we have no manufactures for such wool. And such light and thin fleeces, we should say, would prove a very inadequate protection from the rigors and changes of our climate.

The question is only interesting to our readers as one of *breeding:* but with *us* it also involves one of accuracy as a writer on sheep. We gave our opinion in the Practical Shepherd as we should do again on the same presentation of facts. We now give another version of the facts and leave every one to draw his own conclusions.

* The ewes to be in proportion should weigh from 130 to 140 lbs.

MARRINER & BRONSON'S RAM TEG, "BLOOMFIELD,"

Was bred by his present proprietors, East Bloomfield, New York. He was got by Young Grimes, owned by Harlow & Brothers, Darien, N. Y. His dam was bred by D. E. Robinson, Shoreham, Vermont, got by the Tottingham ram, out of a ewe bred by Mr. Robinson. He is accordingly half Infantado and half Paular. He was one year old last March, was shorn on the fifteenth of April, and yielded seventeen pounds of wool..

SHALL WE ABANDON OUR FLOCKS?

The N. H. Farmer and Miner, the Sheep Department of which is edited by Dr. Henry Boynton, contains an extended and sensible article in answer to the above question. We have room but for a few paragraphs:

"There is no other branch of farming in the State (Vermont) in which the many, proportionably, have acquired wealth as in this, and notwithstanding the present unprecedentedly low price of wool, our farmers here would as soon think of *abandoning* their homesteads as their flocks. Nay, the knowing ones are already bestirring themselves in pursuit of *bargains*, shrewdly reckoning that the market for wool can touch no lower depth, unless the bottom falls out, and that the very best time to buy a good flock of sheep, is when they can be bought for the least money. They argue that the crops all over the country are abundant, that the Southern States, particularly, have raised enough to live on and buy goods with, that their needs are pressing, and their supply will let a streak of daylight and activity into and through the markets; also that the North and West want a host of goods, that the surplus products of the country will *very soon* be hurrying towards the great markets, exchanges Commence, and the 'almighty dollar' be once more forced out into the country. We think the argument tenable that woolen goods will ere long be distributed far and wide, and we hope that 'all creation and the rest of mankind' will have a new suit throughout—*of woolens*—promoting their own health and the market's. But *now* is the time to buy sheep, before the stock of woolen goods is entirely swept out of the market, and the price of wool advanced, as it must and will be.

"What though the tariff has not been able to overcome all extraneous causes *at once*, and profit the wool grower as he expected on this year's clip? Has it not done all it ought to do? It cannot govern the weather, prevent short crops, manage the combinations interested in thwarting its purposes, clear the markets at once of the competing wools imported before it went into power, but the following statement ought to restore confidence in its efficacy."

After quoting a table of the importation of the different classes of foreign wool, at the port of New York, for the first six months of 1866 and 1867, the writer continues:

"Can wool growers doubt these figures? They come from the best authority in this country. If true, is there a doubt that there will soon be a home demand for all, and more, wool than we can raise? If the importation of competing wools has been lessened, in this port, nearly one-half during the first six months after the tariff is put in operation, should not those men who have been selling wool at 35 and 40 cents be thankful for the tariff and take courage? The law of *demand* and supply must, inevitably, force up the price of wool, and, of course, encourage the raising of flocks. We believe that the man who starts flock on the present market will be decidedly in his *luck*."

Condensed Correspondence, Items, &c.

Brain Disease.—We expressed the opinion, a few months since, that some cases of ovine disease presented, were probably cerebro-spinal meningitis. That malady, it would now seem, has made its appearance in horses—a fact which, if it is true, so far favors our former conclusions as to show that this terrible visitation is not confined to human beings. A recent number of the Albany Evening Journal says:—"A new disease is prevailing among the horses on Long Island. It is termed cerebro-spinal meningitis, a disease of the brain and nervous system, developed from atmospheric causes in these cases. It is not contagious nor infectious, and has a fatal termination in from eight to forty-eight hours from the first premonitory symptom. Consultations have resulted in the verdict that there is no curative treatment. The only chance of checking the disease is by the removal of the disinfected stock and placing them under an active preventive treatment. A few hours after the disease first shows itself the organs of deglutition are completely paralyzed, so that the animals can swallow neither food nor drink, and the whole body becomes more or less palsied. There is a general want of nervous power."

The Prolific Chinese Sheep.—We cut the following from the Inverness (Scotland) Courier of Aug. 8th:

"The Journal of Agriculture for this month has an article on the crosses of the Ti-yang sheep from China, which are remarkable for their fecundity—producing twice a year, and at each birth from two to four lambs. In France it has been crossed with Merinos, and the cross is now in the third generation. A ram of three-quarter blood was lately exhibited, and though it was not fattened, was matured at fifteen months, well made, and weighed 205 lbs., live weight. The Journal says that there seems no reason for fearing that this singular cross will not prove hardy, precocious and prolific. About 3,000 lambs have been produced in the department of Seine and Marne, and 2,000 more will shortly be produced. As to the wool of the pure Ti-yang, it is in France of no value, but when crossed it becomes of considerable value in the manufacture of certain articles, such as *popeline de laine*—

'But while the wool of the Chinese sheep is known in France and this country to be of such small importance, it is quite different with that which is produced from the cross-bred of which we have been treating. In January of last year, M. Ramel presented to the Imperial Society specimens of wool, combed and spun, from the fleece of a lamb, the produce of a Chinese ram and merino sheep. This lamb, and many more of the same breed, were exhibited at Poissy, where it was found that at six months old they weighed 110 lbs., live weight. The fleece had been sent to M. Ramel by M. Feymes Desforges; part of the spun stuff had been dyed as *popeline de laine*. The rest was dyed different colors, and was remarkable for its marked shade and unusual brilliancy. It is very soft to the touch, and very uniform in the dye, in spite of the dead wool, (*des jarres.*) which itself took on the dye very well, to the great surprise of connoisseurs. Different light tissues have been made with a mixture of silk. The principal manufacturers at Roubaix are unanimous in considering this wool perfectly suitable for their various fabrics, and in desiring to have it sold to them in large quantities.'

"The Ti-yang has been successfully resorted to in Australia, to mitigate the damage occasioned to all kinds of stock by a terrible drouth. Mr. Thomas Armstrong of Melbourne, crossed a ewe with a Cotswold ram, and the produce was six lambs to a birth, and two lambs at the next birth, making eight lambs in seven months."

Report of Wool Scouring of Northern Illinois Wool Growers' Association, July, 1867.—*Sec. Northern Ill. Wool Growers' Association:* The State Agricultural Society's Committee on Scoured Wool would report to your Association the accompanying table, showing the results of scouring the fleeces forwarded by you to Freeport. Having received no instructions from your Association as to awards, we submit to you the facts.

Graham Lee, Chairman.

The officers of the Northern Illinois Wool Growers' and Sheep Breeders' Association make the following awards:

Exhibitor.	Breed.	Sex.	Age. Years.	Weight of carcass. lbs.	Age of fleece. Days.	Wt. of fleece before scouring. lbs. oz.	Wt. of scoured wool. lbs. oz.	Wt. sc'd wool prod'ts ℔ lb. carc'ss ℔ day Dec'ls oz.	Per cent. of shrinkage.

HORTICULTURAL.

NATIONAL POMOLOGICAL SOCIETY.

In our last issue was a brief notice of the 11th biennial session of the Society at St. Louis on the 11th of September — its organization and the election of officers for the ensuing biennial term. This, with the address of the President, and several by other parties, comprised the proceedings of the first day of the session.

The second day's proceedings were prefaced with a resolution offered by P. Barry, Esq., regretting the absence of James Vick of Rochester, N. Y., and tendering him the thanks of the Society for his faithful and efficient services as Secretary and Reporter of its proceedings for a series of years. The resolution was adopted.

Various committees on wines were appointed. A preamble and resolutions, presented by Mr. Lyon of Michigan, in favor of belts of forest trees in fields and roads, as a protection to fruits, was referred to the business committee.

A report on, and catalogue of, new fruits, with a discussion of each by Mr. Downing, was ordered published.

Mr. Barry submitted a report on the revision of the fruit catalogue.

M. L. Dunlap presented and read an interesting paper on the subject of packing and marketing fruit. Remarks on the same subject were made by Dr. Hull, Dr. Claggett, Dr. Knox, and Mr. Nelson.

Dr. Warder of the Executive Committee, reported that it proved necessary to sub-divide the committee, and he submitted the following subdivision, which was approved:

On Apples—Messrs. Bryant, Ill.; Lyons, Mich.; Ellwanger, N. Y.; Nelson, Ind.; T. McWharton, Ill.
Pears—Downing, N. Y.; Manning, Mass.; Douglas, Ill.; Earl, Ill.
Grapes—Knox, Pa., Campbell, Ohio; Husmann, Mo.; Heavers, Ohio.
Peaches—Parry, N. J.; Hull, N. J.; Barry, N. Y.

The subject of fruits was then taken up for discussion—commencing with—

RASPBERRIES.

Mr. Dunlap, Ill., moved a resolution "that for all practical purposes all the 'ever-bearing raspberries'—so called—are of little value."

Mr. Phœnix judged the resolution to be wrong in spirit and in fact.

Mr. Dubois said that in one fall he had picked ten bushels of raspberries.

Mr. Hooker thought there at least was no need to condemn the culture of the ever-bearing kind.

Mr. Barry had considerably cultivated the Catawissa, but it failed him, and he at length abandoned it.

Mr. Dunlap said that, while not wholly condemning the culture, his resolution simply characterized them as "of little value," and every speaker had substantially corroborated this. He would withdraw the resolution.

An Iowa member thought that Mr. Dunlap could not have traveled much in Iowa, or he would have feasted on the berries in question.

Mr. Dunlap had been in Iowa, and would visit the gentleman and do justice to any such feast, if provided.

Mr. Campbell eulogized the Clark raspberry as the best of the antwerp family of raspberries, and especially as having, to his knowledge sustained very severe degrees of cold without injury.

Mr. Barry also endorsed the Clark as hardy, of good growth and size, and delicious.

A member asked if the Clark resembled the Belle de Fontenay. The President said it did not. Dr. Knox was emphatic to the same effect.

Mr. Trowbridge, Connecticut, said that the foliage, as well as the vines of the Clark, sustained serious frost, and the fruit was delicious.

Mr. Bronson, New York, had seen the Clark in Mr. Clark's own ground, and had also himself cultivated it, and all that had been said for it he could indorse.

Mr. Phœnix said he had found the Philadelphia raspberry hardy and an enormous bearer, but deficient in flavor.

Mr. Sylvester, New York, remarked that the hardiness of the Philadelphia was unquestionable.

Mr. Bateham of Ohio, said that the hardy raspberry of first class was still wanting, unless the Clark were it.

Mr. Williams of New Jersey, after four years experience with the Philadelphia, found it very productive, of fair size, and in quality third rate.

Mr. Barry remarked that, in defense against frost, the vines must be laid down in winter.

Mr. Campbell had covered the tender varieties, but this made them start too early in the spring.

The President held that all the varieties, especially in New England and New York, must be laid down in winter, and the crop was then sure.

Mr. Downing said the raspberry had to his knowledge yielded a net profit of over $500, sometimes $1,000 to the acre.

Mr. Stevens, Mo., asked if the Clark had succeeded in the West as well as in the East.

A member said that, if Sandusky, Ohio, was in the West, the Clark had succeeded here also.

M. Hoag, N. Y., spoke of an Antwerp hybrid of extreme hardiness and productiveness.

Mr. Trimble, N. J., praised the Doolittle raspberry as early, hardy, productive, and of fine flavor.

Mr. Bronson, N. Y., said that Mr. Doolittle is bringing out another variety, equally good, but ripening a week later, and named by him the Seneca.

Mr. Parry of New Jersey, said that the Doolittle was highly prized in that State as earlier than the Miami. He had twenty acres of the Doolittle, having discarded other kinds after trial. His crop was usually a hundred bushels per acre.

BLCKBERRIES.

The Kittatinny, introduced and disseminated by E. Williams of Montclair, N. J., was pronounced by Mr. Weir to be hardy and productive in his part of Illinois.

Dr. Edwards of Missouri, found it earlier by a week than the Lawton, about as productive and of more value.

Mr. Kauffman of Iowa, wished Eastern men to say how the Kittatinny among them compares with the Lawton.

Mr. Parry of New Jersey, had grown them side by side for five years, and found the former hardier and generally better. The Lawton would sometimes be larger—not finer. The Kittatinny will discolor with transportation, yet less than the Lawton.

A member had found the Kittatinny much the hardier, surviving the cherry, peach and plum in frost. The Lawton is peculiarly acid, but when it is canned, and in winter, he is sick who can't eat it.

Mr. Stevens of Missouri, remarked that the Lawton is valuable for persistent ripening, furnishing ripe fruit, not all at once, but continuously. He asked if this could be said for the Kittatinny.

There were several and contradictory answers, some members having one kind of experience in the matter, and others another kind.

Mr. Trowbridge instanced a remarkable case of successful cultivation in his State, (Connecticut,) where the ground was kept particularly moist, and the plants bore largely and fruit of large size.

GOOSEBERRIES.

Mr. Trimble found all the varieties to become mildewed except the American.

Mr. Hooker found the Downing seedling very superior, an inch in diameter, ripening finely, abundant in foliage and in crop.

Mr. Manning so found them. They were oval, of a light bloom, and large.

A member found them satisfactory when in fruit, but his had been five years in fruiting.

Mr. Hooker said this could not be of the kind he had. There were two kinds. No. 1 is larger and better than No. 2, has a pale amber fruit, is erect, with the ends of the branches drooping, and its productiveness increasing with age. It does not bear well when young.

Williams, N. J., described the two varieties.

CURRANTS.

Mr. Batcham, Ohio, had learned to appreciate this fruit, as once he did not, and had found that it was rarely well grown. When well cultivated it had merits too little known, being useful as a promoter of health in summer, and wonderfully palatable in the right season. It is time the people were educated to appreciate the currant, to cultivate and ripen it and understand its great worth.

Mr. Phœnix of Illinois, asked for the most productive kinds.

Mr. Batcham:—"The White Grape and the Versaillaise."

The President thought the latter far superior to other varieties.

Mr. Trimble said there was a popular prejudice against the use of the fruit and against its culture, and the mistake was that the currants were picked too soon.

Mr. Williams thought the fruit had been strangely overlooked and underrated. Its acidity came at exactly the right season for health.

The President said that a neighbor of his had an annual crop which brought him from $800 to $1,300 per acre, all grown under apple trees.

Mr. Hooker: The currant worm can be killed by sprinkling the plant with white powdered hellebore. He said that of late no fruit had been so scarce in New York, and thus so highly prized, on account of its loss by the worm. The fruit had been at $5 a bushel. He thought the difference between the Versaillaise and other kinds puzzling and not material.

The President thought the diversity decided, and described the kinds.

STRAWBERRIES.

Mr. Jordan had been so deeply interested in the subject, that he had this season traveled over two thousand miles to see strawberries in different sections.

Mr. Hoag said a friend of his had found the Agriculturist variety fail in sandy soil, and he himself had it fail in clayey soil.

A member said that the originator of the Agriculturist himself regarded the Green Prolific as superior.

Dr. Edwards, Missouri, for two years had found no strawberry to compare with the Agriculturist in quality or in productiveness, unless the Green Prolific. He referred to Dr. Morse to corroborate his statement. His trial of the Jucunda was limited. Saw it at Pittsburg, but it did not equal what he had since seen of the Green Prolific. But in different localities various results were found. He found the Triomphe de Gand not worth culture.

Mr. Quinette, Missouri, had seen the Agriculturist extensively, and it was everywhere inferior.

Mr. Parry had proved it excellent in his region, and his experience with it was highly favorable.

JUCUNDA STRAWBERRY.

Mr. Hooker. Three years' trial with it had pleased him. It was of good size, fair, healthy, productive and second in quality.

Mr. Heaver. Most have tried the Jucunda; it has merit in appearance, but in quality it is about as good as a turnip. He thought it an *imposition*. [Applause.]

Mr. Hoag had five years of Jucunda, and it had done well; brought a good price. It is not first in quality, but good; more productive than the Wilson, and a valuable market fruit.

Mr. ——— got more quarts from a Wilson than berries from a Jucunda.

Mr. Stevens, St. Louis, knew of gentlemen strongly in favor of it, and going largely into its cultivation.

Mr. Knox had tested it thoroughly and used no deception, and defied the most critical examination. It is uniformly large, has perfect beauty in form and color, and yields enormously. Seeing it on my grounds, said Mr. K., you ask, "How is it possible for vines to yield so much?" As for flavor, that's a matter of taste. Some like the Wilson, others the Triumphe de Gand, others tolerate neither. If to the gentleman it resembles the turnip, he either grows fine turnips or has a fine taste for that vegetable. [Laughter.]

After further and like discussion, Mr. Jordan said that the important lesson learned simply was that certain varieties succeed best in certain localities.

GRAPES—MILDEW.

The discussions were here intermitted for the purpose of listening to some remarks on the grape mildew by Wm. Saunders of Washington, D. C. He said there were various forms of mildew to be seen on grape leaves, but the principal were those appearing the one on the under surface of the leaf and the other on the upper one. Both are mainly, if not wholly, the result of atmospheric changes. The most fatal of these mildews is that species which attacks the under surface of the foliage, and is known by the name of *leaf blight, sun scald* and *blasted leaf*. Its presence is first indicated by a slightly yellowish discoloration on the upper surface of the leaf, which gradually increases until the part affected becomes brown. By turning over the leaf the fungus will be observed spreading and destroying the vitality of the tissue; the leaves ultimately wither, crumble and drop off. Those grapes with a downy foliage are more subject to this disease than those with smooth, shining leaves. The only preventives known are those of shelter from heavy dews and rains, either by mechanical or natural appliances, and applications of sulphur and other antidotes to the foliage.

Experiments have proved that leaf blight may be prevented by sheltering the foliage. How far expedients for this purpose can be profitably employed is a question for grape growers to decide. The simplest form of covering is a board covered trellis, and for amateur culture or private family use the expense of such covering is not worthy of consideration. It is also well known that sulphur applied occasionally during the period of growth will prevent mildew; as a simple statement this has some value, but it is not sufficiently definite to enable the vine grower to determine the extent or frequency of the applications necessary to secure a crop.

It may be well to remark that the system of training hardy varieties on the top of the trellis, for the purpose of sheltering the more tender and valuable varieties below, has been suggested, and to a certain extent acted upon, with favorable results.

A general discussion on the varieties of grapes followed.

The President gave an interesting account of his commission to the Paris Exposition, and the vineyards and wine-cellars of France, and gave it as his conclusion, based on the opinion of his associates and good foreign judges, that America could produce wine to compare with the best in Europe.

At this stage of the proceedings the President, in compliance with the Constitution, announced the following Committees for the next Biennial term:

General Fruit Committee.—P. Barry, chairman, N. Y.; J. W. Daws, Me.; —— Copp, N. H.; J. F. C. Hyde, Mass.; J. H. Bowne, R. I.; D. S. Dewey, Conn.; E. C. Worcester, Vt.; W. B. Smith, N. Y.; J. A. Trimble, N. J.; A. W. Harrison, Pa.; E. Tatnall, Del.; J. S. Downer, Ky.; G. W. Campbell, O.; W. H. Loomis, Ind.; M. L. Dunlap, Ill.; Wm. Muir, Mo.; T. T. Lyon, Mich.; O. P. Taylor, Va.; W. C. Wilson, W. Va.; H. L. Steele, N. C.; William Schley, S. C.; L. E. Berckmans, Ga.; J. M. Stone, Miss.; Mark Miller, La.; M. W. Phillips, Tenn.; Daniel Harper, Ala.; J. C. Plum, Wis; H. C. Swerer, La.; L. F. Landeroque, Cal.; J. Saul, D. C.; D. Robinson, Minn.; C. B. Lines, Kan.; Wm. Watson, Texas; Charles Arnold, Ontario; Hugh Allen, Quebec.

Executive Committee.—M. B. Bateham, O.; Prof. Thurber, N. Y.; J. E. Mitchell, Pa.; W. C. Flagg, Ill.; J. F. C. Hyde, Mass.

On Foreign Fruits.—Geo. Ellwanger, N. Y.; C. M. Hovey, Mass.; Dr. E. S. Hull, Ill.; Wm. Muir, Mo.; D. S. Dewey, Conn.; P. J. Berckmans, Ga.

On Synonyms and Rejected Fruits.—J. S. Cabot, Mass.; J. J. Thomas, N. Y.; J. D. G. Nelson, Ind.; J. A. Warder, O.; H. E. Hooker, N. Y.; M. L. Dunlap, Ill.; J. A. J. Creswell, Md.

On Revision of Catalogue.—President, ex-officio; P. Barry, N. Y.; J. A. Warder, O.; Chas. Downing, N. Y.; C. M. Hovey, Mass.; J. Knox, Pa.; W. C. Flagg, Ill.; Geo. Husmann, Mo.

ENTOMOLOGICAL.

Dr. Trimble delivered an address on the subject of insects, advising all to gather up by animals or hands all fallen fruit, and to stay the march of the larvæ of the codlin moth by hay bands about the trees.

THIRD DAY.

Reports of fruit committees were received and placed on file for publication.

The next place of meeting was fixed for Philadelphia in 1869, on invitation of the Philadelphia Horticultural Society.

The subject of grapes was further discussed, followed by pears and cherries.

Near the close of the session the venerable President was made the recipient of a beautiful wreath from the ladies of St. Louis, by the hand of Dr. Edwards, which was gracefully acknowledged.

Various resolutions pertaining to the business of the session closed the proceedings, and the Convention adjourned.

COCKSCOMB—(Celosia Cristata.)

This somewhat singular and tender annual is now in full bloom. The scarlet and crimson colors are the only ones that make a brilliant show, and are the ones really worth cultivating. The yellow tinged are inferior—some of them dirty looking. The branching varieties are not considered as perfect as those growing single stems and heads, though sometimes they are very pretty for cutting. On the floral grounds of Mr. Vick of this city, are some of the largest specimens of this flower we ever saw, measuring twenty inches across the crest or comb; the stems which support these are enormous. The cockscomb needs an early start, a rich soil, and plenty of moisture to reach perfection. The plants may be cut and hung up by the stems in the shade until dry, and preserved thus in quite a showy condition through the winter.

Horticultural Notes and Queries.

Pleasant Valley Grape Growers' Fair.—The eighth annual Fair of the Pleasant Valley Grape Growers' Association will be held Oct. 9th, 10th, and 11th, 1867, at Hammondsport, N. Y. We advise all who take pleasure in seeing a large and various collection of fruit and flowers, in looking upon extensive, well kept and healthy vineyards loaded with grapes, and in beholding beautiful scenery, to avail themselves of this occasion and attend the Fair. The hospitality of the grape growers is in as good repute as their fruit and wines. Competing articles for premiums may be entered during the first day of the Fair.

Lettuce, Cabbage and Cauliflower may be sown this month for spring and early summer use. Sow in pits or cold frames, and cover with sash and shutters or mats in winter.

Lockport Grape Nurseries.—We have received the wholesale price list for the autumn of 1867 of the firm of C. L. Hoag & Co., Lockport, N. Y. The firm have extensive vineyards and orchards in bearing.

Grape Fair—Pleasant Valley.—The Grape Growers' Association of Pleasant Valley, hold their Annual Fair at Hammondsport, Oct. 9th-11th. The Yates county Fair occurs on the same days—a rather unfortunate occurrence, though as each continues three days, a fair chance for visiting both will be offered.

Celery must be earthed up for blanching; keep the dirt from the crowns of the plants.

New Advertisements.

FRUIT TREES AND SEEDLINGS—ALSO fine Grape Vines from *layers*, cheap. For Wholesale Price List, address
923-4t A. HAMMOND, Geneva, N. Y.

NURSERY STOCK—For Dealers & Planters—including Apple, Pear and Cherry. Plum at $300 ₱ 1,000; Peach, $65. Plum, Apple and Cherry stocks. Send for Catalogue. E. C. FROST, Watkins, N. Y.

UNPARALLELED INDUCEMENTS Offered, to induce you to set Small Fruits. A chance for all to get Plants free. Address (stamp enclosed,)
923-2t P. SUTTON, Beverly, N. J.

NEW RASPBERRY.—THE AUTUMN BLACK—a Seedling of great promise, producing a fine crop in July, and a bountiful one in the fall, continuing to fruit until winter. Plants by mail $1 each. Send for Descriptive Circular. H. B. LUM, Sandusky, Ohio.

CLARK RASPBERRY.—We now have a stock of this new variety to offer. It is a very large, sufficiently firm berry, perfectly hardy, having stood 25 deg. below zero, unprotected and uninjured. It is the very best berry now under cultivation.
We also have the Kittatinny and Wilson's Early Blackberry, and a General Assortment of NURSERY STOCK. Prices given on application.
BRONSON, GRAVES & SELOVER,
923-2tco Washington Street Nurseries, Geneva, N. Y.

KILPATRICK.—This Celebrated Ram, (see engraving in Rural, Dec. 15, 1866,) bred by Hon. Wm. B. Sanford, of Orwell, Vermont, will stand for service of Ewes, at Alexander, Genesee county, N. Y. Season to commence Sept. 10th.
TERMS, $15.
KILPATRICK is of pure Infantado stock; sire Comet, dam by Cross Ram. We are near the depots of N. Y. Central and Erie Railroads, where ewes will be received without delay, by freight or express, and cared for free of charge for a reasonable time. For particulars inquire by letter or call and examine. We have for sale a few choice Ewes and Rams. BOWKER & BUSH.

FROST & CO.,
GENESEE VALLEY NURSERIES,
ROCHESTER, N. Y.,
Offer a very large stock of
Standard and Dwarf Apple, Standard and Dwarf Pears, Standard and Dwarf Cherries, Small Fruits,
of all kinds, Grape Vines, Ornamental Trees, Shrubs, Roses, Evergreens, &c., for the Autumn of 1867. Our Stock of
Standard and Dwarf Trees,
of all kinds, is not excelled by any in the United States. Catalogues sent to all applicants at the following rates:
No. 1—Descriptive Catalogue of Fruits, 10c each.
No. 2— Do. Do. of Ornamental Trees, Shrubs, Roses, &c., 10c each.
No. 3—Descriptive Catalogue of Green House and Bedding Plants, 5c each.
No. 4—Wholesale Catalogue for Nurserymen and Dealers, 5c each. Address
823-2t **FROST & CO., Rochester, N. Y.**

WILSON'S EARLY AND KITTATINNY BLACKBERRY,
PHILADELPHIA RASPBERRY,
And other SMALL FRUITS, at lowest prices, all warranted true to name, with good roots. Send for Price List. EDWARD BEVAN, Medford, Burlington Co., N. J.

FRUIT AND ORNAMENTAL TREES!
FOR THE FALL OF 1867.
ELLWANGER & BARRY
Invite the attention of Planters, Nurserymen and Dealers in Trees, to their extensive stock now offered for the Fall Trade. In the departments of
HARDY FRUIT TREES,
ORNAMENTAL TREES,
SHRUBS AND PLANTS,
The collections are the most extensive and complete in the United States.
Prompt and careful attention given to all
ORDERS, AND PACKING DONE
in the most skillful and thorough manner.
Full particulars will be found in the following Catalogues, which will be sent, prepaid, to applicants who enclose stamps:
Nos. 1 and 2—Ten Cents each; No. 3—Five Cents No. 4—Three Cents.
No. 1—A Descriptive and Illustrated Catalogue of Fruits.
No. 2—A Descriptive and Illustrated Catalogue of Ornamental Trees, Shrubs, Roses, &c., &c., &c.
No. 3—A Catalogue of Dahlias, Verbenas, Petunias, and select new Green-House and Bedding Plants, published every Spring.
No. 4—A Wholesale Catalogue or Trade List.
919-3teo **ELLWANGER & BARRY,**
Mount Hope Nurseries, Rochester, N. Y

THE NEW GRAPE, SALEM.—This Grape is the most successful result of the Hybridizations originated and carried on by Mr. E. S. Rogers of Salem, Massachusetts, whose well known character for probity and modesty of statement affords every guarantee for the unsurpassed excellence of this, his favorite variety. His published statement is as follows:—"The subscriber now offers for sale for the first time, a new grape, named SALEM, from the place of its origin. This is a variety considered not only superior to any of the former well-known numbers, but also to any hardy grape at present before the public, combining, as nearly as possible, every quality desirable in an out-door grape, being one of the hardiest, healthiest and most vigorous of vines, and producing enormous crops of beautiful and high-flavored fruit. Like other well-known kinds, Nos. 4 and 15, this is a hybrid between a native and the Black Hamburg; bunch large and compact, berry large as Hamburg, of a light chestnut or Catawba color, thin-skinned, perfectly free from hard pulp, very sweet and sprightly, with a most exquisite aromatic flavor, not equaled by any other out-door grape for wine or table; as early and hardy as Delaware or Hartford, having never failed to ripen its fruit, in the most unfavorable season, for the past six years.
Taking all its qualities into consideration, earliness, hardiness, and great vigor of vine, size and quality of fruit, it is pronounced by the best judges who have tried it, to have no equal among all the numerous varieties now before the public; and I can, with confidence, recommend it as the best of all my collection, and now offer it for the first time." E. S. ROGERS, Salem, Mass.
Salem, February, 1867.

Notice.—The subscriber would here state that he has disposed of his entire stock of vines and wood of the Salem Grape to J. L. WARING of "Amenia Vineyard," Amenia, Dutchess Co., N. Y., to whom all orders for the same must be hereafter addressed. E. S. ROGERS.
Salem, Mass., March 2d, 1867.

In addition to the high merits of the "Salem," the undersigned is able to say, from personal experience and knowledge, that the claims put forth in favor of the Salem are in no respect exaggerated. During the present season it has made uniformly a most vigorous and healthy growth, and proved itself impervious to mildew, where vines of most of the new and high priced varieties, growing by its side and receiving equal care in culture, have been seriously affected. It is believed that as a paying grape, especially for market purposes, the Salem is without a competitor among out-door varieties.
J. L. WARING.

I take pleasure in announcing that, since purchasing the Salem Vine, I have disposed of my Vineyard and Propagating Establishment, including the entire stock of the Salem, to James A. Requa, Esq., who will hereafter carry on the business with every facility for its successful prosecution. J. L. WARING.
Amenia, N. Y., August 21, 1867.

Having purchased the above, and having secured the services of a most experienced and successful Propagator, with able assistants, I design to make the growing of vines for sale a specialty, and hope to furnish the public with a class of plants unsurpassed in quality, and in every instance warranted up to standard and true to name. Price List and Engraving sent on application to

LASTING BEAUTY.

BY GEORGE H. POWERS.

Thy picture came to me to-night,—
Thou art as lovely as of yore;
Time's fingers ne'er have touched thy brow—
He never comes a-near thy door.

I see thy lip is just as full
As when I kissed it years ago,
Pouting and red, and warm, and sweet—
No wonder that I loved you so!

The reflex of thy face is fair—
Brighter than ever in the Past—
I always thought that so 'twould be—
I knew that charms like thine *must* last!

And then, I see no silver star
Has shone upon thy braids of jet;
Thy brow still wears its placid front—
No corrugations mar it yet.

Though strange to others this may seem,
'Tis simply, sweetly plain to me;
Thy heart and soul have always held
Their native, holy purity!

Clarinda, Iowa, 1867.

A MUSICAL NAME AND ITS OWNER.

THE "eternal fitness of things" demands that a poet have a musical name. But not always are singers so blest. One of England's geniuses (he would have been a genius but for his name,) rejoiced in the cognomen of ALEXANDER SMITH. Nothing very poetical in that, certainly. Nor is MARTIN FARQUHAR TUPPER much better. Indeed, we prefer SMITH, as being a prettier name, and having been worn by a better poet. There is an easy rhythm in TENNYSON which is more pleasing. It is suggestive of melody, as everything pertaining to a singer ought to be. When the world is remodeled after our plan, (not yet published, by the way,) we intend to have this matter of names a little more carefully seen to. The muses will not be allowed to hide their light under the bushel of SMITH; Song shall not be kept from pursuing its flights heavenward because on its wing is written JONES!

"What's in a name?" queried SHAKSPEARE. But he evidently was not thinking of the subject in this light. Its poetical effect probably had not dawned upon him. We have a queer notion that he stuck so closely to blank verse mainly because there was nothing of rhyme in the appellation which fate, or more likely his father, gave him.

The female poets, as is very proper, are more fitly christened than their brother singers. England's most popular lady writer has a name brimming with euphony. "JEAN INGELOW,"—it is full of song. It is sweeter than all the "Woodbines," and "Myrtles," and "Greenwoods" with which many attempt to laurel their productions. Better than this, it has the merit of being real and bona-fide.

We are sure our lady friends will be pleased to read something concerning the home life of Miss INGELOW. A writer in the London Queen thus speaks of a visit to her house:

"Coming at last to a quiet street, where all the houses were gay with window-boxes full of flowers, we reached Miss INGELOW'S. In the drawing-room we found the mother of the poetess, a truly beautiful old lady, in widow's cap and gown, with the sweetest, serenest face I ever saw. Two daughters sat with her, both older than I had fancied them to be, but both very attractive women. ELIZA looked as if she wrote the poetry, JEAN the prose—the former wore curls, had a delicate face, fine eyes, and that indescribable something which suggests genius; the latter was plain, rather stout, hair touched with gray, shy, yet cordial manners, and a clear, straightforward glance, which I liked so much that I forgave her on the spot for writing those dull stories. GERALD MASSEY was with them; a dapper little man, with a large, tall head, and very un-English manner. Being oppressed with 'the mountainous me,' he rather bored the company with 'my poems, my plans, and my publishers,' till Miss ELIZA politely devoted herself to him, leaving my friend to chat with the lovely old lady, and myself with JEAN. Both being bashful, and both laboring under the delusion that it was proper to allude to each other's works, we tried to exchange a few compliments, blushed, hesitated, laughed, and wisely took refuge in a safer subject.

"JEAN had been abroad, so we pleasantly compared notes, and I enjoyed the sound of a peculiarly musical voice, in which I seemed to hear the breezy rhythm of some of her charming songs. The ice which surrounds every Englishman and woman was beginning to melt, when MASSEY disturbed me to ask what was thought of his books in America. As I really had not the remotest idea, I said so; whereat he looked blank, and fell upon LONGFELLOW, who seems to be the only one of our poets whom the English know or care about. The conversation became general, and soon after it was necessary to leave, lest the safety of the nation should be endangered by overstepping the fixed limits of a morning call.

"Later, I learned that Miss INGELOW was extremely conservative, and was very indignant when a petition for woman's right to vote was offered for her signature. A rampant radical told me this, and shook her handsome head pathetically over JEAN'S narrowness; but when I heard that once a week several poor souls dined comfortably in the pleasant home of the poetess, I forgave her conservatism, and regretted that an unconquerable aversion to dinner-parties made me decline her invitation."

The gossips tell us that the sweet singer "is twenty-eight and unmarried." If she could be wooed by song, and we were not past our wooing days, we should wish to be a poet! It would be so pleasant to have such a fountain of melody playing away ever in the house!

We are a little curious on one subject, and may as well breathe our curiosity to the ladies. (Of course it's confidential.) Why do so many poetesses cling to maidenhood? Their solos are very sweet, to be sure, but wouldn't it be quite as well for them to put themselves in the way of singing an occasional duet, which might, finally, attain to the rich harmony of a full chorus? There are two pleasant-faced, middle-aged ladies in New York, who have chanted many pretty lays. ALICE and PHŒBE CAREY have always sung their songs alone. By-and-by they will hush their music—here upon earth, at least—and their house will be silent. They will leave many songs unsung, and without providing any one to sing them!

Written for Moore's Rural New-Yorker.

TO MOTHERS.

MOTHERS, do not neglect your older children too much for the wee babe in your arms. The maternal caress is just as much, aye, far more to them, even, than when they, too, were helpless babes in your arms; and yet you bestow kiss after kiss on the velvet cheeks of your babe while WILLIE and FRED look on lovingly, but receive none. They are banished from the room, not unfrequently from the house, because they are noisy, without a thought from you that their little hearts are yearning for the caresses which they day after day see so lavishly bestowed on baby. Take WILLIE up in your arms; suppose he is a big boy, he is not too old to receive his mother's caresses, nor will he ever grow too old for that. If baby is in your arms, draw FRED to your side, imprint a kiss on his cheeks, and tell him a pleasant little story; do not send him to the street to hear and learn all manner of evil. If mother shows some signs of loving him he will not care so much to go elsewhere. He will desire to linger near, and a gentle caution from you, given frequently and in tenderness, will check, in a measure, his noisy, boisterous mirth when you do not wish to have the sleeping babe awakened. Sometimes, indeed, a little boisterous mirth will do no harm to either. Do not neglect to caress the children, old or young. Too many wrecks have already been made, to say nothing of the many heart-aches, from this cruel but thoughtless neglect of parents. J. M. I.

MARRIAGE AND HOUSEKEEPING.

THERE are a great many persons who are just beginning life, that are newly married, and that are just turning, I trust, away from the hotel and the boarding-house to keep house,—for I think that, next to virtue, house-keeping is the desirable thing for newly married persons. You will perhaps wonder what I have to say upon this. I have this to say, that to any young person's life this is a change so marked, it is a step so different to any other, that if you know how, with this peculiar and critical step of your life, to take also one another, it will not be alone marrying for time—it will be love for eternity. Is there anything more beautiful than true love? No flowers show such colors or exhale fragrance as does true love, that makes one's life a sacrifice for and a service of another. Is there anything more beautiful this side of God's throne, than two right-minded and purely-loving souls beginning to live together, each one servant in love to the other? Now, just beginning a virtuous wedded life is not religion; but if you make this a first step in the series, it will do more to lead a Christian course of life than perhaps any other thing possibly could.—*Beecher.*

OUR SPICE BOX.

WHY is a man who fails in kissing a lady like a shipwrecked fisherman? Because he has lost his *smack*.

"Do you think that raw oysters are healthy?" asked a lady of her physician. "Yes," he replied:—"I never knew one to complain of being out of health in my life."

A WESTERN editor provokes suspicion regarding his own domestic happiness, by placing above the marriage notices in his paper a cut representing a trap spring.

A SHARP talking lady was reproved by her husband, who requested her to keep her tongue in her mouth. "My dear," responded the wife, "it is against the law to carry concealed weapons."

A YOUNG girl one day asked, "Do tell me why it is Cupid continues so long after the invention of powder to use arrows!" "To avoid the report of fire-arms, which would attract the jealous," was the reply.

A LADY, stepping into a railway car, said to her little son:—"Aren't you going to kiss your mother before you go?" The little rogue could not wait, and called out:—"Conductor, won't you kiss mother for me?"

A YOUNG lady possessing more vanity than personal charms, remarked, in a jesting tone, but with an earnest glance, that "she traveled on her good looks." A rejected lover being present, remarked that "he could now account for the young lady never having been far from home."

A LOVER who was slighted by the females, very modestly asked a young lady if she would let him spend the evening with her. "No," she angrily replied; "that's what I won't." "Why?" replied he, "you needn't be so fussy; I didn't mean this evening, but some stormy one when I can't go anywhere else."

ONE of the fair sojourners at Long Branch, on being introduced to Gen. Grant, gracefully bowed her head and kissed his extended hand; upon which one of the bystanders playfully inquired why he did not reciprocate the obsequious salutation? "Oh," promptly responded the imperturbable hero, "I never stoop to conquer!"

Choice Miscellany.

PICNICING.

BY LEWIS DAYTON BURDICK.

Bluest skies are bending over,
Cooling breezes softly blowing,
Through the fields of dying clover
To the hill-side we are going,

Where the halls are high and roomy,
And no chains of duty bind us—
Leaving chambers narrow, gloomy,
Leaving dingy walls behind us.

Climbing up the hill-side higher,
Over fences, through the bushes,
Plucking berries from each briar,
Every hero onward pushes.

Sun above us shining brightly,
Freedom never to us dearer—
Every footstep, falling lightly,
To the cloud-land brings us nearer.

Up we climb, still realizing
That our vision is expanding,
Till the hills no longer rising,
On the summit we are standing—

Standing, neath the maples olden,
Listening to the soft wind sighing
Thro' the green leaves turning golden,
Requiems o'er the summer dying.

What a hum of cheerful voices
Telling o'er the olden story!
Heart of every one rejoices,
Looking on this scene of glory—

Looking from the little mountain
Down upon the winding river;
Quenching thirst from pearly fountain,
Thanking the indulgent Giver.

Tall trees o'er us shadows throwing,
Sunbeams from bare heads are hiding;
While from baskets overflowing,
Fair hands are repast providing.

Silvery voices sweetly blending,—
True hearts were throbbing never—
Though this day shall have an ending,
Memories will live forever.

Norwich, N. Y., Sept., 1867.

Written for Moore's Rural New-Yorker.

COUNTRY SKETCHES.—No. V.

THE last month of summer was waning. The sultry days were almost over, the evenings darkened earlier, and the wind held a chilliness in its breath, presaging the frosty autumn. A summer full of pleasant memories it would always be to the little family of the ANSON farm house. How they had planned, and worked, and laughed together; how they had conquered what at first seemed insurmountable difficulties; how they had learned more perseverance in pursuing their duties, and more patience in controlling their dispositions.

MARY was the oldest, and had learned deeper life-lessons before. The current of her nature was still, and calm, and deep, and her influence was a great help to the others. SUSAN was of a wild, impulsive, erratic nature, either in the heights of ecstasy, or in the depths of despondency; but there was a visible change in her demeanor. Under the pressure of responsibility and care she had learned the necessity of controlling her irritableness, of pressing back the passionate, turbulent tide of her temper, and rising with new dignity, the sovereign of herself.

JANE, too, had improved in her ways and manners. She had grown more thoughtful of others' comfort, and was not quite so ready with her keen, sarcastic wit, to attack every trait of character in her friends that did not exactly suit her. But the spirit of fun was inborn, and when she did not carry it so far as to ignore the feelings of others, it was her chief attraction.

RUFUS—I had almost forgotten him—but he was one of the family now. He came in one day very quietly, set up his easel in the little library room, and went to painting a small autumn landscape. Once in a while we stole in and watched its progress. Softly and gradually the warm, bright colors tinted the dull canvas until there seemed to leap from out its cold depths the perfect, gorgeous, glowing representation of our brilliant fall days' glory. The rich-dyed foliage of a forest hill-side—the cool, green, mossy banks bordering an errant brook—seemed to be called to life and lie naturally on its surface.

One day a shadow stole over the home BERT did not go out to his work with his accustomed alacrity—did not care to play when he came in. His head ached, his rosy cheeks grew paler, and he went in the little bed-room below stairs and laid down. A little anxious fear crept into every heart. He grew worse, mother came, the physician was called, the shadow over the household seemed to cloud the whole horizon. How long the hours were—how wearily the days went by; the little brown head tossing on the white pillows, the bright, laughing eyes closed in delirious slumber, the little burning, fevered hands and feet—oh, would they ever be well and strong again? Dearer, far dearer than they had dreamed, was that little frank, free-hearted, fun-loving brother of theirs. How everything throughout the house spoke of him! His little straw hat, with the torn brim, hung up on the nail; the old shoes set up in the stairway corner; his torn jacket in MARY'S work basket—all seemed to suggest the thought, "would they ever be used again?"

After long days of weary care, and long nights of patient watching, the burning fever cooled its rage, and left the little sufferer very weak, and white, and helpless, yet still alive. Then how the courage in their hearts strengthened, and the light in their eyes brightened. How easily each task was accomplished, although they *were* tired and careworn; for now there was hope, sweet hope! How many plans were arranged for his comfort and his pleasure! He seemed more likely than ever to be the spoiled pet of the family; but he looked so happy when he was able to sit up, to see those glad, attentive faces all about him, that I could not find it in my heart to blame them a bit; indeed, I may as well own I did my full share in helping to spoil him.

September, 1867. ERIE.

Written for Moore's Rural New-Yorker.

CHARITY.

How few of us have charity enough for our fellow men. It is much more natural for us to point the finger of scorn to some who have the misfortune, perhaps, to be more awkward than ourselves, than to think they are just what they were designed to be by the Supreme Power above; nor do we often pause to consider that the soul enshrined within the uncouth casket may be a gem of rare excellence, a model of purity and beauty.

When we hear of a fallen sister's degradation, or an erring brother's sins, we denounce them immediately, and yet, how many temptations they may have resisted, how much they may have contended with, before they gave up their purity and self-respect.

Would it not be well for us to remember that we are none of us perfect, and spend our time in trying to improve ourselves in heart, in mind, instead of raking up other people's deficiencies and imperfections; and then if we have any time to spare, spend it in trying by kind sympathy and love, to lead the erring ones back into the paths of virtue and respectability, and not send them into darker shades of vice by coldness and contempt?

Let GOD be their judge, and I doubt not but that if CHRIST were upon the earth he would often have occasion to repeat what he said so long ago—"Let him that is without sin among you cast the first stone."

LINIE HALL.

THE STILL BEAUTY OF NATURE.

IF there could be some splendid confusion produced amid the serenity of the present universal order; if some broad constellation should begin to-night to play off from all its lamps volleys of Bengal lights, that should fall in showers of many colored sparks and fiery serpents, down the spaces of the heavens; or if some blazing and piratical comet should butt and jostle the whole outworks of a system, and rush like a celestial fire-ship, destroying order, and kindling the calm fleets that sail upon the infinite azure into a flame, how many thousands there are that would look up to the skies for the first time with wonder and awe, and exclaim inwardly, "Surely there is the finger of God."

They do not see anything surprising or subduing in the punctual rise or steady setting of the sun, and its imperial and boundless bounty; and yet there is enough fire in the sun to spirt any quantity of flaming and fantastic jets; it might fill the whole space between Mercury and Neptune with brilliant pyrotechnics and jubilee displays, such as children gaze at and clap their hands. But the great old sun is not selfish, and has no French ambition for such tawdry glories. It reserves its fires, keeps them stored in its breast, spills over no sheets of flame from its high caldron, but shoots still and steadily its clean, white beams into the ether; these evoke flowers from the bosom of every globe, and paint the far-off satellities of Uranus with silver beauty. —*Thomas Starr King.*

WIT AND WISDOM.

WHAT trade is the sun? A tanner.

WHAT goes most against the grain? A reaper.

A THORN in the bush is worth two in the hand.

HIGHT of absurdity—a vegetarian at a cattle-show.

THE largest room in the world—room for improvement.

THE coward says he is cautious, the miser that he is sparing.

A LITTLE wrong-going in the beginning leadeth to a great sin in the end.

LAY by a good store of patience and put it where you can find it.

HE who never changes any of his opinions, never corrects any of his mistakes.

A GOOD kick out of doors is, to some, better than all the rich uncles in the world.

IF a man cannot readily recognize merit, it is very evident that he has none himself.

IT is pleasant to be cheated; we love sweet wild dreams—the greatest cheats in the world.

WHEN we are alone, we have our thoughts to watch; in our families, our tempers; and in society, our tongues.

IF any one speak ill of thee, consider whether he has truth on his side; and if so, reform thyself—was the wise remark of an old philosopher.

GRATITUDE for kindness shown, acknowledgment for favors received, are unerring marks of good breeding, and indications of Christian character.

"IN my youth," says Robert Walpole, "I thought of writing a satire upon mankind; but now, in my old age, I think I should write an apology for them."

SUCH is the blessing of a benevolent heart that, let the world frown as it will, it cannot possibly bereave it of all happiness, since it can rejoice in the prosperity of others.

THE chief secret of comfort lies in not suffering trifles to vex one, and in prudently cultivating an undergrowth of small pleasures, since very few great ones are let on long leases.

A MAN remarked while inspecting the print of the feet of birds in the stones exhibited in the vestibule of the Natural History building—that those marks were evidences of the antiquity of the tract society.

Sabbath Reading.

A MIDNIGHT HYMN.

In the mild silence of the voiceless night,
When chased by airy dreams, the slumbers flee,
Whom in the darkness doth my spirit seek,
O God! but Thee?

And if there be a weight upon my breast—
Some vague impression of the day foregone—
Scarce knowing what it is, I flee to Thee,
And lay it down.

Or if it be the heaviness that comes
In token of anticipated ill,
My bosom takes no heed of what it is,
Since 'tis Thy will.

For oh! in spite of past and present care,
Or anything beside, how joyfully
Passes that almost solitary hour,
My God, with Thee!

More tranquil than the stillness of the night,
More peaceful than the silence of that hour,
More blest than anything, my bosom lies
Beneath Thy power.

For what is there on earth that I desire,
Of all that it can give or take from me?
Of whom in heaven doth my spirit seek,
O God! but Thee?

LAY PREACHING IN LONDON.

SOME features of the the religious life of London, peculiar and surprising to us, are described thus by the Boston Journal's correspondent:—The controversy within the establishment on incense, variegated garments, preaching in the white surplice, confession, the elevation of the host, &c., is more serious than seems from the outside. All London is placarded by the Ritualists, with huge crosses emblazed on them, calling on shopkeepers and others to keep Good Friday on pain of endless woe.

The Baptists are open communion. They are more than this. The leading churches of London, Mr. Brock's, Mr. Landell's, Baptist Noel and others, do not require men to be immersed, even to attain church membership. In these churches men are in office who not only have not been immersed, but who do not even believe in immersion. They acknowledge infant baptism and make no secret of their opinion. Baptism is regarded as a personal theory, of which each man must be the judge.

Lay preaching is very common, very popular and very effective. Men who call out the greatest crowds, who have the confidence of the masses, who are doing the wonderful work that is going on among the working classes are laymen. They attend to their regular business, and preach not only on Sunday, but frequently each night in the week. Mr. Henry Varley is one of the leaders of this lay work. He has a chapel that will hold two thousand people. He has been in it for four years. He preaches, baptizes and celebrates the communion. He has been ordained by no one. He is a butcher and has one of the largest butcher shops in the city. He attends the markets and has made money. But he preaches for nothing; he gives to the poor food, as well as the Gospel. He and his father-in-law built the chapel in which he preaches. On Sunday nights Mr. Varley preaches to crowds in Exeter Hall. Mr. Carter has become celebrated for his work among thieves and the low and dissolute persons in London. He has an audience of over eight hundred. Many have been converted, and these in turn go out and preach to their own class with great acceptance. Richard Weever is one of the most successful lay preachers. He is a converted collier; has a wonderful power, with a rude eloquence, and can command an audience of immense size. The leading Baptist and Congregationalist churches encourage this lay effort, even to the celebration of the communion and baptizing. Mr. Moody of Chicago is doing here quite a work as a lay preacher. He has bent all his energies to form a daily union prayer meeting in London. I think he will succeed.—*Selected.*

GO TO WORK.

LET me commend to some of our brethren a child's version of a sermon delivered in Chicago last Sunday. The preacher urged that Christians should be active to Christ. "They should serve Him, not with breath alone, but also with the hands the feet." One of the audience, leading home his little boy six or seven years, asked him if he understood anything of the sermon.

"O, yes! I hear preaching now-a-days."

"Well, what did you hear this morning?"

"The minister said we should stop blowing, and go to work."—[*Christian Banner.*

More force and point can often be got into a "slang" phrase or word than can be conveyed by any of the more elegant forms of expression. Orators and writers of wit and judgment often select from the patois of children and peasants the rough bolt that will best hit their mark. It is the stone from the brook that killed Goliah. "Stop blowing and go to work" contains the gist of a sermon.

PARAPHRASE OF THE LORD'S PRAYER.—The following paraphrase of the Lord's Prayer has been set to music in England. It is the best we have ever seen in any language—there is nothing wanting and nothing redundant:

Our Heavenly Father, hear our prayer;
Thy name be hallowed everywhere;
Thy kingdom come, Thy perfect will
In earth, as heaven, let all fulfill;
Give this day's bread that we may live;
Forgive our sins as we forgive;
Help us temptation to withstand;
From evil shield us by Thy hand;
Now and forever unto Thee,
The kingdom, power and glory be. Amen.

THE more we remember our days, the fewer sins we shall have to number.

The Reviewer.

HARPER'S HAND-BOOK FOR TRAVELERS IN EUROPE AND THE EAST. Being a Guide through Great Britain and Ireland, France, Belgium, Holland, Germany, Italy, Sicily, Egypt, Syria, Turkey, Greece, Switzerland, Tyrol, Spain, Russia, Denmark and Sweden. By W. PEMBROKE FETRIDGE. With a Railroad Map, corrected up to 1867, and a Map embracing colored routes of travel in the above countries. New York: Harper & Brothers.

THIS is the sixth year in which the HARPERS have issued their most valuable and comprehensive Guide and Hand-book. The success of the work is proof of its worth. We do not see how travelers abroad can dispense with it. The information which it gives concerning routes of travel, places of interest, stopping-places, necessary expenses, and everything pertaining to foreign wanderings, is full as can possibly be gleaned, and we have no doubt is, as is claimed, perfectly reliable. It is a beautifully printed volume of 662 pages, with a hundred or more additional, giving a list of first class hotels in the different countries described; and is handsomely bound in flexible morocco covers. Sold by STEELE & AVERY.

HOME LIFE. A Journal. By ELIZABETH M. SEWELL: Author of "Amy Herbert," "Laneton Parsonage," "A Glimpse of the World," etc. New York: D. Appleton & Co.

A STEP-MOTHER'S story, told in the first person singular, and singularly well. Its aim is to illustrate a few of the fundamental principles of education, and there are many valuable hints, concerning the training and development of children's minds, scattered through the 405 pages. Mrs. ANSTRUTHER—own mother to four little ones, and step-mother to two young girls—undertakes educating them herself, and in her own way. To do this fully and to the best purpose, she thoroughly studies the disposition of each, and seeks to inculcate well-doing as a vital principle rather than as an abstract rule. Miss SEWELL has noble ideas of education, and they should be brought to the notice of mothers everywhere, for, however much may be learned outside, the home-teachings will influence lives the longest. Sold by ADAMS & ELLIS.

THE EARLY YEARS OF HIS ROYAL HIGHNESS, THE PRINCE CONSORT. Compiled under the direction of Her Majesty the Queen, by Lieut. General the Hon. C. GREY. [16mo.—pp. 371.] New York: Harper & Brothers.

HERE IS a revelation of princely life which is full of interest. Queen VICTORIA shows her woman's heart by giving to the world the early history of her lamented husband, and in it we get glimpses of royalty at home, with the crown off. We are so apt to imagine that Kings and Queens and Princes are not of the same stuff as common humanity, that the book will serve a good purpose. The letters of the Prince, and the frequent extracts from the Queen's private journal, show us that human nature is ever much the same, even though under the royal garb, and that hearts beat as warmly and affectionately beneath princely vestments as in the common walks of life. Sold by STEELE & AVERY.

WORKS OF CHARLES DICKENS. Globe Edition. Illustrated from Designs by DARLEY & GILBERT. A Tale of Two Cities; Hard Times. Four volumes in one. New York: Hurd & Houghton.

"A Tale of Two Cities," the opening one in the volume, preludes and accompanies the French Revolution through one of its most intensified periods. The action of the piece, part in London and part in Paris is carried forward by parties whose several portraitures are admirably drawn.

"Hard Times" enables the author to portray characters whose "beings end and aim" is the accumulation of money at the expense of all the finer feelings of the heart. Less dramatic than the first story, it is nevertheless one of no common interest. The volume has all the characteristics of its predecessors in the series.

NATURE AND LIFE. Sermons by ROBERT COLLYER, Pastor of Unity Church, Chicago. Boston: Horace B. Fuller.

HERE are sixteen sermon-essays by one of the most popular divines of the great western metropolis. They are mainly upon common-place subjects, but are full of fresh thought, expressed in language remarkable for its beautiful simplicity. There is nothing dry or stale in them. Through them all there runs a closer application of old and yet ever new truths to the every-day life and thought, than we are accustomed to find. It is in this that the charm of the book consists. For the book has a charm that will win for it a wide circulation among the lovers of religious literature. Sold by ADAMS & ELLIS.

ALEC FORBES OF HOWGLEN. A Novel. By GEORGE MCDONALD, M. A., Author of Annals of a Quiet Neighborhood, etc. New York: Harper & Bros.

THE leading design of this rather miscellaneous performance, seems to be to caution the young against an indulgence in the use of intoxicating beverages, and to show the way to freedom to those who have debased themselves by excess in the use of them. In carrying out this design, in the quaint dialect of the Scotch, the prevalent religious dogmas of that people receive many sly hits, indicating a disbelief in the efficacy of them as a guide to human actions. For sale by STEELE & AVERY.

THE TRAPPER'S GUIDE. A Manual of Instructions for capturing fur-bearing animals and curing their skins, etc. By S. NEWHOUSE and other Trappers and Sportsmen. Second edition. Edited by J. H. NOYES and T. L. PITT. Published by the Oneida Community, Wallingford, Ct.

THE title of this volume pretty clearly describes its character. Besides the technical matter, having direct reference to the main object of the volume, it has several narrative and descriptive pieces of much interest alike to the trapper, sportsman, and the general reader. Its illustrations are quite numerous and of a style creditable to the "Community" by which the work is published.

DAVID COPPERFIELD. Four volumes in one. New York: Hurd & Houghton.

THIS is one of the series, Globe Edition, illustrated, of the works of CHARLES DICKENS, which seem to have been quickened into new life within the last year. The volume is well printed on good paper, and the story as good as new. Sold by DEWEY.

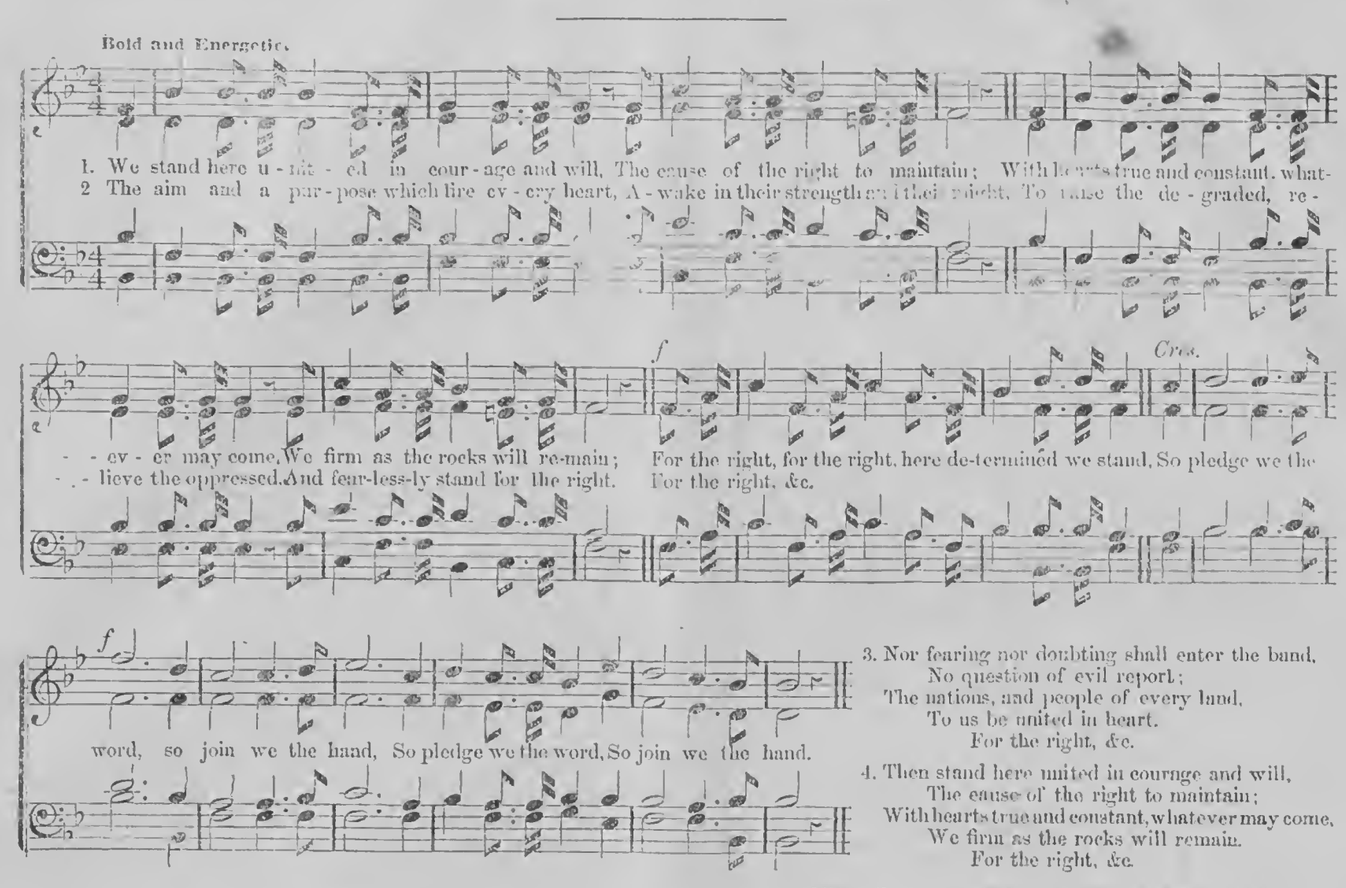
ROSES WILL BLOOM AGAIN. Song or Duet. By A. A. HOPKINS. Rochester: Joseph P. Shaw.

THIS is pronounced unusually beautiful by good ballad singers. We know it is very popular hereabouts. It is published with both piano and guitar accompaniment.

HOLMES' PATRIOTIC SONGS. By S. N. HOLMES.

THIS is the third edition, enlarged, of JUDGE HOLMES' campaign songs. They are meeting with much favor, and are highly popular.

PLEDGED FOR THE RIGHT!



3. Nor fearing nor doubting shall enter the band,
No question of evil report;
The nations, and people of every land,
To us be united in heart.
For the right, &c.

4. Then stand here united in courage and will,
The cause of the right to maintain;
With hearts true and constant, whatever may come,
We firm as the rocks will remain.
For the right, &c.

[*From the Normal Singer, published by Mason Brothers.*

Various Topics.

ABOUT HUMOR.

HUMOR will often dispose best of enthusiastic or frantic fancies. In Dean Swift's time, a tailor near him took it into his head that he was divinely called to interpret the prophesies, especially Revelation. One night he received the commission to declare the word of the Lord to the Dean, and bright and early the next morning he was on his way to do it. Through his glass door the Dean saw him coming, and surmised his errand. Putting on a grave, studious air, and opening his Bible to Rev. x, with fixed attention he awaited the prophet's approach. The door opened, and in an unearthly voice it was announced: "Dean Swift, I am sent by the Almighty to—" "Come in, my friend," said the Dean; "I am in great trouble, and no doubt the Lord has sent you to help me out of my difficulties." The prophet was cheered by the welcome. He was all ears, in more senses than one. "My friend," said the Dean, "I have just been reading Rev. x, and am greatly distressed with a difficulty, and you are the very man to help me out. Here is an account of an angel that came down from heaven, and was so large that he placed one foot on the land and the other upon the sea, and lifted up his hands to heaven. Now, my knowledge of mathematics has enabled me to calculate exactly the form and size of this angel; but I am in great difficulty, for I wish to ascertain how much cloth it will take to make him a pair of breeches; and as that is in your line of business, I have no doubt the Lord has sent you to show me." The poor tailor was confounded. He felt as if struck by an electric shock. He rushed back to his shop; a revulsion of feeling came over him, and he was fully satisfied that his calling did not lie in the line of prophetic interpretation.

John Bunyan was not without an element of humor, if one is to believe the story of the Quaker who found him in Bedford jail, and told him that the Lord had a message for him, which he was commissioned to deliver, and on account of which he had sought him out in all the jails of the kingdom. "If the Lord had given you a message for me," said Bunyan, "he would have known where to send you, for he knows that I have been lying these twelve years in Bedford jail."

But humor is an edged tool that must be played with carefully. It may cut the fingers that are heedless in handling it. Rev. Azel Roe was taken prisoner by the British in the Revolutionary war, and was conducted by his captors to New York. They treated him with much respect, and as they were about crossing an unbridged stream, the British officer offered to carry him over on his back. He did so; but midway in the stream, the clergyman, amused at the plight in which both were, inadvertently let his humor out. "Well," said he, "it must be confessed that if you were never priest-ridden before, you are so now." The officer was so convulsed with laughter that he nearly performed the office of a Baptist preacher for his Presbyterian brother.

The joke practical does not always end as harmlessly as in the case of Nathaniel Appleton, who found, on riding up to the house of his beloved, that his rival's horse was hitched at the gate. Unhitching him, and giving him a smart stroke with his raw-hide, he walked in and inquired whose horse that could be cantering down the street. It need not be said that he found the coast clear at once, and took good pains to keep it so.

But when humor gets thus beyond words into actual deeds and tricks of mischief, it grows wanton and needs a check. And that check it is sure to find at last. The humor is canceled or neutralized by the mischief. The bee stings as well as sings, and bee-music must be the best kind of soprano to keep one unconscious of venom rankling in the blood. Happily, humor is not commonly given in excess. Like oil for putty, it is usually just enough, if rightly used, to soften the nature, and make it pliable. Where it abounds, it needs to be kept within careful limits. Otherwise the fire that warms will burn, and be constantly kindling conflagrations. One gifted in the line of wit or humor must be careful, or these will absorb everything else. Intellect, affection and conscience will all be dissolved in it, only to form a worthless amalgam.—*Hours at Home.*

SEEING THE SUN AT MIDNIGHT.

IN July, 1865, Hon. J. H. Campbell, United States Minister to Norway, with a party of American gentlemen, went far enough north to see the sun at midnight. It was in 69 degrees north latitude, and they ascended a cliff 1,000 feet high above the Arctic sea. The scene is thus described:—"It was late, but still sunlight. The Arctic ocean stretched away in silent vastness at our feet; the sound of its waves scarcely reached our airy look-out; away in the north the huge old sun swung low along the horizon like the slow beat of the pendulum in the tall clock in our grandfather's parlor corner. We all stood silent, looking at our watches. When both hands came together at 12, midnight, the full, round orb hung triumphantly above the wave—a bridge of gold, running due north, spanned the waters between us and him. There he shone in silent majesty which knew no setting. We involuntarily took off our hats—no word was said. Combine, if you can, the most brilliant sunset and sunrise you ever saw, and its beauties will pale before the gorgeous coloring which now lit up the ocean, heaven and mountain. In half an hour the sun had swung up perceptibly on its beat, the colors changed to those of morning, a fresh breeze rippled over fiord, one songster after another piped up in the grove behind us—we had slid into another day."

GREAT NATIONAL CURIOSITY.

THE Sentinel, published at Jacksonville, Oregon, of the 12th ult., says:—"Several of our citizens returned last week from a visit to the Great Sunken Lake, situated in Cascade Mountains, about seventy-five miles northeast from Jacksonville. This lake rivals the famous valley of Sinbad, the sailor. It is thought to average 2,000 feet down to the water all round; the walls, almost perpendicular, running down into the water, and leaving no beach. The depth of the water is unknown, and its surface is smooth and unruffled, as it lies so far below the surface of the mountain that the air currents do not affect it. Its length is estimated at twelve miles, and its breadth at ten. No living man ever has, and probably never will be able to reach the water's edge. It lies silent, still and mysterious in the bosom of the "everlasting hills" like a huge well, scooped out by the hands of the giant genii of the mountains, in unknown ages gone by, and around it the primeval forests watch and ward are keeping. The visiting party fired a rifle several times into the water, at an angle of forty-five degrees, and were able to note several seconds of time from the report of the gun until the ball struck the water. Such seems incredible, but is vouched for by some of our most reliable citizens. The lake is certainly a most remarkable curiosity."

QUARRELING.—If anything in the world will make a man feel badly, except pinching his fingers in the crack of a door, it is unquestionably a quarrel. No man ever fails to think less of himself after it than before. It degrades him in the eyes of others, and what is worse, blunts his sensibilities on the one hand, and increases the power of passionate irritability on the other. The truth is, the more peaceably and quietly we get on, the better for neighbors. In nine cases out of ten the better course is, if a man cheats you, cease to deal with him; if he is abusive, quit his company; and if he slanders you, take care to live so that nobody will believe him. No matter who he is, or how he misuses you, the wisest way is to let him alone; for there is nothing better than this cool, calm and quiet way of dealing with the wrongs we meet with.

ALEXANDER DUMAS, the elder, returning from a day's sport at the country-seat of a friend with an empty game-bag, was asked, "Well, Dumas, what did you kill?" "Time," was the quick reply.

THE NUMBER THREE.

WHEN the world was created, we find land, water and sky; sun, moon and stars; Jonah was three days in the whale's belly; our Saviour passed three days in the tomb; Peter denied his Saviour thrice. There were three patriarchs—Abraham, Isaac and Jacob. Abraham entertained three angels. Samuel was called three times. "Simon, lovest thou me?" was repeated three times. Daniel was thrown into a den with three lions, for praying three times a day. Shadrack, Meshack and Abednego were secured from the flames of the furnace. The ten commandments were delivered on the third day. Job had three friends. St. Paul speaks of faith, hope and charity, these three. Those famous dreams of the baker and butler were to come to pass in three days. Elijah prostrated himself three times on the body of the dead child. Samson deceived Delilah three times before she discovered the source of his strength. The sacred letters on the cross are I. H. S.; "*in hoc signo.*" There are three conditions for man—the earth, heaven and hell. There is also the Holy Trinity. In mythology, there were three graces; Cerberus with his three heads; Neptune holding his three-toothed staff; the oracle of Delphi cherished with veneration the tripod; and the nine muses sprang from three. In nature we have male, female and offspring; morning, noon and night; trees group their leaves in threes; there is the three-leaved clover. Every ninth wave is ground swell. We have fish, flesh and fowl. The majority of mankind die at the age of thirty-three. What could be done in mathematics without the aid of the tri-angle? Witness the power of the wedge; and in logic three premises are indispensable. It is a common phrase that three is a lucky number.

ANGER.—Never get angry. It does no good. Some sins have a seeming compensation or apology, a present gratification of some sort, but anger has none. A man feels no better for it. It is really a torment, and when the storm of passion has cleared, it leaves one to see that he has been a fool in the eyes of others, too. A passionate man adds nothing to the welfare of society. He may do some good but more hurt. Heated passions make him a fire-brand, and it is a wonder if he does not kindle flames of discord on every hand. Without much sensibility, and often void of reason, he speaks like the piercing of a sword, and his tongue is an arrow shot out, and found only "in the bosom of fools." Why should it be indulged in at all?

REGARDING HATS.—The sacred "stove pipe" is in danger. It is about to be abolished, superseded. The work proceeds by degrees, and consists in gradually lowering the crown and widening the brim until it becomes a "low, stiff sombrero of silk-covered cardboard, with soft interior edges." It will be light because it will be little. It will furnish a grateful shade for the eyes with its broad brim. It will be easy of use in salutation, because the brim is stiff. We could wish it were less heating for the head than the superseded stove pipe, but persons of an imaginative turn will readily persuade themselves, as hitherto, that a hat with a small spoked hole in the center of the crown, must necessarily be well ventilated.

SIXTH SENSE IN MAN.—In a paper before the British Association, Dr. Hughes Bennett announced that the tendency of modern physiology was to ascribe to man a sixth sense. If there be placed before a man two small cubes, the one of lead and the other of wood, both gilded so as to look exactly alike, and both of the same temperature, not one of the five senses could tell the man which is lead and which is wood. He could tell this only by lifting them; and this sense of weight was likely to be recognized as a sixth sense.

A MAN who owes a little can clear it off in a very little time, and, if he is a prudent man, will; whereas, a man who, by long negligence, owes a great deal, despairs of ever being able to pay, and therefore never looks into his accounts at all.—*Chesterfield.*

Reading for the Young.

CHERISH KINDLY FEELINGS.

BY MRS. M. A. KIDDER.

Cherish kindly feelings, children;
Nurse them in your heart;
Don't forget to take them with you,
When from home you start;
In the school-room, in the parlor,
At your work or play,
Kindly thoughts and kindly feelings,
Cherish every day.

Cherish kindly feelings, children,
Toward the old and poor,
For you know they've many blighting
Hardships to endure;
Try to make their burden lighter,
Help them in their need,
By some sweet and kindly feeling,
Or some generous deed.

Cherish kindly feelings, children,
While on earth you stay,
They will scatter light and sunshine
All along your way;
Make the path of duty brighter,
Make your trials less,
And whate'er your lot or station,
Bring you happiness.

Written for Moore's Rural New-Yorker.

THE ELDER BROTHER AND SISTER.

POWERFUL, indeed, is the influence exerted in a family by the elder brother. Is he kind and forbearing towards the younger ones, and faithful in performing the duties assigned him by his parents, the other children are almost certain to follow his example. In time, too, he comes to be the one to whom his father explains his plans for business, and to him he looks for sympathy and help to carry them out; and when this feeling of confidence is mutual it is something beautiful to behold. So, too, the elder sister, if she be kind and affectionate, as she often is, becomes almost a second parent to the little ones, and a companion and helper to her often over-worked mother.

Younger children sometimes complain that their parents never think they have grown up, but continue to treat them as children long after their age entitles them to the consideration shown to grown people; and this charge is apt to be true. As a general thing I think the elder sister makes the best wife,—the most unselfish and amiable. This may be because in her station she is obliged to make more self-sacrifices than the others, and therefore can do it more gracefully when called on to preside over a house of her own.

Example has a potent influence over the minds of the young. The thought of the good, upright elder brother will often come with restraining power to the younger son, inclined to transgress the laws of right; and the patient elder sister exerts a silent influence over the restive younger one. Happy elder ones. If you knew your power for good, how you would prize it!

Elkhorn, Wis., 1867. B. O. D.

DO IT WELL.

"THERE, that'll do," said Harry, throwing down the shoe-brush, "my boots don't look very bright. No matter. Who cares?"

"Whatever is worth doing is worth doing well," replied a serious but pleasant voice.

Harry started and turned round to see who spoke. It was his father. Harry blushed. His father said,—"Harry, my boy, your boots look wretchedly. Pick up your brush and make them shine. When they look as they should, come to me in the library."

"Yes, pa," replied Harry, pouting, and taking up his brush in no very good humor, and brushing the dull boots until they shone nicely. When the boots were polished, he went to his father, who said to him,—

"My son, I want to tell you a short story. I once knew a poor boy whose mother taught him the proverb, 'Whatever is worth doing is worth doing well.' That boy went to be a servant in a gentleman's family. He took pains to do everything well no matter how trivial it seemed. His employer was pleased and took him into his shop. He did his work well there.

When he swept out the shop he did that well. When he was sent on an errand, he went quickly, and did his errand faithfully. When he was told to make out a bill, or to enter an account, he did that well. This pleased his employer so, that he advanced him from step to step, until he became head clerk, then a partner, and now he is a rich man, and anxious that his son Harry should learn to practice the rule which made him prosper."

"Why, pa, were you a poor boy once?"

"Yes, my son, so poor that I had to go into a family and black boots, wait at table, and do other little menial services for a living. By doing those things well, I was soon put, as I have told you, to do things deemed more important. Obedience to the proverb, with GOD'S blessing, made me a rich man."

Harry never forgot the conversation. Whenever he felt like slighting a bit of work, he thought of it, and felt spurred to do his work properly. "*Whatever is worth doing is worth doing well,*" cheered him in his daily duties.

I commend the proverb to every lazy boy and girl. I hope it will make little Annie Careless do better sewing, make better progress with her music lessons, and take better care of her room. I hope, too, that Tom That'll-do will stir himself, and show that he regards the proverb by doing his work so well that there will be no need for the complaints which are made about him every day. O Tom, Tom, you will never be worth a shilling to yourself or anybody else if you don't mend your ways by learning to do your work well. Do you hear that Tom? *Yes.* Very well, then, do as well as hear.

Our Fall Campaign!

A NEW QUARTER--VOLUME XIX.

The last Quarter of this Volume of the RURAL NEW-YORKER commences next week—October 5th. As a large number of subscriptions expire this week (all which have No. **923** printed after name on address label,) a prompt renewal is necessary to secure an uninterrupted continuance of the paper. We trust they, and the thousands who wish to take the paper, will at once renew or subscribe. Both single and club subscriptions are now in order and respectfully solicited.

Gen. PHOTOGRAPHY (our candidate for the Presidency,) reigns throughout the land, for the season has been a most fruitful one, and peace and plenty abound, maugre the melancholy predictions of politicians and the croaker brigade, (both of which ought to be mustered out of the service, their occupation being gone.) The Farmers and Horticulturists of the Country are abundantly blessed in basket and in store. The magnificent and abundant Products of Field, Orchard and Garden are nearly secured the long evenings and leisure of Winter are coming on apace, and *Now is the Time* to provide good Journals and Books for the Entertainment and Instruction of every family circle. Such a journal as the RURAL is needed, and will *pay*, in almost every family, and if those who are already subscribers, and know its value, *will kindly aid in extending its circulation*, it may be placed in the homes of tens of thousands of appreciative people during the ensuing three months.

GOOD PAY FOR DOING GOOD!

All who form clubs, either to begin with the New Quarter (Oct. 5th,) or next Volume (Jan. 4, 1868,) will be substantially rewarded, as our inducements are extraordinary—more liberal than ever before. Specimen Numbers, Show-Bills, Premium Lists, &c., sent free to all disposed to act as club agents.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., SEPTEMBER 28, 1867.

NEWS OF THE WEEK.

New York State Items.

THERE was a collision on the Canandaigua and Elmira branch of the Northern Central Railway, between Mailport and Pine Valley, on the 18th inst., between a freight and an excursion train, by which two men were killed and five wounded.

It is thought that there have been extensive whisky frauds perpetrated in Buffalo recently.

There is some prospect of an adjournment of the Constitutional Convention until some time after the fall election, or perhaps throw it over until next year. It is quite doubtful if it can perfect its labors sufficiently to bring them before the people for ratification in November.

Charles H. Van Dake, Messenger for the Merchants' Union Express Company between Rochester and Niagara Falls, shot himself on the morning of the 19th inst.

The magnificent steamer Dean Richmond, of the People's Line, was sunk by colliding with the C. Vanderbilt near Rondout, on the night of the 19th inst. It is feared several lives were lost.

Horace Greeley made a proposition in the Constitutional Convention to sell our State canals. It was brought to a vote, and received only *six* in the affirmative.

E. C. Gillett, a Merchant's Union Express messenger, in charge of the Company's Montreal car, which left Albany on the 21st inst. for that city, is missing—together with money and valuables, estimated at $70,000.

A Rectifiers' and Distillers' Association was formed Saturday evening at the Astor House, to assist the Government in collecting revenues. One hundred and seventy firms were present.

From Washington.

THE flags over all the public buildings were at half-mast as a token of respect to the memory of Sir Frederick Bruce.

The Treasury receipts since the 1st inst., are, from Customs, $10,034,000 in coin, and from Internal Revenue, $9,700,000 in currency.

Gen. Sheridan arrived there on the 20th inst.

Some anxiety is felt concerning the U. S. Steamer Dale, which has been two months out on a practice cruise with a number of midshipmen.

Gen. Banks, who is Chairman of the House Committee on Foreign Affairs, has accepted the invitation of the Mexican Minister, Senor Romero, to accompany him to Mexico.

The Treasury Department has news that Hon. S. B. Colby, Register of the Treasury, who is very ill at Haverhill, N. H., is sinking rapidly.

Certain questions bearing upon the application of Fitz John Porter for a new trial have been submitted by Gen. Grant to the Attorney-General.

Gen. Grant has assigned Brevet Major-General Joseph J. Reynolds, now on the Rio Grande, to the command of the District of Texas; and Brevet Major-General Mower, now at New Orleans, as the temporary commander of the Department of the Gulf.

About $3,700,000 of the 7-30 notes falling due Aug. 15th are not converted into long bonds. Upon this amount the holders lose nearly eight per cent.

The Navy Department has received reports from our squadron commanders abroad. Admiral Thatcher, in the Pacific, visited Lahaina, one of the Hawaiian Islands, with Gen. McCook, Minister Resident at Honolulu. They were escorted to a Christian Church where the children sang Union war songs in the native language, and John Brown's body and the Star Spangled Banner in English.

From the West.

THE Indians made a general attack upon the grading parties at the end of the track of the Union Pacific Railroad, Eastern Division, on the 18th inst. Seven men were killed.

All the stock of a Government train has been captured between Walker and Fossil Creeks.

The Union Pacific Railroad is now finished 460 miles west of Omaha. The gross earnings of the Kansas branch of this road for August were $236,000.

The citizens of Montana are calling loudly upon the Government to stop the Indian outrages or let them do it themselves.

It is said that the Indians have celebrated the advent of the Commissioners and the new moon by breaking out into fiercer hostilities all along the route.

Forty wagons were attacked at Crow Creek, and twenty-one Government mules, some valuable horses, and $5,000 in greenbacks, were captured. The prairie has been fired for fifty miles, and the Indians are appearing in large bodies and threatening total destruction to stations and travel.

There were twelve deaths from cholera in Omaha on the 18th inst.

The Indians attacked the camp of Thomas Parker, a railroad contractor, on the 19th inst., but were repulsed. Parker and five other men were killed.

The Legislature of Arizona met on the 4th inst., and organized the ensuing day. The Territory desires to be made a military district, and to receive a larger military force.

By the explosion of a steam tug boiler at Detroit on the 18th inst., six persons were killed and five others badly injured.

From the South.

YELLOW FEVER is still raging to a great extent in New Orleans. It is also spreading among the towns in the interior of Louisiana and Texas.

A colored Judge presided in New Orleans for the first time, on the 18th inst., on the bench of the First District Recorder's Court.

The new Constitution of Maryland has been adopted by a vote of the State. Majority in its favor about 20,000.

Gov. Swann presided at the dedication of the Antietam Cemetery. The corner stone of the monument was laid by the Grand Master of the Masons of Maryland. At the conclusion of the ceremonies, President Johnson, Gov. Geary and Gov. Fenton made brief speeches.

The Howard Association of New Orleans has asked aid for the poor of that city.

Gen. Pope has ordered an election in Georgia. It will commence on the 29th proximo, and continue three days. The vote is to be for or against a State Convention.

The Picayune says the yellow fever in New Orleans is wider spread than during the epidemic of 1853, but the cases are of a milder type, and the mortality is not as great.

From New England.

THE Massachusetts State Temperance Convention assembled in Worcester last week. Nearly eighteen hundred delegates were present. Rev. Dr. Eddy was made President. Hon. Henry Wilson addressed the Convention in opposition to the license system.

Two young ladies, daughters of Mr. James Kane, were burned to death in East Abington, Mass., on the night of the 15th inst.

The corner stone of a new Cathedral to cost $1,500,000, was laid in Boston on the 15th inst., with imposing ceremonies.

Sir Frederick Bruce, British Minister to this country, died in Boston on the 19th inst., of throat disease. Mayor Norcross ordered proper marks of respect to be paid the remains of the deceased.

The freight house of the Hartford and New York Steamboat Company, in Hartford, was burned on the 21st inst., with a large amount of freight. Loss over $100,000.

Latest from Europe.

The Paris *Liberte* of the 10th says:—The Sultan has granted the English Government permission to enlist volunteers in Arabia for the Abyssinian expedition.

It is stated that an attempt had been made in Nicolaeff to assassinate the Emperor of Russia by two ruffians disguised as females. The matter was hushed up.

The transformation of old fire-arms into needle guns has commenced in Italy.

The Prince and Princess Royal of Prussia will visit England the last of October.

The Russian Grand Duke Michael is expected at Constantinople from the Crimea on a visit to the Sultan.

The North German Parliament has agreed to a bill establishing a consulate in New York.

Arrests of Fenian emissaries continue to be made in Dublin.

Admiral Farragut's fleet is at Copenhagen. The Kings of Denmark and Greece have given a superb entertainment to the Admiral, in the Royal Palace. The most noted men of the Kingdom were present, and the greatest friendship was manifested toward the United States.

Gen. Garibaldi has issued a stirring address to his followers, announcing that the time has now come for them to overthrow the tyranny of the Pope, restore Rome to Italy, and give the Eternal City its original supremacy as the Capital of the Italian nation.

A royal proclamation has also been promulgated, signed by King Victor Emmanuel, warning all Italians against taking part in aiding or abetting the revolutionary movement against Rome, which is denounced as a crime against the laws of Italy and of nations.

The Peace Congress at Geneva is pronounced merely a local affair, of no practical importance. Gen. Hooker and other Americans are in Geneva, but have taken no part in it.

A Decree has been issued in Spain that vessels arriving from the United States and Belgium be placed in Quarantine.

The Veronin Brothers of Moscow, heavy operators in cotton, have suspended. Liabilities a quarter of a million sterling.

The bullion in the Bank of England exceeds its circulation, a very unusual circumstance.

The wheat crop of England is under the average, and barley and oats are ten to fifteen per cent. above.

It is thought that 40,000 French soldiers are concentrated at Toulon, ready to embark for Rome at any moment.

A serious riot occurred in Manchester, England, on the 19th inst. A strong police force was escorting two Fenians from the jail to the depot, preparatory to their removal to Dublin for trial, when it was attacked by a mob. A desperate fight ensued. The police gave way, and the mob carried the prisoners off. Several were killed and wounded.

THE LATEST FROM MORMONDOM.—In a recent harangue at the Tabernacle in Salt Lake City, Brother Sloan, editor of the Deseret News, declared himself a polygamist, and denounced the Government as tyrannical and unjust, and as having no right to make laws for the saints. He urged upon his hearers the necessity of practicing polygamy to uphold their institution and enhance their salvation. Brother Kimball approved of this, and pronounced himself sound on polygamy. He said he had seventy children already, and calculated that in fifty years the Kimball family would outnumber the present aggregate of saints.

FROM CENTRAL AMERICA.—The last Aspinwall steamer brought news of the passage by the National Congress of Bogota, and the signing by the President, of the bill extending the charter of the Panama Railroad Company. In consideration of the sum of one million dollars paid by the Company on the signing of the contract, and an annual payment hereafter of two hundred and fifty thousand dollars, twenty-five thousand of which goes direct to Panama, the Government of Columbia grants an extension of the Company's charter for ninety-nine years from the present time.

NEWS PARAGRAPHS.

A YOUNG cow whale, about eight feet long, was harpooned in New London Harbor, on Friday morning, and put on exhibition at ten cents per sight.

THE New Orleans Common Council has elected three blacks and one white for Assistant Recorders of the city, and several negroes to other positions.

AT Elkador, Iowa, last Thursday, an earthquake was perceptibly felt. Houses were shaken up, and the shock lasted in a grumbling kind of way for two hours.

A FARMER in Brighton, Monroe county, New York, has a ten-acre watermelon patch, the income from which this year is estimated at three thousand dollars.

THERE was a very large fire in Montreal on the night of the 16th inst. Spellman's distillery, situated in the heart of the city, was totally destroyed. Loss $100,000.

THE Earl of Mayo succeeds Lord Monck as Governor-General of the Dominion of Canada next June. Gen. Charles Windham replaces General Mitchel as Commander-in-Chief of the Canadian forces.

THE Conferences of the Indian Commissioners with the leading chiefs of the warlike tribes of the plains, show that the terms exacted by the Indians are not to be entertained, and that a war of extermination is inevitable.

CHARLES STETSON, while playing with a monster elephant at a circus in East Saginaw, Michigan, gave it a rotten apple. The enraged animal at once threw him some fifty feet from the ring, but fortunately without injury.

A NEGRO slave recently murdered the sister of the Postmaster-General of Cuba, and attacked and wounded that official himself. He ran away, but was soon arrested. He said he was made desperate by the fact that his brother was about to be sold into slavery by the Postmaster's family.

A FIRM in Delaware who put up fruits in cans for the market, in a letter to a party in Boston, says:—"We never before saw so many peaches as this year. We are putting up 550 baskets a day, and although we receive them in a few hours after picking, we lose a great many by their rotting."

THIRTY women in Montgomery, Ala., with children, numbering ninety-six in the aggregate, publish a card in the papers of that city, in which they declare that they are suffering for the absolute necessaries of life, and can get no work with which to support themselves and their helpless children. They state that they have been receiving assistance from the United States Government and from Dr. Rose, but these sources have been closed.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, September 24, 1867.

THE amount of gold shipped last week from New York did not exceed $178,000, which was less than anticipated. The price of gold declined two or three cents during the week. Sales were made yesterday at 143¾. There was quite a flurry in the Eastern money market last week. The rate of interest on call loans suddenly advanced from 4@5 ₱ cent. to 7 ₱ cent. The New York banks have for some weeks been steadily working into a closer condition. Since the 10th of August they have lost $11,000,000 in legal tenders, and over $6,000,000 in net deposits, while the loans have been increased nearly $1,000,000. The legal tender contraction of the Treasury Department has been large. Between the 1st of June and the 1st of Sept., $38,500,000 of compound, and $8,000,000 of United States notes, have been retired. Western Banks have been drawn upon largely for funds to move the crops, and they have found it necessary to draw legal tenders from New York. The amount of funds sent West week before last, from New York, was about $8,000,000, and last week a much larger sum was forwarded. On Friday last, one bank alone was drawn upon for $1,500,000 for remittances to the West and the interior. The Bulletin of Saturday says:—"Discounts are checked to a large extent by the activity in call loans. The banks doing a brokers business have almost entirely suspended discounting operations."

The stringency at the East will speedily receive some relief from the heavy payments that must now almost immediately be made for fall goods. The money plethora, however, is past for the present. Stocks have declined, and for some days have been weak and excited. If there is not speedy relief in the money market, prices will go still lower. There will be much uncertainty in financial circles until after the 1st of October.

Extreme commercial prostration still exists in England and on the Continent. As interest has so largely advanced on this side, we shall doubtless have the use of idle funds from abroad, until the pressure caused by the movement of the crops is abated. The foreign exchange houses are now largely in funds, and afforded sensible relief to the banks during the past week. The 7-30's that were not converted prior to Sept. 15th, will now be paid in cash. About four and a half millions are still unpaid.

COTTON.—The total receipts of Cotton for the year ending Sept. 1st, 1867, were 2,019,271 bales against 2,193,987 bales for the previous twelve months. The total exports of last year were 1,593,311 bales. The value in gold of our cotton exports for the year ending Sept. 1st, would be about $170,000,000. The stock of old cotton in the interior is now very small. The supply for the coming year must come mainly from this year's crop.

WOOL.—The wool market is still in a peculiar condition, and the predictions of the most experienced dealers are not verified. Prices of low and medium grades continue to settle down. At the West, and in the interior, there are few purchases from first hands, both the grower and buyer being unwilling to operate in the present state of the market. The actual consumption of wool is small for the season, and yet sales are large. The transactions in Boston last week foot up 1,800,000 lbs., fleece selling at 29@62½c, and pulled ranging from 25@50c. The commission houses are free sellers, and low prices tempt such manufacturers as have money to lay in a stock for future consumption. The present stringency in the money market will doubtless increase the anxiety of holders to realize. The price of fleece wool in this locality is nominal at 35@40c. Buyers are beginning to operate in pulled wool. The amount expected from the West is large.

WHEAT AND FLOUR.—The market for wheat and flour still tends upward. Red wheat is selling in this city at $2,20@2,40, the outside figure being freely paid for best quality. Flour has advanced from $1 to $1,25 ₱ barrel. The rise in wheat and flour was altogether unexpected by most dealers. Recently statements have been made that the crop of wheat is not as large as first reported, and the effect has been to put up prices. Future prices will depend much upon the receipts of Western wheat in October.

JUST PUBLISHED.
The first number of
THE NATIONAL AMERICAN,
A Monthly Journal issued under the auspices of THE AMERICAN INDUSTRIAL LEAGUE. Guaranteed circulation, 30,000 copies. *Price, five cents a copy.*
A limited number of advertisements will be received.
THE NATIONAL AMERICAN will be devoted to the advocacy of the great NATIONAL POLICY of American industrial independence, and will seek to present in a candid and lucid manner the entire question in debate between the advocates of Home Production on the one hand, and of British Free Trade on the other. Advocating no class interests, its columns will be open to the discussion of co-operation and the important labor question.
The highest editorial ability in the United States will be engaged.
Dealing boldly as it will with the great vital questions which affect the industrial and financial prosperity of the country, it is believed that THE NATIONAL AMERICAN will be hailed with cordial welcome as a timely monitor and instructor by the millions of patriotic Americans who desire the prosperity of DOMESTIC INDUSTRY, and from such a liberal support is invited.
Orders for quantities to be supplied, or advertisements to be inserted, are respectfully invited.

— A man recently committed suicide in Minnesota to avoid being murdered.

— Fifty-five Government employees have died in New Orleans of yellow fever.

— Louisiana promises 80,000 hogsheads of sugar, double the product of last year.

— A coin of Philip of Macedon is on exhibition in Washington. It is 300 years old.

— A little boy in Bolton, Eng., was lately drowned in an unbaked "batch" of bread.

— The leprosy is making fearful havoc among the inhabitants of the Hawaiian Islands.

— The cotton crop of Texas is estimated at 60,000 bales. The yield of corn is enormous.

— It is said that Dickens has written fiction so long that it has interfered with his veracity.

— Homer, Ill., being troubled by rats, proposes to devote a day to their everlasting destruction.

— There is an editor in Minnesota who weighs 642 pounds. Light literature is not his specialty.

— The Secretary of the Treasury has issued an order suspending Cailleoti, the Collector of Brooklyn.

— Abner Marks robbed Adams' Express of $31,000 last year. He has just been arrested in Richmond.

— A set of six twins in one family may be seen airing in Hyde Park, London, of pleasant mornings.

Special Notices.

STUMP MACHINES—A PROPOSITION.

W. W. WILLIS, proprietor of the Lever Stump Machine, will ship one to any point within reasonable distance of Rochester, and operate it by way of testing its merits. If it performs what is claimed for it, he expects the parties ordering the trial to purchase the machine and pay the charges of transportation. His own services will be gratuitously rendered under the preceding conditions. He will exhibit one on the Monroe County Fair grounds during the Fair, commencing on the 25th instant.

WHEATON'S OINTMENT will cure the Itch.
WHEATON'S OINTMENT will cure Salt Rheum.
WHEATON'S OINTMENT cures Old Sores.
WHEATON'S OINTMENT cures all Diseases of the Skin.
Price 50 cents;—by mail 60 cents. All Druggists sell it. WEEKS & POTTER, Boston, Proprietors. 922

GOOD READING VERY CHEAP!

WE have a few extra copies of Volume XII of the RURAL NEW-YORKER, (1861,) stitched, and in good order, which we will sell at $1 per copy at office or by express. If you wish a copy, speak quick. A few bound copies of same volume for sale at $3. We can also furnish bound copies of most of the volumes issued since 1855, at $3 each. Bound volumes of 1865 and 1866, $4 each.

Address D. D. T. MOORE, Rochester, N. Y.

ESTABLISHED 1861.

THE

GREAT AMERICAN TEA COMPANY

HAVE JUST RECEIVED

TWO FULL CARGOES

OF THE

FINEST NEW CROP TEAS.

22,000 HALF CHESTS by ship GOLDEN STATE,
12,000 HALF CHESTS by ship GEORGE SHOTTON

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune district of China, which are unrivalled for fineness and delicacy of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade, (before the establishment of the GREAT AMERICAN TEA COMPANY,) we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in the country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in Invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices, with the small additional expense of transportation, as though they bought them at our warehouse in the city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on the list, as seen in the club order published below, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

Parties sending Club or other orders for less than thirty dollars had better send Post-office drafts or money with their orders, to save the expense of collections by Express; but larger orders we will forward by Express, to *"collect on delivery."*

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

Oolong (Black,) 70c., 80c., 90c., best $1 ℔ lb.
Mixed (Green and Black,) 70c., 80c., 90c., best $1 ℔ lb.
English Breakfast, (Black,) 80c., 90c., $1, $1.10, best $1.20 ℔ lb.
Imperial (Green,) 80c., 90c., $1, $1.10, best $1.25 ℔ lb.
Young Hyson (Green,) 80c., 90c., $1, $1.10, best $1.25 ℔ lb.
Uncolored Japan, 90c., $1, $1.10, best $1.25 ℔ lb.
Gunpowder (Green,) $1.25, best $1.50 ℔ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economize in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

CLUB ORDER.

Edwards, St. Lawrence Co., N. Y., June 3, 1867.

THE GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street, New York.

DEAR SIRS:—I herewith send you another order for Tea. The last was duly received, and gives general satisfaction. As long as you send us such good Tea, you may expect a continuation of our patronage. As a further evidence that the subscribers were satisfied, you will observe that I send you the names of all those that sent before who were near out of Tea, with a large addition of new subscribers. Accept my thanks for the complimentary package. Ship this as the other, and oblige.

Your ob't servant, DAVID C. McKEE.

The Howe Sewing Machines

MANUFACTURED BY

THE HOWE MACHINE CO.,
ELIAS HOWE, Jr., President,
699 BROADWAY, NEW YORK.

FOR FAMILIES AND MANUFACTURERS.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine.

The New Improved Family Machine is without a rival, and cannot be surpassed,—a Hemmer, Feller, Braider, Quilter and Guide go with each Family Machine free of charge.

Every Machine is as near perfection as the best machinery in the world can make it.

They are adapted to all kinds of Family sewing, and Manufacturing of every description, making a beautiful and perfect Stitch, alike on both sides of the articles sewed, and will neither rip nor ravel.

The parts being exactly alike, if any part needs to be replaced, the operator can replace it.

Loss of time and expense of sending to a machine shop rarely occurs.

THE BEST MACHINE IN THE WORLD!

THE COLLINS AND SHATTUCK

Combined Clover Thrasher, Huller & Cleaner,

MANUFACTURED BY

GLEN & HALL, ROCHESTER, N. Y.

We beg to call the attention of Farmers to the superior characteristics of the Collins and Shattuck Clover Machine made by us, which we are now prepared to supply.

Our Machines have two bolts with counter reciprocating motion, which have proved *indispensable* in keeping the Machine still, preserving it from racking and preventing it from clogging. We will WARRANT them with proper management to Thrash, Hull and Clean Clover or Grass Seed at one operation, more rapidly and in a much better manner than any other Machine made. When thrashing grass seed they can in a moment be so arranged that the seed and chaff will pass directly from the bolts to the fanning mill without going through the huller—*an advantage possessed by no other machine.* The ratchet form of the upper bolt in our machine insures a thorough separation of the heads and seed from the straw before the latter is allowed to pass into the stack. Our machines are constructed of the best material, in the most thorough manner, handsomely painted and ornamented, and have in all cases given entire satisfaction. Persons purchasing these machines to do custom thrashing will find them even much more remunerative than Grain Thrashing Machines.

We are also prepared to supply Horse-Powers, Truck Waggons, &c., to be used with our machines, or they will be adapted to run with any other Horse Powers.

☞ Descriptive Catalogues, containing full information, with testimonials from persons using our Clover Machines, sent free to all applicants. Address GLEN & HALL, Rochester, N. Y., or Detroit, Mich. J. D. EASTON, Gen'l Western Agent, Chicago, Ill. 921 10t

THE GREAT NEW ENGLAND REMEDY!

Dr. J. W. POLAND'S

WHITE PINE COMPOUND

Is now offered to the afflicted throughout the country, after having been proved by the test of twelve years in the New England States, where its merits have become as well known as the tree from which, in part, it derives its virtues.

The White Pine Compound

CURES

Sore Throat, Colds, Coughs, Diptheria, Bronchitis, Spitting of Blood, and Pulmonary Affections generally. It is a remarkable Remedy for Kidney Complaints, Diabetes, Difficulty of Voiding Urine, Bleeding from the Kidneys and Bladder, Gravel, and other Complaints.

For PILES and SCURVY it will be found very valuable.

This medicine is *free from anything deleterious,* pleasant to the taste, safe, yet sure and effective in its action.

(From the Boston Journal, Jan. 20, 1866.)

POLAND'S WHITE PINE COMPOUND.—After having given it a thorough trial, we can confidently recommend *Poland's White Pine Compound* as a very valuable article for the cure of colds, coughs, and pulmonic complaints generally. In several cases we have known it to give prompt relief when all other remedies which had been tried had failed. It is an article which, in a climate so promotive of sudden and severe colds, as is that of New England, ought to be in every family; and we are sure that those who once obtain it and give it a fair trial will not thereafter be willing to be without it.

A VALUABLE MEDICINE.—*Dr. Poland's White Pine Compound,* advertised in our columns, is a successful attempt to combine and apply the medicinal virtues of the White Pine bark. It has been thoroughly tested by people in this city and vicinity, and the proprietor has testimonials to its value from persons well known to our citizens. We recommend its trial in all those cases of disease to which it is adapted. It is for sale by all our druggists.—*Independent.*

The WHITE PINE COMPOUND is now sold in every part of the United States and British Provinces.

PREPARED AT THE

New England Botanic Depot, - - Boston, Mass.

AGENTS WANTED.—Another Great Work by E. A. POLLARD, the acknowledged Historian of the South; entitled "LEE AND HIS LIEUTENANTS," comprising a Life of Gen. R. E. LEE, replete with facts never before published, including Biographies of every Southern General of distinction.

In one large volume—30 steel portraits. A companion volume to "THE LOST CAUSE," a Standard Southern History of the War, which has already obtained half a million of readers. A new and enlarged edition is now ready. One Agent sold 220 the first week. These two works form a complete library of the War from the other side. E. B. TREAT & CO.,
915-7teo Publishers, 654 Broadway, N. Y.

PLASTIC SLATE ROOFING

JOINT STOCK COMPANY,

OFFICE 157 [Room 19] *BROADWAY,*
NEW YORK.
W. C. POTTER, *Vice-Pres't.*
J. M. ALLEN, *Sec. & Treas.* Licenses Granted.

PLASTIC SLATE FOR

ROOFING & OTHER PURPOSES.

The process of reducing Slate Stone (rock) to a disintegrated state was Patented February 21st, 1865. It is a combination of

Pulverized Slate and Viscous Matter,

(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.

AS A ROOFING MATERIAL IT STANDS UNRIVALLED.

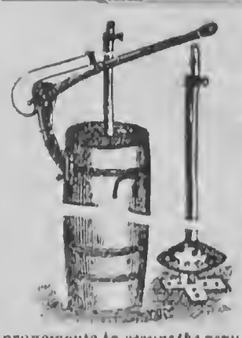
A mastic—it adapts itself to every shape and slope. Non-combustable, impervious, non-expansive, and undecaying.

FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.

The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and

PERFECTLY FIRE-PROOF.

It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.



H. P. WESTCOTT'S ADJUSTABLE

DASH CHURN.

First Pat'd Aug. 1863, *Improvements Pat'd April,* 1865 *and Nov.* 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Its tall Price—No. 1, (80 gal.,) $16; No. 2, (⅞ hhd.,) $14; No. 3, (⅝ hhd.,) $12; No. 4, (½ hhd.,) $10; No. 5, (3-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Agt'l Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Agt'l Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ THE SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

THE CHAMPION.
HICKOK'S PATENT PORTABLE.

KEYSTONE CIDER AND WINE MILL.

OVER 15,000 IN USE AND APPROVED.

Written for Moore's Rural New-Yorker.

MILDRED MIRIAM.

Out across the ghostly snow-fields
Wailed the slowly swinging bell;
Back from sunset-purpled hill-sides
Moaned the sorrow-burdened knell.
"It is little MILDRED MIRIAM,"
All the old men sad'ning said;
And the young men—"MILDRED MIRIAM,—
She so beautiful—is dead."

"It is darling MILDRED MIRIAM,"
Said the tearful village girls,—
"Cut the waxen white camelias
For her bosom and her curls."
"It is lovely MILDRED MIRIAM."
Every mother's heart made moan,—
"Soothe, oh GOD, the stricken mother,
Spare, oh spare, to us our own!"

"It is pretty MILDRED MIRIAM,"
Said the children, sobbing sore,—
"She will never stop to kiss us
In the school-path any more."
"It is blessed MILDRED MIRIAM,"
Said the poor, "so kind and good,
That 'twas but a step between her,
And the heights of angelhood!"

"It is thine own MILDRED MIRIAM,
O my bitter heart," I said,
"Henceforth, thine the voice of weeping,—
It were better to be dead."

Out across the spotless snow-fields
Ring the merry bells aloud,
Back from sunset-gilded hill-sides
Echo's gleeful answers crowd.
Just one year to-night has vanished
Since the solemn knelling said
To the valley and the village:
"MILDRED MIRIAM is dead."

Who will think of MILDRED MIRIAM,
List'ning to the joyous call?
Who will speak of MILDRED MIRIAM
In the joyous festive hall?
Old men, sitting by their firesides
Thinking of their own young days,
Have forgotten her who cheered them
By her winsome looks and ways.

Young men, gazing upon rose-lips
Fanned by thrilling laughter's breath,
Think not of the lips so silent
In the quiet grace of death;
And the thoughtless village maidens
Sing aloud and laugh outright,
And with waxen white camelias,
Star their braided locks to-night;

And each mother-heart exulting
Over girlish grace and bloom,
Thinks not how one sitteth childless,
Weeping, in a silent room.
And the merry little children,
In their holiday attire,
With their peals of ringing laughter
Answer that which shakes the spire.

E'en the needy, not forgotten
In the universal cheer,
Think not of the one who helped them
With a free white hand last year.
But, ah! bitter heart, this ringing
Is a knell to thee instead;
Life is blank, and joy is withered—
MILDRED MIRIAM is dead. ANON.

The Story Teller.

THE MYSTERIOUS ORGANIST,

A LEGEND OF THE RHINE.

"KIND hearts are more than coronets,
And simple faith than Norman blood."

YEARS ago, at a grand old cathedral overlooking the Rhine, there appeared a mysterious organist. The great composer who had played the organ so long had suddenly died, and everybody, from the king to the peasant, was wondering who could be found to fill his place, when, one bright Sabbath morn, as the sexton entered the Church, he saw a stranger sitting at the crape-shrouded organ. He was a tall, graceful man, with a pale but strikingly handsome face, great, black, melancholy eyes, and hair like the raven's wing for gloss and color, sweeping in dark waves over his shoulders. He did not seem to notice the sexton, but went on playing, and such music as he drew from the instrument no words of mine can describe. The astonished listener declared that the organ seemed to have grown human—that it wailed and sighed and clamored, as if a tortured human heart was throbbing through its pipes.

When the music at length ceased, the sexton hastened to the stranger and said, "Pray, who are you sir?"

"Do not ask my name," he replied. "I have heard that you are in want of an organist, and I have come here on trial."

"You'll be sure to get the place," exclaimed the sexton. "Why, you surpass him that's dead and gone, sir!"

"No, no; you overrate me," resumed the stranger, with a sad smile; and then, as if disinclined to conversation, he turned from old Hans and began to play again. And now the music changed from a sorrowful strain to a grand old pæan, and the mysterious organist,

"Looking upward full of grace,
Prayed, till from a happy place
God's glory smote him in the face,"

and his countenance seemed not unlike that of St. Michael, as portrayed by Guido.

Lost in the harmonies which swelled around him, he sat with his "far-seeing" eye fixed on the distant sky, a glimpse of which he caught through an open window, when there was a stir about the church door, and a royal party came sweeping in. Among them might be seen a young girl with a wealth of golden hair, eyes like the violet's hue, and lips like wild cherries. This was the Princess Elizabeth; and all eyes were turned to her, as she seated herself in the velvet-cushioned pew appropriated to the court. The mysterious organist fixed his eyes upon her and went on playing. No sooner had the music reached her ears than she started as if a ghost had crossed her path. The blood faded from her cheek, her lips quivered, and her whole frame grew tremulous. At last her eyes met those of the organist, in a long, yearning look, and the melody lost its joyous notes and once more wailed, and sighed, and clamored.

"By my faith," whispered the king to his daughter, "this organist has a master hand. Hark ye, he shall play at your wedding!"

The pale lips of the princess parted, but she could not speak—she was dumb with grief. Like one in a painful dream, she saw the pale man at the organ, and heard the melody which filled the vast edifice. Ay, full well she knew who he was, and why the instrument seemed breathing out the agony of a tortured heart.

When the service was over, and the royal party had left the cathedral, he stole away as mysteriously as he had come. He was not seen again by the sexton till the vesper hour, and then he appeared in the organ-loft and commenced his task. While he played a veiled figure glided in and knelt near a side shrine. There she remained till the worshipers dispersed, when the sexton touched her on the shoulder and said:

"Madam, everybody has gone but you and me, and I wish to close the doors."

"I am not ready to go yet," was the reply;—"leave me—leave me!"

The sexton drew back into a shady niche, and watched and listened. The mysterious organist still kept his post, but his head was bowed upon the instrument, and he could not see the lone devotee. At length she rose from the aisle, and moving to the organ-loft, paused beside the musician.

"Bertram," she murmured.

Quick as thought the organist raised his head. There, with the light of a lamp suspended to the arch above falling full upon her, stood the princess who had graced the royal pew that day. The court dress of velvet, with its soft ermine trimmings, the tiara, the necklace, the bracelets, had been exchanged for a gray serge robe and a long thick veil, which was now pushed back from the fair girlish face.

"Oh! Elizabeth, Elizabeth!" exclaimed the organist, and he sunk at her feet and gazed wistfully into her troubled eyes.

"Why are you here, Bertram?" asked the princess.

"I came to bid you farewell; and as I dared not venture into the palace, I gained access to the cathedral by bribing the bell-ringer, and having taken the vacant seat of the dead organist, let my music breathe out the adieu I could not trust my lips to utter."

A low moan was the only answer, and he continued:

"You are to be married on the morrow?"

"Yes," sobbed the girl. "Oh, Bertram, what a trial it will be to stand at yonder altar, and take upon me the vows which will doom me to a living death!"

"Think of me," rejoined the organist. "Your royal father has requested me to play at the wedding, and I have promised to be here. If I were your equal, I could be the bridegroom instead of the organist; but a poor musician must give you up."

"It is like rending soul and body asunder to part with you," said the girl. "To-night I may tell you this—tell you how fondly I love you, but in a few hours it will be a sin! Go, go, and GOD bless you!"

She waved him from her, as if she would banish him while yet she had the power to do so, and he—how was it with him? He rose to leave her, then came back, held her to his heart in a long embrace, and then with a half smothered farewell, left her.

The next morning dawned in cloudless splendor, and at an early hour the cathedral was thrown open and the sexton began to prepare for the wedding. Flame-colored flowers nodded by the wayside—flame-colored leaves came rushing down from the trees, and lay in light heaps upon the ground; and the ripe wheat waved like a golden sea, and berries drooped in red and purple clusters over the rocks along the Rhine.

At length the palace gates were opened, and the royal party appeared, escorting the Princess Elizabeth to the cathedral, where her marriage was to be solemnized. It was a brave pageant; far brighter than the untwined foliage and blossoms were the tufts of plumes which floated from stately heads, and the festal robes that streamed down over the housings of the superb steeds. But the princess, mounted on a snow-white palfrey, and clad in snow-white velvet, looked pale and sad; and when, on nearing the church, she heard a gush of organ-music, which, though jubilant in sound, struck on her ear like a funeral knell, she trembled, and would have fallen to the earth had not a page supported her. A few minutes afterwards she entered the cathedral. There, with his retinue, stood the royal bridegroom, whom she had never before seen. But her glance roved from him to the organ-loft, where she had expected to see the mysterious organist. He was gone, and she was obliged to return the graceful bow of the king, to whom she had been betrothed from motives of policy. Mechanically she knelt at his side on the altar-stone; mechanically listened to the service and made the responses. Then her husband drew her to him in a convulsive embrace, and whispered:

"Elizabeth, my queen, my wife, look up!"

Trembling in every limb, she obeyed. Why did those dark eyes thrill her so? Why did that smile bring a glow on her cheek? Ah! though the king wore the royal purple, and many a jewel-eled order glittered on his breast, he seemed the same humble person who had been employed to teach organ music, and had taught her the lore of love.

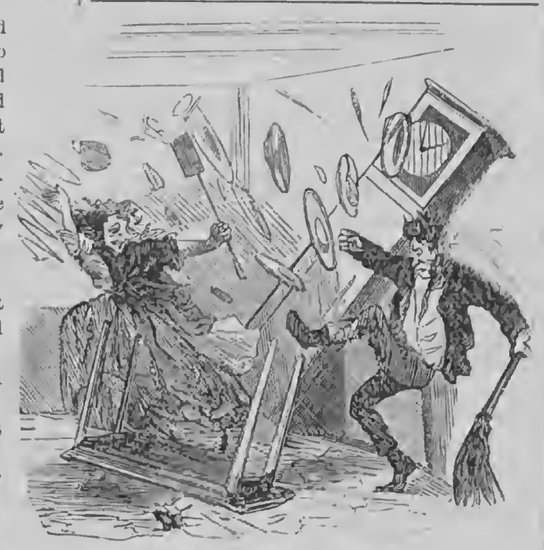
"Elizabeth," murmured the monarch, "Bertram Hoffman, the mysterious organist, and King Oscar are one. Forgive my stratagem. I wished to marry you, but I would not drag you to the altar an unwilling bride. Your father was in the secret."

While tears of joy rained from her blue eyes, the new-made queen returned her husband's fond kiss, and for once two hearts were made happy by a royal marriage.

SLEEPING FLOWERS.

IT is said that almost all kinds of flowers sleep during the night. The marigold goes to bed with the sun, and with him rises weeping. Many plants are so sensitive that their leaves close during the passage of a cloud. The dandelion opens at five or six in the morning, and shuts at nine in the evening; the daisy opens its day's eye to meet the early beams of the morning sun. The crocus, tulip, and many others close their blossoms at different hours towards evening. The ivy-leaved lettuce opens at eight in the morning, and closes forever at four in the afternoon. The night-flowering cereus turns night into day. It begins to expand its magnificent, sweet-scented blossoms in the twilight; it is in full bloom at midnight, and closes never to open again at the dawn of day. In a clover field not a leaf opens till after sunrise. So says a celebrated author, who has devoted much time to the study of plants, and often watched them in their slumbers. Those plants which seem to be awake all night he styles "the bats and owls of the vegetable kingdom."

Wit and Humor.



A SPIRITUAL MANIFESTATION.

What a bottle of whisky will do when rightly applied.

AN UNINTENTIONAL JOKE.—A Rochester urchin unconsciously perpetrated a great joke at the expense of his teacher. The lady was announcing to her pupils the holiday of February 22d, and asking them some questions concerning its observance; among others, why the birth day of Washington should be celebrated more than that of any one else. "Why," she added, "more than mine. You may tell me," she said to a little fellow eager to explain. "Because," he exclaimed, with great vivacity, "because he never told a lie!"

TAVERN AND SHOP SIGNS.—In old times, in England, but few could read. So streets were not numbered, but had some name only; and houses and taverns had signs to distinguish them. A gilded book over a bookstore; a sheaf of wheat or a loaf, over a baker's door; a golden sheep for a clothier was quite common; and so on. Thus in Old London and in the country we had "The Bull's Head," "The Saracen's Head," "The Marquis of Granby," "The Bowl and Pitcher," among the noted taverns.

JONES' STORY.—Jones has been telling Robinson one of his good stories:

Robinson—"Ya-as—it's very funny!"

Jones—"Then why the deuce don't you laugh?"

Robinson—"My dear fellah, I would with pleasure, but I daren't display any emotion—these trowsers are so tremendously tight."

SETTING TYPE.—An editor getting tired of paying printers, resolved to put his own shoulder to the wheel. Here is a specimen of his effort at setting type:

,'we tqink Me shyll dO most oF Our own setqiNg tZ Pe hearnsher——PrnterS maf tvLk vBout iTs bÆing disjicult To sEt tipe, buq We dOn,t exporienoE umeh dificultYi',

CORRUPTION OF WORDS.—A young lady asked a gentleman the meaning of the word "surrogate," and he explained it to her as "a gate through which parties go to get married." "Then I imagine," said the lady, "that it is a corruption of the word sorrow-gate." "You are right," said he, "as woman is an abbreviation of woe to man."

PRETTIEST neck-tie for a lady—the arms of her baby; for the melancholy—jolli-tie; for the poor—plen-tie; for the dull—varie-tie; for the solitary—socie-tie; for the mean—liberality; for the inebriate—sobrie-tie; for the sinful—pie-tie.

A GENIUS out West, who wished to mark a half dozen new shirts, marked the first John Jones, and the rest ditto.

IT was of course the Irishman who said:—"The most eloquent feature in a dog's face is its tail."

IT is beauty's privilege to kill time, and time's privilege to kill beauty.

WHAT is that which must be taken from you before you can give it away? Your photograph.

Corner for the Young.

For Moore's Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I AM composed of 34 letters.
My 6, 34, 20, 1, 10 is an article of furniture.
My 26, 30, 5, 9 is a useful article.
My 22, 33, 24, 2 we cannot live without.
My 29, 12, 18, 6, 4, 6 is what people dwell in.
My 34, 28, 14 1, 33, 7 is a vegetable.
My 3, 30, 33, 17 means proud.
My 15, 16, 9, 24, 29 is a part of a year.
My 11, 8, 30, 5 is the one-hundredth part of a century.
My 20, 14, 18, 30, 10 an article of food.
My 15, 30, 5, 19 is a girl's name.
My 25, 31, 21 does not mean morn.
My 23, 20, 32, 10 is a boy's name.
My 22, 27, 18 means an enemy.
My whole is one of Thomas Jefferson's Ten Rules of life.

Ironton, Wis. EVA BUNDY.

A CHARADE.

My first for being neat and clean,
In almost every house is seen;
And yet is often in the dirt,
By all considered but a flirt.

My second, dressed in lively green,
And splendid silks, oft too is seen;
Yet heedeth not the wind and weather,
But stands exposed for weeks together.

My whole is planted—groweth tall,
Its fruit is valued least of all;
And yet in truth it may be said,
Is chiefly valued for its head.

North Pitcher, N. Y. E. T.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

HINTS FOR THE MONTH.

OCTOBER is the autumn harvest month. The corn crop is generous with its two-fold yield of grain and fodder; potatoes and roots are fit to be gathered, and the orchards hand down their rich fruits to the picker. Let the farmer devote all his energies this month to the harvest, making a complete finish of it if possible, and the next will afford time for plowing and works of improvement.

Animals.—Work horses should be stabled. Keep the stables clean and use plaster and absorbents freely; no foul smells should be tolerated in them even when the weather is warmest. Harness should not hang in stables; the gases destroy the leather. Fatting hogs should be pushed rapidly. Sheep destined for the butcher should receive grain on the grass; so with cattle.

Clover Seed should be cut. The reaper is much the best implement to cut this crop with. Throw off the gavels so that winrows will be formed, and gather it on to the wagon with barley forks. It should be so dry as not to ferment or heat much when stored in the barn. Avoid handling as much as possible, as the seed shells easily from the head and is wasted. Mowing with a machine and raking with a horse-rake is very wasteful if the clover is dry and ripe. A crop of clover seed is more exhaustive to land than one of grass.

Corn.—Take pains to secure the stalks in good order. Shock them well, binding the tops tight, and when in good order draw to the stack or barn. It is a good plan to fill up some shed or out-building, or the barn floor if it can be spared from other uses, with corn, to be husked in rainy weather. Fallen shocks in the field should be husked first to save the fodder from damage.

Grain.—October is usually a good month to market grain, especially barley. We should not advise farmers to hold grain at present prices. Storage costs something, insurance also, and the use of the money is to be considered.

Grass Seed.—Sow timothy seed on the wheat fields if not already done. Land seeded in the sping, but on which the grass is a failure, may be cultivated and sown with timothy if it is desirable not to plow and crop again. It will make good pasture next year.

Implements.—Have you any rotting or rusting out in the weather?

Rye may be sown in October. On good soil it will get growth enough before winter.

Manure.—A great deal can be saved and made in the hog-pens by throwing in plenty of straw, sods, weeds, or potato tops. Fill up the mudholes in that way in the pens if you are so unfortunate as to have any.

Straw should be well saved. Bright straw, cut fine and well sprinkled with mill feed, will winter horses and young cattle equal to hay, and is much cheaper. So the stacks are worth looking after.

Roots grow well through this month when their tops are large and the weather moist and cool. Delay harvesting them as long as it is safe to do so.

Pumpkins.—Store a good supply of these under cover for the months of November and December.

Poultry.—It is more profitable for the farmer to fatten his poultry for market than to sell it otherwise. Shut the fowls in proper coops and feed three weeks before selling.

CANADA THISTLES AND QUACK GRASS.

A CORRESPONDENT asks us how to kill Canada thistles, observing that he has cut them repeatedly, and that for every one so treated two grew in its place. Canada thistles and quack or couch grass are two of the worst weeds the farmer has to contend with, and when once fairly in possession of a large area of ground there is serious work to do if they are exterminated. The vitality and power of propagation they possess, in their underground stems, render them so formidable. Their stronghold is in the earth, and modern warfare has demonstrated that earthworks are the most difficult of all barriers to demolish.

It seems clear that the farmer who sets about exterminating them must work on the principle of destroying the top or overground growth so persistently and completely that the nutriment and vitality of the undergound stems will be used up—exhausted—and when this is accomplished the plants die. If two thistles spring up where one is cut, it proves that the growth of the plant is divided and directed to more members, and if these are likewise destroyed, so much the more is the vitality diminished, and if the work is repeated it brings nearer the end desired. Repeated and persistent cutting of the tops will surely destroy thistles or quack grass in the end, but sometimes this task is so great that few are bold enough to carry it through to completion. It occurs to us that much might be done in this way on a large scale. Take a field that is thoroughly in the possession of the weeds, and plow it to the depth of twenty inches, completely inverting the top. Do this in the autumn. Then with a stiff wire-tooth rake gather all the roots within six inches of the surface, cart them off and burn them. During the following spring and summer, harrow, rake, plow and cultivate so thoroughly that nothing green can be found or seen on the surface of that field. In the fall sow grain and seed. If this course would not destroy the pests we are quite certain that if one would follow the same for two years in succession they would completely disappear. But the question is, can we afford it?

RURAL FARMERS' CLUB.

Weather and Crops in Pennsylvania.

R. W. H., Pughtown, Chester Co., Pa., under date of September 2d, writes us that in his section there were eighteen days in August during which rain fell. Some of the showers were very heavy, causing the Schuylkill to rise higher than for thirty years before. Wheat, in that section, was an excellent crop. Hay turned out well; oats good, but much damaged by the wet weather. The corn crop promises to be better than common. Potatoes grew well and gave promise of a fine yield, but the heavy rains and hot sun scalded the tops, causing a general rot among the tubers. The Monitors are nearly all destroyed. The Peach-blows fared some better. The Prince Alberts were less affected by rot than any other variety. Not much attention is paid to the orchard in that section. Pears have done well, but apples poorly. The small fruits were excellent. On the whole, our correspondent says:—"We have had a plentiful season, so far."

Preparing Corn Ground in Autumn.

J. A. COBBETT writes us from Wooster, O., as follows:—"I have a field on which there has been nothing but timothy for two or three years. It is upland. I want to plant corn in it next spring. I also have quite a lot of manure which is not sufficiently rotted to use on land sown this fall, and which I want to remove from the barnyard before turning stock in. I had thought of two plans which I will mention. First. Spreading it on the field and plowing it under late this fall, and working with cultivator in the spring before planting. Second. Hauling it out and putting it in one or more large heaps, and covering till spring. Please inform me through the RURAL what you think of the above plans, particularly the first named? and if you think of anything better than either, I shall be obliged for a suggestion. commenced farming last spring, and want to fill up the barnyard—there is a hollow in the middle of it where the water stands—and start even."

The first plan mentioned is not objectionable, if it is desirable in your case to fall plow, in order to head off the grub. If the manure is half rotted, however, we should prefer top-dressing the field with it after plowing, and then cultivating it in next spring. Another way we think well of is to spread the manure on the sward this fall and defer plowing until just preceding planting time. Manure lying on the surface during the winter and spring months will not waste unless by water in case the ground is very uneven. The rains and snows withdraw from it the soluble elements and give them to the soil, the grass starts early and vigorous in the spring, and *that* is of some consequence. If grubs are plenty in the land there is no better way to avert their ravages than to feed them with plenty of grass plowed under just before planting. In any case, we should not move the manure and heap it again this fall. Spread it on the ground unless it is so rolling that heavy rains will wash it away.

Two Queens in One Hive.

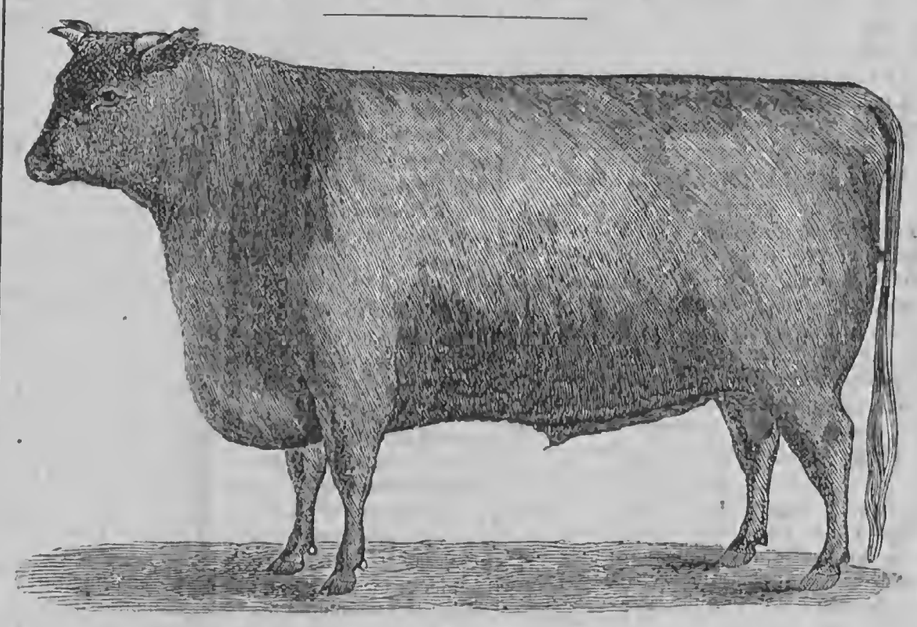
JACOB H. NELLIS, Cinajoharie, N. Y., writes us as follows:—"I have seen, in a recent issue of the RURAL, a note on 'Two Queens in One Hive,' written by Mrs. E. S. TUPPER, and having had a similar experience I now write this. I had a large swarming hive from which I removed the old black queen, and introduced an Italian queen cell, and retained the old queen in a small rearing box, which was close at hand. About the time I expected the cell to hatch, I examined and found she had emerged. About three days afterwards, I searched thoroughly for her, but was unable to find her, and thinking she had been lost, I put the old queen back, and left her in for about four days, so as to get a little brood, from which to prepare to introduce another queen. I then let it stand ten days, and opened it expecting to cut off queen cells, preparatory to introducing a queen, when instead I found a handsome laying Italian queen. So I infer from the above that there were two queens in one hive for about four days, and that the young queen was not fertilized within that time, and it is probable she was not distinguished from a common worker."

Hen Lice Among the Horses.

"A SUBSCRIBER," Dansville, N. Y., states his case thus:—"Having been foolish enough to build my hen house against my horse barn, I have got the latter filled with *hen lice*, very much to the annoyance of my horses; and in fact I dare not keep them in the barn, or go in myself. Now, how can I get rid of said 'small fry?' Have tried several things, but of no avail. Have had the hens shut out for weeks. By answering the above, you will greatly oblige a reader of your valuable paper."

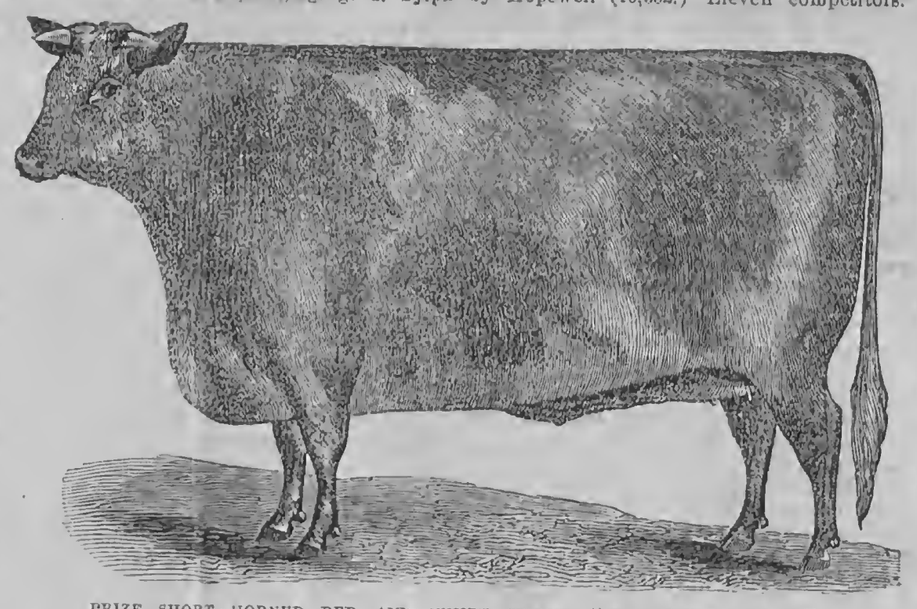
Give the barn and hen house a complete cleansing, and sprinkle every part that *harbors* the lice with strong lye. Boiling water might be as effectual, if thrown with a force pump. If the barn can be closed tight, a thorough fumigation with sulphur or tobacco will destroy the "critters."

FOREIGN PRIZE SHORT-HORNS.



PRIZE SHORT-HORNED RED BULL "ROYAL DUKE."

BRED by and the property of THOMAS BARNES, Esq., Westland, Moynalty. Was awarded the First Prize as the best bull in his section, at the Great National Cattle and Horse Show of the Royal Agricultural Society of Ireland. Calved May 17, 1866; sire Royal Sovereign (22,802;) dam Grand Duchess 2nd by British Flag (19,351;) g. d. Grand Duchess by Grand Duke 3rd (16,182;) g. g. d. Sylph by Hopewell (10,332.) Eleven competitors.



PRIZE SHORT-HORNED RED AND WHITE HEIFER "PRINCESS PRIMROSE."

BRED by and the property of RICHARD WELSTED, Esq., Ballywalter, Castletownroche. Was Highly Commended, and, in conjunction with "Bridesmaid," was awarded the Purdon Challenge Cup as the two best Heifers in their section at the late Great National Cattle and Horse Show of the Royal Agricultural Society. Calved May 3, 1866; got by Uncle Ned (19,026,) dam Primrose by Orson (13,432,) g. d. Trinket by Duke of Cornwall (5,947,) g. g. d. Trifle by Mowbray (4,516.)

AGRICULTURAL EDUCATION.—No. IV.

THE NEWSPAPER.

As a source of popular education in agriculture, the Newspaper stands preëminent. This is a sort of universal Farmers' Club, ramifying itself into every district of the land, brought to every man's door, a silent but eloquent messenger, discussing at every fireside, patiently and in the best temper, all the endless little questions of detail in the farmer's life. It is ever ready to be consulted, advised, bantered or bullied—with temper unruffled and countenance bright and hopeful, it looks serenely and benignantly into the face of ignorance, and placidly into the face of passion and prejudice—holding out a helping hand to the inquiring and thoughtful, leading onward and upward the aspiring and ambitious—flaming before the eyes of all its motto "*Excelsior*." The newspaper in this country, like the caloric of nature, overspreads and circulates throughout the whole social system. In no country does the newspaper circulate so universally as in the United States, and in no other country are the people so universally intelligent.

The newspaper is not ancient, dating back hardly two hundred years in any country. The first in the United States was established in Boston in 1690, but was soon suppressed by the *Government*. *In April, 1704, the Boston News* Letter was established, edited by JOHN CAMPBELL. The Boston Gazette was commenced in 1719 by JAMES FRANKLIN, and some of the earliest articles of his brother BENJAMIN were published in this paper. The Agricultural Journal is hardly forty years old in this country, and yet some now count readers from the hundred thousand upwards. It is the universal channel through which the people communicate with each other. All experiments may here be reported, compared and discussed. Some writer says:—"He who makes the songs of a people need not care who makes its laws." We can say that with the newspaper free, rightly conducted and generally circulated, no Legislature will dare to make bad laws. A democratic government without a free press cannot exist—with it despotism is impossible. It is the daily, triweekly or weekly telegraph of thought for the people. And in no other country has the newspaper developed itself to such colossal proportions as in the United States. It enables the people rapidly to combine their strength for defense or to vindicate their honor. It creates a medium through which the people may at their firesides discuss the great questions of public interest and determine their duty. And most peculiarly is it adapted to educating farmers in all improvements in agriculture. The want of social intercourse, as we have seen, is the great obstacle with farmers in adopting new improvements, but the newspaper presents the same facts to a hundred thousand farmers, at once, and turning their minds to the same subject, causes a discussion when they meet, leading, frequently, to simultaneous advance in the same direction. This is of the highest importance, and in a large degree makes up for the want of more frequent assemblies of farmers. Through this channel, all the readers of a newspaper are put in communication with each other, as if in one immense assembly. Although it can hardly create that enthusiasm which is the result of magnetic contact in personal intercourse, yet it has the advantage of appealing more to the reason and reflection, leaving the mind at liberty to work out the problem presented, uninfluenced by external pressure, and arriving, perhaps, at more correct conclusions.

But the natural tendency of the newspaper is to increase sociality, and cause frequent assemblages of farmers to discuss subjects pertaining to their interests. It incites to the formation of Agricultural Clubs—furnishes themes for their discussion, reports the discussions when held—makes a fact discovered by an individual the common property of the whole agricultural public. More than a BRIAREUS—it has ten thousand hands reaching out to help the people—has the faculty of being everywhere present—sees everything, reports everything—discovers the appearance of a new bug in some far-off corner, describes him, his doings and how to combat him—informs the cattle breeder of some new and fatal disease and of the discovered remedies—gives an estimate of the coming wheat, corn, cotton, wool and all other crops, the probable demand and price for them, so the farmer may determine when to sell or hold his surplus.

It also serves the important purpose in the

farmer's education of affording a channel through which he may communicate his thoughts in writing, thus improving him in that most important art of composition. How few farmers, from a want of practice, are able to keep the minutes of a meeting or make a statement of facts satisfactory to themselves. And how indulgent is the editor, who encourages every attempt of the farmer at writing for information or to communicate facts of benefit to others, putting them in shape to conform to literary usage, sending them back in print to allure him on to further effort. This has been the beginning of many a writer who has arrived at great excellence in the art. Hundreds of farmers may be found whose first effort was in communicating some fact or experiment for the agricultural paper, who have since, through frequent correspondence, become proficient in logical statement and purity of diction. The newspaper, in fact, is the great democratic educator of this age. It finds its way to the million readers.

And yet, with all their excellencies, the Agricultural Journals do not have have one-third the circulation, even in this country, that they deserve. With over two millions of farmers, probably less than half a million take an Agricultural Journal. This shows the immense field yet unexplored by the journalist, and the incentive he has to bring all his effort to bear upon this great multitude of farmers who have never enjoyed the blessings of an Agricultural Newspaper. Almost every county in every State needs this missionary effort. Those are to be found, everywhere, who hesitate to make the trifling outlay for such a paper, yet are able to spend ten times the amount upon some frivolous gewgaw or small ornament, adding little to enjoyment and nothing to knowledge. Every farmer who has enjoyed the pleasure and privilege of the weekly or monthly visit of this great educator, should resolve that he will, at least, get one new subscriber and thus be the means of illuminating one family now dark. All great wholes are made up of units, and a doubling of the units is what is needed in the patrons of the Agricultural Press. How easy for such patron to persuade his friend to become one. And yet what a magnificent result! Suppose a half million could be added to the subscribers of Agricultural Journals during the next year, what an upheaval of old and senseless routine—what a bonfire of old, useless implements—what a rise in the value of farms—and what a plethora of cash in the farmer's pocket! E. W. S.

STOCK AT THE LIVINGSTON CO. FAIR.

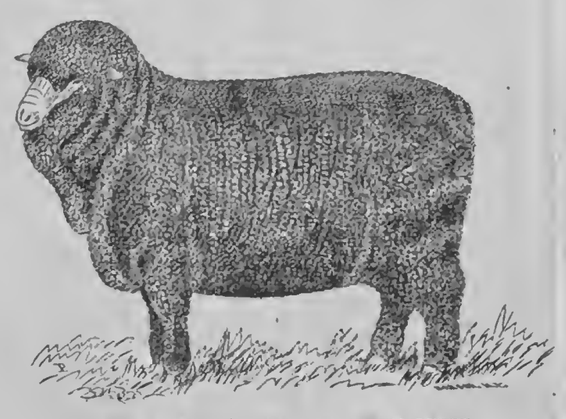
THE Livingston Co. Fair (Sept. 26th,) was slimly attended. I suppose it was because the horse racing was not to come on till the next day. As usual, the show of Durham cattle was very good. I first noticed several fine two-year-old steers belonging to my friend, Farmer ABELL. I don't wonder their owner is *fat*, feeding on *such* steers. Mrs. ALLEN AYRAULT exhibited about 30 head of excellent Durhams, Herefords, and a cross between the two which, in the opinion of her herdsman, were hardier, and gave a better quality of beef, with less feed, than pure Durhams. Mr. WM. SPENCER made a good show, as did that venerable breeder, AARON BARBER, whose magnificent cows could furnish plenty of milk or plenty of tallow—I don't know which. I was glad to see the WADSWORTH Stock in all its glory, and to meet Mr. CRAIG WADSWORTH, who takes a lively interest in Agricultural Improvement, like his distinguished and patriotic father. He is doing something for horses by introducing blood animals of rare merit. The exhibition in the horse line was meager.

A few good hogs, some of them Chester Co. Whites, exhibited by RUSSELL BARBER of Wyoming Co., made the show in that department.

SHEEP.—What on earth had the *ewes* done that none of them were there? Have ewes gone out of fashion? Well, it is some consolation to know that the rams are alive and bunting;—they showed most superbly. Mr. GIBBS, Mr. SHORT and Mr. CURTIS, exhibited stock that would do credit to any National institution. JOHN SHELDON was there with the first premium ram of the last State Sheep Show. He was compactly covered with a fleece that would make a coat for a King or a Congressman. That worthy and capital breeder, HILLMAN of Avon, had a stock sheep which for symmetry of form, length, compactness and weight of fleece, could hardly be excelled. A Wyoming Co. ram, "Tiger," bred by HAMMOND of Vt., and owned by PIERCE, TOWNSEND, TALLMADGE & Co., created a marked sensation. "Kilpatrick" himself was there—one of the celebrated stock rams of Vt., bred by SANFORD; and I was very glad to learn that he was brought out by BOKER, BUSH & Co., expressly for the service of ewes, to stand at Alexander, in Genesee Co. He combined in a wonderful degree compactness and weight of fleece, with a marvelous constitutional development, which gives character to his progeny, and is at the foundation of all excellence in sheep.

All the sheep I have described above are characterized by most of the good points of our best animals, and it appears to me that the true way for farmers to improve their stock is to select a few of their very best ewes and cross (whatever it may cost) with these rams. Two or or three crosses will give you sheep worth fifty dollars, and sometimes vastly more. Let farmers now prepare for the "*good time coming*" *for sheep men, and not very distant.* H. T. B.

RAISING GEESE.—At the last meeting of the Institute Farmer's Club a letter was read asking about the "profits of raising geese." This created a laugh, and the geese seem to have been hissed out, though SOLON ROBINSON spoke a word in their favor. Hens, turkeys and ducks have ample ventilation, through the press and before clubs, while geese get little but hissing. Though largely given to *quacking*, the goose has claims to consideration which should not be wholly ignored even by the "Institute Club."



BOTTUM & BENEDICT'S INFANTADO EWE BETTY.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

BOTTUM AND BENEDICT'S INFANTADO EWE "BETTY."

MESSRS. N. & N. BOTTUM, Shaftsbury, Vt., write:—"The ewe represented in the cut is one of two which we (BOTTUM & BENEDICT) purchashed of Mr. EDWIN HAMMOND in the fall of 1863, price paid $800 each. She was got by Sweepstakes out of Mr. HAMMOND'S best ewes. We have not the full pedigree of her dam at hand, and can only say that she is from the Long Wool stock on one side."

REPORTS OF GREAT FLEECES.

UNDER this head we have alluded to the reported fleeces, for three years, of a ram owned by JOHN BARKER, of North Granville, N. Y. Our last remarks on the subject will be found in our issue of Aug. 31st, and can be referred to by those who feel sufficient interest in the matter to wish to know how far the following certificates constitute the proofs there called for in response to Mr. BARKER'S offer, or which ought to be considered satisfactory in the premises:

HULBERTTON, Sept. 4, '67.

I sold a buck to JOHN BARKER'S son in Sept., 1865, a yearling. I sheared him about the first of May, 1865, and he sheared 21 lbs., and Mr. ROMNEY and ST. JOHN did the fleece up and weighed the fleece, and its weight was 21 lbs., and I have seen the buck at BARKER'S since. M. J. WEBSTER.

MIDDLE GRANVILLE, Sept. 6, '67.

To whom it may concern: This may certify that I sheared sheep for Mr. JOHN BARKER, Esq., of North Granville, Washington Co., N. Y., the 2d week in May, 1866. I also sheared his celebrated buck. Saw the fleece done up, and weighed, and am ready to certify under oath that said fleece weighed in the barn 27 lbs. and 4 oz., and that said fleece contained nothing but what is usually put up at the time of shearing, and all came off from said buck.

Respectfully yours,
HORATIO N. MORGAN.

WHITEHALL, Sept. 9, '67.

I and my son sheared sheep at J. BARKER & Son's, about the middle of May, 1867, and my son sheared BARKER'S buck. I believe they call him "Profit." I saw his fleece done up and weighed. It weighed 30 pounds, and there was nothing weighed but what was shorn from the buck. AMOS F. LOONS.

Mr. BARKER accompanies the above statements with the following letter:

NORTH GRANVILLE, Sept. 11, '67.

Hon. H. S. RANDALL—*Dear Sir:* Please find inclosed the certificate from the men who sheared and saw the fleece, done it and saw the weight. One man that sheared for me in 1866 has gone west, or I should have sent his. I could send you a large number of names that have examined his fleece and seen its weight, but you say that amounts to nothing.

You say you have been informed by men of my own county in relation to the heft of my buck's fleece.—You know there is many narrow-minded men in every county that will buy cull sheep, and then if any of their neighbors shear a heavy fleece or sell a sheep higher than they can, oh, then it is all a lie.

You say you will give me fair play; if so, give me the names of my antagonists, so that I may know who I am contending with—men or boy.

When I sent you the weight of my buck's fleece I didn't expect to displease any one; it was to show the improvement in the heft of fleeces for the last forty-five years when I commenced raising wool.

But as I have raised a ripple on the smooth surface of my neighbors. I will make a proposition for them to accept if they please. I am not a betting man, but as you press things rather severe in your remarks, I consider I am bound to make the following proposition. First, it is considered that a third fleece of a sheep is his heaviest. I will leave it to three disinterested men to say what the difference should be between a three year old and a four year old.

I will bet five hundred dollars ($500) that my buck will shear in 1868 in proportion to what he sheared in 1867, if I keep him and he does well.

Yours truly,
JOHN BARKER.

In answer to Mr. BARKER'S call for the names of his "antagonists," as he is pleased to term them, we give the following as a sample of several letters we have received on the subject:

WEST GRANVILLE CORS., Aug. 3, '67.

DEAR SIR:—I have read in your paper of the 13th July the report of the shearing of "BARKER'S Profit." Also, your comments, &c. As Mr. BARKER resides within ten rods of the stand where the Washington Co. Sheep Breeders' and Wool Growers' Association have held their public shearing for three years last past, I thought it might be well to write you a few lines regarding this extraordinary fleece. Mr. B. brought this ram into town the spring he was a yearling and reported that he had sheared when a yearling 21 lbs. He was exhibited by Mr. B. at our fair in May, 1866, and there were "loud calls" to have him shorn, but Mr. B declined. He sheared him privately a few days afterwards and reported his fleece 27 lbs. Mr. B. again exhibited him at our fair, 1st and 2d May, 1867. The request to have him shorn in public was made by the officers of the Association and by numerous individuals. Mr. B. declined. A few days after the ram was reported by Mr. B. to have shorn 30 lbs. I have never yet heard of the individual who saw that sheep shorn, saw the fleece done up, and saw it weighed. Respectfully yours,
H. W. BECKWITH,
President Wash. Co. Sheep Breeders' and Wool Growers' Association.

P. S.—I do not care to have this letter published unless it becomes necessary to have the public properly understand the *circumstances*. Mr. B. is one of the officers of our Society, and if his sheep shears what he says it does, he certainly neglected a very favorable opportunity to have the public know it without the expense and trouble of getting up affidavits. H. W. B.

MR. BARKER asserts that he could send us a large number of names (of persons) that have *examined* his (ram's) fleece *and seen it weighed*, but that we say "that would amount to nothing." Mr. B. totally misapprehends us. What we did say was that the certificate of INGALLS (the weigher) amounted to nothing, for the very reason that he "did not open the fleece to see whether it appeared to be one," or in other words "*examine*" it. Furthermore we had in our possession a letter from INGALLS from which we extract the following sentence: "The *bunch* of wool that I weighed, weighed truly 30 lbs., but as to its growing on one sheep is another thing, and a matter of great doubt."

If Mr. BARKER has the fleeces of his ram in his possession, (we are informed he has two of them,) and will publicly and above board take them to the wool stapler of some manufactory—to such person for example as he and President BECKWITH shall agree upon as a competent and reliable person for that purpose—to be opened and examined, the certificate of such stapler that each "bunch" of wool is composed in his judgment of a single fleece from one animal, though not absolutely decisive testimony of that fact, will in our opinion be far better proof of it than any yet offered, or than can be established by any offers to bet what the ram will yield *next year* if Mr. BARKER "keeps him and he does well."

GOITRE.

The following communication is from a physician of standing and extended practice. We submit the facts to our readers without any present comment:

CORTLANDVILLE, N. Y., Sept. 5th, 1867.

HON. H. S. RANDALL—*Sir:* In compliance with your request I furnish the following brief synopsis of my recent experience with goitrous sheep:

Since the year 1857, there have been placed in my pasture seven sheep and two goats, which were selected from different flocks and at different times, viz: one 2 year old Southdown ewe in '57; two grade Merinos in '58; one yearling of a coarse wooled variety in '59; one 2 year old do. in '61; two Merinos in '63, and two goats in '65. These when procured were all healthy, in fine condition, and free from any perceptible swelling of the neck. Yet all exhibited more or less enlargement of the thyroid glands within two years after they came into possession.

Of their progeny, eighteen in number, six were still-born, soft and almost boneless. Two, though dropped alive, were so palpably worthless that they were disposed of at once. Six were feeble and soft, with the osseous system imperfectly developed, and were reared by extra care, but were never thrifty and vigorous. Four only, were what might be considered fair lambs. All had more or less goitrous swelling of the neck,—the first mentioned, very large, the last, distinct, but inconsiderable. The glandular hypertrophy seemed to bear a very exact proportion to the lack of development and want of vitality in the lamb. In those that throve best, the swellings diminished but did not wholly disappear as the summer advanced. Indeed nearly all were better in warm weather, and worse during the changeable weather of spring.

The above account, as will be seen, embraces twenty-seven in number, of both old and young, including all of the sheep or goat kind that have been kept on my home premises during the time alluded to. Not one of them was entirely free from the disease, although since their removal several of the ewes have been kept upon hill farms with other sheep, and have reared strong, healthy lambs, having no traces of the affection about them.

My pasture includes a few acres of our stony flat land, to which I have applied annually a top dressing of barn yard manure, some gypsum, wood-ashes, and manure from the poultry yard, and at one time several loads of partially decomposed bones and other refuse material from a soap manufactory. The soil is, of course, very fertile. The feed consists of the ordinary small grasses, white clover preponderating. The winter feed has been chiefly good timothy hay with a small proportion of clover, and occasionally a few parings of roots from the kitchen. As the adult sheep were always in high condition, they got very little grain of any kind.

My stock are supplied with water from a well, and salt is kept constantly within their reach.—More than ordinary attention is paid to cleanliness, and a good range afforded at all seasons of the year.

The stable to which my sheep have access both in summer and winter, is sufficiently capacious, dry, airy, well ventilated, and lighted by glass windows and an ample door standing open at all times except during some of the most blustering days of winter.

Having had, in early life, some experience in the care of sheep in larger numbers, and still retaining an interest in whatever pertains to the breeding and rearing of these animals, the above cases have not failed to make a strong impression on my mind. The question naturally suggests itself, whether there is not some local cause existing about my premises, or some circumstance connected with my mode of keeping, which may conduce to the production of goitre.

Of the various theories which have from time to time been advanced respecting the cause of this disease in the human subject, no one has proved in any degree satisfactory to the great mass of medical inquirers; and I am well aware that the number of cases here noted is altogether too limited to form the basis of an opinion as to the probable cause of the affection, in this instance, occurring to every individual of my little flock; yet it seems to me a somewhat remarkable coincidence at least, and I shall be glad to hear from such as have enjoyed more extended advantages for observation, and who are therefore better qualified to theorize upon the subject. H. O. JEWETT.

Dairy Department.

BUTTER—FAST AND SLOW CHURNING.

A PENNSYLVANIA dairyman, in giving his method of managing cows and making butter, takes exceptions to the celerity with which the churning process is generally gone through with. In his opinion one hour is not too long for the operation of churning; two hours are better still. It is regarded as a desideratum among dairymen generally to get a churn which will produce butter in the shortest possible time, and the one that succeeds best in this is generally the favorite. Those who have worked a dash churn by hand, for an hour or two, with a batch of cream that acted as though "possessed," will hardly give their suffrages in favor of prolonged churning, even though an ounce or two more of butter were sure to result from it. If, as we have seen in some sections of Pennsylvania, "dog power" is employed to do the churning, or if the power of steam or water is used, the question of time is of much less consequence, but where hand labor has to do the business, the sooner it is accomplished the better, is the general verdict of farmers and their wives. It is not believed that any increase in the amount or improvement in the quality of the butter, claimed as the result of slow churning, is a paying equivalent for the extra time recommended for the operation.

THE CHEESE AND BUTTER MARKET.

THE Utica Herald reports the cheese market at Little Falls, on the 23d ult., as brisk, but the delivery from farm dairies was not large. No factory made was offered, though factory men were on hand for the purpose of effecting sales. Some of the best Herkimer dairies were held at 16 cents. During the week preceding about 2,000 boxes were disposed of at prices ranging from 12 cts. to 16 cts. The total shipments from Little Falls during the month of August was 17,547 boxes, weighing 1,095,063 pounds. The shipments for the first two weeks of September were 9,555 boxes, weighing 589,337 pounds. The Herald is of the opinion that the amount of cheese on the shelves of the factories is much less than at the same time last year. Since our last the butter market here has been much excited and prices advanced several cents on the pound, but whether this can long be maintained is a questionable matter.

DAIRY ITEMS.

Cream—Milk Pans.—Repeated tests have demonstrated the fact that milk, strained into pans to the depth of from two and a half to three inches, precipitates the cream more rapidly and in greater quantity than when twice or thrice that depth. Hence, if butter makers desire to get the most from their milk, they must give more surface to it than is sometimes done.

Butter by the Ton.—The Randolph Register, Cattaraugus Co., states that over twelve tons of butter were brought into that place in a single day. The average price per pound was 32 cents.

Salting Butter.—The Irish Farmer's Gazette, Dublin, states that Dr. CAMERON examined a sample of cask butter, and found it to contain *eight* per cent. of salt! That paper justly adds: "It is a penny wise and pound foolish consideration which induces so many farmers to incorporate excessive amounts of salt with their butter. This practice increases the weight of the butter, the grain is more than neutralized by the deterioration of the article which ensues." Where butter is designed for immediate consumption, it does not require more than a quarter of an ounce to the pound, but if intended for keeping or shipment, double this amount will be about right. The salt should be pure and of the best quality of rock. Its use is essential in consequence of the presence of casein, or curd, which it is difficult to separate wholly from the butter, and whose tendency is to rancidity unless counteracted by salt or its equivalent.

AUCTION SALE OF BLOODED STOCK.—Attention is directed to the announcement of THOMAS FITCH of New London, Conn., relative to his second annual sale of through-bred and high grade Alderney and Ayrshire cattle, to take place on the 17th instant.

Rural Notes and Items

A NEW QUARTER—VOLUME XIX, &c.—All its readers are reminded that a new Quarter of the RURAL begins this week, and Volume XIX in January ensuing. As we propose to materially improve the paper, all who can consistently do so are invited to aid in extending its circulation and usefulness at the present time—when people want and can afford to take such a journal. We are daily receiving requests for specimen numbers, show-bills, etc., and will cheerfully send such free to all disposed to lend their kind offices in behalf of the RURAL'S circulation. Will not every Agent-Friend open the Fall Campaign at once? And will not some subscriber act as club agent in every place where there is none? *Now* is the time to begin, before the canvassers for cheap and trashy papers make their locust-like appearance. We propose to furnish the best paper of its class obtainable, and yet reward its club agents as liberally and substantially as any honest publisher can afford.

THE CROPS.—*Yield and Prospects.*—The Crop Reports of the Department of Agriculture for August and September, have been published. The leading wheat growing States report the increase of wheat, the present season over that of the last, as follows:—Ohio, one hundred and thirty per cent., Indiana fifty, Michigan thirty-three, Wisconsin seventeen, Minnesota twenty-five, Illinois eleven, Iowa twenty, Missouri forty, Kentucky thirty-four, West Virginia sixty, Virginia fifty, Tennessee forty, Georgia eighty, Arkansas forty-five, New York fourteen, and Pennsylvania forty, while only Kansas and Texas show a falling off from last year, when the crops in those States were very large. This would give an average increase for the States named of about forty per cent.—It is probable that the October report will decrease this per centage of grain somewhat. The Corn crop prospect has improved somewhat, but in the Middle and Northern States it will unquestionably be considerably below the average, while in the Southern ones a marked increase is confidently relied upon. Cotton prospects are improving. Six States show a prospective increase of about thirty-two per cent, as compared with last year, while in Louisiana and Texas there will be a considerable falling off. The Potato crop is rotting badly and the yield will be considerably below the average of last year. Hay shows a considerable increase. The wool clip is estimated at about ten per cent. below that of last season.

THE MONROE CO. FAIR—Held on the grounds of the Society, near this city, four days of last week,—was favored with charming weather and a good attendance. The display of Fruits, Flowers and Vegetables was fine—as noticed on next page. The exhibition of Agricultural Implements, &c., was limited, but comprised samples of the best reapers and mowers, plows, potato diggers, cultivators, harrows, rollers, etc., made in this vicinity. Domestic Hall was filled with varied specimens of domestic and mechanical industry—a very fine display, alike creditable to the contributing ladies and artisans of the county. The show of Cattle, Sheep, Swine and Poultry was decidedly meager. In Horses—stud, farm, fast and fancy—the display was affluent in numbers and fair in character. We suspect that the great attraction at this Fair (as at many others recently held in Western New York) was the trotting course, where trials of speed, equestrianism, etc., were in order,—and we more than suspect that a good many intelligent and right-thinking members and patrons of the Society disapprove of the prominence given to that feature. Though we have not learned as to its receipts, we presume the Fair was a financial success.

COSTING TOO MUCH.—During a recent session of the N. Y. Institute Farmers' Club, a member said he had just visited the Government Farm at Washington, and saw the manner of treating the ground for strawberry vines. The entire surface of the ground was covered by a heavy dressing of barn-yard manure. The leaves of the plants were raised up and the manure placed closely around the stems. By this system of cultivation most bountiful crops were produced. Mr. MEEKER replied that it cost the Government at the rate of $1,500 per acre to manure the ground, and objected to taking lessons from such a source.

COTTAGES FOR $600.—A savings' bank in Chicago, having determined to provide for the use of its depositors models of cheap houses, offered a premium for the most desirable building not costing more than $600. The premium cottage consists of four rooms; parlor, kitchen, two bed rooms, press and pantry. The size of the house is 18 x 24 feet. There is no cellar and the foundations of the building are of wood. It is said the author of the plan built a row of seven houses, each costing but $600, including fencing, and renting for $20 per month.

STOCK SALES AT MICHIGAN STATE FAIR.—At the close of the Michigan State Fair a sale of farm stock took place. A Durham bull, Canada bred, sold for $200; a Devon cow, six years old, for $150; three bull calves, raised by WALTER COLE, of Batavia, N. Y., $150, and a cow $400; seventy Cotswold Canada sheep $420, or $6 per head; a Shropshire Down buck from Canada $50; one small Essex pig, $22.

GRASS NAMED.—J. S. LIGHTNER, Hartstown, Pa., sent us sometime since a few stalks of grass for the purpose of being named. The request was attended to at the time, but the answer was overlooked and not published. We supply the omission now. It is known as soft-grass, velvet-grass—*Holcus lanatus*—introduced from Europe, and rather rare in this country.

GENESEE COUNTY FAIR.—This Fair, held at Batavia week before last, is said to have excelled in the amount and variety of articles exhibited, and also in point of numbers in attendance, anything heretofore witnessed in that county. The weather was propitious and the receipts large, footing up nearly $1,900.

WYOMING COUNTY FAIR.—The Attica Atlas says that the Fair at Warsaw last week, though a financial success, was, as a rural or industrial show, not what it should have been. The show of fruits—especially of grapes—is mentioned with special commendation.

A REMARKABLE SHEEP.—The Maine Farmer says that JOHN ROURK of Pittstown in that State has a ewe seventeen years old. She has raised 29 lambs, including 13 pairs of twins, and never lost one one till last spring.

WISCONSIN STATE FAIR.—The Wisconsin State Fair, held at Madison, closed on the 27th ult., and was quite successful. Receipts about the same as last year—$11,000.

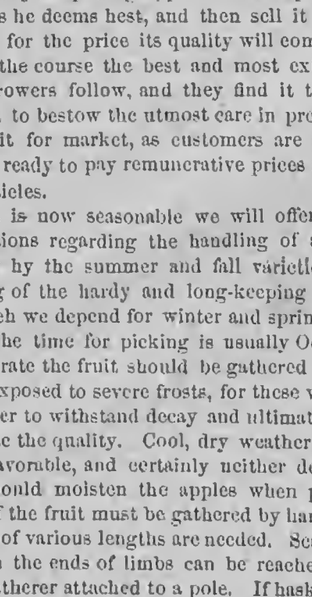
AG'L FAIRS.—For lists of State, County and Local Fairs see our issues of August 17th and 31st.

HORTICULTURAL.

GATHERING THE APPLES.

As the apple is the most valuable of our fruit products, and possesses in the most eminent degree the quality of long keeping when properly treated, it should be the aim of the grower to add to its valuable qualities, and therefore to the profit of the crop by skillful and careful handling. The methods now generally practiced by farmers of packing and marketing their apples are capable of being greatly improved. In many localities the fruit is shaken from the trees and carried to market in lumber wagons, and then transferred to barrels. When the dealers furnish farmers with barrels and the fruit is put up in the orchard for a stipulated price, the aim of the seller is quantity and not quality. He culls out as few cider apples as possible, and seldom or never makes more than one grade. We believe the best course in the end, both for the fruit grower and the fruit buyer, is for the former to buy his packages, put his fruit up in such shape as he deems best, and then sell it in the market for the price its quality will command. This *is* the course the best and most extensive fruit growers follow, and they find it to their interest to bestow the utmost care in preparing the fruit for market, as customers are always plenty, ready to pay remunerative prices for the best articles.

As it is now seasonable we will offer some suggestions regarding the handling of apples, passing by the summer and fall varieties, and treating of the hardy and long-keeping kinds, on which we depend for winter and spring supply. The time for picking is usually October. At any rate the fruit should be gathered before being exposed to severe frosts, for these weaken its power to withstand decay and ultimately deteriorate the quality. Cool, dry weather is the most favorable, and certainly neither dew nor rain should moisten the apples when picked. Most of the fruit must be gathered by hand, and ladders of various lengths are needed. Scattered fruit on the ends of limbs can be reached by a fruit gatherer attached to a pole. If baskets are used they should have hooks attached for hanging them to the ladder or limbs of the tree, and if the fruit is transferred directly from them to the barrel the baskets should be of such shape and size as to permit being turned and emptied readily in the package. Perhaps the most convenient arragement for picking is a common grain bag with its mouth propped open with a stick, and the upper and lower corners tied together. This can be slung on the shoulder, and both hands are left free for picking the fruit. It is also very convenient to empty the apples from the bag, as it can be placed in the bottom of the barrel or basket and then withdrawn, depositing



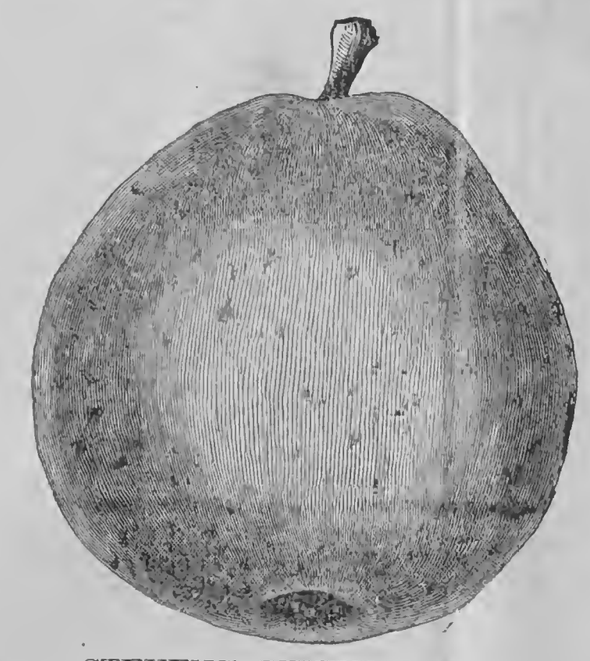
the fruit without the least bruising. Our sketch, taken from that very complete and practical work, THOMAS' American Fruit Culturist, shows the arrangement plainly. We will further remark that stems should not be detached from apples designed for long keeping, and in all the handling great care should be taken not to inflict the slightest bruise.

In order to put apples in the best condition for long keeping they should be carefully assorted. In this particular the mass of fruit growers fall, and it is principally for the reason, we think, that the purchaser offers them no sufficient inducements to do otherwise. But it must be plain to any one of ordinary observation that a crop—say of a thousand barrels—will bring more if assorted in two or more classes and sold for different prices, according to quality, than if put up in packages promiscuously and sold for one price. The sorting should be governed by the size, kind and maturity of the fruit. The best class should be uniform in size, fair in appearance, even in quality, and every package should contain only one sort.

Care should also be taken to give a neat appearance to the fruit by suitable packing. We do not by any means advise "shingling" a barrel to deceive the buyer, but the apples of the bottom and top layers may be so disposed as to be inviting to the beholder without being one

whit better in any particular than the rest of the fruit in the package. In filling a barrel, then, place the first layer in by hand, with the stems down. As the package is filled, it should be frequently shaken to settle the fruit, and when full the head brought down snugly under a press, such as we herewith figure. The apples should not be pressed hard enough to bruise them, but sufficient to prevent rattling in future handling.

For late keeping, it is best to store apples in cool, dry cellars, laying the barrels on their sides. They need not be brought into the cellar until the approach of freezing weather; it is best, in fact, to pile them under cover in a more airy situation. Dryness, and a low, even temperature are the chief requisites to long keeping.



STEVENS' GENESEE PEAR.

DOWNING says that this admirable pear combines in some degree the excellence of the Doyenne and Bergamotte. It originated in Western New York, in Livingston county. It ripens the first of autumn—occasionally in August—and continues for some time afterward. The fruit resembles that of the Virgalieu; it is apt to rot at the core if not gathered early. The flesh is white, moderately fine-grained, half buttery, and has a very fine, rich flavor.

THE WALTER GRAPE.

EDS. RURAL NEW-YORKER:—Much ado has been made recently through the columns of the RURAL NEW-YORKER about the Walter grape. Now, I have no knowledge of the grape in question, nor of the gentlemen on either side of the subject, but I have have been thirsting after and seeking for grape knowledge for thirty years, and perhaps these Walter grape men, or some of the horticultural editors of the RURAL, can give me light on the following points: First—is the Walter the result of artificial crossing of the Delaware and Diana? Second—Will the crossing of two plants well known to be general failures from a lack of constitutional vigor, produce a plant perfectly hardy? INVESTIGATOR.

West Zanesville, Ohio.

REMARKS.—On the first point we reply to "Investigator" that we have no accurate knowledge of the means used to produce the Walter grape, and as to the second we are not aware that the Diana is "well known to be a failure from lack of constitutional vigor." Further, we wish "Investigator," and all our readers, to understand that, because we open our columns to the illustration and description of new fruits, implements, &c., which are attracting considerable public attention, we do not thereby endorse and praise them as deserving public favor. Both sides of a question are often presented in the RURAL, and our intelligent readers will have no trouble in discriminating between the opinions of correspondents and those of the editors.

GROWING CHESTNUT TREES FROM SEED.

EDS. RURAL NEW-YORKER:—Myself, with many others, want more information on planting chestnuts. Last fall I put some under ground two feet, and some on the top. Both were sprouted one-half inch in the spring. I then planted some in ground that had been summer-fallowed the previous year. Part we put in holes among loose stones under a rail fence, and covered some with rotten wood, and some with loose earth from ¼ to ½ inch in depth. It then became very wet, and they all rotted. They were planted on oak and chestnut land. Now, will you or some one else tell us how to do better? PETER DUBOIS.

Ithaca, Tompkins Co., N. Y.

REMARKS.—Our correspondent should not be discouraged by one failure. Try again. Make a seed bed this fall on fine, mellow and dry soil, which has sufficient drainage. Plant the nuts from four to six inches apart on this bed, leaving spaces for suitable working. Cover them with fine soil—leaf-mould would be excellent—to the depth of an inch or less over the upper surfaces of the nuts, and over all spread two or three inches of forest leaves for winter protection. In the spring rake away the leaves, and when the sprouts appear place more earth around them. Be careful that they do not suffer from drouth the first season. The young trees should not stand more than two years in the beds, and when transplanting shorten the tap-roots.

LIQUID MANURE FOR FRUIT TREES.—M. de Thler recommends liquid manure to be applied three or four times during the summer, over the whole extent of surface that the roots of fruit trees may be presumed to occupy. He advises the surface soil to be removed a few inches deep before the application, and replaced afterward, or some mulching in its place. He gives four kinds of liquid manure, either of which may be used. First, guano mixed with eight times its bulk of water. Second, oil-cake, finely bruised, and mixed with six times its bulk of water. Third, excrementitious matter mixed with water, and rendered inodorous by mixing two pounds of green copperas with twenty-two gallons of the liquid. Fourth, urine mixed with four times its quantity of water.

STRAWBERRIES—SOIL.

AN experienced cultivator of fruits, remarking on the strawberry, in the Boston Watchman and Reflector, says:—"The soil best adapted to this berry is a light loamy one, although strawberries will grow on almost any soil—but the best results are obtained on those of the character named. If the soil is poor, it should be manured at the rate of twenty-five tons per acre—if a composition, lime should not form a part. This should be spread broadcast over the ground and plowed under six inches deep in the fall. Cross plow early in the spring and pulverize well.

Planting.—When the ground is ready, take a one-horse plow and turn two furrows together, raising a ridge about four inches above the general level. These should be straight and four feet apart, and the plants twenty inches asunder in the rows. When runners begin to make, train them in the direction of the rows, thus leaving a chance to use the cultivator between them till the first of July, when reliance must be placed upon hand hoeing to keep the ground clear of weeds."

COAL ASHES—FRUIT TREES—MULCHING.

G. W. P., Hamilton, Ill., wants to know, First—whether coal ashes are good to put on fruit trees.

We answer that such ashes have no fertilizing value worth mentioning. They are valuable for stone fruits, when put upon the ground about the trees on a space equal to that shaded by the top. They make, when put on an inch or two thick, a covering so compact as to prevent the curculio from reaching the soil for their customary domiciliation in it.

Second—Whether mulching fruit trees in the fall with straw is proper; or whether, in the case of peach trees, it would not aid the borers.

We do not think it advisable to put straw around the trunks of trees, as it makes a harbor for mice, however it may affect the borer. Mulching is good on the ground under the trees, but it should not come in contact with the trunks for the reason stated. Mulching in the way proposed, whether done in the fall or spring, is no doubt of great benefit to fruit trees.

KEEPING GRAPES FRESH.

WE have tried many plans to preserve pears, apples, grapes, &c., and have in them all partially or wholly failed. A friend in the interior of this State received a present of grapes some time ago, (March,) which he speaks of in the following manner:

"Three days since a friend brought me a pound of Catawba and Isabella grapes. They were about as good as if just taken from the vine in the proper season—full and plump—but most of the berries had fallen off from the stems in the carriage of about ten miles over a rough road.

"Now, the way these grapes were preserved may not be new to you, though it certainly seemed a novel one to me, but the fact of their keeping until the end of March in fine condition, is worthy of publicity.

"In the fall, when they are perfectly ripe, they are taken from the vines, when they are free from anything like moisture, handled carefully, and packed in small kegs—nail kegs were the kind used in this instance. Put a layer of green leaves, right off the vines, in the bottom, on this a layer of grapes, then leaves again, and grapes, alternately, until the keg is full, then finish off with leaves. Put in the head, and your cask is ready—for what? Why, to be buried in the ground. Dig a trench so as to admit the casks deep enough that they will have about one foot or fifteen inches of soil over them when covered. The ground should be packed moderately tight, and a board laid along on the top before earth is thrown in. They throw some litter on the surface of the ground over those which they wish to take up during the winter, to prevent the ground from freezing so hard as to keep them from getting at them. One important thing must be observed, that they be placed where there can be no standing water about the casks, or they would suffer.

"On further inquiry, I learn that the farmers in that neighborhood have practiced this mode for years, and don't seem to think it anything new."

We would express the opinion that if the grapes are buried the keg, or whatever they may be packed in, should be water-tight. If moisture penetrates, the grapes will not keep.—*Germantown Telegraph.*

Horticultural Notes and Queries.

MONROE CO. FAIR—FLORAL HALL.—The display of flowers and fruits at the recent Fair of this county was superb—superior, we would dare assert, to what would be seen in this line at our State Fair, were not the same exhibitors also contributors on that occasion. The chief exhibitors of flowers and fruits were Messrs. ELLWANGER & BARRY, FROST & CO., H. E. HOOKER & CO., JAMES VICK, WILDER & BROWN, JACOB MOORE and GEORGE BECK. Those acquainted with the above parties, their grounds, ability and disposition to make a rich display of horticultural products, can imagine, if they were not so fortunate as to see, the appearance of Floral Hall, gorgeous in the profusion of rich and rare flowers, and generous in its wealth of varieties of timely fruits. Mr GEORGE BRAUENBERGER, of this city, exhibited fine prints of flowers and fruits in colors. They were exceedingly natural and a credit to his artistic ability.

The vegetables were displayed in Dairy Hall, and the crowd congregated there was significant of the interest in this department. The collection of potatoes, squashes, melons, cabbages, cauliflowers, celery, &c., was fair, and we may note also some nice samples of grain and dairy products.

THE GRAPE CROP.—The grape crop in Pleasant Valley and along the Shores of Crooked Lake promises to be a full one. It is a week or more in advance of last year. The earlier varieties, such as the Hartford Prolific and Delaware, are being gathered and forwarded to market. High prices are anticipated, owing to a partial failure of the crop at the West in consequence of the rot.

KEYES' EARLY TOMATO.—J. T. OGDEN, Owego, says of this tomato that it opens up more rapidly than some other varieties, more bushy in habit of growth; requires less support and less given to rotting on the vines than the older sorts, but is little, if any, earlier and quite too small for profitable cultivation. The claim of being thirty days earlier than the older varieties is pronounced to be simply untrue.

CATALOGUES, PAMPHLETS, &c., RECEIVED.—Price List of Small Fruits, Grape Vines, &c., cultivated and for sale by H. B. LUM, Sandusky, Ohio.

Price List of the Canandeaga Nurseries. Address RICHARDSON & BELLOWS, Geneva, N. Y.

SULPHATE OF LIME—CIDER.—(R. E. V. R.) Cider, kept sweet by the use of sulphate of lime, soon becomes flat and unfit to drink. Let the cider ferment and rack it twice before the first of April, then bottle and you will have a fine summer drink.

APPLE SEEDS.—(J. S.) Apple seeds should be planted late in the fall or very early in the spring. If wintered over they should be kept in boxes, mixed with sand slightly moist, and stored in a dry, cool place.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

CANNING GREEN CORN.—The following, from C. A. HOYT, Hudson City, N. J., should have appeared several weeks ago, but has been overlooked till now. He says:—"Strip the corn from the cob and fill the jars—glass ones are the best—and add cold water, filling them two-thirds full; set them in some larger vessel of cold water and *boil for five hours.* Then fill the can with hot water and secure the lid so as to be air-tight, when it will keep for any desired length of time. The time given for boiling, to preserve it, may seem absurd, when one-tenth of that time is sufficient for table use, but corn is very different from fruit in this particular. It takes a much longer time to expel the oxygen from the former, and if acetic fermentation has commenced in the least, it cannot be retarded as it can in fruits. This peculiarity of corn, peas, &c., not being generally understood, it has been the cause of many failures in attempts to preserve them. Even experts have been obliged to confine their efforts to the tin can with soldered joint, for the obvious reason, that even with this long boiling, it is not always certain that all the oxygen is expelled, which if it is not, will have a tendency to burst the can, which brings it in contact with the atmosphere causing acetic fermentation and spoiling the whole. After the jar has become cold, should the oxygen not all have been expelled, it will show itself in from three hours to a week by forcing up the cover to allow the gas to escape. In such a case take off the cover and boil as before, for fifteen or twenty minutes. It will rarely occur, if boiled as above directed—and, if ever—seldom more than once, when the saving of the contents will more than compensate for the extra trouble."

SAVING KEROSENE.—A Pennsylvania exchange states that a great saving in Kerosene can be made by filling the globe of the lamp half full of common salt before pouring in the oil. The amalgamation produces a steadier and clearer flame than the oil alone.

INQUIRY.—Will some of the RURAL readers give me the best method for making Peach Marengo? and very much oblige—M. A. J.

MUFFINS—HOW TO MAKE.—Take 1 pint of sweet milk; 2 tablespoons of butter, 2 eggs; a little salt and half a cup of yeast. Let it rise over night, and bake on a pan or griddle.

WHEAT MUFFINS.—Melt a small piece of butter into a quart of milk, and set it aside until cold. Beat four eggs very light, and make a batter by adding alternately a little milk and a little flour until the batter is of a proper consistence—which is quite thin,—then add a large spoonful of yeast, if you do not use the powders. Bake them in muffin rings on a griddle, and butter them before serving. They must be torn asunder to butter, as cutting them open renders them heavy.

New Advertisements.

RICHARDS & LINCOLN'S FRUIT PICKER—See Rural of Aug. 3d, 7th, 10th and 24th.

GRAPE VINES.—WE OFFER TO THE Fall Trade—10,000 Iona, 10,000 Concord, 2,000 Israella; also Hartford Prolific, Allen's Hybrid, several numbers of Rogers, &c., &c., of excellent quality, at reasonable rates. Send for Price List, free. PETER DE PEW & SON, Nyack, Rockland Co., N. Y. 921-4t

HEDGE PLANTS FOR FALL SETTING. 200,000 English White Thorn plants, large and well-rooted, $8 and $10 per thousand. Address 922-8t GEORGE BADMAN, Skaneateles, N. Y.

AVERAGE SIZE.

HEADQUARTERS FOR ORIGINAL

Kittatinny Blackberry Plants.

☞ Pronounced by the highest *disinterested* authorities in the country to be the

Best Blackberry Known.

Every wide-awake Rural reader will have it, as prices are low. Catalogue, with this year's testimony, ready Oct. 1st—10 cts. Price list gratis. Address E. & J. C. WILLIAMS, Montclair, N. J.

TO WINE GROWERS!—GRAPE SUGAR Sirup for sale by HARTMANN & LAIST, 47 East 2d St., Cincinnati, Ohio. Pamphlets sent free of charge upon application. 931

FRUIT AND ORNAMENTAL TREES.—A large stock for sale at the Niagara Nurseries. For Wholesale, Retail and Descriptive Catalogues address 917-8t E. MOODY & SONS, Lockport, N. Y.

IT DON'T SCRATCH YOU!—Or Tear Your Clothes—Davison's Thornless Black-Cap Raspberry is the best, as it is hardy, productive, EARLY and sweet, and it is a pleasure to cultivate it.

☞ For origin, description, prices, testimonials, &c., send for Circular, to JOSEPH SINTON, Angola, Erie Co., N. Y

BRONSON, GRAVES & SELOVER, Washington Street Nurseries, GENEVA, N. Y., Offer for the present Fall a large and well grown stock of Fruit and Ornamental Trees, Evergreens, Shrubs, Roses, Small Fruits, &c.

—ALSO—

NATIVE AND FOREIGN GRAPE VINES,

Very healthy and strong. Hedge Plants, Plum and Cherry Seedlings, and a full supply of general Nursery articles. We invite correspondence or a personal examination of our stock. 922-3teo

FRUIT TREES AND SEEDLINGS—ALSO fine Grape Vines from *layers*, cheap. For Wholesale Price List, address 923 4t A. HAMMOND, Geneva, N. Y.

UNPARALLELED INDUCEMENTS Offered, to induce you to set Small Fruits. A chance for all to get Plants free. Address (stamp enclosed,) 923-2t P. SUTTON, Beverly, N. J.

NEW RASPBERRY.—THE AUTUMN BLACK—a Seedling of great promise, producing a fine crop in July, and a bountiful one in the fall, continuing to fruit until winter. Plants by mail $1 each. Send for Descriptive Circular. H. B. LUM, Sandusky, Ohio.

WILSON'S EARLY AND KITTATINNY BLACKBERRY, PHILADELPHIA RASPBERRY, And other SMALL FRUITS, at lowest prices, all warranted true to name, with good roots. Send for Price List. EDWARD REEVE, Medford, Burlington Co., N. J.

KILPATRICK.—This Celebrated Ram, (see engraving in Rural, Dec. 15, 1866,) bred by Hon. WM. H. SANFORD, of Orwell, Vermont, will stand for service of Ewes, at Alexander, Genesee county, N. Y. Season to commence Sept. 10th.

TERMS, $15.

KILPATRICK is of pure Infantado stock; sire Comet, dam by Cross Ram. We are near the depots of N. Y. Central and Erie Railroads, where ewes will be received without delay, by freight or express, and cared for free of charge for a reasonable time. For particulars inquire by letter or call and examine. We have for sale a few choice Ewes and Rams. BOWKER & BUSH.

FROST & CO., GENESEE VALLEY NURSERIES, ROCHESTER, N. Y., Offer a very large stock of Standard and Dwarf Apple, Standard and Dwarf Pears, Standard and Dwarf Cherries, Small Fruits, of all kinds, GRAPE VINES, ORNAMENTAL TREES, SHRUBS, ROSES, EVERGREENS, &c., for the Autumn of 1867. Our Stock of

Standard and Dwarf Trees,

of all kinds, IS NOT EXCELLED by any in the United States. Catalogues sent to all applicants at the following rates:

No. 1—Descriptive Catalogue of Fruits, 10c each.
No. 2— Do. Do. of Ornamental Trees, Shrubs, Roses, &c., 10c each.
No. 3—Descriptive Catalogue of Green House and Bedding Plants, 5c each.

THE NEW GRAPE, SALEM.—This Grape is the most successful result of the Hybridizations originated and carried on by Mr. E. S. Rogers of Salem, Massachusetts, whose well known character for probity and modesty of statement affords every guarantee for the unsurpassed excellence of this, his favorite variety. His published statement is as follows:—"The subscriber now offers for sale for the first time, a new grape, named SALEM, from the place of its origin. This is a variety considered not only superior to any of the former well-known numbers, but also to any hardy grape at present before the public, combining, as nearly as possible, every quality desirable in an out-door grape, being one of the hardiest, healthiest and most vigorous of vines, and producing enormous crops of beautiful and high-flavored fruit. Like other well-known kinds, Nos 4 and 15, this is a hybrid between a native and the Black Hamburg; bunch large and compact, berry large as Hamburg, of a light chestnut or Catawba color, thin-skinned, perfectly free from hard pulp, very sweet and sprightly, with a most exquisite aromatic flavor, not equaled by any other out-door grape for wine or table; as early and hardy as Delaware or Hartford, having never failed to ripen its fruit, in the most unfavorable season, for the past six years.

Taking all its qualities into consideration, earliness, hardiness, and great vigor of vine, size and quality of fruit, it is pronounced by the best judges who have tried it, to have no equal among all the numerous varieties now before the public; and I can, with confidence, recommend it as the best of all my collection, and now offer it for the first time." E. S. ROGERS, Salem, Mass. Salem, February, 1867.

NOTICE.—The subscriber would here state that he has disposed of his entire stock of vines and wood of the Salem Grape to J. L. WARING of "Amenia Vineyard," Amenia, Dutchess Co., N. Y., to whom all orders for the same must be hereafter addressed. E. S. ROGERS. Salem, Mass., March 2d, 1867.

In addition to the high merits of the "Salem," the undersigned is able to say, from personal experience and knowledge, that the claims put forth in favor of the Salem are in no respect exaggerated. During the present season it has made uniformly a most vigorous and healthy growth, and proved itself impervious to mildew, where vines of most of the new and high priced varieties, growing by its side and receiving equal care in culture, have been seriously affected. It is believed that as a paying grape, especially for market purposes, the Salem is without a competitor among out-door varieties. J. L. WARING.

I take pleasure in announcing that, since purchasing the Salem Vine, I have disposed of my Vineyard and Propagating Establishment, including the entire stock of the Salem, to JAMES A. REQUA, Esq., who will hereafter carry on the business with every facility for its successful prosecution. J. L. WARING. Amenia, N. Y., August 21, 1867.

Having purchased the above, and having secured the services of a most experienced and successful Propagator, with able assistants, I design to make the growing of vines for sale a specialty, and hope to furnish the public with a class of plants unsurpassed in quality, and in every instance warranted up to standard and true to name. Price List and Engraving sent on application to
924t JAMES A. REQUA,
August 21, 1867. Amenia, Dutchess Co., N. Y.

TO MY MOTHER.

Like silver bells through memory's chamber pealing,
Now soft and sad, now louder in their glee,
My childhood's happy hours come softly stealing,
Freighted with memories of home and thee.

Like fairy tales with strange, wild beauty teeming,
Or like the glimmer of some distant star,
These float across my hours of peaceful dreaming,
With thrills of rapture which no time can mar.

No after joys have seemed like those of childhood,
No flowers have bloomed, since then, so bright to view
As those I gathered in the distant wildwood,
And brought them home, my Mother dear, to you.

But time, who moves on restless, tireless pinion,
Has crept upon us almost unawares,
Gathered our joys into his vast dominion,
And left, instead, a life of toil and cares.

And she, who shared with me my youthful pleasures,
Wept at my grief, and smiled on all my joys,
In Heaven rests, among those priceless treasures,
"Where moth nor rust corrupt," nor time destroys.

But we are left, dear Mother, to each other,
Nor grief, nor time, can our affection move;
No earthly power save death, can ever smother
That priceless blessing,—a true mother's love.

And e'en in death 'tis like some beauteous flower,
That blossoms bright, then for a season dies,
But to revive again with tenfold power,
To bloom for endless years beyond the skies!

Porter, N. Y., 1867. A. E. H.

MAN'S LIFE vs. WOMAN'S.

Much has been said upon this subject, and yet much more might be said. Although to "creation's lord" the little unthought-of feelings of a woman's life are naught, yet to us they are existence itself. Once let the happiness of a woman's heart be rent in twain, once plant in her bosom a doubt that the being whom she has enshrined in her inmost soul is unworthy of the affection bestowed, and life becomes a mere blank—existence a wearisome burden.

You may curl your lips in scorn if you will, and sneer, in the pride of your manhood, at the weakness, frivolity and fickleness of woman; but if there are any holy memories in your heart, they are of your mother, your wife, your sister or your sweetheart. It may be that, long years ago, your mother was laid away "in the valley and shadow of death." But many a time you call to mind her gentle counsel to her wayward boy, and you feel, oh! how fully, that a mother's heart is generous and warm. Perchance your wife or sister slumbers in the shade, unmindful of the busy onward flow of life. But very many times do you remember the gentle touch of a soft hand upon your brow, and the tender light of loving eyes, and you know a woman's heart must be true. They may all have left you,—mother, wife, sister and sweetheart,—but you can look back over the years that were blessed with their presence, and feel how little you knew of their life.

You, when disappointment assails, when any grief breaks in upon your usual calm, can seek the busy street, and, in consultation with your fellow men, for the moment partly forget. You can enter into speculation, and in the excitement and whirl of business drown your sorrow. There are a thousand pursuits open to you, a thousand amusements attainable for you. But did you ever think of a woman's life? Did you ever measure the full extent of her isolation—shut out from the society of father, husband, brother, or lover? Did you ever think of the weariness of the long days, engrossed with some petty household care, waiting and watching for an appreciation which never came? Did you ever notice the flush on the cheek, and the tear in the eye, when you have failed in some of those little attentions which make up the sum of a woman's existence? Did you observe the paling of her cheek at that harsh tone of your voice, and the heaving of the bosom at your careless good bye?

Man lives in the world, in all around him; but a woman lives in her affections. Cold lip and careless eye may attest your indifference now, but when sickness shall "have lain the strong man low," you will long for the gentle presence of the life so thoroughly the opposite of yours. Beware how now the harsh word, or unkindly look, or indifferent act, benumbs the heart from which your own life must sometimes draw its vitality.

Fort Atkinson, Wis. Sara G. Chapa.

THE BOSTON POETESS.

Mrs. Julia Ward Howe, the Boston poet, and wife of the philanthropist, Mr. Samuel G. Howe, is also the daughter of the late Samuel Ward, the eminent banker of New York, who is held in remembrance as a man of great public spirit, and the liberal patron of the Stuyvesant Institute, the Historical Society, and the University of the city of New York. More remotely, Mrs. Howe is descended from an old soldier of Cromwell, who left his country because he couldn't stay in it, and settling in Rhode Island during the reign of Charles II., married a daughter of Roger Williams, and became the father of Richard Ward—a Governor of the State—and the grandfather of his son Samuel, a member of the old Continental Congress. Thus Mrs. Howe inherits good blood—blood which dyed English grass in the days of the old Cromwellian, and after six generations, has poured itself into song, and thrills the hearts of twenty millions of American freemen. More than any other poem of the war, Mrs. Howe's Battle Hymn of the Republic fired the soul of the North, and nerved it to the great struggle with the rebellion.

THE ROMANCE OF LIFE.

A maiden lady, by the name of Klingling, who settled in Warren county, Ohio, many years ago, from Germany, was killed by being thrown out of her buggy some days since, about a mile west of Lebanon. She leaves an estate worth $20,000 or $40,000, which she bequeaths to Warren county for the purpose of building and maintaining an orphan asylum, provided the county will raise a like sum for the said purpose. Should this county decline to comply with the conditions of the bequest, the estate goes to the German Orphan Asylum of Cincinnati named in her will.

There is a bit of romance connected with the history of Miss Klingling that may not be uninteresting. In her youth, in Germany, she had a lover to whom she pledged her troth,—but the marriage being prevented by opposing relatives, she and her lover entered into pledges never to marry, and she came with a brother, since deceased, to this country. Years after, her lover died unmarried, leaving by will a large sum of money to found an orphan asylum at Frankfort. Subsequently Miss Klingling became entitled to an estate in Germany, and thereupon devoted a large portion of it to swell the fund bequeathed by her lover, and now her death reveals the fact that she has devoted the bulk of her property to found a similar institution at the home of her adoption.

EARLY MARRIAGES.

We were not permitted to depart without seeing the ladies of the house, and accepting the invariable Eastern hospitalities. Attending the venerable mother, entered a young girl, of about fourteen, small and delicate in form and feature, and exceedingly pretty. Her black hair was plaited in broad braids that were long enough to reach the shoulders, about which the ends were left to fall in soft fringes. Her wide Turkish trousers were of rose-colored silk; the sleeves of her embroidered jacket fell away loosely from a white arm; a little, jaunty Greek cap surmounted the glossy braids, the silken tassel reaching to the silky fringes of her hair. She did not take her seat, English fashion, with the mother, on the divan, as is sometimes done by way of courtesy to the guest, but dropped, *a la* Turk, on the cushions near our feet. While we were saying to ourselves, "What a sweet child this is!" and wondering whether she would ever develop the affections of young ladyhood, the old man spoke of her as the wife of his son, and said they had been married three years. It is not uncommon for marriages to take place in the East when the bride is only eight years of age. The favorite wife of the Prophet Mohammed was seven at the time of his betrothal, and he waited for her but a year, and took, meantime, one or two others as a solace for his loneliness.—*Damascus Cor. N. Y. Tribune.*

GOSSIPPY PARAGRAPHS.

A gentleman called to see a tenement that was to be let. It was shown him by a pretty chatty woman, whose manners charmed her visitors.

"Are you to be let, too?" inquired he, with a languishing look.

"Yes, sir," said she; "I am; I'm to be let alone!"

"Madam," said a husband to his young wife, in a little altercation, which will spring up in the best regulated families, "when a man and his wife have quarreled and each considers the other at fault, which of the two ought to advance towards a reconciliation?" "The best-natured and wisest of the two," said the wife, putting up her mouth for a kiss, which was given with unction. She was the conqueror.

John G. Saxe, writing of what he saw in Europe, says:—"I saw more pretty girls in Dublin than in London; and many more in London than in Paris. The sweetest voice I ever heard in conversation came from a German woman who sold beer and biscuits in the suburbs of Gotha, with smiles benignant enough to turn cakes and ale into ambrosia and nectar.

"My dear," said a fond husband to his wife, one day, "where would you go should I fail in business?" "Where I always go when I can, love," was the answer, "into the arms-house," and so saying the lovely wife hid her blushes in the circling embrace of her husband.

Squabbles, an old bachelor, shows his stockings, which he has just darned, to a maiden lady, who contemptuously remarks:

"Pretty good for a man-darner."

Whereupon Squabbles rejoins:

"Good enough for a woman, darn her."

At no moment of difficulty does a husband know so well his own helplessness, and draw so closely to his wife's side for comfort and assistance, as when he wants a button sewed on to his shirt collar.

Mirrors are placed in the windows of houses in Brussels at an angle which gives the lady of the house a glimpse of her callers. She cannot tell whether she is at home or not until she has looked therein.

A young lady being requested by an old bachelor to take a seat upon his knee in a crowded sleigh, made the following reply:—"No, thank you; I'm afraid such an old seat would break down with me."

They have an accomplished musical professor at Bigfoot Academy, Wis., in the person of a young lady, who, at one and the same time, plays two airs upon the piano, whistles a third and sings a fourth!

"My dear," said a smiling spouse to her other half, "I'm going a shopping to-day and want a little change." "Pooh!" responded the savage, "that would be no change at all; you go shopping every day."

Choice Miscellany.

EQUINOCTIAL.

The Sun of Life has crossed the line,
The summer-shine of lengthened light
Faded and failed,—till, where I stand,
'Tis equal Day and equal Night.

One after one, as dwindling hours,
Youth's glowing hopes have dropped away,
And soon may barely leave the gleam
That coldly scores a winter's day.

I am not young, I am not old;
The flush of morn, the sunset calm,
Paling, and deepening, each to each,
Meet midway with a solemn charm.

One side I see the summer fields
Not yet disrobed of all their green;
While wearily, along the hills,
Flame the first tints of frosty sheen.

Ah, middle-point, where cloud and storm
Make battle-ground of this my life!
Where, even-matched, the Night and Day
Wage round me their September strife!

I bow me to the threatening gale:
I know, when that is overpast,
Among the peaceful harvest days,
An Indian summer comes at last!

A LAY SERMON.

LET HIM WHO THINKETH HE STANDETH TAKE HEED LEST HE FALL.

BY F. H. STAUFFER.

Mr. Evans was walking slowly up and down his veranda. It was habitual with him thus to exercise himself; especially during the long summer evenings. Such were his most profitable seasons for meditation. His face was placid, his eyes blue and calm, his mouth expressive. The former wore the patience of resignation; it was not the effect of trials and sufferings, for the world had ever dealt kindly with him. It rather sprung from the peculiarity of his organism. He paused in his walk to return the salutation of a passing neighbor, then a second after beckoned him to approach.

"Good evening, friend Cole," he said. "You are in no hurry?"

"No—I am not. I might say that I was merely loitering by."

"Enjoying a walk, eh? That is what I have been doing, doubling a score of times on my circumscribed path. I have been on this beat summer after summer for the last fifteen years. On this monotonous patrol I have thought out many problems—organized many victories over a defiant spirit—often have been lifted out of the slough of despondency and placed upon solid ground again. Pray be seated, neighbor Cole. It has occurred to me several times during the week that I ought to drop over and see you. You were expelled from church last Sabbath?"

"To my everlasting shame be it said," replied Mr. Cole, sorrowfully. "And for drunkenness, as you may have supposed."

"I was very sorry to hear it. How do you feel under the circumstances?"

"How do I feel? Mr. Evans, do not ask me! It has almost broken the heart of my poor wife. She sits and moans and weeps; seems lifeless, purposeless, in her distraction. I feel miserable, wretched, God-forsaken. Behind me lies a waste of misspent years; around me jackals crouch and howl; in front of me stretches a sea of impenetrable blackness. From the bottom of my soul comes an agonizing, far-away sounding cry of lost! lost! lost! Can any thought be more shuddering than the thought of a lost soul?"

"You are despondent, neighbor Cole. Your soul is not lost as a consequence."

"Consequence of what?"

"Either of your fall or of your expulsion."

"The week has been one of fearful struggling."

"And you have kept sober?"

"I have not touched a drop."

"I am glad to hear that. You are a hero."

"But no conqueror, Mr. Evans."

"I do not know about that. So much positiveness should make you hopeful."

"But you do not know what I suffer—the desperateness of the struggle."

"I can imagine it."

"Imagine it? No—*never!* You can never realize the gnawing for strong drink—the craving of a diseased appetite. It is more ravenous than the horse leeches daughters—more horrible than starvation—more excruciating than the slow torture of fire. You are a strong man, Mr. Evans. Your force of character—strength of will—tenacity of purpose, are proverbial. But the passion for strong drink would try you sorely."

"I would fall, friend Cole. My very strength of purpose would trip me up. In all probability I would depend more upon myself than upon Divine aid. Does not the good book say 'Let him who thinketh he standeth take heed lest he fall?' Did you pray for strength?"

"Did I? That alone has thus far saved me from headlong destruction since last Sabbath. Yes, I prayed—but I saw no light—I felt no influx of strength; I groped about like a child in the maziness of my prayers, yet with all the trustfulness of a child."

"That very trustfulness has saved you. God rarely answers in the thunder stroke of the lightning. Elder Fales was most active in bringing about your expulsion?"

"He was."

"You are embittered against him?"

"I should not be."

"No; it would not be in accordance with the divine precept. Elder Fales has been presumptive; he has been over-zealous; he may himself be standing upon the flimsiest encrustation. He is tinctured with religious bigotry. Does his religious life sparkle? It is like the sparkle of the icicle; there is no out-gushing warmth about it. It is built upon a snow bank of rigid, outward discipline. The growth of his Christian charity is stunted. He may yet learn that 'he who thinketh he standeth should take heed lest he fall.' A word of advice to you, friend Cole. Still keep sober—still continue to pray. Read your Bible constantly—wrestle hourly for the victory. Come to-morrow evening and we will have another talk. I shall also make it my business to speak to Mr. Fales and the other elders. You must be restored to church fellowship."

"Thank you, Mr. Evans. And you will pray for me?"

"Fervently, repeatedly."

A few nights afterwards a man, while staggering along the pavement, fell heavily against Mr. Cole's door-step. Mr. Cole heard the noise, went to the door, and carried him in. The man was drunk; his face was covered with blood oozing from a cut received in his fall. Mr. Cole laid him on the settee and washed his face.

It was Elder Fales. He came to in a short time. Opening his eyes, he recognized Mr. Cole.

"How did I get here, Mr. Cole?" he asked.

"You fell, and I carried you in."

"Do you know that I am drunk?"

"Yes, sir."

"Beastly drunk?"

"You are not so now."

"Who else witnessed my disgrace?"

"Nobody else."

After a few moments of silence Mr. Fales said: "Neighbor Cole—our oil company met this evening. You know I am President; we had news of a sudden and astounding yield of oil. Champagne was brought in; I protested against it. I refused to drink, but refusal was of no avail. I drank; I became intoxicated; most surely and most suddenly so, at your door. You took me in; you stood, and yet stand, between me and public disgrace."

"Your secret shall be my secret, neighbor Fales."

Eales took Cole's hand in his and pressed it warmly.

"O the humility of my spirit! I, who prided myself on my inflexible righteousness! The scriptures say—'Pride cometh before a fall'—'let him who thinketh he standeth take heed lest he fall.' Can it be that I am but a prayer-mouthing Pharisee?" Do you know, friend Cole, that it was I who urged, and insisted upon, your expulsion from church?"

"So I learned."

"And you could crush me."

"I am not resentful."

"No—you are more the Christian, and I more the veritable sinner. I wronged you; I oppressed you; I turned you out of the visible church."

"The grievance can be atoned for."

"How?"

"By restoration."

"It shall be done. I am now able—no, *sober*, enough to go home. I thank you for your charity towards me—for your kindness—your Christian spirit. I humbly ask your pardon for the wrong I did you. Come to my house to-morrow evening. We will hold a prayer meeting—you and I. *I*, at least, feel that God should encompass me about."

Mr. Cole became a devout, praying church member again, and in a few years the leading elder in the church. Mr. Fales became a changed man; he did his good works more in secret; he became less selfish and more charitable. "Let him who thinketh he standeth take heed lest he fall!"

PROVERBS FROM DON QUIXOTE.

The jest that gives pain is no jest.

The golden load is a light burden.

Every one is the son of his own works.

Who sits in the saddle must get up first.

Good expectation is better than bad possession.

Better a flush on the face than a stain in the heart.

Fortune always leaves some door open in misfortune.

"I will give thee" is good; but "Here, take it" is better.

By the streets of "by-and-by" one arrives at the house of never.

The fire is discovered by its own light; so is virtue by its own excellence.

The Lesson of Children.—Children may teach us one blessed, one enviable art—the art of being easily happy. Kind Nature has given to them that useful power of accommodation to circumstances which compensates for many external disadvantages, and it is only by injudicious management that it is lost. Give him but a moderate portion of food and kindness, and the peasant's child is happier than the duke's; free from artificial wants, unsatiated by indulgence, all Nature ministers to his pleasure: he can carve felicity from a bit of hazel twig, or fish for it successfully in a mudpuddle.

How to be Agreeable.—The art of being agreeable is to appear well pleased with all the company, and rather to seem well entertained with them than to bring entertainment to them. A man thus disposed, perhaps, may not have much learning, nor wit; but if he has common sense, and something friendly in his behavior, it conciliates men's minds more than the brightest parts without this disposition; and when a man of such a turn comes to old age, he is almost sure to be treated with respect.

Sabbath Reading.

PROMISES.

BY A. H. LINTON.

The earth is full of promises.
The leaves that rustle on the trees
When shaken by the passing breeze,
Their promise give;
It is that though they fade and die,
Though over blessings lost we sigh,
Within the glorious by-and-by
The good will live!

The crystal brook, that laughing plays
Adown the shady dell always,
And seems to shun the sun's glad rays,
Is trilling low
Of silver waters, calm and deep,
On which the sunlight lies, asleep,
And where is found a grander sweep—
Sublimer flow.

The flowers that by the wayside bloom,
The buds that blossom on the tomb,
Light up with promises the gloom
O'erhanging death:
"The beautiful may fade away,
But bright their resurrection day
Shall be," the blossoms sweetly say
With dying breath!

The root that of the germ is born,
Of golden grain and ripened corn
Foretells the coming harvest-morn;
And every blade
That from the quick'ning mold upsprings,
Throughout the summer gladly sings
A song of hope, and better things,
In sun and shade.

O, thankless heart! give better heed!
There is for each and every need
Of thine, a promise true indeed
In earth and air:
And there's a pledge of greater bliss
In every fancied good you miss:
Another day, or haply this,
Will answer prayer!

WHAT THE FALLING LEAF SAYS.

Every season has its lesson of life. The Spring—for that is the true beginning—has one of unfolding; the Summer, one of growth; the Autumn, one of transition; and the Winter, one of age and waiting. Perhaps, of these, if any one be more suggestive than another, the lesson of the falling leaf is the deepest. The drying up of the vital essence of life—the fading, when the little day is nearing the sunset—touches the heart as nothing else can. But it ought never to make the heart sadder. It is only a prelude to the winter's waiting—a waiting that will bring a glorious unfolding when the April showers come!

In "Nature and Life," a new volume of sermons by Robert Collyer, the falling leaf enforces its own lesson very beautifully. We extract the following from what the leaf says:

"I am a fading leaf certainly: watching for the sun and frost to give the signal for my dissolution. I have had to bear heavy rains, to wrestle with great storms, to shudder in electric fires, to fight my way and hold my own as well as I could in the teeth of foes and parasites, ever since I began to spring. But this I can say, as I fall, that there has been no day since I first began to grow, when I have not tried to be true to the law of my life, as the mediator, bridging the gulf between senseless matter and the sentient soul.

"And now, in my falling, I shall fall for blessing, and cease to be a leaf because, as a leaf, I am no longer needed. But, in ceasing to be what I am, I may well remind you of what one has said who loves us, and takes us into his heart beyond all men living:—'We compare ourselves to leaves: the leaves may well scorn the comparison, if we live only *for* ourselves. If ever in the autumn a pensiveness steals over us, as the leaves flutter by in their fading, may we not wisely look up to their mighty monuments; and as we see how fair they are, how far prolonged in arch and aisle the avenues of the valleys, the fringes of the hills, so stately, so eternal; the joy of man, the comfort of all living creatures, the glory of the earth—remember that these are but the monuments of fading leaves, that faintly flit past us to die? Let them not die before we read and understand their holy revelation; so that we also, careless of a monument for the grave, may build one in the world, by which men may be taught to remember, not where we died, but where we lived.'

"You can think as you like, therefore, about man, as he fades and falls,—make the end of your life here as mournful as you please,—dishonor death by evil names and images, as its shadow falls upon your race; but I ask you, once for all, to leave me out of your sad analogies. I protest against being counted as one that shudders at dissolution. I might have done that in June, when my life was all to live; but in September, when it has had its day, as I begin to loosen from the spray where God caused me to spring, the loosening seems as good as ever did the springing."

Faith Working by Love.—All true and lively faith begets love; and thus, that heavenly light is the vehicle of heat. And as, by this means, true faith has a tendency to the practice of obedience, so, all true obedience depends upon faith, and flows from it. But it also proceeds from love, because faith first produces love, and then works by it. All knowledge of mysteries is vain and of no value, unless it have an influence upon the affections, and thereby, upon the whole conduct of life. The luminaries of heaven are placed on high; but they are so placed that they may shine, and perform their periods, for the benefit of this earth.—*Leighton.*

Murmuring is a black garment, and it becomes none so ill as saints.

The Traveler.

Correspondence of Moore's Rural New-Yorker.

UP THE MISSISSIPPI.

BY AMELIE PETTIT.

At last muslins, frills, ribbons, and all the paraphernalia of a summer trip, were stowed away and securely locked and strapped in, lest their lightness should cause them to float away "into thin air," and with ourselves were all aboard the steamer bound up the Mississippi. Already, while the bell was sounding, and the last link that bound us to the pier was withdrawn, we fancied we could hear the voice of Minnehaha "calling to us in the distance," while Minneapolis and Minnetonka in far-off Minnesota allured us on, as do all MINNIES, by their sweet-sounding names.

"It is not we, but you, who need commiseration," said our friends who were to remain in the city, as we entered the stifling cabin, and who, when they bade us *bon voyage* and adieu, seemed not at all sorry to be left behind; but what mattered the heat, when in imagination we were already snuffing the exhilarating air of the Northland. My sister remembered, with a sigh, her snowy bed, with its generous pillows and luxurious, airy room, as she took possession of the diminutive state-room. To me, a little romance-dazed as I am, they seemed, in their minuteness, fit entrances to fairy-land.

As we steamed away a fine breeze arose, and the glamour of an afternoon, like unto those of the land where "it seemed always afternoon," was spread over the low banks, tree-bordered, and waters, dark and turbid, of a river here interesting only by its breadth of waters, flowing away to a far-distant sea. Gradually the banks become higher and bolder, until one hundred and forty-four miles from St. Louis, we see Hannibal, curled up in a quiet dell among the hills, and spreading out its arms upon the heights, as if it meant at no distant day to occupy beautiful mansions and proud gardens overlooking the water,—a place, we imagine, of future importance and beauty. A short stop for freight and passengers, and away we steam again, ever northward, till we find Quincy, perched upon as many hills as ancient Rome, and picturesque from its situation. Though but a city in embryo,—a diamond half-cut,—it looks pleasant. We spend the half-hour of our stay watching some score of urchins playing at "mermen," diving, swimming and plunging into the Father of Waters as fearlessly as if it were some mountain brook of wading possibilities.

The scenery becomes more and more grand as we advance, and as we glide between high bluffs and castelated peaks, silent and uninhabited, save by wild fowl, we can fancy the wild enthusiasm, the fear, the awe that filled the bosoms of the first explorers. Truly is the Mississippi named "the Grand," "the Father." Still on, on we sail, and still broad and deep the waters stretch away in the distance. Still we pass beautiful islands, majestic heights, and towns, busy and brisk, wherever Nature had made a good landing. Keokuk, Burlington, Davenport, Rock Island and Dubuque, are the largest and most important; all thriving, clean-looking villages. A short distance above Keokuk are the Rapids, not at all dangerous when going up, with the water at its present high stage; above Davenport, also, are some twenty miles more of rapids, which require a steady, competent pilot to get through successfully, especially at low water and on a downward trip.

On the last evening of the voyage it was announced by our excellent Captain, W. P. HIGHT, that we were entering Lake Pepin; and we went above to see a most beautiful, clear, deep water, embosomed among the hills, cradled in the broad lap of Nature. Long we lingered in the pilot-house, while Lake City, girdled by waters, faded away in the distance; and the evening shadows gathered round Maiden's Rock as we told over the old legend, and scanned the wild of waters, thinking perchance we might catch a glimpse of the phantom maiden, urging her birch canoe to meet her lover, or taking again that fatal leap into the hungry waves. It was finally decided that I should write a poem upon the subject—but I found myself capable only of the following trifling verses:

MAIDEN'S ROCK.

Silent and grand the bold and rocky height
Looks down upon a calm and placid lake,
While the soft footsteps of the summer night
Upon the watery plain no echoes wake.

But as the twilight shadows fall apace,
And all the landscape creeps into the shade,
WINONA, daughter of a dusky race,
The legend says, revisits rock and glade;

And stands again beside the fatal wave,
And softly chants her wild and mournful song,
Then springs again into her watery grave,
And back to spirit land is borne along!

The fifth morning of our journey found us looking through a slow, misty rain upon St. Paul. Nearly all the passengers went ashore at once. Our party, by invitation of our host, remained to take a farewell breakfast with him, and after ample justice had been done a generous meal, we set out for Park Place, a hotel pleasantly situated upon high grounds in the suburbs. The cool, healthful air and quiet were here the only attractions, as the house is very indifferently kept.

Four days served to familiarize us with the city. We found it a pleasant, clean, thriving little place. St. Paul has many fine stone mansions scattered in shady nooks among the hills, several quaint, low churches, four or five good hotels, and a cathedral, apparently well-built, looking solid and compact, but with no architectural beauty. It is said that, not having been erected according to contract, the edifice is condemned to be torn down. It has evidently cost a vast sum of money, and the waste seems deplorable. Lake Como, three miles distant, was described to me as a lovely sheet of water, and if half as beautiful as the water-lilies, brought from it by our friends, it well deserves their eulogies. Saturday we "took up our line of march," by railway ten miles, to Minneapolis. Found the busy little town swarming with people, a great proportion of whom were invalids, seeking health.

We were soon off to Minnehaha. A drive of four fabulously short miles—does not pleasant company practically annihilate distance?—brought us all unawares upon the gem of gems, picture of pictures, "thing of beauty and joy forever"—the falls of Minnehaha. It is not Minnehaha the grand, the magnificent, the splendid; but Minnehaha, the pure, the bewitching, the beloved. Fancy a broad ribbon of blue, rippling and winding through emerald meadows, curved and twisted as if the wind had been playing among its silky folds, suddenly slit into a myriad shining threads, each dropping off countless pearls, flashing out all their opal splendors and changing, in different lights, to every glorious gem that we picture in the sapphire-tinted walls of Paradise, while the music of their tinkling fall floats up like angel voices calling from the blue ether, and you dimly fancy Minnehaha.

As we stood hushed and spell-bound by such a vision of loveliness, Captain J. broke the silence, exlaiming, "How glorious 'twould be to have this in one's dooryard. How deliciously one could fall asleep with that music the last earthly sound before drifting into the land of dreams. What company for restless nights or unhappy days. I am going behind the fall; Miss AMELIE, will you go?" A prophetic vision of a damp, dripping young woman, with threads of green through a white dress spreading out into irregular patches and blotches of sickly hue, hair limp, and gaiters wringing and ruined, flashed through Miss AMELIE's brain and caused her reluctantly to decline. Gen. M—— had faced cannon, but feared neuralgia; Hon. Mr. B—— had a sick wife to care for; Mrs. M—— was an invalid, and consequently the Captain went alone, and emerged, saturated, but delighted. After our return somebody wrote the "inevitable little poem" which I append.

MINNEHAHA.

As musical and silver clear
Sweet Minnehaha flows along,
As though each drop, an angel's tear,
Still echoes back angelic song.

By distant hill and shady wood,
It hums a low and cheerful strain,
Or laughs aloud in merry mood,
Then sweeps into the shade again.

And thus it flows, in sun and shade,
'Neath willow boughs and tangled vine,
But never tells to man or maid
Where it has learned its song divine.

And then, at last, with shout of glee,
It leaps adown the rocky way;
Like myriad pearls from string broke free,
And flashing in the sun's bright ray.

And thus 'twill flow, as thus it sings,
From day to day, from year to year,
Till TIME, grown weary, folds his wings,
And Heaven on Earth again appear

THE ORIGINAL TEMPERANCE ADVOCATES IN NEW YORK.

During the past year a new impulse has been given to the cause of Temperance, and the advocates of total abstinence are greatly encouraged. The formation of a Congressional Temperance Society, last winter, was a movement in the right direction, which naturally attracted much attention, and exerted a powerful influence throughout the Union. State and other large Temperance Societies have since been organized and revived, and many secret associations—such as the "Good Templars," "Army of Temperance," "Sons of Temperance," "Temple of Honor," &c., &c.,—have been organized and received hosts of active and enthusiastic members in various parts of the country. Though recently organized, the order of Good Templars in this city has over three hundred members, and the Army of Temperance has a large and rapidly increasing membership. Reports from all quarters show the rapid progress of temperance, and the new interest and zeal so generally manifested indicate the inauguration of a long-needed reformation.

In this connection we give an illustration of interest to all engaged in the temperance movements,—being portraits of the late Dr. J. B CLARK, Rev. LEBBEUS ARMSTRONG, GARDINER STOW, and JAMES MOTT, the originators of temperance societies in this State, and a picture of the house in which they held their first temperance meeting. Additional interest is given these pictures from the fact that Dr. CLARK, the principal of the movement, died in February last at an advanced age. Dr. CLARK was born in 1778 in Northampton, Mass., but began his labors in the cause of temperance in 1806 in Moreau, Saratoga county, New York. In 1808 he commenced moving to organize a temperance society, and finally succeeded in organizing a society in his own town composed of the leading citizens. The first meeting was held at the tavern of Mr. PETER L. MAWNEY, a picture of which we give. It was torn down in 1852. In 1820, Dr. CLARK was a member of the State Legislature, and in 1848 he was one of the Electors of President and Vice-President.

Rev. LEBBEUS ARMSTRONG, who acted with Dr. CLARK in the first meetings, and was one of the Committee to draft the Constitution, was born November 23, 1775, in Bedford, Westchester county, New York, and removed with his parents to Ballston, Saratoga county, in 1783. In 1804 he was installed as pastor of the Congregational Church in Northumberland, and in 1808 co-operated with Mr. CLARK in organizing the first temperance society. He continued to preach until within a few years of his death.

GARDINER STOW was a law student in the office of a Mr. WESTON in Sandy Hill, across the river from Moreau, in 1808, when he joined Dr. CLARK's temperance society. He afterward removed to Troy, and became one of the leading lawyers of that city, where he died in 1866.

JAMES MOTT, who still survives his early comrades, is a Quaker. He was born in Dutchess county, New York, in 1783. He removed to Moreau in 1807, and the following year assisted in organizing the temperance society. He is a farmer, and has held various town offices.

Various Topics.

WEALTH OF THE ANCIENTS.

Cræsus possessed, in landed property, a fortune equal to £1,700,000; he used to say that a citizen who had not sufficient to support an army or a legion, did not deserve the title of a rich man. The philosopher Seneca had a fortune of £3,500,000. Tiberius, at his death, left £19,624,000, which Caligula spent in twelve months. Vespasian, on ascending the throne, estimated all the expenses of the State at £35,000,000. The debts of Milo amounted to £600,000. Cæsar, before he entered upon any office, owed £2,000,000. He had purchased the friendship of Coro for £500, and that of Lucius Paulus for £300,000. At the time of the assassination of Julius Cæsar, Antony was in debt to the amount of £3,000,000; he owed the sum to the Ides of March, and it was paid by the Kalends of April. He spent £147,000,000. Appius spent in debauchery £500,000, and finding, on examination of his affairs, that he had only £80,000, poisoned himself, because he considered that sum insufficient for his maintenance. Cæsar gave Satulla, the mother of Brutus, at an entertainment she gave to Antony, dissolved in some vinegar, a pearl worth £80—not several hundred pounds, as is commonly stated—and she swallowed it.

DANGEROUS PAPER.

There is a great difference in the combustibility of common papers. Enameled card paper, on account of its compact body and the presence of mineral matter, white lead or barytes, is quite disinclined to burn; in fact some kinds are practically fire proof. White writing and printing paper can seldom be lighted by a spark, and when ignited by a flame, it requires dexterity to keep it burning. On the other hand, there is a common reddish-yellow paper which, in some circumstances, is as dangerous as gunpowder. It takes fire by the smallest spark, and burns like tinder; when once lighted, if left alone, it is sure to be consumed completely. All the yellow and buff paper which I have tested, out of which envelopes are made, partakes more or less of the same character. I have no doubt that such paper has been the occasion of some of the fires which have been otherwise unexplained, such as the fires in paper warehouses and offices of professional men. A spark of fire, or the stump of a lighted cigar, falling in a waste basket containing yellow envelopes with other kinds of paper, would have a good chance of setting the whole on fire.—*Prof. Seeley.*

A MAGIC TRICK.

At a celebrated Parisian restaurant, in 1861, an extempore bet was decided, interesting in its way. A Mississippi gentleman won a big pile. He bet that he would bring five hundred drops out of an empty bottle from which the last supernacular had been drained. It was done in the fairest way, without any dodge, on the purest natural philosophical principles. There is a great deal of moisture still remaining in the bottle, only it is dispersed all over the inside surface, in homeopathic particles, too minute to be poured out in any way.

You take the bottle, hold it nearly horizontal, shake it up well, and strike the lower part of the neck repeatedly on your hand. After you have manipulated it in this way for a minute or two, (the length of time depends on the performer's skill,) the moisture becomes collected and condensed in the neck, and then you can jerk out on a plate or a sheet of paper more drops in a quarter of a minute than you can count in a quarter of an hour. It made quite a sensation at the time, but soon spread about. A Frenchman who was present exhibited the trick the next night at the Maison d'Or.

Sweets and Digestion.—If sugar is coated with fruit until it thoroughly penetrates the pulp—as in pies, jellies, and preserves—there is a chemical change, a union of the sugar and the fruit; the fruit partakes of the nature of the sugar, giving up its natural juices and qualities, making the mass an indigestible substance. As sugar preserves fruits from decay, so it preserves them from digestion. There are many causes of derangements of the digestive apparatus, but the use of sugar and molasses is one of the greatest. —*Herald of Health.*

Reading for the Young.

BEAUTY.

Beautiful faces, they that wear
The light of a pleasant spirit there
It matters little if dark or fair.

Beautiful hands, are they that do
The work of the noble, good, and true,
Busy for them the long day through.

Beautiful feet, are they that go
Swiftly, to lighten another's woe,
Through summer's heat or winter's snow.

Beautiful children, if rich or poor,
Who walk the pathways sweet and pure,
That lead to the mansions strong and sure.

Written for Moore's Rural New-Yorker.

TALKS WITH OUR BOYS AND GIRLS.

BY UNCLE PAUL.

FALL.

Little boys and girls of the Rural Circle, do you know what we mean by "Fall?"

"Yes," says a bright-eyed little fellow, and a whole group of voices echo "yes," "yes," "yes."

"You mean the time when the leaves turn red, and drop off the trees," says our bright-eyed friend, "and the chestnuts fall out of their burs, and the beech-nuts, and the walnuts; and we go off nutting in the woods, and have, Oh! such lots of fun!"—and, really, his face glows so with the thought that we almost wish we were a boy again back there among the hills, and could go nutting once more with the boys and girls as we used to do years ago!

Well, little folks, fall has come—we don't know where from, exactly, nor do we know just where it went to twelve months since, but it has come. CHARLIE went out bright and early this morning to get the cows, and when he came in he said there was frost all along down the lane. It covered the top of the fences, and made the prettiest kind of a white coverlid on the grass. MAGGIE, when she fed her chickens, (the hen-babies of that old "clucker" that *would* set,) found the poor things shivering and peeping away at a great rate, as if they were calling for a larger supply of feathers. Glad enough they were to snuggle up under the old hen, who, as MAGGIE said, "ought to be ashamed of herself for having little chicks around this time of year."

There isn't a bit of doubt, then, that fall has come. The frost told CHARLIE of it, as it took hold of his fingers and seemed to whisper to him, "I am the same fellow that was with you last winter, up on the pond;" and the chickens peeped loudly of it to MAGGIE. We heard the leaves whispering to each other about it, too, as we came along under the trees. A little sadly they spoke of it, for they knew that very soon they would be only dead leaves, rustling over the ground, all their life and beauty gone.

Are we glad it has come? Are you, boys? Are you, girls? Of course you are! We did not need to ask. It is not so long a time since we were a boy and gir—no, we don't mean all that, only a boy—that we have forgotten how we used to look forward to the first snow-storm. When October came we used to think, just as we presume many of you are thinking now—"next month will be November, and we shall have snow, and Thanksgiving, and coasting, and may be some skating; and won't it be jolly?" But now you have all this month in which to gather your apples, and walnuts, and butternuts, to go off on the hills after chestnuts in merry parties, to ride out in the cornfield with JOHN, and back on a load of yellow pumpkins—and may you all enjoy the month greatly!

For we don't want you to get the notion, young friends, that the fall is a gloomy sort of time, with nothing glad in it. It is no such thing. If you hear any of your grown-up friends say it is sad, and talk dolefully about it, just tell them it is *glorious*, and we'll back up what you say! To be sure, last night's frost spoiled the flowers that KATE has been cherishing so fondly, but she must not feel bad about that. "Roses will bloom again," says the song, and it says truly. There are just as bright and pretty flowers down in the earth there, under those that the frost killed, as any that KATE loved. But you need not dig down now to find them. You wouldn't find them if you should. But they will come, only wait a little while. There's another June away off somewhere, where eight, or ten, or twelve other Junes that you know of came from, and it will come in good time.

Now, boys, don't forget to gather all the nuts and apples, and the girls had better go with you, so as to make nut and apple gathering pleasant. And after you have gathered them we will come around some evening, (of course you will be glad to see us,) and eat some with you, and perhaps tell you a story our grandmother told us many a year gone by.

Axe Grinding—A Story for Boys.—This is a term borrowed from a story told by Franklin. A little boy going to school was accosted by a man carrying an axe. The man calls the boy all kinds of pretty and endearing names, and induces him to enter a yard where there is a grindstone. "Now, my pretty little fellow," says he with the axe, "only turn that handle, and you'll see something pretty." The boy turns and turns, and the man holds the axe to the stone and pours water over it till the axe is ground. Straightway he turns with changed voice and fierce gesture on the boy:—"You abandoned little miscreant," he cries, "what do you mean by playing truant from school? You deserve a good thrashing. Get you gone this instant!" "And after this," adds Franklin, "when anybody flattered me I always thought he 'had an axe to grind.'"

Our Fall Campaign!

A NEW QUARTER--VOLUME XIX.

A NEW QUARTER of the RURAL begins this week, (Oct. 5,) and Volume XIX in January next. Now, therefore, is a good time to subscribe and form Clubs; as subscriptions can begin with October or January or any time between. The 13 numbers of this (Oct. to Jan.) or any preceding Quarter of this year, will be sent on trial, or as specimens, for ONLY FIFTY CENTS.

Gen. PROSPERITY (our candidate for the Presidency,) reigns throughout the land, for the season has been a most fruitful one, and peace and plenty abound, maugre the melancholy predictions of politicians and the croaker brigade, (both of which ought to be mustered out of the service, their occupation being gone.) The Farmers and Horticulturists of the Country are abundantly blessed in basket and in store. The magnificent and abundant Products of Field, Orchard and Garden are nearly secured the long evenings and leisure of Winter are coming on apace, and *Now is the Time* to provide good Journals and Books for the Entertainment and Instruction of every family circle. Such a journal as the RURAL is needed, and will *pay*, in almost every family, and if those who are already subscribers, and know its value, *will kindly aid in extending its circulation*, it may be placed in the homes of tens of thousands of appreciative people during the ensuing three months.

GOOD PAY FOR DOING GOOD!

All who form clubs, either to begin with the New Quarter (Oct. 5th,) or next Volume (Jan. 4, 1868,) will be substantially rewarded, as our inducements are extraordinary—more liberal than ever before. Specimen Numbers, Show-Bills, Premium Lists, &c., sent free to all disposed to act as club agents.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., OCTOBER 5, 1867.

NEWS OF THE WEEK.

New York State Items.

THE Constitutional Convention has adjourned over until the 12th of November, (the second Tuesday.) There was no hope of its completing its labors in time to submit them to the people at the next election.

The Republican State Convention assembled in Syracuse on the 25th ult. Senator Roscoe Conkling was made President. The following nominations were duly declared:—Secretary of State, James B. McKean of Saratoga; for Comptroller, Calvin T. Hulburd of St. Lawrence; for Treasurer, Gen. Theodore C. Gates of Ulster; for Attorney-General, Joshua M. Van Cott of Kings; for State Engineer and Surveyor, A. C. Powell of Onondaga; for Canal Commissioner, John M. Hammond of Allegany; for Judge of the Court of Appeals, Charles Mason of Madison; for Inspector of State Prisons, Gilbert Delamatar of Wyoming.

An extensive break occurred in the Erie Canal near Fultonville last week, causing great delay in transportation.

The American Board of Commissioners for Foreign Missions held its Annual Meeting last week in Buffalo. It adjourned on the 27th ult., after designating Norwich, Conn., as the place for holding the next meeting.

Gen. Sheridan received a magnificent reception in New York. A formal ovation was given him on the night of the 30th ult.

From the West.

THE Eighteenth Kansas Regiment left Fort Hays on the 22d ult., for Fort Larned, to protect the Indian Commissioner.

Omaha dispatches re-affirm the statements to the effect that Pawnee Killer left the council at North Platte, painted his face red in token of his determination of war against the whites, and rode away in disgust.

The dispatches also say that it is the belief of persons well acquainted with Indian character that the chiefs who professed a desire for peace, merely did so to gain time and obtain ammunition, &c.

A gold mill was recently burned at Black Hawk. Loss $60,000.

Quite an extensive fire occurred in Chicago on the 24th ult.

The steamer John L. Stevens left San Francisco for Sitka last week with two companies of troops under Brig.-General Jefferson C. Davis. They took with them a considerable quantity of live stock and supplies, and thirty merchants and laborers. The buildings for the troops are nearly ready at Sitka. The trading privileges and property of the Russian Fur Company have been purchased by a Company in San Francisco for six hundred thousand dollars.

Gov. McCormick of Arizona, delivered the Annual Message to the Legislature on the 9th ult. He urges the necessity of putting the Indians on reservations, and employing a sufficient force to keep them there in peace. Gen. McDowell will soon visit Arizona to attend to Indian affairs. Arrangements are making to put regular steamers on the Colorado River to run as high as Coltville, six hundred miles above the mouth of the river.

Fourteen hundred Indians are assembled sixty miles south of Fort Larned, waiting for the Peace Commission.

Superintendent Head writes to the Indian Bureau from Great Salt Lake that Black Hawk had pledged himself to use all his influence to stop further Indian depredations.

From the South.

GEN. SCHOFIELD has decided that the only restriction imposed upon eligibility to membership in the Virginia State Convention is having taken the oath to the United States and afterwards aided the rebellion.

The tobacco factory of Reuben Ryland at Petersburg was burnt on the 24th ult. Loss $250,000; insured $80,000.

The yellow fever plague is still increasing in Texas. The disease proves fatal in nine cases out of ten. People will not venture into town with provisions, and meal cannot be secured to make gruel for the sick. Business has ceased entirely, newspapers have suspended publication, and the jail has been emptied of its inmates, who fled from the scene of desolation in terror. The greatest consternation and gloom overwhelms the living.

A considerable majority of the journals of Virginia oppose the calling of a Convention this season.

The interments from yellow fever in New Orleans now average from fifty to sixty per day.

Two hundred and fifty privates and seven officers in the First U. S. Infantry, are now under treatment for yellow fever at Jackson Barracks.

The municipal election at Nashville passed off peacefully on the 28th ult. Soldiers were stationed at all the polls, but were not needed. The Radical ticket for Mayor and Common Council was elected with little opposition. Thus ends the contest between Gov. Brownlow and the city authorities. It looked, three days previous to the election, as though a resort to arms would be inevitable, to enforce the State authority. Gen. Grant ordered Gen. Thomas to use the U. S. military power to preserve order, but happily a collision was avoided.

The State Convention of Colored Benevolent Societies of Kentucky met at Lexington on the 23d ult., and was addressed by Gen. Brisbane and John H. Breckinridge.

Resolutions favoring a union on the basis of equal rights for colored men were agreed to. A Constitution was adopted, and officers for the ensuing year were elected, John H. Breckinridge being chosen President.

From Washington.

SECRETARY MCCULLOCH has promulgated an order forbidding the clerks of the Treasury Department from furnishing information to persons connected with the public press, unless by permission of the Secretary, his assistants, or the chiefs of the Bureau.

A violation of the rule subjects the offender to dishonorable dismissal. The object in issuing the order is stated by the Secretary to be a prevention of the embarrassment and annoyance to the Department occasioned by the publication of misrepresentation of facts based on incorrect statements.

It has now become definitely settled that the Davis trial will take place at the Nov. Term of the Circuit Court in Richmond. Judge Chase has expressed his intention of presiding, and if the rebel ex-President does not fail to come to time on his straw bail, questions of great importance will arise which will require all the diplomacy and ability of the Chief Justice to evade and decide. The opinion is expressed, that allowing Davis will appear, the trial will be shirked by the Government, and the prisoner will again be set at liberty on bail. There is reason, however, to contradict such an erroneous impression. Indications lead to the belief that the trial will be proceeded with, and a mass of the most important events connected with the history of the rebellion disclosed.

Fitz John Porter is still here attending to his application for the re-opening of his case, with much industry. Those deepest in the President's confidence are giving out that the application will be granted.

A correspondent says the currency funds are short, and to meet the daily demands upon the Treasury, another sale of gold will be made.

The application of Gen. Sickles for a court of inquiry is suspended, awaiting the opinion of the Attorney-General on the point whether the President has discretion under the articles of war to refuse such application.

Secretary Seward refuses to consider Yellow Fever Blackburn as included in the amnesty proclamation of President Johnson, and has returned to him the oath of allegiance which that individual had subscribed, and forwarded to the Department of State for filing. The Secretary characterizes the Doctor as a detestable felon.

Col. John A. Graham of the U. S. Treasury, has been appointed Acting Register until a successor to the late Mr. Colby is selected.

The Secretary of the Treasury has received a notification from the executors of the last will and testament of Capt. Ralph S. Fritz, late of San Francisco, that said testator has left to the United States the sum of twenty thousand dollars, in trust, to be applied toward canceling the national debt.

Foreign Intelligence.

GEN. GARIBALDI, in pursuance of his plans against Rome, was at Sinigaglia, a fortified sea port of Central Italy, lying sixteen miles west northwest of Ancona, and situated on the Misa at its mouth in the Adriatic. Here the General was summoned by Italian authority, and under and by virtue of the King's proclamation, and in the name of the law, to retrace his steps.

Garibaldi at once refused, and upon his refusal he was immediately arrested by the officers of the Crown and conveyed, after a short delay, to the Fortress of Alexandria, a building in which he enjoyed the privilege of a conference with Louis Napoleon during the progress of the Italian war in 1859.

The arms and war munitions intended for the use of the Garibaldian troops were seized on the frontier.

The Italian volunteers who formed the Garibaldian ranks were also made prisoners by the order of the King of Italy.

The Eternal City is greatly excited by the important political events which are transpiring in Italy. The Papal troops, including the famous Antibes Legion, which many Romans regard as a French force in reality, and which caused, by its presence, the recent military mission of Gen. Dumont from Paris, are very active and on the alert everywhere.

Paris is excited to a very great degree by the publication of the news of Garibaldi's arrest by the Italian troops, and the present frustration of the revolutionary advance on Rome.

The reports are commented on freely, parties expressing themselves in approval or condemnation, just as they incline in feeling towards Garibaldi's idea of progress or the conservative plans of Napoleon.

A number of French transports and war vessels are already assembled at the naval station at Toulon, under orders of the Minister of Marine, ready for the duty of embarking a force of Imperial troops, and conveying them to Italy, to the aid of the King's Government in its action against the revolutionists.

Serious riots have broken out at Udine, a town of Northern Italy, 60 miles from Venice. The rioters were mostly Garibaldian volunteers, who had fled from the Roman frontier.

It is reported that King Emmanuel will call an extra session of the Italian Parliament.

The English Government has sent a number of gunboats to guard the southern and western coasts of Ireland against the Fenians.

A large party in Greece favors the deposing of the King and proclaiming a Republic under the protectorate of the United States, or annex it as three States.

Garibaldi has written a letter from his prison in Alessandra, in which he says the Romans have the right which all slaves have to rise against their oppressors, and it is the duty of Italians to aid them. The letter concludes with an earnest appeal to the men of the Liberal party.

From Canada.

IT is reported that Hon. John Rose is to be Speaker of the House of Commons, and Hon. John J. Hillyard Cameron, President of the Senate.

On the 26th ult., Papal Bulls nominating the Very Rev. John Walsh, Vicar-General of Toronto, to the Episcopal See of Sandwich, arrived at Ottawa.

E. L. Finney, in the employ of Geo. T. Smith, forwarder, has absconded after committing several forgeries and abstracting $2,000 from letters.

It is understood that Newfoundland will soon ask admission into the Confederation, and that resolutions would be passed in Parliament at the next session admitting Hudson Bay Territory.

ACROSS THE SIERRA NEVADAS.

THE great tunnel of the Central Pacific Railroad at the summit of the Sierra Nevada Range is opened. The track is being laid on the eastern slope, a locomotive is already running in the Truckee Valley, and in a few days the road will have reached the open country of the Salt Lake Basin, after which progress will be rapid and easy. This overcomes the only noticeable obstacle on the Western portion of the through line; and its significance is understood when we are told that the cost and difficulty of grading the 150 miles now nearly completed, is greater than for the 650 miles next following. The Chief Engineer expects to average a mile a day across the interior valley next year. The local traffic on the completed portion surpasses all previous estimate, and is lucrative without the immense through business which we may expect to flow over it.

In accordance with the Act of Congress, the Central Pacific Railroad Company receive a large Government subsidy, and are issuing their First Mortgage Bonds to a limited amount. The merits and advantages of these securities as an investment are fully set forth in their advertisement in another column.

S. D. & H. W. SMITH'S AMERICAN ORGANS.—We have ourselves both seen and heard a large instrument of the above manufacture, which has been purchased by the Congregational Society of this place. It is a very superior instrument in the mechanical perfection of its various parts, and in the resemblance of its tones to those of a pipe organ, it is superior to any we have ever heard. It contains 5 sets of reeds and 14 stops, and is capable of a great variety of expression, its softest tones being beautifully sweet and pure, while the stronger tones are delightfully full and sonorous. The reeds are so voiced that there is a marked difference in the quality of the tones of each set, and by this improvement different qualities of tone can be used when desired, and when the whole are combined, a richer, grander volume of tone is produced than can be by other instruments not thus voiced. It is but just that we should say that this Organ was selected by the committee, after a careful study and trial of the most celebrated reed organs, and believed by them to possess more of the requisite qualities to make up a good instrument, than any other kind of organ manufactured. These organs are manufactured by S. D. & H. W. Smith, at Boston, Mass.—*Barton Standard.*

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, October 1, 1867.

OUR local money market is without material change. There is still an important movement of currency westward, although in some quarters it is represented as less than last week. The Chicago papers report a continued active demand from grain dealers. The banks of that city are represented as being disinclined to grant further accommodation to the local grain dealers. These advances for moving the crops have thus far been very large.

In reference to the New York market, the Financial Bulletin of Saturday says:—"Banks having extensive connections with the interior have had but little to lend; but elsewhere there appears to be a fair supply of money, and the applications of brokers have been generally met at 7 per cent. The current operations of the Sub-Treasury do not appear to have any tendency to modify the condition of the money market. The reduction of the balances yesterday arose from the charging off about four millions of Seven-Thirty notes sent to Washington."

WHEAT AND FLOUR.—Prices of wheat and flour continue to advance. Red wheat sold in this city yesterday at $2,50. For white wheat buyers offered $2,70@2,75. The amount of white wheat offering is small.

WOOL.—There is no change to notice in the market for wool. The sales in Boston last week foot up 800,000 lbs., at 37@60c. for fleece.

Rochester Wholesale Prices Current.

Flour, Feed, Grain, Etc.		**Fruits, Vegetables, Etc.**

EPILEPSY, OR FITS.—A SURE CURE for this Distressing Complaint is now made known in a Treatise (of 48 octavo pages) on Foreign and Native Herbal Preparations, published by Dr. O. PHELPS BROWN. The prescription was discovered by him in such a providential manner, that he cannot conscientiously refuse to make it known, as it has cured everybody who has used it for Fits, never having failed in a single case. The ingredients may be obtained from any druggist. Sent free to all on receipt of their name and address, by Dr. O. PHELPS BROWN, No. 19 Grand St., Jersey City, N. Y.

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introdnce throughout the U. S. the GENUINE IMPROVED COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, bind, braid and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made. Address SECOMB & CO., Cleveland, Ohio.

CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured. 924-4t

THE GREAT PRIZE!

EXPOSITION UNIVERSELLE, PARIS, 1867.

THE HOWE MACHINE COMPANY,

ELIAS HOWE, JR., 699 BROADWAY, NEW YORK,

AWARDED OVER EIGHTY-TWO COMPETITORS,

THE HIGHEST PREMIUM,

THE ONLY CROSS OF THE LEGION OF HONOR

given to AMERICAN SEWING MACHINES. 924-tf

ACROSS THE SIERRA NEVADAS.

THE

Central Pacific Railroad,

THE WESTERN HALF OF THE

Great National Trunk Line Across the Continent,

Being constructed with the AID AND SUPERVISION OF THE UNITED STATES GOVERNMENT, is destined to be one of the MOST IMPORTANT LINES OF COMMUNICATION IN THE WORLD, as it is the sole link between the Pacific Coast and the Great Interior Basin, over which the immense Overland travel must pass, and the

Principal Portion of the Main Stem Line between the Two Oceans.

Its line extends from Sacramento, on the tidal waters of the Pacific, eastward across the richest and most populous parts of California, Nevada, and Utah, contiguous to all the great Mining Regions of the Far West, and will meet and connect with the roads now building east of the Rocky Mountains. About **100** miles are now built, equipped and in running operation to the summit of the Sierra Nevada. Within a few days **35** miles, now graded, will be added, and the track carried entirely across the mountains to a point in the Great Salt Lake Valley, whence further progress will be easy and rapid. Iron, materials and equipment are ready at hand for **300** miles of road, and **10,000** men are employed in the construction.

The local business upon the completed portion surpasses all previous estimate. The figures for the quarter ending August 31 are as follows in GOLD:

GROSS EARNINGS,	OPERATING EXPENSES,	NET EARNINGS,
$487,579.64	$86,548.47	$401,031.17

or at the rate of Two Millions per annum, of which more than three-fourths are net profit on less than 100 miles worked. This is upon the actual, legitimate traffic of the road, with its terminus in the mountains, and with only the normal ratio of government transportation, and is exclusive of the materials carried for the further extension of the road.

The Company's interest liabilities during the same period were less than $125,000.

Add to this an ever-expanding through traffic and the proportions of the future business become immense.

The Company are authorized to continue their line eastward until it shall connect with the roads now building east of the Rocky Mountain ranges.

Assuming that they will build and control half the entire distance between San Francisco and the Missouri River, as now seems probable, the United States will have invested in the completion of **865** miles **$28,592,000**, or at the average rate of **$35,000** per mile—not including an absolute grant of **10,000,000** acres of the Public Lands. By becoming a joint investor in the magnificent enterprise, and by waiving its first lien in favor of the First Mortgage Bond holders, THE GENERAL GOVERNMENT, IN EFFECT, INVITES THE CO-OPERATION OF PRIVATE CAPITALISTS, and has carefully guarded their interests against all ordinary contingencies.

The Company offer for sale, through us, their

First Mortgage Thirty Year, Six per Cent. Coupon Bonds,

PRINCIPAL AND INTEREST PAYABLE IN GOLD COIN, in New York city. They are in sums of $1,000 each, with semi-annual gold coupons attached, and are selling for the present at **95** per cent. and accrued interest from July 1st, added, in currency, at which rate they yield nearly

Nine per Cent. upon the Investment.

These Bonds, authorized by Act of Congress, are issued only as the work progresses, and to the same amount only as the Bonds granted by the Government; and represent, in all cases, the first lien upon a completed, equipped, and productive railroad, in which have been invested Government subsidies, stock subscriptions, donations, surplus earnings, etc., and which is worth more than three times the amount of First Mortgage Bonds which can be issued upon it.

The Central Pacific First Mortgage Bonds have all the assurances, sanctions and guaranties of the Pacific Railroad Act of Congress, and have in addition several noticeable advantages over all other classes of railroad bonds.

First—They are the superior claim upon altogether the most vital and valuable portion of the through line.

Second—Beside the fullest benefit of the Government subsidy, (which is a subordinate lien,) the road receives the benefit of large donations from California.

Third—Fully half the whole cost of grading 800 miles eastward of San Francisco is concentrated upon the 150 miles now about completed.

Fourth—A local business already yielding three-fold the annual interest liabilities, with advantageous rates payable in coin.

Fifth—The principal as well as the interest of its Bonds being payable in coin, upon a legally binding agreement.

☞ Having carefully investigated the resources and prospects of the road, and the management of the Company's affairs, we cordially recommend these Bonds to Trustees, Executors, Institutions, and others as an eminently sound, reliable and remunerative form of permanent investment.

Conversions of Government Securities INTO CENTRAL PACIFIC FIRST MORTGAGE BONDS

now realize for the holders from TWELVE TO EIGHTEEN PER CENT. ADVANTAGE, with the same rate of interest.

The following are the current rates (September 9th,) subject, of course to slight variations from day to day. We receive in exchange:

U. S. Sixes, 1861, coupon, and pay difference		108.49
U. S. Five-Twenties, 1862, coupon,	do.	130.49
U. S. Five-Twenties, 1864, coupon,	do.	125.99

ESTABLISHED 1861.

THE

GREAT AMERICAN TEA COMPANY

HAVE JUST RECEIVED

TWO FULL CARGOES

OF THE

FINEST NEW CROP TEAS.

22,000 HALF CHESTS by ship GOLDEN STATE,
12,000 HALF CHESTS by ship GEORGE SHOTTON

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune district of China, which are unrivalled for fineness and delicacy of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade, (before the establishment of the GREAT AMERICAN TEA COMPANY,) we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in the country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices, with the small additional expense of transportation, as though they bought them at our warehouse in the city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on the list, as seen in the club order published below, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

Parties sending Club or other orders for less than thirty dollars had better send Post-office drafts or money with their orders, to save the expense of collections by Express; but larger orders we will forward by Express, to *"collect on delivery."*

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

Oolong (Black,) 70c., 80c., 90c., best $1 ₱ lb.
Mixed (Green and Black,) 70c., 80c., 90c., best $1 ₱ lb.
English Breakfast, (Black,) 80c., 90c., $1, $1.10, best $1.20 ₱ lb.
Imperial (Green,) 80c., 90c., $1, $1.10, best $1.25 ₱ lb.
Young Hyson (Green,) 80c., 90c., $1, $1.10, best $1.25 ₱ lb.
Uncolored Japan, 90c., $1, $1.10, best $1.25 ₱ lb.
Gunpowder (Green,) $1.25, best $1.50 ₱ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best, 10c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economize in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5613 New York City.

CLUB ORDER.

Edwards, St. Lawrence Co., N. Y., June 3, 1867.

THE GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street, New York.

DEAR SIRS:—I herewith send you another order for Tea. The last was duly received, and gives general satisfaction. As long as you send us such good Tea, you may expect a continuation of our patronage. As a further evidence that the subscribers were satisfied, you will observe that I send you the names of all those that sent before who were near out of Tea, with a large addition of new subscribers. Accept my thanks for the complimentary package. Ship this as the other, and oblige

Your ob't servant, DAVID C. McKEE.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third (**beside the Express charges,**) by sending directly to "The Great American Tea Company."

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

POST-OFFICE orders and drafts make payable to the order of The Great American Tea Company. Direct letters and orders to

GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street.
NEW YORK.
Post-Office Box, 5643 New York city.

AGENTS WANTED—For J. T. Headley's Great Work on our Navy, entitled "FARRAGUT AND OUR NAVAL COMMANDERS," comprising the early Life and Naval Career of Admirals Farragut, Porter, Foote, Dupont and a host of others. In one volume, 600 pages—the only work of the kind published—agents find no competition. This work is highly recommended by the leading Naval Officers, and endorsed by Secretaries Seward and Wells, Governors Fenton, Buckingham and Burnside and leading men throughout the country. Our Agents, in connection with this work, can take orders for four other standard works by the same author. Our terms are nowhere excelled.
E. B. TREAT & CO.,
916-6tco Publishers, 651 Broadway, N. Y.

WANTED, SALESMEN—Permanent Employment in selling Crowell's Improved SCISSOR and KNIFE SHARPENER. Sample sent by mail on receipt of 50 cents. G. W. CROWELL & CO., Cleveland, O

CANCERS CURED—Without the KNIFE—by WM. W. HADLEY, M. D., 546 Broadway, N. Y.

THE ALBANY COTTON GIN MANUFACTURING CO.,
ALBANY, N. Y. (POST-OFFICE DRAWER 162.)
Office and Factory on Thacher St., near Broadway, North End of City.

MANUFACTURERS of Agricultural Machinery and Implements of the best and most approved kinds and patterns in use, embracing

1st Premium "Star" Cotton Gins and Condensers,
1st Premium "Star" Railway & Lever Horse-Powers,
1st Premium "Star" Threshers and Cleaners,

Threshers and Separators, Circular and Drag Saw Mills, Vegetable Cutters, Dog Powers, &c., &c.

Important improvements recently made in our THRESHER AND CLEANER (which we denominate the "*Star Thresher and Cleaner* to distinguish it from all others,) enable us to claim for it, without fear of contradiction, a marked superiority over all others now made, as well in the quality and quantity of the work which it will do as in the perfection of its construction, insuring the durability of the Machine and the ease with which it may be operated.

THE "STAR" RAILWAY HORSE-POWER
AND
THE "STAR" LEVER HORSE-POWER,

Made by this Company, are fully approved by all who have used them, to stand unrivalled in all the qualities which a Horse-Power must possess to give it acceptance to the Farmer—as to durability, economical use of the strength of the Horse (admitting an easy gait of the animal, with—in the Railway Power—a very moderate elevation of the platform,) facility of moving about, setting up, repairing, &c., &c. We solicit a continuance of the patronage hitherto so liberally bestowed.

MR. WM. H. EMERY (SURVIVOR OF EMERY BROTHERS) gives his personal superintendence to all work got out by this Company. His long experience in manufacturing Agricultural Machinery affords the strongest guarantee of the superior character of the machines made by us.

☞ Our complete Illustrated Descriptive Circular and Price List will be sent *free of charge*, on application, and all information cheerfully furnished.

Agents, both Traveling and Local,

are wanted all over the country to sell our manufactures. To active and competent men liberal commissions will be paid. 923

AN INVALUABLE MEDICINE FOR THE PURIFYING OF THE BLOOD.

DR. J. W. POLAND'S

HUMOR DOCTOR,

A Positive Remedy for all kinds of Humors,
PARTICULARLY
Erysipelas, Nettle Rash, Salt Rheum, Scrofula, Carbuncles, Boils, and Piles.

This excellent medicinal compound was first prepared by Dr. J. W. POLAND, in 1817, and was then employed with great success in expelling Humors from the blood; but in 1848 a medical friend, who was quite celebrated as a physician, especially in the treatment of humors, suggested some important improvements, which were adopted, and which has made it (so the people say) the very best remedy for all kinds of humors known to "the faculty."

The HUMOR DOCTOR cures Scrofula, Salt Rheum, Erysipelas, Canker, Piles, Nettle Rash, &c. Numerous individuals, who have used this remedy for Erysipelas, give it the most flattering recommendations.

This preparation is composed entirely of vegetables, among which are Sarsaparilla, Yellow Dock, Noble Pine, Mandrake and Bloodroot.

When the originator lived in New Hampshire, at Gofftown Center, for the space of thirty or forty miles around, and in Manchester particularly, the Humor Doctor was well known and highly valued for the numerous and wonderful cures which it effected. Though manufactured in large quantities the supply was frequently exhausted, and purchasers had to wait for more to be made. In that region some very severe cases of Erysipelas were treated with,—and they were cured! Erysipelas sores, or carbuncles,—those ugly, painful ulcers,—were entirely removed wherever this medicine was faithfully used. So it was with Scrofula and Salt Rheum. The Humor Doctor cured them.

Within the last ten years this valuable remedy has so increased in popularity that now it is more largely used all over New England than any other one preparation for cleansing the blood, and restoring the system to its healthy condition. Throughout the Western States it is now meeting with great success wherever it has been introduced. It is *free* from any dangerous drugs, is pleasant to the taste, safe, yet sure and effective in its action.

PREPARED AT THE
New England Botanic Depot, - - Boston, Mass.
And for sale by all Dealers in Medicine.

AWAY WITH Spectacles.
OLD EYES MADE NEW easily, without doctor or medicines. Sent, post paid, on receipt of 10 cents. DR. E. B. FOOTE, No. 110 Lexington Ave. Cor. of East 28th st, N. Y

THE COLLINS AND SHATTUCK Combined Clover Thrasher, Huller & Cleaner,
MANUFACTURED BY
GLEN & HALL, ROCHESTER, N. Y.

We beg to call the attention of Farmers to the superior characteristics of the Collins and Shattuck Clover Machine made by us; which we are now prepared to supply.

Our Machines have two bolts with counter reciprocating motion, which have proved *indispensable* in keeping the Machine still, preserving it from rocking and preventing it from clogging. We will WARRANT them with proper management to Thrash, Hull and Clean Clover or Grass Seed at one operation, more rapidly and in a much better manner than any other Machine made. When thrashing grass seed they can in a moment be so arranged that the seed and chaff will pass directly from the bolts to the fanning mill without going through the huller—*an advantage possessed by no other machine.* The ratchet form of the upper bolt in our machine insures a thorough separation of the heads and seed from the straw before the latter is allowed to pass into the stack. Our machines are constructed of the best material, in the most thorough manner, handsomely painted and ornamented, and have in all cases given entire satisfaction. Persons purchasing these machines to do custom thrashing will find them even much more remunerative than Grain Thrashing Machines.

We are also prepared to supply Horse-Powers, Truck Wagons, &c., to be used with our machines, or they will be adapted to run with any other Horse Powers.

☞ Descriptive Catalogues, containing full information, with testimonials from persons using our Clover Machines, sent free to all applicants. Address GLEN & HALL, Rochester, N. Y., or Detroit, Mich. J. D. EASTON, Gen'l Western Agent, Chicago, Ill. 924-10t

In the United States, to have the exclusive sale of articles in good demand, paying a large profit. Address "CHARLES S. GREENE & CO., No. 413 CHESTNUT Street, Philadelphia, Pa." 921-13t

PLASTIC SLATE ROOFING
JOINT STOCK COMPANY,
OFFICE 157 [Room 19] *BROADWAY*,
NEW YORK.
W. C. POTTER, *Vice-Pres't.*
J. M. ALLEN, *Sec. & Treas.* Licenses Granted.

PLASTIC SLATE FOR
ROOFING & OTHER PURPOSES.

The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of

Pulverized Slate and Viscous Matter,

(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.

AS A ROOFING MATERIAL IT STANDS UNRIVALLED.

A mastic—it adapts itself to every shape and slope. Non-combustable, impervious, non-expansive, and undecaying.

FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.

The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and

PERFECTLY FIRE-PROOF.

It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, *Improvements Pat'd April,* 1865 *and Nov.* 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the larges quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag't Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag't Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING Co. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 923-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G Co., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

THE CHAMPION,

886-tf Drs. BABCOCK & SON, 700 Broadway, N. Y.

O, LONG SUMMER DAYS!

BY A. A. HOPKINS.

O, long summer days! ye are waning apace,
And golden-hued autumn creeps dreamily on:
The summer rays linger to kiss the sad face
Of each little flowret, so faded and wan:
The harvest moon climbs where the autumn stars shine,
To mellow the crimson flush nature now wears,
And summer's fair fingers with autumn's entwine
As with it her lingering glory she shares.

O, long summer days! to be conning thee o'er
In the midnight of winter, *ah!* sweeter will be
Than gathering gems from the richest of lore,
Or chasing the hours in the wildest of glee.
Ye haunt me with visions of happiness, bright
As glimmer of stars thro' the frost-laden air;
And o'er me comes floating the soft, mellow light
That wrapt ye about in a glory most fair!

O, glad summer days! will the warmth that ye bro't
To my heart and my life by the winter be chilled?
The fragrance with which all thy breezes was fraught
Be lost, and thy murmuring raptures be stilled?
Ah, me! will the winter of life ever tell
What sweetness it saw in the blossoming spring?
Will memory breathe of the fairy-like spell
The summer days brought, in the songs it may sing?

O, bright summer days! in the sunlight and gold
Ye linger, a picture most charmingly set;
The wine-tints of autumn their richness unfold,
But memory paints thee with rarer tints yet!
Thy June may float back on the waves of the past
To blend with the Junes that are nearly forgot,
But bright in my heart all its beauties will last,
And bloom as they bloomed when the winter was not!

O, long summer days! ye will come not again;
The roses ye brought me are withered and dead:
The blossoms have faded from heather and glen,
And summer's rich blood is in crimson leaves shed!
Though other days come with a glory like thine,
They never can bring the same gladness to cheer;
The stars of the summer-nights ever may shine,
But never again will thy brightness appear.

Ah, cricket! sing low in thy snug little nest!
Sing low of the long summer days that are flown!
The last summer's sun has gone down in the west,
And o'er them its lingering glory has thrown!
And memory's song with the cricket's will blend—
A song of the days that were life's pleasant dream—
The sweet song of memory never will end
'Till the long summer days of eternity beam!

The Story Teller.

Written for Moore's Rural New-Yorker.

ESTELLE LA VERNE.

BY HARRIET HOLMES.

CHAPTER I.

My acquaintance with ESTELLE LA VERNE commenced at the fashionable school where we both finished our education. She came there a year before I left, when she was fifteen and I nearly twenty. But she was a mere child and I older than my years; so I took the lonely, beautiful, spoiled creature under my especial care, and was by turns ruled, petted and obeyed by her during the remainder of my stay. I always wondered why she cared for me, we were so unlike in everything; but I think she did love me dearly; and I, never weary of her varying moods, learned to regard her with almost the same interest and affection I should have felt for a younger sister, had heaven granted me such a blessing.

When I first saw ESTELLE I thought her the most beautiful girl I had ever met; and indeed hers was the most perfect type of brunette beauty I have ever found. But it was not till years afterward that she attained that full development of form and feature which made her so completely magnificent in her dark loveliness. Slight and childlike of form she was then, with the tiniest witching hands and feet, that seemed never weary and never at rest. For the rest, I know that her forehead was of medium height, with delicately arched and clearly defined eyebrows, and that it was usually half hidden by short, jetty, clustering curls. I am sure that every feature was perfect in itself, but it is only her eyes and her mouth that I remember when I think of her. The mouth was always the same—sweet and childlike—in its repose, but capable of wonderful expression; pity, scorn, defiance or determination only here gave sign, for her eyes were fathomless. Large, full, black, as midnight they were, but their depths I could never reach. I know they changed in after years—that they were never the same as when I first knew her,—but their language I never knew. I remember how I tried to read them once, when she told me the story of her young life. I had known her about three months—had learned that she was a native of the South, that she was, like myself, an orphan, and under guardianship of her father's sister. More than this she had not chosen to tell me, and I had forborne to question her.

But one day there came a letter from my brother, who was just completing his collegiate course, bidding me prepare to accompany him to Europe when he should leave college. CHARLES was my only living relative, the one object in whom all my hopes were centered. I had no higher pleasure than to obey his wishes, but I shrank from parting with ESTELLE. Slow to form attachments, but firm in my friendship; loving her with an affection that only one who has no home ties can feel for another, of no kindred blood, I could not bear to leave her, and proposed that she should accompany us as we should go with the family of our guardian and our father's old friend, Mr. LINDSEY. She was standing by the window with her face half hidden by the drapery; I sat on a sofa with the letter in my hand. When I mentioned her going with us she replied in a low tone that she could not go—but I would not take this as her answer.

"I will write to your aunt, ESTELLE," I said. "You have never lived with her and she will not care; you shall go to Europe with us; and who knows but the beautiful LA VERNE heiress may marry a lord?"

She made no reply, but glancing up I saw by the quivering of the slight form that she was weeping, and when I went to her she clasped both my hands with her slender fingers and bowing her head upon them sobbed out the grief that could find no words. I drew her to the sofa beside me, and tried to fathom the cause of her sorrow. It was a long time before I could get an answer to my inquiries, but after a while she became quiet, and I learned that it was the dread of my departure and the thought of the loneliness she should feel that had caused her weeping. Then, letting go my hands suddenly and sitting erect, she said:—"I have deceived you, MARY; I am deceiving everybody; I'm not an heiress, I'm as poor as the most wretched beggar in the city."

"Why, ESTELLE," I exclaimed, "are you insane?"

"It's the truth, MARY. I know it is so, though they don't want me to know it, and besides, I'm engaged and can't go anywhere, or do anything, except as some one else chooses."

She was tearless now, and made the astonishing announcement in the quiet tone of one who utters an accepted fact. I looked at her in speechless wonder, thinking, in a bewildered way, "What can the child mean?"

After a pause, however, she explained thus:—"You know we lived in Charleston. Papa was very rich, I suppose; sometimes, though, it is a mystery to me what became of his wealth. Mamma died when I was very young, and he never married again. I know he loved me as no one else ever will. I had never a wish that he did not gratify at any cost, and I had the best of teachers at home, because he would not send me away from him."

Here she paused, busy with early recollections I was sure, but I sought vainly in her eyes for any sign of their nature, whether sad or pleasant.

"Did you ever hear of MORTIMER KINGSLY?" she suddenly inquired.

I caught my breath in quick surprise, then answered quietly, "Certainly, every one has heard of MORTIMER KINGSLY, the author."

"Did you ever see him!"

"Once, a good while ago; but why do you ask."

"Only because he is the man I am to marry."

"ESTELLE LA VERNE!"

"Yes, MAMIE, it is the truth. I suppose I ought not to tell—he didn't want me to—but you won't tell any one else, will you, please?"

"No, STELLA, I will keep your secret, but it is so strange. You are but fifteen and he—"

"Is thirty."

"But how did this singular engagement come about? Where did you meet him?"

"I will tell you all I know, MAMIE. Papa died with the consumption. I suppose he had it a long time, but I only knew of it a year before his death. He had a severe illness then, and Mr. KINGSLY came and staid a week at our house. He may have been there before. I never paid any attention to papa's visitors when he was well, but I thought it strange Mr. KINGSLY should come and stay so long when papa was sick, and I wondered whether he sent for him, yet I never inquired. After he went away, papa asked me how I liked him, and I answered, "very well;" which was all I could say, for he had rarely spoken to me. After this I did not think of him until a year later, when he came again. They told me papa could not live, and I was too completely wretched and grief-stricken to wonder at anything, until one morning he called me to him and asked me if I had ever thought what would become of me after he was dead. I told him I had not, and he asked me if I would do as he wished me, even in something that would affect my whole life. I answered that I would, and then he asked me if I would like to live with my Aunt LAWTON. I said, 'No, papa, but if you wish me to, I will.' He then said, 'Would you marry Mr. KINGSLY, if I wished you to, ESTELLE?' I replied that I would do anything he thought best, and drawing me to him and kissing me many times, he said, 'Will you promise me this, my darling?' I said 'yes,' and then calling a servant he sent for Mr. KINGSLY, and when he came in told him that he had talked with me and I had promised all he wished. Mr. KINGSLY did not reply, and papa said, 'You are fourteen now, ESTELLE; will you marry Mr. KINGSLY when you are eighteen, if he wishes?'"

"I had my face buried in the pillows, and did not look at Mr. KINGSLY, but answered 'yes,' as before, and then he came, and smoothing my hair softly with his hand, said, 'GOD helping me I will try to make you a good husband when that time comes, STELLA,' and papa answered, 'And may GOD deal with you as you do with my orphaned child, MORTIMER.' After this, MAMIE, I hardly remember anything, until after papa died. I cried day and night, and they tell me I was half insane when they buried him away from my sight forever."

"Then Mr. KINGSLY went away and Aunt LAWTON took me home with her. I had been there about six months when Mr. KINGSLY came back, and then he talked with me a good while and said that he wished me to finish my education at the North, and that he would not trouble me with any correspondence, but wished our engagement kept a secret until the time for its fulfillment arrived. And so he brought me here, and of my life since you know as much as I. I write to my aunt sometimes, and occasionally I get a letter from her. She is my nominal guardian, but I know whatever she does is by Mr. KINGSLY's order, and I have lately become convinced that it is he who defrays the cost of my education."

"But why?—your father was considered wealthy."

"Yes. It is all so strange I do not know what to think. I cannot tell why I think as I do, but I feel my dependence most deeply."

CHAPTER II.

MORTIMER KINGSLY had been my ideal hero for years. I had seen him but once. Some one had pointed him out to my father, saying, "That is KINGSLY, the promising young author," and looking in the direction indicated I had seen a tall, grey-eyed, rather plain looking young man, who but for his broad intellectual forehead and earnest, thoughtful countenance, I should have called very *common looking*, in my girlish phraseology. It was at a crowded railway station, and I caught but a momentary glimpse of him, but it was sufficient to endow whatever he wrote with a deeper interest for me. And indeed no other author had ever written anything that could call back an echo from my soul-depths as did some words of his, I remembered that he had once written, "To insure wedded happiness there must be a perfect congeniality, if not similarity, of the intellectual faculties in those united for life;" and recollecting this, the fact of his singular engagement with ESTELLE LA VERNE was all the more unaccountable. Love her I felt sure he could not; there was nothing in her story to warrant such a belief, and he evidently still looked upon her as a child.

I might have believed her father's wealth the attraction, had she not been so firm in her conviction that she was penniless,—but knowing her as I did I was obliged to give half credence to her belief. Her quick, intuitive mind would arrive at conclusions instantaneously which my slower reasoning process could only deduce by the most careful analysis of facts, and she was very seldom wrong.

The more I pondered upon it the more mystified I grew, so I had but to wait the course of events. I do not think the fact that she was bound by an engagement was a source of grief to ESTELLE in those days; she was too young and unacquainted with life to realize its significance fully. To her, love was but a dream of the poet or romancer—something she certainly should never feel, and I think had she not been haunted by the fear that she was dependent upon some one, she would have been usually cheerful and content. *Usually* I say, but there must have been times under any circumstances when she was not happy,—with these intensely passional natures there must be periods of nameless unrest, times when the soul is oppressed by some undefined and never-to-be satisfied yearning,—"moods" occasioned by the undue activity of one or more of those faculties phrenologically termed affective, and which less impulsive people can find little excuse for. I did not understand ESTELLE's nature then as I do now, but she was, nevertheless, an interesting study for me. Sometimes selfish, often unreasonable, she was yet always fresh, piquant and charming. Darling ESTELLE!—how I love to linger over those days, and to think of you in your youthful beauty; but ah, how swiftly time bears us onward!

I do not easily form intimate friendships—did not even in my school-girl days—so when my brother came to take me away there were few to mourn very deeply, though many to utter kind wishes and a pleasant "good-bye." As for ESTELLE, though she had made scores of friends, she could not give me up, but clung to me during the last days of my stay like a little child to its mother. I, too, was sorrowful as I thought of leaving her, yet eager in my anxiety to meet my dearly loved brother.

I had not seen CHARLES in a long time, and was hardly prepared to meet the handsome, intellectual looking gentleman who greeted me as "Sister MAMIE." If I had thought him noble before, I deemed him perfection now, and my heart found perfect rest in trusting him. I have seen but few men who were as handsome as my brother, and I only rejoiced that nature had bestowed upon him so lavishly those gifts she had denied to me. Tall and finely formed, almost perfect in form and feature, with beautiful chestnut hair and dark brown eyes, I have wondered sometimes if he were not half ashamed of his plain, quiet, unattractive sister. But he never, by word or look, gave sign that he had such a thought—never, during those four years of European travel, was other than the kind, gentle, attentive brother I found in the first day of our reunion.

Our party consisted, besides ourselves, of Mr. and Mrs. LINDSEY and two daughters. MINNIE, the eldest, was nearly my own age, tall and slender, blue-eyed and golden-haired—lovely as a poet's dream, and as good and pure by nature as she looked. HATTIE, a merry, saucy beauty of sixteen, was *petite*, browned-haired and rosy-cheeked. All were kind, intelligent and agreeable, and in those years I learned to love them with an affection which neither time nor circumstances can ever change.

To go over the story of our travels were but to repeat an oft-told recital, for hundreds have had a like experience. Often during the first two years there came letters from ESTELLE, but she was one of those unsatisfactory correspondents of whose thoughts and feelings you can form little idea from their letters. I had not heard from her in almost six months, when CHARLES, looking over the "personal" column of an American journal, read aloud this paragraph:

"It is reported that MORTIMER KINGSLY has bought back the estate of his grandfather, and contemplates residing at the old KINGSLY mansion. His beautiful bride, the only child of the late WALTER LA VERNE, Esq., of Charleston, is said to possess a splendid fortune in her own right."

"Then they are indeed married," I said.

"Is the Miss LA VERNE mentioned here that queer little Spanish-looking Miss who went into such grief when you left school?" asked my brother.

"Yes."

"And no doubt she has written you of her 'triumph' long ago."

"I knew of her engagement three years ago," I answered, quietly.

"You don't mean to tell me that KINGSLY was engaged to that child *then?*" asked CHARLES in surprise.

"I certainly do, Sir Curious," I laughingly replied.

"Well, well, you shall keep all my secrets for me henceforth, MAMIE. A beauty and an heiress; KINGSLY is fortunate, isn't he?"

CHARLES seemed loth to leave me that morning. He lingered around awhile, talking of various trivial matters, then at last he said, "MAMIE, what if I were to tell you I had offered myself to MINNIE LINDSEY?"

"I should say you had done wisely," I replied.

"But what if I were to tell you she had rejected me?"

"I should say *she* had done wisely," I replied a little mischievously, for I knew she had not.

He stooped and kissed me tenderly. "You will welcome her as a sister, will you not, MARY?"

"Gladly, joyfully," I answered. "I would have chosen her before all the world for my brother's wife."

And it was, indeed, the realization of my fondest wishes. That night I clasped darling MINNIE to my heart and called her by the sweet name of "sister," feeling I was abundantly blest.—[Concluded next week.

Wit and Humor.

PORTRAIT OF MR. TIPPETS,
AFTER HAVING A REAL NICE TIME PLAYING BASE BALL.

A GERMAN BACHELOR.

GRISWOLD, the "Fat Contributor," has been writing up a list of bachelors in different parts of the country. Here is one specimen:

Hans Vons Poote is in the shoe trade. The painter, economic and ingenious, painted his sign to read:—"Hans Von Poote and Shoes." Hans kindly furnished us his own account of himself:—"I pese a pachelor mit a frow unt more ash a tozen children. Two udder frows vot I cot living, pese ted. My age is about fifty, thirty-leven, sixteen, somewhere along there, which accounts for my having pine eyes unt pig feet. I dakes lager peer mit mine goffee, unt goes to schurch cept it pe Soontay, ven I stays to home in a peer garten. I never swears, by tam, unt I always did. I goes out walkin' every afternoon pefore preakfast mit a horse unt puggy, and am sick aped all de while mit good health. I pese a creat bollydishun. At de last vorth of Juiy I voted six dimes for der bazific railroad for President. That's the gind of man vot I am, don't it? Ven I gits married I vants every poddy to gomb to the vuneral. No cards."

BASE INGRATITUDE.—An editor who occupied a room in a hotel not a thousand miles distant, absented himself from town for a night. The house being crowded with guests, the obliging landlord put a stranger in the editor's bed. This kindness the ungrateful fellow requited by scrawling upon a piece of paper, which he left on the table, the following rhymes:

"I slept in an editor's bed last night,
And others may say what they please;
I say there's one editor in the world
Who certainly takes his ease.
When I thought of my humble cot away,
I could not suppress a sigh,
But thought, as I rolled in that feathern nest,
How easily editors lie."

MRS. JENKINS complained in the evening that the turkey she had eaten at Thanksgiving did not set well. "Probably," said Jenkins, "it was not a hen turkey." He got a glass of water in his face.

A BROKER being asked the other day how his child was, answered, almost in tears, "Very ill; would not give two per cent. for his life."

Corner for the Young.

ANSWERS TO ENIGMAS, &c., IN No. 922.

Answer to Miscellaneous Enigma:—An evil habit is never conquered by yielding to it.

Answer to Anagrams of Counties:—Madison, Cattaraugus, Schenectady, Orleans, Seneca, Ulster, Ontario, Chenango, Westchester, Delaware.

Answer to Mathematical Problem:—367684,4000 lbs.

Answer to Anagram:

I have been with friends who were cherished
All earthly things above,
Till I deemed the death pangs lighter
Than the pangs of parting love.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
Agricultural, Literary and Family Newspaper,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

THREE DOLLARS A YEAR—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free, to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $3,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time for those who wish to preserve the paper for binding, reference, etc. ☞ A new Quarter begins October 5th,—a good time for club or single subscriptions to commence. See head of News page.

PURE WATER.

HEALTH AND ECONOMY. Patent Lead Encased Block-Tin Pipe—Recommended by the Croton Water Board of New York, and the Boards of Brooklyn, Philadelphia and Boston and by the most eminent medical men of the country. Costs less than Lead Pipe, and is much stronger. Recent improvements enable us to supply this Pipe at a *less* price per foot than common Lead Pipe. To give the cost per foot, please furnish the pressure or head of water, and bore of Pipe. Pamphlets sent FREE on application. Address THE COLWELL, SHAW & WILLARD MANUFACTURING CO., foot of West Twenty-Seventh Street, New York. We also manufacture and keep constantly on hand, all sizes and weights of Lead Pipe and Sheet Lead. 923-4t

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

HUSBAND THE FODDER.

THE price of hay throughout the country is high for the time of year; fall feed, over a large portion of the same is short, owing to drouth; the hay is not expected to "spend" as well as usual, as a general thing, from the fact that its season of growth was short and consequently it reached maturity at a rapid pace. In the hay regions along the Eastern seaboard States the season was unusually wet, and a great deal of the crop was in consequence gathered in a damaged condition. Under these circumstances it behooves farmers to husband their fodder so as not to fall short next spring. It is not a favorable period of the year to part with stock unless it is fit for the butcher; the best course then, is to take early precautionary measures to carry the animals through the grass in good condition without incurring unnecessary expense. We sound this note of warning in season for our readers.

How shall the farmer husband his fodder? By saving, systematic feeding, by giving grain with coarse fodder, and by cutting and steaming. Warm shelter is very important; it saves a very large per centage. Bright, well kept straw or corn stalks, cut fine and fed with an allowance of mill feed or ground grain, will winter horses and cattle much cheaper than hay alone. A good fodder cutting machine is a paying investment. Even hay cut, mixed with some ground grain and partially fermented, is much cheaper food than hay alone. Farmers then should use their coarse grains. It is also sometimes a paying operation for a farmer to get his crop of wheat floured, in order to retain the feed for his own use. Frequently there is a good home market for the flour, at such prices as leave the feed comparatively cheap. Roots, and even potatoes, fed in conjunction with cut fodder and mill-feed, are valuable auxiliaries, promoting health and furnishing suitable nutriment, especially for milch cows. If possible, procure carrots for the horses. At any rate save the corn fodder in good condition, and the straw stack should be protected by a good top, or thatch, from the fall rains. Keep the stock in good heart during the last of autumn by a little extra feed of grain so as to bring them to winter in good condition, have warm shelter, good racks, take good care of them, husband the fodder early and in season, and continue to do so all through, and next spring you may unexpectedly have a few tons of hay to sell which will replace the money, the extra grain, labor and implements costs.

TURNING OVER A NEW LEAF.

A SHORT time since, passing at an early hour in the morning the domicil of an acquaintance notorious for the habit of late rising, we found him up and busy about his barn. Surprised at this matutinal display, and inferring that something was wrong with the family, we inquired if such was the fact. He seemed amused at the question and said he supposed his early rising had caused me to propound it. After a pause he said, "There is nothing the matter with the family,—but the fact is I have *turned over a new leaf*, hence you find me up early in the morning for once." This was so singular and unlooked for, considering the known habits of the man, that it was natural to ask how the change came about. "Well," said he, rather reluctantly, "the fact is the old woman and the girls got me out to meeting the other day, and the preacher went on to tell a long story about a sluggard, which, he said, was mentioned in the big book. There was something about a little more sleep, a little more folding of hands: about weeds, and such like truck on the sluggard's farm, and when he said this my wife kinder looked up at me as though the fit was just about my size. I felt vexed at the look, at the preacher, and—well, truth to say, at myself also, because the matter fitted my case so well. The upshot of the whole was that, on going home, nothing was said about the fitting,—but I felt it nevertheless, and a mental resolve was made to 'turn over a new leaf,' and it is turned, as you see. When I commenced this, RACHEL—that is my wife—had a look of wonder on her honest face, though she said nothing, but was so kind, affectionate, and encouraging in her manner that I was repaid a hundred fold for the extra exertion the reformation cost me. It is now a week since the 'new leaf was turned,' and the gain has been much. I am not forced to run to catch up with my business as before; my stock do not call for food as they did then; my work is not carelessly done as formerly, and I find plenty of time to do everything in season, without the vexation of hurrying. This 'new leaf' is the best turn I ever made, and it will not be turned back by me, you may depend upon it."

There are a good many things about farming—practices followed from habit—which it were better to reform by "turning over a new leaf." It is not so difficult to do this as some imagine. The great point is to *resolve* to do, and the thing is done. The new leaf turns over, presenting a clean page upon which to commence a new account, an improvement on the blotched and blurred one of the sleepy past.

CONCERNING OATS.—CURIOUS ERROR.

IN many kinds of grain the weight per bushel is a pretty good indication of the quality of the article, and in Germany a series of investigations have been recently carried on by MULLER & WUNDER, at Chemnitz, Saxony, having for their object to determine the causes of this difference in weight. As a step towards affording the practical man the means of avoiding the causes which tend to produce light grain, such investigations are of great value and interest. Prof. S. W. JOHNSON of the Sheffield Scientific School, whose admirable articles are familiar to the readers of our agricultural literature, has furnished a resume of these experiments for the American Agricultural Annual, published by Messrs. JUDD & Co. of New York. We take the liberty of quoting from his article the table furnished by MULLER & WUNDER:

		I.	II.	III.	IV.
Weight per bushel		45.8 lb	40.8 lb	33.5 lb	28.84 lb
No. of kernels per bushel		382,440	542,460	544,100	801,550
Weight of single kernels*		0.1305	0.0911	0.0279	0.0163
Bulk of single kernels†		0.0218	0.0246	0.0201	0.0217
Composition of kernels in 100 parts.	Water	10.70	13.16	14.64	12.00
	Fiber	8.46	9.34	10.74	14.88
	Ash	2.74	3.19	2.68	3.91
	Gluten, &c	9.37	10.00	8.87	8.87
	Fat	6.56	6.56	6.18	6.18
	Sugar	2.40	2.40	2.53	2.53
	Starch	59.77	55.33	54.36	51.63
		100	100	100	100

* Expressed in decimals of the gramme—15.4 grains.
† Expressed in decimals of the cubic centimetre.
‡ Fat and sugar not having been estimated are assumed equal to what were found in Nos. I and III respectively, which gives sufficiently accurate figures for determining starch by difference.

To this table Prof. JOHNSON appends the following comments:

"As regards composition we notice that the light grain contains more fiber (husk) and less starch; otherwise no constant differences appear. These by no means account for the differences in weight. The latter are due principally to the size and shape of the kernels. As regards number, other things being equal, the fewer the kernels the greater their weight will be. One solid mass of lead, for instance, just filling a bushel measure, must weigh more than the same measure filled with bullets, and the latter more than the same filled with shot, because as the lead is subdivided, spaces which contain only air, are multiplied.

"Again, as regards shape, the nearer the kernels approach a spherical figure, the more can be got into a bushel. The heaviest grain, therefore, is that which has the largest, the roundest, and the smoothest kernels, while the greater the number, and the more elongated and irregular the grains, the less will be the weight per bushel."

On reading this, it surprised us not a little that Prof. JOHNSON should have fallen into such a singular error, an error which vitiates much of his reasoning throughout the remainder of the article. "One solid mass of lead," he says, "just fitting a bushel measure, must weigh more than the same measure filled with bullets." This is true, but it is not a fair instance. To make the comparison fair the lead should have the same shape as the bullets, and then we would find that a single bullet which would just go into a bushel measure would not weigh as much as the same measure filled with musket bullets. Moreover, if Prof. JOHNSON had a bushel measure and a mass of gold which would just fill it, he might get considerably more gold into his bushel measure by reducing it (the gold) to a very fine powder.

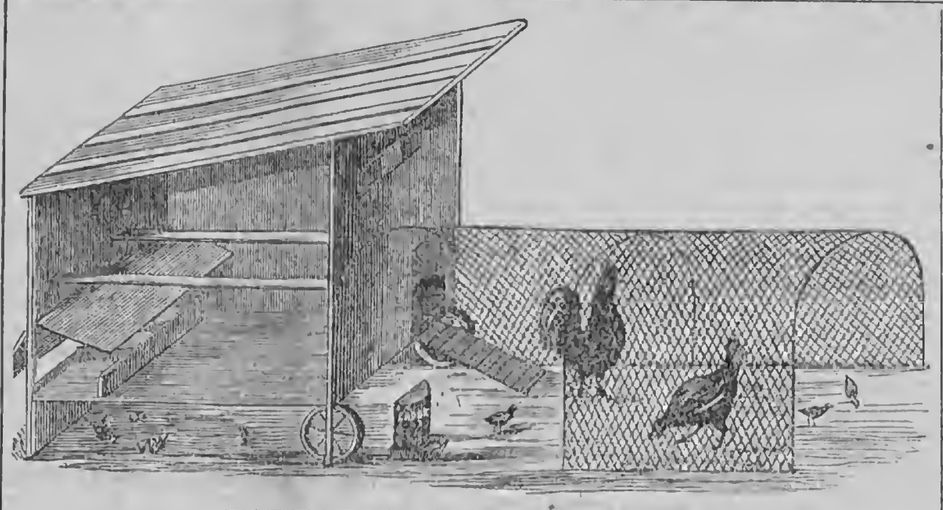
But let us waive all consideration of these extreme cases. He states that a measure filled with bullets will weigh more than a measure filled with shot. This is not so. It requires no Oertling or Becker balance to test this. Fill a tin cup accurately with duck shot and the rudest grocers' scales will show that it will not be as heavy as if filled with snipe shot. It is true that the air spaces in the latter case are more *numerous* than in the former, but then they are *individually* so much less that they do not detract as much from the weight as the fewer but larger air spaces which exist in the measure filled with the larger shot. If the readers of Prof. JOHNSON's article will test this question and will then bear in mind the true state of the case, they will readily see that the weight of the grain per bushel ought to be in inverse ratio to the size of the grains, *if no other influences were at work*, and such is found in one case to be the fact.

Moreover the Professor remarks that the nearer the kernels approach the spherical figure the more can be got into a bushel. This is not true. The spherical form is by no means the best, so far as the mere filling up of the measure is concerned. But the plump, spherical grains have the shells better filled; hence the specific gravity of each individual kernel is greater, and hence the weight of the bushel is greater. From this we would be led to infer that the value of two samples of oats would vary *more* than the mere relative weight per bushel would indicate, and in practice this is well known to be the fact.

Let us now consider this subject from a plowman's stand-point. The weight per bushel is a good but not an infallible index of the value of the grain. This value seems to depend greatly upon the variety of oats cultivated—a subject to which sufficient attention is not paid in this country of corn and wheat. In the experiments of Messrs. MULLER & WUNDER, as detailed by Prof. JOHNSON, the variety is given as "white oats." This is about the same as to tell us that certain grapes under examination were *red* grapes. The question might arise, were they *Delaware* or *Northern Muscadine?* Potato oats, and Poland oats, are both white, but every cultivator of oats knows how much they differ.

It is too obvious to require mention that the weight per bushel depends upon the specific gravity of the grains, and the degree to which they are compressed; and the specific gravity of each kernel will depend more upon the degree to which it is filled than upon the proportion of its constituents. Mere inspection will show that where a sample of oats is light this character depends principally upon the fact that the grains are not well filled out, and that the *amount* of husk per kernel is about the same in a well-filled and in a poorly-filled sample of grain—hence the *per centage* of husk is vastly greater. On this account the degree of compression to which light oats are subjected during measurement, will influence their bulk more than it would that of better filled grain. A thousand bushels of light oats measured in separate bushel measures will not fill a thousand bushel measure. Hence an advantage which may be gained by the buyer that uses a large measure.

In order to secure a sample of oats that will *mill* well, two things are necessary—1st, the selection of a good variety of oats, and secondly, its growth under proper circumstances. In the selection of variety we are sometimes governed by other circumstances than mere quality. I remember very well a certain farm where potato oats could not be grown because they always lodged, while Poland oats were a more certain although an inferior crop—always bringing a less price in market. The culture given to oats no doubt governs largely the character of the grain. I believe it is generally conceded that oats sown on old sod usually fill better than those sown on recently manured land, and the experimental determination of the influence of different kinds of manure upon the character of the grain will be a question worthy the attention of our Agricultural Colleges. ARATOR.



PORTABLE POULTRY HOUSE.

A GREAT many persons are desirous of keeping a few fowls, but their arrangements are such that it is not convenient to let them roam at liberty about the premises. But as fresh earth, food, and change are necessary to the thrift of poultry it is sometimes difficult to combine profit and confinement. In these cases a movable poultry house is a desideratum. Our engraving, taken from the Cottage Gardener, represents a cheap and well arranged movable poultry establishment. The wire screening enclosing the yard may be enlarged to any desirable extent, and the capacity of the main building can be regulated according to the wants of the owner. Portability, durability and convenience are combined in this plan.

PUSH THE HOGS.

THIS is the best month in the year to push the hogs forward. The weather is cool, feed of all kinds, especially corn, ready for use. Swine intended for slaughter this season should have all the food they will eat and as often as they will partake of it. Give them dry, clean pens, and they will eat, sleep and grow fat with greater celerity and at less expense than when exposed to storms, gorged one day to repletion and put on short commons the next. Vegetables mixed with corn meal are very good as food for hogs,—but the most compact and valuable pork is made from pure corn and pure water. Steady and full feeding, during the month of October, will so finish off a hog as to require little thereafter but the butcher and the packing barrel.

TO FATTEN GEESE.—The Irish Farmers' Gazette says, to fatten geese, put up three or four into a darkened room, and give each bird one pound of oats daily, thrown on a pan of water. In fourteen days they will be found almost too fat. Never shut up less than two together, as they pine if left alone.

NEW YORK STATE FAIR.

THE opening of the State Fair at Buffalo was inauspicious. Confusion reigned on the grounds during the first day. Considerable stock and many articles for exhibition arrived late, and even then the buildings were not all in complete condition for their reception. Briefly, it was the opinion of competent judges that the Fair was one day behind time in arrangement. The grounds, located some two and a half miles from the city, are ample in space, but the surface is exceedingly rough and hummocky, and if this locality had been blessed with what it greatly needs—a heavy rain—the soil and surface are of such nature as would have necessitated stilts, or at least cavalry boots, to have enabled pedestrians to traverse them. As it was clay, dust was dominant; it was denser in the air than the most famous London fog, and it was suggested that the brick-makers on the ground would need to supply nothing but water to their machines—the clay would come obligingly in the air. Wednesday there fell a light shower, which abated the dust nuisance for a couple of hours, and this (Thursday) morning the sky is overcast with clouds, and some rain is falling. Our notes yesterday were taken among the Stock, and we give first those of

CATTLE.

The show of this stock is not large, but some choice herds are represented; there are none, however, from outside this State, except a few from Canada. EZRA CORNELL, Ithaca, has on exhibition from his Short-Horn herd the two-year-old bull "Fidget Oxford," four-year-old cow "Lucilla," two-year-old heifers "Princess 16th" and "Kirk Livingston 12th." The latter is a splendid animal. Also a yearling heifer, "Lucia," and two heifer calves. A. B. CONGER, Walberg, shows "Fleur de Lis," son of "2d Duke of Thorndale," and "Rose Gloster," grandson of "Red Rose 2d" and "Duke of Gloster." J. & S. KINSEY, Darien, exhibit "Duke of Dover," a three-year-old bull, one cow, "Amethyst," with her calf; also "Marksman," a fine cow and one yearling heifer. These were bred in Canada by GEO. ROACH. J. W. TAYLOR, Ontario Co., shows some fine fat steers and heifers which he purchased in Kentucky for grazing purposes. CHARLES E. WEST, Buffalo, shows one three-year-old bull, one two-year-old heifer, and two yearlings. A pair of working oxen were shown by H. AMES, Livingston Co. This list comprises the substance of the Short-Horn herd at the Annual Fair of the Empire State; tolerable as far as it goes, but it don't reflect much credit on the management that has called it out.

The leading herd of Ayrshires is that of WALCOTT & CAMPBELL, New York Mills. It is doubtless the best in the country. On the grounds were "Daisy," a seven-year-old cow, "Maud," four-year-old, "Bloom" and "Helen Mar," two-year-old heifers, and "Jessie" and "Ella," yearlings. The last four mentioned are from imported cows by imported bulls, and none have been previously exhibited but "Helen Mar." Their famous bull "Tarbolton" was also entered as a competitor for the herd prize. O. HOWLAND, Auburn, shows "Governor 5th," a three-year-old Ayrshire bull, one two-year-old, a yearling and two heifer calves. E. HARVEY shows the bull "John McGregor," and G. W. PAINE, Erie Co., a grade heifer.

The *Alderneys* are more numerously represented. W. B. DINSMORE, Staatsburg, shows at least nineteen head, among which is a pair of three-year-old steers, broke to the yoke. Many of this herd are imported. It attracted great attention, and the number and fine points of the animals elicited much praise for the owner. ERASTUS CORNING, Jr., Albany, also shows Alderneys, seven in number, among which the imported cows "Violet" and "Lady Eva," and the four-year-old bull "Romeo"—on his first exhibition—were particularly noticeable. In the line of *Herefords* Mr. CORNING also exhibits seven head. F. W. STONE, Canada, five cows and two calves.

Of *Devons* WALTER COLE, Batavia, shows twelve head, comprising a four-year-old and one yearling bull, six cows, and some calves. The older bull was much admired. C. DIVES, Monroe Co., has a pair of grade Devon working oxen, four-year-old, weighing about forty hundred, which are very fine. LEVI GILLETT, Buffalo, shows one Galloway four-year-old bull, bred in Canada, the only specimen of this breed on the grounds.

SHEEP.

The Sheep Department is much better represented than it was at Saratoga last year. It is pronounced very good,—especially are the long-wools well represented. F. W. STONE, Guelph, Canada, has in the pens over thirty South Downs and Cotswolds. The other exhibitors of long wool are L. L. LORILLARD, several pens of South Downs; JOHN SNELL, Ontario, Can., 13 Cotswolds and Leicesters; JOHN GILL, Canada, 12 Leicesters; DONALD ROBERTSTON, Queenston, Can., several pens of Leicesters. JOHN D. WING, Dutchess Co., shows Cotswolds, among which is the ram "Golden Fleece," whose portrait was given in a late RURAL, and who sheared 20 lbs., and took the RANDALL prize at last State Sheep Show. J. AIKEN, Dutchess Co., shows the Cotswold rams "Tam O'Shanter" and "Souther Johnny," and some ewes. GEORGE BROWN, Dutchess Co., South Downs; C. E. WEST, several pens of Grades and cross-breeds; WALCOTT & CAMPBELL, N. Y. Mills, some imported Lincoln rams and ewes, and also Leicesters. Angora Goats are shown by Messrs. DURKEE, Alden, twelve in number. One imported buck sheared four and one half pounds of wool of hair, said to be worth four dollars per pound. We were informed that these goats will climb a rail fence or stone wall readily, but cannot surmount a board one. They are hard to confine in a pasture. W. B. DINSMORE also two pens of Angora's. PARSON'S, Monroe Co., has some Hampshire Downs.

There are also some famous Merinos. BUSH & PECK, Alexander, show the famous three-year-old ram "Kilpatrick." J. E. PARKER, Addison Co., Vt., exhibits, among others, the yearling ram "Young Addison," the two-year-old "Gen. Fremont," and four-year-old "Young Gold Drop." Also four rams, one sired by "Golden Fleece," two by "Prince of Gold Drop," and one by STICKNEY'S "Robinson" ram. E. D. MUNGER, Middlebury, Vt., shows the four-year-old ram "General Butler," JOHN BUTTOLPH, Vermont, shows the two-year-old ram "Morgan," and A. BALDWIN, Vermont, one pen of rams and one of lambs; WM. HALMON, Vt., the ram "Duck-leg," and H. E. BURWELL, Bridport, Vt., the ram "Silver Ring," of Hammond blood, whose fleece cleansed 6 lbs. and 12 ozs. TOWNSEND & TALMADGE, Pavillion, exhibit a large lot of fine wool sheep, the most famous of which is the yearling ram "Tariff," bred by HAMMOND and sired by "Green Mountain," dam by "Sweepstakes." WM. CHAMBERLIN, Red Hook, has several pens of Silesians—about fifty in all. JOHN SHELDON & SON, Moscow, show three rams; S. B. LUSK, Batavia, two pens of ewe lambs; H. M. BOARDMAN, Ontario Co., fifteen ewes and lambs, and JOHN A. THOMPSON and H. LEAPP, Clarence, show some fine ewe and ram lambs. This list comprises nearly all the exhibitors of sheep.

HORSES.

The crowd manifest very little interest in the horses. The display of this stock is only tolerable, and the dust impedes a good exhibition on the track. The stalls are built along the course, and visitors encounter the full force of the storm of dust, only to find in many cases the animals in their stalls, locked from observation. Aside from the display usually made on the track, the show of horses at our fairs is very unsatisfactory; for all chances of comparison and examination, the animals might as well be at home, and the department is worthy of but little attention from the people or press.

SWINE.

This kind of stock is numerously represented; it is, indeed, the best display of swine that has been seen at our State Fairs. It is noticeable that the principal exhibitors are from Jefferson Co., this State. A. C. CLARK, Henderson, Jefferson Co., shows 50 improved Cheshires, cross of the Yorkshires and Cheshires. The breed is famous for early maturity, small bones, thin skin, little hair, and profitable feeding qualities. S. P. HUFFSTATER, from the same county, has thirty-nine Yorkshires on exhibition, one pen of March pigs being very fine. T. T. CAVANAGH shows thirty-seven improved Cheshires, one litter of which, consisting of eleven, (one year and four days old,) will average nearly five hundred pounds each. All of these are kept for breeding, but are in good flesh for the butcher. JAMES BRODIE shows nineteen thorough-bred Yorkshires from imported stock. JAMES F. CONVERSE has also pure bred Yorkshires. W. B. DINSMORE has a large number of improved Suffolks, and C. E. WEST one Berkshire sow with a litter of small pigs. They are black in color.

POULTRY.

There is a fair show of fowls, some of them fine, but most of them having room enough for improvement. The principal exhibitors are LEWIS F. ALLEN, Black Rock; E. A. WENDELL, Albany; R. H. NICHOLS, Lockport; L. L. LORILLARD, Dutchess Co.; G. H. WARNER, New York Mills; and ROBERT BELL, Rochester. THOMAS GOULD, Aurora, has a fine litter of lop-eared rabbits—the ears on some of them measuring nineteen inches in length. Master J. S. HOLMES, Buffalo, has on exhibition in this department a cage of white cats, and there is also one of puppies. The cackling of the geese and crowing of the cocks announce the location of the poultry coops far and wide over the grounds, and their visitors are numerous.

BEE FOOD.—The Bee Journal has an article on the importance of a new plant found in the Rocky Mountain region, superior to anything hitherto known for supplying food for bees. It is denominated the American Bee Plant—*Cleome Integrifolia*—is a strong grower, much branched, like the common mustard plant, but its flowers are of a bright purple hue and last from midsummer till the frosty weather of autumn. The bees prefer this to all other flowers—not excepting the buckwheat—while the honey made from them is of a superior character.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

MANAGEMENT OF STOCK RAMS.

OUR spirited contemporary, The Western Rural, (published at Chicago and Detroit,) strongly endorses the views presented by us, Sept. 21st, under the head of "Fall and Winter Management of Sheep," and closes its remarks with these well put words:

"We have little doubt that less use of young, highly fed, and prematurely developed rams, coupled with ewes, unnaturally confined, and stimulated with highly nutritious food, and the keeping of the natural desire to have the flock constantly in show condition, subordinate to the desire to keep them in a healthful normal condition, would do much to diminish the number of untimely deaths of lambs, yearlings and breeding ewes."

We did not specifically include the proper management of stock *rams* in our article, having repeatedly done so on former occasions, and taking it for granted that all would understand that those causes which tend to health and strength on the one hand, or illness and debility on the other, must extend their effects to both sexes. We have, however, just received inquiries from a friend, who is a breeder of distinction, covering the very points in regard to stock rams alluded to by The Western Rural; and in reply we can but reiterate the views of that journal and our own. But it may be well to give some of the facts and analogies on which we found our opinions.

That animals to a certain extent inherit physical *conditions*, as well as form and other peculiarities of physical structure, from their parents and ancestors, is a fact established, we think, by common observation, and certainly sustained by all sound theory. Thus they inherit not only the *form* of the bones, muscles and other structures, but their actual *qualities*, such as density, firmness, and strength,—or, on the contrary, porosity, flaccidity and weakness. This is remotely shown by the phenomena of species. How could different species originate from a common stock—the one species strong, tough, and long-lived, the other weak, tender, and short-lived—if these characteristics (however induced) were not transmitted from generation to generation? They certainly are not first produced by external circumstances, such as feed, climate, treatment, &c., in each individual case. The Scotch Mountain sheep is *born* a hardier animal than the high-kept English Leicester, because at the moment of yeaning it can safely withstand a degree of cold or other exposure which would prove fatal to the Leicester lamb. Analogous facts are to be found among all classes of animals, including man.

The same fact is also proved by every day experience among men and brutes of the same species. The strong individuals are more likely to beget the strong, the weak to beget the weak. And if the parents are naturally strong and healthy, but have lost these qualities and conditions, by want of exercise and high keep, (what among human beings would be termed idleness and luxury,) their progeny fall off *somewhat* from the *natural* stamina of their parents, but usually not fatally, because beneficent nature constantly struggles to save and restore rather than to destroy. But if the indolence and pampering are kept up in the second generation, the stamina of *its* progeny goes down another step, and recovery becomes less easy,—and so on, under the operation of like causes, the process of degeneration continues to advance and become confirmed. We see this in human beings. No nation, or family, ever kept up a continued course of idleness and luxury without producing corporeal effeminacy and decay. History, trumpet-tongued, proclaims this in all ages. We are aware that physical analogies between men and brutes are, owing to moral and other causes which affect the former and not the latter, very defective. The comparison rarely goes "on all fours." But we love to resort to it, because, for obvious reasons, it brings home the lesson more convincingly and with more impressive effect to the majority of minds.

It is important to our argument to note the fact that the loss of physical integrity and stamina, occasioned by the above-named causes, does not necessarily include a loss of the proper *form* of the carcass or of any of its structures. Nay, the enfeebled animal may possess a much handsomer form—one perhaps indicating more profitable properties in some particulars—one even as consistent with absolute health. The Leicester is as perfect in the shape and arrangement of its organic structures as the Mountain sheep. The idle and pampered descendant of idle and pampered human ancestors, may present a more shapely and even better adjusted bodily machine than the toiling and frugal descendant of toiling and frugal ancestors—yet the latter is ten times as capable of withstanding hardship, ten times less subject to disease, and ten times more likely to recover from disease. The finer machine, though covered with veneer and varnish, is composed of soft, weak, badly seasoned wood—the coarser one, of solid oak and iron. And we repeat, that these *conditions*, as well as forms, are transmitted to posterity. The offspring of the wild Tartar, the roving Arab and the North American Indian, at the very moment of birth, as well as during the earliest periods of infancy—before they can have acquired any artificial toughening—encounter exposures and deprivations which would prove almost universally fatal to the offspring of the idle and luxurious classes of Europe. But we need not take extreme cases, or go so far, to prove our position. Every observing person knows that the children of the laboring and unpampered classes, in our midst, are not only brought forth more safely, both to mother and offspring—but that they *are born* stronger, less subject to disease, and better capable of resisting disease, than the children of the luxurious and idle.

If we apply these principles to the practical breeding of domestic animals, we of course believe that to obtain hardy and vigorous offspring the sire and dam should be *habitually* in a hardy and vigorous condition, and consequently be *habitually* kept free from pampering and accustomed to a sufficient amount of exercise. It is not enough that they be brought down to a moderate degree of mere fleshiness at the period of copulation and gestation, if the seeds of weakness and degeneration have been sown in their systems at other periods—say by a hot-bed process of extreme forcing while they were attaining their growth. Nor is it quite sufficient that the sire and dam should *always* have been properly treated. It is far better and safer that they also should be descended from *ancestors* that have been properly treated, so that no hereditary taint—no bad results of the bad management of progenitors—shall linger in their systems.

The fatness acquired on grass, without extra or stimulating feed, is not a pampered state—but too much fatness in the ram, even thus acquired, is not a favorable condition at the opening of the coupling season. It would be better—if breeders were willing to take that degree of pains—to keep it down not by starvation, which would reduce the strength, but by exercise, which would give firmness to the muscles and not permit any extra deposition of fat. It might be regarded as a very comical spectacle by some, to see the shepherd leading or driving his over fleshy ram four or five miles a day "for exercise"—to prepare him for the working season—yet there is no absurdity discovered in the groom doing this for a stallion under his charge, which perhaps did not cost half so much, and is not half so intrinsically valuable as the ram. And whether over fleshy or not, the ram should receive a degree of exercise *during* the coupling season. To take him from the pasture, keep him closely confined in a small pen or stall, and put him on higher feed—according to the too prevalent system—cannot but be injurious and unsafe. All well trained grooms give *daily* exercise to the stallions. We were told the other day of a very celebrated one (we forget his name) which was never allowed to serve mares, under any circumstances, until he had taken his morning exercise—a drive of several miles. It was a most salutary arrangement.

The second rule of the Dishley Society, established by Mr. BAKEWELL, was:—"No member shall give his rams, at any season of the year, any other food than green vegetables, hay and straw.*" Whether this great breeder had in this any other object than the ostensible one—because he regarded pampering rams as injurious for breeding purposes—we cannot say, for he most carefully, and, judged by American standards, most meanly concealed, as far as practicable, all his modes and processes of improvement. We can, however, imagine no other motive. That he regarded the fatness acquired by the *Leicester rams*, without pampering, as objectionable in the working season, distinctly appears from the statements of MARSHALL cited by YOUATT. He says:—"Before the season of business, the rams were reduced from the cumbrous state of fatness in which they were shown." In what manner reduced does not appear.

It is not probable, nay it is impossible, that American Merino rams should do the amount of work often required of them—serving 250 or 300 ewes in the season—without some grain feed. Mr. BAKEWELL'S rams covered only from 100 to 120, with only a single service each.† But an excess of grain feed to keep the ram fat and stimulate him to work beyond his natural capacity, must be regarded as prejudicial to his progeny and destructive to himself.

It is this, connected with close confinement, which is killing nearly all the most valuable Merino rams in the country before they have attained half the natural period of useful life. To demonstrate by tangible facts that the get, especially the later annual get of an overworked ram, are not so good in all particulars as the get of a moderately worked one, may be very difficult—but upon every sound principle of physiology, every analogy in nature, we can entertain no doubt whatever of that fact. And this should be especially true of ram tegs and yearlings, prematurely developed by high keep. There can be no such exhausting strain on the vital powers and on the constitution as an unbounded and artificially stimulated indulgence of the sexual passions during the immaturity of youth—it is equivalent to adding *debauchery* to idleness and luxury among human beings—and if *conditions* are inherited in any case, can we possibly expect the get of an animal thus prematurely forced and worn out and *burnt* out, to have all the vigor and excellence of the progeny of animals subjected to no such unnatural and ruinous treatment? The idea is preposterous.

There is another mode of overworking rams, which exhausts and injures them equally with too much work, without their accomplishing any extra amount of work. It is permitting them to serve ewes too frequently. It is better that a strong, full-grown ram should not be allowed to serve ewes (by single leap) oftener than once in two hours—a yearling once in three or four hours—and that the day's work be not extended beyond twelve hours. More work may not show on the carcass, or diminish alacrity, under abundant and stimulating keep,—but it must tell on the constitution.

Nothing probably will effectually correct the prevalent follies in the treatment of rams, or those follies in the treatment of ewes, commented on in our article of Sept. 21st, but experience, the best, but sometimes a tremendously expensive teacher. It is already giving its bitter lessons in feeble and diseased lambs, in the difficulty in raising tegs, in the premature deaths of costly and valuable rams, and in the reduced longevity and stamina of the flocks mismanaged in the particulars we have discussed.

* Youatt, p. 317.

† Marshall, cited by Youatt, p. 316.

Condensed Correspondence, Items, &c.

WINTER FEED.—ANDREW BLACK, Warkworth, Northumberland Co., Canada, writes us:—"I am one of the few farmers in Canada that patronise fine wooled sheep. My flock at present numbers about 250, 98 of them lambs. In former years I have fed, during winter, turnips, pea straw, and occasionally a feed of hay to my ewes and store sheep, and I have fed the lambs with shorts, turnips and hay. They have all done well, and my losses during the three years I have had them have been less than one per cent. per annum, and almost all by accident.

"Turnips with us this year have failed, and I have taken the liberty of writing to you to inquire what would be the best substitute for that root. Bran and shorts can be got for from $10 to $12 per ton. Peas are from 60 to 70 cents per 60 lbs.; or, we may say, one pound of peas to two of bran or shorts. Now, will you be kind enough through the RURAL to let me know which would be the most profitable to feed, and what quantity would suffice, along with hay and pea straw, to keep ewes in good condition, and whether bran or shorts should be fed wet or dry? I have always fed dry to the lambs."

The best substitute for turnips would be other roots—pumpkins and cabbages answering well in the season of them. The sheep being *accustomed* to green winter feed, we should be very anxious to keep it up, especially with ewes near yeaning time—and if unable to do so, should prefer not to have the lambs dropped until grass started in the spring. One or two root feeds a week are much better than none, in keeping the bowels in right condition, avoiding cholic or "stretches," and preparing the system for a proper secretion of milk. Turning the sheep for an hour or two each day, when weather and depth of snow permits, on a pasture not too closely gnawed down in the fall, would be a good substitute so far as available.

Bran, shorts and peas are all excellent feeds for sheep of all ages. Either of the former sprinkled with the latter (the peas comprising say a third or fourth of the bulk) constitute a *dry* feed which cannot be surpassed. It is not necessary to wet the bran, though it would perhaps be desirable to do so for ewes yeaning before grass, and deprived of their *accustomed* green feed. It is an approximately correct rule to say that equal weights of the different kinds of grain (including wheat bran) or pulse ordinarily fed to sheep, contain equal amounts of nutriment—*i. e., a pound* of bran, shorts, oats, corn, peas, &c., are equal as feed. This rule allows every person to decide what is the *cheapest* feed in his own market. We believe that bright, early cut hay, with bright, well cured pea straw, with occasional green feed, is good enough feed, without grain or pulse, for breeding ewes, which are of good age and enter the winter in good condition, up to six or eight weeks before lambing. After that we would give them daily a feed of grain or pulse equivalent to a gill of oats a head daily. Old or poor sheep and tegs had better receive that amount of grain or pulse all winter, with some accession, according to circumstances, after the 1st of February. We speak of *Merinos* kept for ordinary and wool growing purposes.

The Poultry Yard.

AMERICAN POULTRY SOCIETY.

A REGULAR meeting of the American Poultry Society was held at 37 Park Row, New York, Oct. 2, the President, Mr. JOHN J. FINNIE, in the chair. The committee on rooms and exhibition reported progress. Notice was given of motion to be made at next regular meeting to amend certain sections of the constitution and by-laws.

On motion, it was resolved that the subject of discussion at the next regular meeting be "The adoption of the Standard of Excellence as laid down by the London Poultry Club, and published by TEGETMERI, with such alterations as may be deemed advisable for this country." The Secretary was instructed to notify all members of the election, on Wednesday, Oct. 9, and urgently request their attendance. Also, to call their attention to the importance of attending the next regular meeting, Oct. 16, in view of the subject then to be discussed.

The Society then adjourned to Wednesday, Oct. 9, same hour and place.

FATTENING POULTRY.

THE London Field states that poultry, properly fed, will acquire all the fatness needful for marketing purposes, in a fortnight or three weeks at most. Their diet should be Indian, oat or barley meal, scalded in milk or water—the former is the best, as it will expedite the fattening process. They should be fed early in the morning, at noon, and also in the evening just before going to roost. A plentiful supply of pure fresh water—plenty of gravel, sliced cabbage or turnip tops. If the fowls are required to be very fat, some trimmings of fresh mutton suet may be chopped up and scalded with their other feed, or they may be boiled in milk alone and poured over the meal. This renders the flesh firmer than it otherwise would be. When fit to kill, feeding should be stopped for twelve hours or more, that the intestines may become comparatively empty.

THE BEST FOWLS.—THE editior of the Germantown Telegraph, discoursing of barn-yard fowls, gives it as his opinion that none of the imported varieties have proved as desirable or profitable as those the country already possessed in what are denominated "natives." This is certainly at variance with the commonly received opinion, but it may be true nevertheless. What say the Brahma and Silver Poland advocates to this estimate of foreign varieties of fowls?

EGGS FOR USE AND MARKET.—The Maryland Farmer says that hens will lay just as many eggs if kept from intimacy with the males as when allowed unrestricted liberty in this respect. It is added that eggs produced without impregnation keep much longer than with it. If this is so, it would be good policy, at the commencement of the season, to isolate all the hens but such as are designed for propagating purposes.

Rural Notes and Items

YIELD OF THE WHEAT CROP.—Now that the wheat crop of the whole country has been harvested, and to a large extent thrashed and measured, it appears that the yield will aggregate far less than was anticipated. The result proves that all parties overestimated the yield—the press, growers and dealers. The commercial papers almost invariably overestimate the prospective yield every season, and this year the Agricultural Department and Journals have, no doubt innocently, committed the same error. We think the yield will be full fifteen per cent. below the general estimate, which must make a vast difference when the crop of the whole country is taken into the account. Of course the prices of breadstuffs must advance rather than recede, and growers and others having wheat on hand will be likely to govern themselves accordingly.

The fact that the wheat crop of Great Britain also proves short will have a tendency to further augment prices in this country. A telegram just received from Washington says:—"Information has been received at the Treasury Department from an official source that the thrashing shows the crop of wheat in the United Kingdom of Great Britain to be short in quality as well as quantity. Competent judges, with whom the writer has conversed during the month of September, estimate that it will fall twenty per cent. below an average crop."

NEW YORK STATE FAIR.—The Annual Fair of the N. Y. State Ag. Society, held at Buffalo last week, is pronounced one of the most successful ever held in the State, when pecuniarily considered. The receipts aggregated $21,000, and of course the attendance must have been large to yield that amount to the treasury—though probably not greater than at some of the Fairs held in Rochester many years ago, when the price of single admission was only 12½ cents. But, although a pecuniary success, the Fair has not resulted to the credit and reputation of the Society in some respects. Buffalo, Rochester and other papers speak most disparagingly of the arrangements for and management of the Fair, and from their testimony, as well as that of our own reporters, we infer that the Society lost both popularity and influence by the course pursued,—a result we sincerely regret, and which must be deeply deplored by the farmers and other industrial classes of the State who have so long sustained and taken pride in the institution. In this and the next RURAL will be found sundry notes and comments by our associates and reporters who attended the Fair, and had an opportunity to see the elephant in all his proportions.

OHIO STATE FAIR.—This Fair, held at Dayton Sept. 23-27, was largely attended,—some 90,000 persons having visited the grounds during its continuance. There was no entrance fee for articles competing for premiums, no exhibitor's or family tickets sold, but a uniform entrance fee charged for each person visiting the grounds. Carriages and persons on horseback were excluded as were also all kinds of "shows." The show of horses, principally draft, was very large, and that of cattle very creditable. The sheep department was less full than common, but that of swine more than usually large. The Fair, as a whole, was a very successful one. The receipts were about $20,000—exceeding those of any previous exhibition.

ILLINOIS STATE FAIR.—This State exhibition commenced at Quincy, Oct. 1. There were about 4,000 entries upon the books at the close of the second day. There were 500 stalls filled with horses, and others in preparation; 150 pens filled with sheep, while many were outside waiting for pens to be made. Of cattle and swine there was the largest exhibition ever seen in the State. The show of machinery was very large. All the other departments are reported to have been superior in character and fullness.

INDIANA STATE FAIR.—There was a lively time at Terre Haute on the opening of the State Fair on the 1st instant. The entries were very numerous—those of stock alone numbering over 500. The horse display was very large and fine. The throng of people was great, showing that a successful exhibition was a foregone conclusion.

FATTENING HOGS.—Feeding hogs corn or corn meal is hardly a paying business, unless they are of the best breeds for laying on flesh, and have good care and shelter. How much more than ten pounds of pork can you make with a bushel of corn? Ten cents per pound will hardly make good the price of the grain in market. Wouldn't it pay better to make mutton?

SULPHITE OF LIME.—Last week we noticed the use of Sulphite of Lime in preserving cider. The types made us say *Sulphate* of lime. The two substances are wholly different in their action on fermenting liquids. The Sulphite is formed by the combination of sulphurous acid with lime, and the Sulphate by the combination of sulphuric acid with the same.

THE WHEAT FIELDS.—See that surface drains are cut and cleared. Protect exposed knolls by spreading a light coat of long manure on them before winter sets in; straw or leaves will answer. Perhaps a coat of plaster would pay if applied soon to wheat that has a small top.

IOWA STATE FAIR.—This Fair opened at Clinton, Oct. 1st, and at the close of the second day the books showed about 2,000 entries. Every department was represented, making a show superior to any previously witnessed at a Fair in that State.

AWARDING PREMIUMS.—The Livingston Republican censures the committee on horses, at the recent Fair in that county, for declining to award a premium to a certain horse because his owner had been awarded the first honors on several previous occasions.

FALL PLOWING.—Plow deep in the fall, and plow all you can. Leave the surface rough. Fall plowing is an effectual way to destroy many kinds of weeds. Plow the garden, at any rate, and barley and oat ground.

UNION FAIR—HEMLOCK LAKE.—The Agricultural Society comprising the towns of Livonia, Lima, Richmond, Canadice, Springwater and Conesus, will hold their next annual Fair at Hemlock Lake on Wednesday, Oct. 16th.

HORSE SHOWS.—The first of October seems to have been prolific in Horse Fairs. There was one at Kalamazoo, another at St. Louis, Mo., a third at Paterson, N. J., and a fourth one at New Haven, Ct.

SEEDING WITH TIMOTHY.—If spring seeded fields fail to show a fair amount of grass, it is not yet too late to harrow them well and sow timothy seed.

CHAUTAUQUA CO. FAIR.—The receipts of the recent Fair at Fredonia amounted to $2,270.

HORTICULTURAL.

HORTICULTURE AT THE STATE FAIR.

FRUITS AND FLOWERS.

THE inevitable "Floral Hall" tent of our State Ag. Society was very meagerly occupied with horticultural products until the second day. Then a light shower sent the water so freely into some parts of the tent that the exhibitors were disgusted, and the day after the clay dust settled so thick that the flowers lost their brilliance, and the fruit acquired a thick and uniform bloom, which was not, however, at all tempting to the appetite. There were not flowers enough to make a half-dozen bouquets, but there was a fine collection of exotics shown by Mrs. W. G. FARGO and Mrs. M. P. BUSH, Buffalo. These suffered greatly from the wind and dust, and on Friday morning we noticed that many of them were drooping from effects of the previous night's frost.

In the line of fruits, ELLWANGER & BARRY of Rochester had the most varieties of grapes—fifty-one, we believe—also a fine collection of pears. C. L. HOAG & CO., Lockport, N. Y., displayed some twenty-six varieties of grapes, among which were several plates of fine Ionas and Israellas,—being the best representation of these varieties we ever saw. J. CRAINE, Lockport, also had a fine lot of grapes. JACOB MOORE, Rochester, showed some very fine clusters of the Diana Hamburg, a promising hybrid. The Pleasant Valley Grape Growers' Association had some twenty varieties of grapes on exhibition, the samples being very fine. All of them were natives and comprised the leading and desirable kinds. In this collection, representing hundreds of acres of vineyard, there were some remarkably perfect clusters of Delawares; eight bunches of this variety were selected which weighed four pounds. The Catawbas from Pleasant Valley were also remarkably fine, being well ripened, and showing no indications of disease. It is noteworthy that the vicinity of Crooked Lake is about the only locality where the Catawba is extensively grown in which disease in some form has not devastated the vines or fruit. There it is yet perfectly healthy and vigorous. The Dianas in this collection were large and also high and uniformly colored. The Keuka, an accidental seedling, was shown by F. M. MCDOWELL, Wayne, Steuben Co. It is a black, early grape, apparently possessing qualities of considerable value, and may be desirable for making red wine. Some sixty or more varieties of apples, besides a large collection of pears, were shown by E. W. SYLVESTER, Lyons, N. Y. There were also some other collections of fruit, but we have mentioned the principal ones.

We don't wish our readers to imagine this show, at its great Annual Fair, a representation of the Horticultural Products of the Empire State. We have in fact no reason to infer that the officers of the Society intended or desired to call out this great and leading interest. No premiums were offered to elicit sharp competition, or, when gained, of a character to be highly estimated by the winner. True, there were a few dollars offered for the largest number of varieties of grapes shown, but there was no reference to quantity or quality, and the other premiums consisted chiefly of worthless pieces of paper, styled diplomas. We have heard, but will not absolutely vouch for its being a fact, that this premium list was made out some forty years since, stereotyped, and even to the present day the same venerable plate is used. At any rate progress in Horticulture is ignored, and we are inclined to think this premium list is not the only stereotype and out-of-date fixture of the State Ag'l Society that needs to be broken and remoulded to comport with the times we live in.

VEGETABLES.

A building was provided for this department, but the raised platform in the center broke down the first day under the weight of a smaller amount of vegetables than a corner grocery would ordinarily display, and the exhibition was then transferred to "Dairy Hall." It was simply a disgrace; and as for dairy products, as no one could imagine how any possible good could come to the producers by exhibiting butter, cheese, &c., we suppose they likewise could'nt see it, and acted accordingly. If liberal premiums had been offered, no doubt a fine show would have been the result.

DISCUSSION ON APPLES.

The question set down for discussion on Tuesday evening regarded the cultivation of the apple—whether its extension was profitable. Maj. H. T. BROOKS of Wyoming opened with a very interesting address, in which he argued for the proposition that four square rods of ground growing a well-cultivated, thrifty apple tree, will produce more food than if devoted to any other product. The success of the apple in Western New York was noticed, and the commercial and hygienic aspects of the subject ably treated. We hope to lay before our readers, in a short time, a full synopsis, if not the whole of this able essay.

O. C. CROCKER of Broome Co. followed Mr. BROOKS and maintained his position. In starting an orchard he thought more pains should be taken in planting the trees; the bed for them should be dug deep, the soil well pulverized. Lime mixed with the soil would aid to bring the trees into bearing three or four years sooner than if this material is absent. He would also deposit bones and manure in the holes and soil in which the young trees are to be planted. Had used ashes around the trees and found it prevented the working of the borer. The speaker thought that apples alone were not the entire profit of an orchard, as much can be grown in the intervening spaces of the rows, and if small fruits are grown there their yield might be worth more than that of the apples, and in his opinion such cropping would not injure the apple crop.

SOLON ROBINSON conceded that the profits claimed from the apple crop might be realized in three or four counties in Western New York, but he questioned if apple culture was invariably profitable. He believed apple orchards were fast disappearing from New England and Eastern New York. The apple trees, as a general thing, were dying off, and he thought we should be compelled to depend on some other fruit for a supply in the future. The cause of decay was inexplicable, and trees under all conditions went the same way. They begin dying at the ends of the limbs, and continue downward until the tree is used up. He observed that orchards standing in sod for a long time should not be plowed deep and manured; such treatment might be fatal to the trees. Ashes were one of the best manures for trees. He considered that the cause of the failure of apples throughout New England, &c., unknown; it was, however, a melancholy fact; the best cultivators lost their most thrifty trees.

O. C. CROCKER thought shelter was of great value. Instanced an orchard that had received protection from a forest on a hill; it was thrifty and bore well,—but the timber being cut off the apple trees failed. He believed in plowing old orchards deep, and manuring them; had done so with great success. The orchards were not failing in his region where well cultivated.

Mr. PARSONS, Niagara Falls, advocated good cultivation. Instanced two orchards planted at the same time; one had been cultivated, the other not, and the former, after the lapse of a few years, was three times the best.

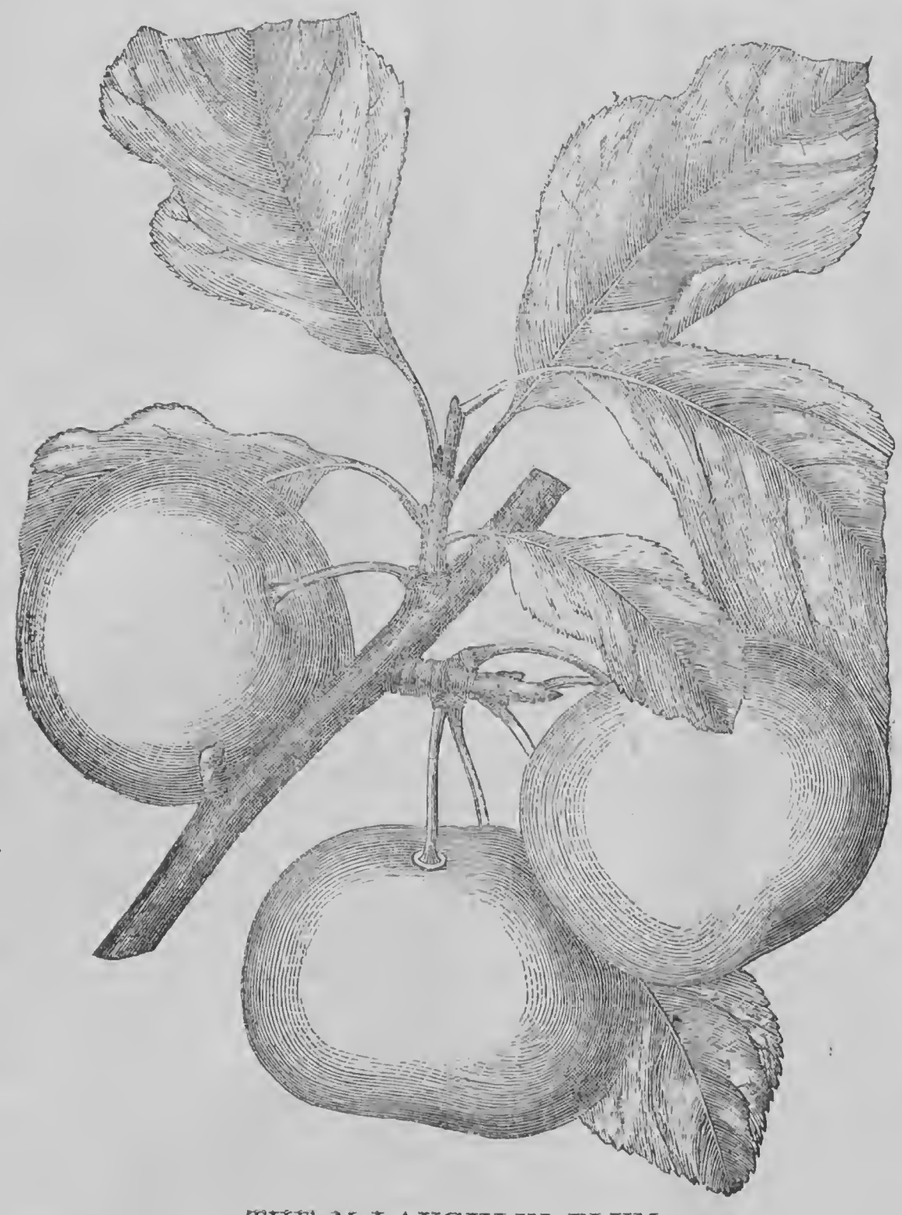
H. T. BROOKS said in Alleghany Co. there was no indication that apples were failing, nor did he believe they were in Western New York.

Mr. HAWLEY, Syracuse, said that in Onondaga Co. the peaches had failed and the apples were going the same way. He advocated shelter for orchards.

Mr. SHATTUCK, Chenango Co., described two orchards in his vicinity that had been pastured with hogs year after year, and the trees bore remarkably well and were healthy. Thought hogs, by eating the fallen fruit and rooting up the ground, greatly benefited an orchard.

Mr. QUIMBY, Monroe Co., thought it of great importance to select good trees in starting an orchard; would not plant those over four years old from the bud. Spoke in favor of enriching the ground, proper pruning, and good cultivation. Would not grow a crop near the trees, though part of the space between them might be given to other products. All his experience and observation taught him that orchards should be cultivated and not cropped. In reply to a question he said it made no difference, in his opinion, whether or not a tree was set in the same relative position to the points of the compass as it occupied in the nursery. He would plant trees two inches deeper than they stood in the nursery. He gave the preference to the Baldwin for profit.—G. F. W.

LAWNS.—One bushel of gypsum, two bushels of ashes and one bushel of fine bone dust, sown at the rate of forty bushels per acre, or one peck per square rod, is recommended as a fertilizer for lawns.



THE McLAUGHLIN PLUM.

WE herewith present our readers with an engraving of one of the best plums grown—the *McLaughlin*. In quality, it is acknowledged by all to be nearly equal to the *Green Gage*, and many prefer it to this old favorite. The tree is hardy, vigorous, and productive; fruit large and nearly round, usually a little flattened, as shown in the engraving. Skin thin and yellow, and dotted and marked with red on the sunny side, and covered with a thin bloom. Flesh dull yellow, rather firm, juicy, sweet and luscious, and adheres to the stone. It ripens usually about the first of September. It is considered one of our best market plums.

CURRANTS IN THE NEW YORK MARKET.

THE prices realized by the sale of currants this year have surprised even the dealers. Like all other fruits, at the beginning of the season, they promised to be, and were very abundant, and the dealers anticipated very slow sales and low prices, yet they were most agreeably disappointed. The first arrivals were about July 1st, but being quite green, did not sell very well, yet they brought eight cents per pound. In a few days ripe ones sold for 10 cents, but as the quantity increased prices fell to eight cents, and at that price they sold rapidly.

Afterwards the quantity increased to such an extent that the prices fell to four cents. One cause of this depression of prices was that the people were not ready to purchase for their winter's use, and finding them coming in freely and falling in prices, concluded that they would be very cheap, and consequently did not purchase. But the scene soon changes; for at this juncture the preservers began to purchase, and they cleaned the market out every day. This caused the prices to rise again to eight cents, and some very choice packages sold for 10 cents. All at once the ladies became very much interested in the currant trade; they found the prices rising, instead of falling to two or three cents per pound, as they anticipated, and expressed their indignation quite freely toward the dealers because *they* raised the prices.

Cherry currants have sold from 15 to 20 cents per pound, as per quality and style of packages. The demand for this fruit is increasing every year, and in a short time, I hope to see them take the place of so many of the small ones. Currants are sent to market in almost every style of package that can be found around the farm house—soap and boot boxes, bushel or half bushel baskets, anything so they do not have to buy. But all are not sent in this style, for some growers take as much pride in sending this fruit to market as any other; many make use of the same boxes that they pack grapes in, and are well paid for so doing. The fruit that is sent in the rough boxes and large baskets frequently receives such rough handling that the juice runs freely on arrival, and consequently is sold at a much lower price. NOW AND THEN.

New York, Oct., 1867.

HORTICULTURAL CLEANINGS.

Fallen Apples.—In passing several orchards lately we observed the ground under the apple trees, in many instances, literally covered with immature fruit—dropped prematurely in consequence of the action of the curculio. Leaving the fruit there was wrong, as it afforded the worms a chance to escape into the ground and prepare another generation of fruit pests. These apples, as they fell, should have been fed to the hogs or otherwise destroyed, aiding by so much the extirpation of the great enemy of the apple and other fruit orchards.

Planting Fruit Trees.—If fruit trees are to be planted out, the farmer should remember that something more is necessary to success than merely digging a post hole in the ground and crowding the roots of a tree into it. The ground upon which the rows of trees are to be planted out, should be plowed deep enough to allow the surplus water to drain off readily. If the ground is underdrained, so much the better; but if not, deep plowing will partially supply the defect. The soil should be aided by a free application of well rotted manure, enabling the rootlets to find ready sustenance as they reach out in search of it. Many young trees die out the first season after planting in consequence of the slovenly manner of putting them into the ground.

Rhubarb—Cultivation.—The fall season is a good one for preparing the ground and planting out rhubarb roots. This plant may be grown to great advantage on ground just appropriated to orchard purposes. The rhubarb serves to check the growth of weeds and keeps the ground moist about the roots of the young trees. But, whether grown among the trees or alone, it is important that the soil should be deeply stirred and thoroughly manured. The roots may be planted out as soon as the leaves have dropped. The stools should be so divided as to leave but one or two buds on each bunch of roots. The varieties most favorably known are Myatt's Victoria, Downing's Colossal, and the Linnæus, a variety also produced by MYATT. Every farmer's garden would be the better for the growing of a sufficient quantity of this palatable plant for domestic consumption, if nothing more.

Horticultural Notes and Queries.

GRAPE VINE PROPAGATION.—We are asked if Diana, Delaware and Ives Seedling vines can be propagated by cuttings or single eyes in the open ground without the use of frames. By cuttings all may be grown readily, though the Delaware is the most difficult to succeed with. Mr. GRIFFITH of North East, Pa., grows vines very extensively in the open air from single eyes by placing them thickly in beds and using mulch. The wood is cut close to the eye on the upper side, and left as long as possible on the other end. The mulch covers the beds to the depth of an inch or two.

GROWING THE WHITE THORN.—A "Subscriber" sends us from Clinton, Iowa, the following query:—"Will some reader of the RURAL please inform me through the columns of that paper how to propagate the common white thorn (known by school-children as thorn-apple bush) from the seed? What time of year should they be planted and how treated? Has any reader ever tried making a hedge of them? If so, what was the treatment and what the success?"

SEEDLING SWEET APPLE.—We are indebted to Mr. S. T. SHORT of Livonia, N. Y., for specimens of a very fine sweet apple—of good size, red, juicy, tender and fine-flavored. In season from Aug. 1st to middle of Sept. This apple originated in Livonia; has been called the Dan Apple, but it is proposed to call it the Livonia Sweeting. A good bearer, tree upright, &c. We think it worthy of cultivation.

Domestic Economy.

PUMPKIN, APPLE AND PEAR BUTTER.

A CORRESPONDENT of the Maryland Farmer gives his experience and practice in the manufacture of a kind of mock apple butter, which he says is an excellent article for family use, and more cheaply made than the old-fashioned apple butter. The ingredients for a five or six-pail kettle of butter are—2½ bushels of pared and sliced sweet pumpkins, the same amount of pared and cored Swaar apples, six quarts of molasses, two pounds of brown sugar; fifteen quinces and a shilling's worth of cinnamon. Having prepared the ingredients put a pail of clean water in the kettle and add the pumpkin. Boil till fine, then add the apples gradually and stir to keep from burning. When done fine, mix the molasses in warm water and add to the butter. Continue stirring for a time and then add the sugar. When cooked about enough, add the cinnamon, and the work is done. The pumpkin is made to supply the place of cider which now bears so high a price as to make the butter quite expensive. If there is a perceptible pumpkin taste the addition of a little more molasses and sugar will serve to destroy it while supplying a very desirable article for family consumption. When cider is used the pumpkin may be dispensed with, as it is only a substitute for that article.

GOOD PLAIN OLD-FASHIONED APPLE SAUCE.—Let your stock of apples be picked over several times in the course of the winter, and all the defective ones taken out. Let the good parts of these be pared, and if not used for pies, be made into apple-sauce. Boil it in a preserving-kettle, and to a pailful of cut apples put one sliced lemon. After the apples are tender add a pint bowl of brown sugar, and boil them gently fifteen minutes longer. Toward spring, when apples become tasteless, a teaspoonful of tartaric acid, dissolved in a little water, should be added to this quantity of apple.

VEGETABLE SOUP.—Take two potatoes and two onions, with two turnips, one carrot, a little parsley chopped fine, salt to the taste. Cut the potatoes in quarters, slice the onions, cut the turnip in quarters, slice the carrots. Put all in a stew-pan, with three pints of water, and salt to the taste. Boil it down to one quart. About fifteen minutes before it is done add the parsley. Strain it, and serve with light bread or toast. This is the receipt of a late eminent physician of Philadelphia.

TOASTED CHEESE.—Mix three ounces grated cheese, four ounces grated bread crumbs, two and a half ounces fresh butter, yolks of two eggs, well beaten, tablespoonful of cream, teaspoonful of mustard, salt, and pepper to taste. Put into a saucepan and stir over the fire till heated, then lay it upon toast and brown it.

BAKED RICE PUDDING.—Swell a coffee cup of rice; add a quart of milk; sweeten with brown sugar. Bake about an hour in a quick oven.

HEDGE PLANTS FOR FALL SETTING. 200,000 English White Thorn plants, large and well-rooted, $3 and $10 per thousand. Address
923-3t GEORGE BADMAN, Skaneateles, N. Y.

AVERAGE SIZE.

HEADQUARTERS FOR ORIGINAL
Kittatinny Blackberry Plants.

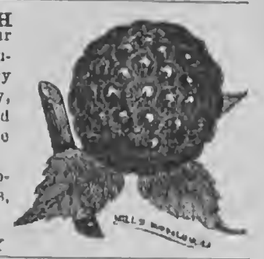
☞ Pronounced by the highest *disinterested* authorities in the country to be the
Best Blackberry Known.

Every wide-awake Rural reader will have it, as prices are low. Catalogue, with this year's testimony, ready Oct. 1st—10 cts. Price list gratis. Address E. & J. C. WILLIAMS, Montclair, N. J.

TO WINE GROWERS!—GRAPE SUGAR Syrup for sale by HARTMANN & LAIST, 47 East 2d St., Cincinnati, Ohio. Pamphlets sent free of charge upon application. 921

CLARK RASPBERRY.—We now have a stock of this new variety to offer. It is a very large, sufficiently firm berry, perfectly hardy, having stood 25 deg. below zero, unprotected and uninjured. It is the very best berry now under cultivation.
We also have the KITTATINNY and WILSON'S EARLY BLACKBERRY, and a General Assortment of NURSERY STOCK. Prices given on application.
BRONSON, GRAVES & SELOVER,
923-2teo Washington Street Nurseries, Geneva, N. Y.

IT DON'T SCRATCH You!—Or Tear Your Clothes—Davison's Thornless Black-Cap Raspberry is the best, as it is hardy, productive, EARLY and sweet, and it is a pleasure to cultivate it.



☞ For origin, description, prices, testimonials, &c., send for Circular, to
JOSEPH SINTON,
Angola, Erie Co., N. Y

FRUIT TREES AND SEEDLINGS—ALSO fine Grape Vines from *layers*, cheap. For Wholesale Price List, address
923-4t A. HAMMOND, Geneva, N. Y.

NEW RASPBERRY.—THE AUTUMN BLACK—a Seedling of great promise, producing a fine crop in July, and a bountiful one in the fall, continuing to fruit until winter. Plants by mail $1 each. Send for Descriptive Circular. H. B. LUM, Sandusky, Ohio.

WILSON'S EARLY AND KITTATINNY BLACKBERRY, PHILADELPHIA RASPBERRY,
And other SMALL FRUITS, at lowest prices, all warranted true to name, with good roots. Send for Price List. EDWARD REEVE, Medford, Burlington Co., N. J.

KILPATRICK.—This Celebrated Ram, (see engraving in Rural, Dec. 15, 1866,) bred by Hon. WM. K. SANFORD, of Orwell, Vermont, will stand for service of Ewes, at Alexander, Genesee county, N. Y. Season to commence Sept. 10th.
TERMS, $15.
KILPATRICK is of pure Infantado stock; sire Comet, dam by Cross Ram. We are near the depots of N. Y. Central and Erie Railroads, where ewes will be received without delay, by freight or express, and cared for free of charge for a reasonable time. For particulars inquire by letter or call and examine. We have for sale a few choice Ewes and Rams. BOWKER & BUSH.

HYDRAULIC RAMS
DEEP WELL
PUMPS,
FORCE PUMPS,
AND
POWER PUMPS,
MANUFACTURED BY
COWING & CO.,
Seneca Falls, N. Y.

AGENTS WANTED—In Every Town in the United States, to sell two Patent Articles that can be sold at every house. State, County and Town rights for sale. Samples sent by Express on receipt of fifty cents. All letters answered.
925-3t HOWES NORRIS & CO., Springfield, Mass.

ATTENTION!—All Wanting Farms—In a mild, healthy climate, good soil and pure soft water; 18 miles south of Philadelphia, at the Junction of the West Jersey and Cape May Railroads, and only 12 miles by turnpike to steamboat ferry. Improved farms, fruit and village lots for sale cheap. Circulars giving full information, sent free. Address
WM. ALBOTT, Glassboro', N. J.

WANTED—AN AGENT—One chance in each town, worthy the attention of an active business man, to take the agency for the sale of Bradstreet's Rubber Moulding and Weather Strips, applied to the sides, bottom, top and center of doors and windows. The sale is beyond anything ever offered before to an agent, and from $10 to $25 per day can be made. Send for agents' circular. The first who apply secure a bargain. Terms for Moulding, cash.
923-13t J. R. BRADSTREET & CO., Boston, Mass.

THE NEW GRAPE, SALEM.—This Grape is the most successful result of the Hybridizations originated and carried on by Mr. E. S. Rogers of Salem, Massachusetts, whose well known character for probity and modesty of statement affords every guarantee for the unsurpassed excellence of this, his favorite variety. His published statement is as follows:—"The subscriber now offers for sale for the first time, a new grape, named SALEM, from the place of its origin. This is a variety considered not only superior to any of the former well-known numbers, but also to any hardy grape at present before the public, combining, as nearly as possible, every quality desirable in an out-door grape, being one of the hardiest, healthiest and most vigorous of vines, and producing enormous crops of beautiful and high-flavored fruit. Like other well-known Kinds, Nos 4 and 15, this is a hybrid between a native and the Black Hamburg; bunch large and compact, berry large as Hamburg, of a light chestnut or Catawba color, thin-skinned, perfectly free from hard pulp, very sweet and sprightly, with a most exquisite aromatic flavor, not equaled by any other out-door grape for wine or table; as early and hardy as Delaware or Hartford, having never failed to ripen its fruit, in the most unfavorable season, for the past six years.
Taking all its qualities into consideration, earliness, hardiness, and great vigor of vine, size and quality of fruit, it is pronounced by the best judges who have tried it, to have no equal among all the numerous varieties now before the public; and I can, with confidence, recommend it as the best of all my collection, and now offer it for the first time." E. S. ROGERS, Salem, Mass.
Salem, February, 1867.

NOTICE.—The subscriber would here state that he has disposed of his entire stock of vines and wood of the Salem Grape to J. L. WARING of "Amenia Vineyard," Amenia, Dutchess Co., N. Y., to whom all orders for the same must be hereafter addressed. E. S. ROGERS.
Salem, Mass., March 2d, 1867.

In addition to the high merits of the "Salem," the undersigned is able to say, from personal experience and knowledge, that the claims put forth in favor of the Salem are in no respect exaggerated. During the present season it has made uniformly a most vigorous and healthy growth, and proved itself impervious to mildew, where vines of most of the new and high priced varieties, growing by its side and receiving equal care in culture, have been seriously affected. It is believed that as a paying grape, especially for market purposes, the Salem is without a competitor among out-door varieties.
J. L. WARING.

I take pleasure in announcing that, since purchasing the Salem Vine, I have disposed of my Vineyard and Propagating Establishment, including the entire stock of the Salem, to JAMES A. IRIQUA, Esq., who will hereafter carry on the business with every facility for its successful prosecution. J. L. WARING.
Amenia, N. Y., August 21, 1867.

Having purchased the above, and having secured the services of a most experienced and successful Propagator, with able assistants, I design to make the growing of vines for sale a specialty, and hope to furnish the public with a class of plants unsurpassed in quality, and in every instance warranted up to standard and true to name. Price List and Engraving sent on application to
922-4t JAMES A. IRIQUA,
August 21, 1867. Amenia, Dutchess Co., N. Y.

ANGEL-DARLINGS.

BY A. A. HOPKINS.

We've a little one up yonder
Somewhere 'mid the stars.
Though we may not see her clearly
Through our being's bars;
When the evening dropped its curtain
Round about the day,
Silently she wandered from us
Where the glory lay!

Sometimes still we hear the patter
Of her little feet;
Sometimes still we hear her prattling—
Never half so sweet;
But 'tis when the earth is distant,
And the stars are near,
And we hear the angel-harpers
Playing sweet and clear!

Oftentimes we can but wonder
If our darling knows
How across the shadowy distance
Still our loving flows;
Can but vaguely ask the question
"Does she love us yet?
Or do little ones translated
All of earth forget?"

Then a spirit seems to answer—
"When the baby creeps
From the hearthstone up to Heaven
Not an angel weeps,
But the rather each and every
Angel does beguile
Winsome little prattling darlings
Skyward all the while!

"And the sweetest music floating
O'er the valleys fair,
Is the prattle of the darlings
That have wandered there:
And the cherubs, ne'er forgetting
Those who lonely stay,
Call to them across the distance,
Fondly, day by day!"

Blessed little angel-prattler,
May we ever hear
Your soft baby-accents calling
To us sweet and clear!
May the vision e'er be with us,
Blessing evermore,
Of our angel-darling playing
On the golden floor!

ANECDOTES OF VICTORIA.

Grace Greenwood contributes to the first number of the Weekly Advance the following, among other anecdotes of Victoria:

Another little anecdote which shows her simplicity of character and shrewdness of perception, was told me by a gentleman who once enjoyed the pleasure of a very informal interview with her, under rather peculiar circumstances. My friend, Mr. W——, is a person of very artistic tastes—a passionate picture lover. He had seen all the great paintings in the public galleries of London, and had a strong desire to see those of Buckingham Palace, which, that not being a "show house," were inaccessible to an ordinary *connoisseur*. Fortune favored him at last. He was the brother of a London carpet merchant, who had an order to put down new carpets in the state apartments of the palace—and so it chanced that the temptation came to my friend to put on a workman's blouse, and thus enter the royal precincts, while the flag indicating the presence of the august family floated defiantly over the roof. So he effected an entrance, and when once within the royal halls, dropped his assumed character, and devoted himself to the pictures. It happened that he remained in one of the apartments after the workmen had left, and while quite alone the Queen came tripping in, wearing a plain, white morning dress, and followed by two or three of her younger children, dressed with like simplicity. She approached the supposed workman, and said:

"Pray can you tell me when the new carpet will be put down in the Privy Council Chamber?"—and he, thinking he had no right to appear to recognize the Queen under the circumstances, replied, "Really, madam, I cannot tell, but I will inquire." "Stay," she said, abruptly, but not unkindly, "who are you? I perceive that you are not one of the workmen."

Mr. W—— blushed and stammered somewhat, yet made a clean breast of it, and told the simple truth. The Queen seemed much amused with his ruse, and for the sake of his love for art, forgave it, then added, smiling, "I knew for all your dress that you were a gentleman, because you did not 'your Majesty' me. Pray look at the pictures as long as you will. Good morning. Come chicks, we must go."

Another anecdote, illustrating Victoria's admirable good sense and strict domestic discipline, came to me directly from one who witnessed the occurrence. One day, when the Queen was present in her carriage at a military review, the Princess Royal, then rather a willful girl of about thirteen, sitting on the front seat, seemed disposed to be rather familiar and coquettish with some young officers of the escort. Her Majesty gave several reproving looks without avail—"winked at her, but she wouldn't stay winked." At length, in flirting her handkerchief over the side of the carriage, she dropped it—too evidently not accidentally. Instantly two or three young heroes sprang from their saddles to return it to her fair hand, but the awful voice of royalty stayed them. "Stop, gentleman!" exclaimed the Queen, "leave it just where it lies. Now, my daughter, get down from the carriage and pick up your handkerchief." There was no help for it. The royal footman let down the steps for the little royal lady, who proceeded to lift from the dust the pretty piece of cambric and lace. She blushed a good deal, though she tossed her head saucily, and she was doubtless angry enough, but the mortifying lesson may have nipped in the bud her first impulse towards coquetry. It was hard, but it was wholesome. How many American mothers would be equal to such a piece of Spartan discipline?

HEAD DRESSES OF AFRICAN NATIVES.

On my arrival at Igoumbie I had noticed how curious the head-dresses of the women were, being so unlike the fashions I had seen among any of the tribes I had visited. Although these modes are sometimes very grotesque, they are not devoid of what English ladies, with their present fashions, might consider good taste; in short, they cultivate a remarkable sort of chignons. I have remarked three different ways of hair-dressing as most prevalent among the Ishogo belles. The first is to train the hair into a tower-shaped mass, elevated from eight to ten inches from the crown of the head; the hair from the forehead to the base of the tower, and also that of the back part up to the ears, being closely shaved off. In order to give shape to the tower, they make a frame-work, generally out of old pieces of grass-cloth, and fix the hair around it. All the chignons are worked upon a frame.

Another mode is to wear the tower, with two round balls of hair, one on each side, above the ear. A third fashion is similar to the first, but the tower instead of being perpendicular to the crown, is inclined obliquely from the back of the head, and the front of the head is clean shaven almost to the middle. The neck is also shorn closely up to the ears. The hair on these towers has a parting in the middle and on the sides, which is very neatly done. The whole structure must require years of careful training before it reaches the perfection attained by the leaders of Ishogo fashions. A really good chignon is not attained until the owner is about twenty or twenty-five years of age.

It is the chief object of ambition with the young Ishogo women to possess a good, well-trained and well-greased cover of hair of the kind that I describe. Once fixed, these chignons remain for a couple of months without requiring to be rearranged, and the mass of insect life that accumulates in them during that period is truly astonishing.—*Du Chailen.*

A WORD TO MOTHERS.

Each mother is a historian. She writes not the history of empires or of nations on paper, but she writes her own history on the imperishable mind of her child. That tablet and that history will remain indelible when time shall be no more. That history each mother shall meet again, and read with eternal joy or unutterable grief in the coming ages of eternity. This thought should weigh on the mind of every mother, and render her deeply circumspect, and prayerful and faithful in her solemn work of training up her children for heaven and immortality.

The minds of children are very susceptible and easily impressed. A word, a look, a frown may engrave an impression on the mind of a child which no lapse of time can efface or wash out. You walk along the sea shore when the tide is out, and you form characters, or write words or names in the smooth white sand which is spread out so clear and beautiful at your feet, according as your fancy may dictate; but the returning tide shall in a few hours wash out and efface all that you have written. Not so the lines and characters of truth or error which your conduct imprints on the mind of your child. There you write impressions for the everlasting good or ill of your child, which neither the floods nor the storms of earth can wash out, nor Death's cold fingers erase, nor the slow-moving ages of eternity obliterate. How careful, then, should each mother be in her treatment of her child! How prayerful, and how serious, and how earnest to write the eternal truths of God on his mind—those truths which shall be his guide and teacher when her voice shall be silent in death.—*Phrenological Journal.*

OUR SPICE BOX.

Pouts are better in water than on pretty girls' lips.

Love in a woman's life is a history; in a man's an episode.

At what season did Eve eat the apple? Early in "the fall."

What are the best kind of agricultural *fairs?* Farmers' daughters.

Why do ladies like to visit the sea coast? Because it relates to marry time.

Why is a fascinating woman like a successful gambler? Because she has such winning ways.

A young lady at Long Branch is reported as "clothed in laughing eyes and a bewitching smile."

Ladies who give away their hearts should not be censured for being heartless. They can't be anything else very well.

If a woman wants to keep her husband at home let her send him to the top of the house, and take away the ladder.

What letter of the alphabet does pretty Mary Lee most admire. The letter *r*, of course because it makes Mary marry.

A writer declares that, under the present system of education, "daughters are becoming elegant cyphers." A figure of speech.

The best cure for the heart-ache is to take another suffering with precisely the same complaint. Two positives make a negative.

Young Lady—"Going to make a flower bed here, Smithers? Why, it'll quite spoil our croquet ground!"

Gardener—"Well, that's your pa's orders, Miss. He'll hev it laid out for 'orticultur, not for 'usbandry."

Choice Miscellany.

Written for Moore's Rural New-Yorker.

A MEMORY.

BY RUFUS W. SMITH.

I.

The brown leaves flutter in little flocks,
Like frightened birds, from under the trees,
And rustling adown the forest aisles,
Play hide-and-seek in the autumn breeze.

II.

Under the evening's purple and gold,
I walk alone by the silent stream—
Through dim old paths by the river's rim,—
And live glad summers in one sweet dream!

III.

The wind has murmurous voices now,
Soft as the sounds of the far off sea:
And in the lulls of its timeless tunes,
I dream that a sweet voice calls to me.

IV.

I wait, and listen with folded hands—
I hear no voice that is meant for me,—
I wait, and listen with patient hope—
And yet I know that it may not be!

V.

For where two shadowy hemlocks stand,
And the woodland path grows vague and dim,
The dry leaves flutter in little flocks
Around a grave by the river's rim.

Cleveland, O., Sept. 27, 1867.

Written for Moore's Rural New-Yorker.

STRAWS.

"Straws show which way the wind blows." Whether some other material would not answer the same purpose, and by what process of reasoning or labor of investigation, and by whom so important a truth was arrived at, it is not worth while to inquire—the fact is undisputed. The structure of the proposition would indicate that it is the result of observations made with reference to the material world. Some mechanical genius, doubtless, knowing that all motion is the result of force applied, and observing, as he chanced to be in a thoughtful mood, that a number of straws took the same common direction in space, proceeded to trace the effect to the cause, and by a very easy and natural transition decided that the moving force must act in the same direction—hence our text. But this history of its origin is merely conjectural, and has nothing whatever to do with the subject.

The benefits derived in the material universe from the knowledge of this law and its practical applications to the arts and sciences, are doubtless very great, but it is in the political world that the value of straws is never underrated. There the flight of every individual specimen is carefully noted, its bearings taken, a record made and sent to the press. Nothing can be more reliable. Indeed, one would think that the now-a-day editors fancied themselves Hebrew bondsmen under Egyptian task-masters, and their newspapers nothing less than bricks. A vote is taken in some ladies' seminary, or an emigrant car, and the result is called a straw, and shows conclusively the inclination of the popular mind, virtually decides the contest and renders a formal election wholly superfluous. Fortunate is it that straws are not ballots.

Morally, intellectually, straws assume a different character. Here the object of our investigations is not matter, not mind, but the *manifestations* of mind and matter. We handle not realities, but appearances. We arouse all our powers, we put forth our mightiest energies, construct formidable batteries, arm ourselves with our strongest weapons, and proudly make our attack. We think we are storming the citadel of Truth—we suppose we are scaling her walls—we imagine her entire domains are open before us—we already triumph in victory—and lo! we grapple with straws. We find them scattered here and there, we eagerly seize them, study their texture, examine their composition, note their length and direction, and forthwith pronounce upon the size, form and quality of the grain. But while we may thus approximate to the truth, we never arrive at tangibilities. The ocean of luscious grain which lies just over the boundaries of mortal vision, is not to be harvested by the puny sickle of human reason. Not a single kernel of the precious truth can be grasped by man's tiny comprehension. Truth, in its essence, is inapproachable as the eternal throne of God. Our weak vision is dazzled by the reflected rays from her veiled effulgence; our finite minds cannot cope with things actual; our feeble understanding staggers with the weight of a straw.

The theologian clasps reverently his Bible and says, "Here have I revealed to me the whole truth of God. Herein is contained His holy will, hereby has He made known His purposes, herewith shall I become wise in all heavenly wisdom." But how is it that he is presently engulfed in disputations with his brother divines concerning doctrines, creeds, forms and ceremonies? Why contends he so earnestly that one passage be explained in this manner, that another be interpreted thus, and a third thus? Why does he insist so strenuously upon certain renderings for certain words? Why does he establish so carefully and guard so jealously his own belief, lest it be overturned? Has our Father spoken to us, like the Delphic oracle, in ambiguous language? Are His holy words susceptible of a double meaning? What then? Is the divine revelation a defective one? Is it a failure? Rather, why will vain, boastful man think to bring down within the range of his narrow comprehension the vast designs of the Almighty one, to make the thoughts of Omniscience his own? Why foolishly imagine himself able to compress within the compass of his puny understanding the stupendous plan of a world's salvation? Does he suppose that the whole of the divine economy is laid open to his inspection? Why not accept thankfully that knowledge necessary to lead to eternal life, and leave the rest to be unfolded by the Divine Teacher in celestial Bible-classes?

So, then, with all his boasted powers, his giant intellect, his mighty achievements, man is but a Lilliputian, tugging away all his lifetime under a burden of chaff, stumbling over straws, fighting with the shadows and semblances of things that are, vainly seeking the light, not knowing that himself is blind. How glorious will the awakening be, when the scales shall have fallen from our eyes, when these earth-bonds shall have been sundered, when this mortal shall have put on immortality, and our unfettered spirits shall soar forever in the pure sunlight of God's truth!

Sept. 19, 1867. L. R. Mellie.

A BACKWOODS EXQUISITE.

Once as I was traveling by sleigh in a comparatively settled part of the country, a young man who was driving rapidly in the opposite direction pulled up to greet my companion, with whom he was acquainted. He was coming to the town, from his residence in the heart of the woods, thirty or forty miles from where we met him, and certainly I was astonished—being then newly arrived in the country—at the extreme slenderness of the outfit of one who was bound to do the "man about town" for a few days, and that in mid-winter, too. He was in his shirt-sleeves, having no coat with him whatever. His black-velvet waistcoat, now foxy and threadbare with much use, might once have been a *chef d'œuvre* from the hand of some London tailor whose gossip was of Guardsmen and their measurement. The rest of his costume consisted of a pair of buckskin breeches fastened at the knee with pearl buttons, heavy woolen stockings and pegged boots, the latter indebted for their luster more to the rind of pork than to the blacking brush.

Singularly incongruous with this get-up was the kid-gloved hand with which he removed the black pipe from his mouth; nor was his straw hat exactly the sort of head-dress that one might have expected to meet with during a Canadian sleigh-ride. But it was only when he rose to his feet on the little rough sleigh, three feet by two, on which he had been sitting, that the full splendor of his wardrobe became revealed to us; for then he threw around his shoulders a magnificent cloak, made, I think, of some kind of Siberian fur, and which, folded up, had served him for a cushion on his journey. I frequently afterward met this exquisite of the backwoods, wrapped in that showy mantle, walking in the streets of the little wooden town, where his appearance, so strange to me, did not seem to excite any particular comment. In those parts men would often come into the towns, in winter, dressed in blanket coats, with the rather inappropriate accompaniment of white duck trousers and straw hats. Residents did not appear to see anything eccentric in this; but in the mind of a stranger a sense of the ludicrous was naturally excited by it.—*Atlantic Monthly.*

EPIGRAMS.

The Boston Post gives publicity to the following dialogue about the vexed question of the weather:

"I think," said Isabel, "the tearful sky
Is weeping sadly—only hear it sigh;"
"Do not," said Quilp, "commiserate its woes;"
It does not weep—it only blows—it snows."

It were not difficult nor altogether unpleasant to solve such chess problems as this. (Two pieces on the board; John to move, and mate in two moves:)

"John moves his arm round Julia's neck;
She moves one square and whispers—'Check!'
He, nothing daunted, moves right straight
His lips to hers, and calls out, 'Mate!'"

The Post thus embodies Bonner and his newly purchased horse Dexter:

"Fifty thousand for Dexter!" a cavalier cries.
"Excuse me—let people believe it who can!"
"'Tis nothing surprising," a crony replies,
"For Bonner was always a Dexter-ous man!"

A soldier in the hospital, who had his leg amputated, addressing the detached part, thus turns the calamity to his advantage:

"Strange paradox! that in the fight
Where I of thee was thus bereft,
I lost my left leg for 'the right,'
And yet the right is the one that's left!"

This points out a musical error on the part of the performer:

"All out of tune Hal sung the song,
Then played the flute—till, heaven knows!
Methought 'twas very, very wrong
For Hal to 'go from *words* to blows!'"

This gives the exact difference between two popular watering places:

"Saratoga and Newport—you've seen 'em,"
Said Charley, one morning, to Joe;
"Pray tell me the difference between 'em,
For, bother my wig, if I know!"
Quoth Joe, "'Tis the easiest matter
At once to distinguish the two—
At the one you go into the water,
At the other it goes into you!"

Coleridge, in one of the most beautiful of similes, illustrates the pregnant truth—that the more we know, the greater our thirst for knowledge, and the more we love, the more instinctive our sympathy: "The water lily, in the midst of waters, opens its leaves and expands its petals, at the first pattering of the shower; and rejoices in the rain drops with a quicker sympathy than the parched shrub in the sandy desert."

Such is the blessing of a benevolent heart that, let the world frown as it will, it cannot possibly bereave it of all happiness, since it can rejoice in the prosperity of others.

Sabbath Reading.

A REFLECTION.

BY DR. J. G. HOLLAND, IN "KATHRINA."

O! not by bread alone is manhood nourished
To its supreme estate!
By every word of God have lived and flourished
The good men and the great.
Ay, not by bread alone!

"O! not by bread alone!" the sweet rose, breathing
In throbs of perfume, speaks;
"But myriad hands, in earth and air, are wreathing
The blushes for my cheeks.
Ay, not by bread alone!"

"O! not by bread alone!" proclaims in thunder
The old oak from his crest;
"But suns and storms upon me, and deep under
The rocks in which I rest.
Ay, not by bread alone!"

"O! not by bread alone!" The truth flies singing
In voices of the birds:
And from a thousand pastured hills is ringing
The answer of the herds;
"Ay, not by bread alone!"

O! not by bread alone! for life and being
Are finely complex all,
And increment, with element agreeing,
Must feed them, or they fall.
Ay, not by bread alone!

O! not by love alone, though strongest, purest,
That ever swayed the heart;
For strongest passion evermore the surest
Defrauds each manly part.
Ay, not by love alone!

O! not by love alone is power engendered,
Until within the soul
The gift of every motive has been rendered,
It is not strong and whole.
Ay, not by love alone!

O! not by love alone is manhood nourished
To its supreme estate;
By every word of God have lived and flourished
The good men and the great.
Ay, not by love alone!

GOD'S GREETING.

God greets many a one who never observes, and many more who never thank him for it. When, for instance, His sun wakes thee early to the enjoyment of another day of life and health, and when, at eventide, thine eyes close in peaceful slumber, it is because God has bid thee "Good-night;" and when thou sittest down to a well-spread table, with a good appetite, it is God's gift for thy good. When again thou art enabled to discover, timely, some threatened danger, what is it but God saying to thee, "Take heed, my child, and turn back before it is too late?" When, on some early summer morning, thou walkest about amid the blossoming of flowers and the singing of birds, and thy heart feels light and joyful, is not God saying to thee, "Welcome, heartily welcome to thy palace garden!" And when, all of a sudden, perhaps, without thy knowing how or why the heart is moved to good thoughts, and thou beginnest to feel sorrow for having done wrong, and a desire to do better, is not thy Heavenly Father saying to thee, "O, grieve not my Holy Spirit which now stirs within thee?"

Or, when thou passest by a new-made grave, and a sudden shudder of anxious forebodings runs cold through thy frame, is not God greeting thee with the fatherly admonition, "Remember now thy Creator in the days of thy youth, while the evil days come not, nor the years draw nigh in which thou shalt say, 'I have no pleasure in them,' for there is neither wisdom nor device in the grave, whither thou art fast hastening?" O, yes, these are God's greetings, "whether we will hear or whether we will forbear." But if we hail them not with pleasure in time, we shall remember them with vain regret in eternity.—*From the German.*

POWER OF GOD'S PRESENCE.

Consider what God is in his mature love, possessed of joy, crowned with peace perpetual. Transfer all this into a human soul, into your soul; let them abide among the sensitive receptivities of your better nature, every faculty lovingly open to his influence, and it shall be a living epistle. No wonder if you be changed into his likeness, nay, his very image, and the blessed attributes of God become the blessing attribute of man. Stocks cannot bind these feelings then; they fly abroad in song. Dungeons cannot darken them; they make that dungeon flame with light. Their genial warmth dwarfs the fierce furnace heat to pleasant coolness. They join in angel company when lions stand around. They are never more exultant and triumphant than when man's last enemy cowers to see the indwelling presence and power of Him who alone has conquered death.

WHAT IS THE HAPPIEST SEASON?

At a festal party of old and young, the question was asked, which season of life was the most happy? After being freely discussed by the guests, it was referred for answer to the host, upon whom was the burden of four score years. He asked if they had noticed a grove of trees before his dwelling, and said:—"When the spring comes, and in the soft air the buds are breaking on the trees and they are covered with blossoms, I think *how beautiful is spring!* And when the summer comes and covers the trees with its heavy foliage, and singing birds are among the branches, I think *how beautiful is summer!* When autumn loads them with golden fruit, and their leaves bear their gorgeous tints, I think *how beautiful is autumn!* And when it is *sere* to winter, and there is neither foliage nor fruit, then I look up, and through the leafless branches, as I never could until now, I see the *stars* shine."—*Evening of Life.*

Educational.

SURFACE AND DEPTH.

Length and breadth are often very desirable properties. There are times when they are all that is needed—when superficial measurement answers every purpose. But not always are they enough. You may have a shallow lake in which there is more water than in the deep river, but the river is much the best for navigation. Your lake is a beautiful expanse—a perfect liquid gem—we grant, and serves a capital turn for floating pleasure-craft; but it is worth absolutely nothing for practical business. So with nearly everything, and especially so in regard to education. Surface knowledge may glitter and dazzle most brilliantly; if there be no depth it is of little account.

Depth of knowledge does not, necessarily, imply profound erudition. At least we shall not use the phrase with that meaning. One must master many things before he is profoundly erudite; he may master but one thing, and still go into the depths. In this sense, then, the child may sound the depths of knowledge; in another, and broader sense, the gray-haired philosopher has never sounded them, nor can he ever hope to.

And it is just this matter of leading the child into the depths, in the sense in which we use the word, that we wish to allude to particularly. The idea which many teachers seem to entertain, that young minds are merely receptacles, into which a certain amount of information is to be put every day and then left alone, is a very injurious one. To follow out the process, in accordance with the idea, is but to lumber up the minds with a mass of dead accretions. There is no expansion, no lively growth. Knowledge should stimulate thought. Unless it is made use of, by whoever imparts it, as such stimulant, the full mission of the teacher is unfulfilled. More than many imagine, does the young mind long for the Why and the Wherefore. A mass of facts—a bundle of dry accretions—pages of history, of philosophy, or of logic, laid away in the memory and carefully labelled—may satisfy the parents, and may win for the teacher their commendation as a good instructor, but if with them there never is mingled any full solutions, any clear explanations—if the mind is not led down into the depths of whatever may be treated of—the child is not satisfied. Or if there be satisfaction, all around, it is a satisfaction born of that which ought not to satisfy. With no encouragement given to the child's questioning spirit, it soon ceases to manifest itself. Thereafter, bare statements are all he expects, and very soon he cares for nothing more. Declare to him any simple fact whatever, and he at once accepts it as such, unhesitatingly, and with never a thought of query. And thus is his after-thought and life materially moulded. For the early habits are strong ones. A lesson of repression,—a curbing of the inquiring disposition—in the childish years, lasts through a lifetime.

In the common school, as well as in later study, may thought probe more deeply. All over our land, in every country school house, there are little questioners who want to go deeper into simple every-day philosophies than they are able to go alone. It should be a pleasure to the teacher to take them by the hand and walk with them as far soever as he may, in the curiously winding paths of their queryings. They may want to go beyond his own depth, now and then, and may ask when he literally cannot answer. But until they do this, let him be not chary of patient replies, couched in language adapted to their understanding.

The teacher well knows how, in his daily routine, much of his education is being continually turned over and enlivened. By this means, and by numberless new applications, fresh thoughts are evolved, and he looks further into the different subjects under consideration. In like manner ought he to endeavor, day by day, to refresh whatever of knowledge may be imparted to the young,—to quicken the thought, and train it to a deeper analysis. We know many believe that to answer childish queries, or to give to the young learner reasons for specific treatments, is labor lost. In the few cases it may be so; in the many it is not. To do it may at times task the teacher's patience, but it will be giving and developing a knowledge that shall possess more than superfice; and it will encourage a spirit of inquiry that shall by-and-by be a power in searching out the truth.

EDUCATION.—CLASSIC AND PRACTICAL.

Sir J. F. W. Herschel, an eminent man, in a communication to the English Public School Commissioners, gives his views as follows:

"I should consider any system radically faulty which should confine itself to the study of the classical languages, and to so much of Greek or Roman history as is necessary to understand the classical authors as its main and primary features; and should *reluctantly* admit a *minimum* of extra-classical teaching. Such a system must necessarily suffer the reasoning faculty to languish and become dwarfed for want of timely exercise. In those years, from fourteen to twenty, it is quite as important that youths should have placed in their hands for study, books which may initiate them into the domain of consecutive thought as books in classical literature. I would not depreciate grammar, prosody, and all that classic scholarship includes. But Greek and Latin is bought too dear, if at the sacrifice of any reasonable prospect of improving the general intellectual character, by habits of concentrated thought, and by induction, investigation and generalization, while the mind is yet plastic and impressible."

BUREAU OF EDUCATION.

This new department at Washington has in view national statistics, wide information and broad plans for popular education. It is authorized by act of the last Congress, and is now organized so far as possible. Congress was enthusiastic to adopt this plan and to show its appreciation of the educational interests of the land; but it forgot to make an appropriation to render that enthusiasm practical. Dr. Barnard is, perhaps, the best man for the place; and his eminent attainments and zealous life-labors in behalf of education render it certain that if the National Bureau of Education can be made of advantage that purpose will be achieved. There being no appropriation to defray the expenses of the establishment, of course there is no clerical force. Mr. Barnard is busily engaged in distributing circulars to the different States, asking information concerning their educational interests. This measure has its advocates and its opponents—both strong and bitter—but it were well to thoroughly test the experiment. It may be of great advantage to the country.

Too Much Study.—A Richmond paper speaks of a girl thirteen years old who committed fifteen hundred consecutive verses of the New Testament in one week, wearied out several teachers in reciting her lesson, and had brain fever the next day. The Hartford Times says that a girl of sixteen is dying in that city from the effects of the disease caused by over study at school. And the Boston Traveler notices the case of a young lady who recently died in a suburban town, and her physician says her death was undoubtedly caused by hard study.

Useful, Scientific, &c.

STEAM CAR BRAKE.

William Longbridge of Paterson, N. J., has invented a brake for rail cars which promises to substitute steam for brakemen on railroads. A trial of it was made, before the representatives of some dozen railroad companies a short time since, resulting in a highly satisfactory issue. It is thus described:

"The new steam brake is operated by a steam cylinder with 24-inch throw of piston. This cylinder is placed under the "foot board" of the engine. Nothing is seen on the engineer's stand but a small lever that opens and shuts a valve, and a three-fourths inch pipe, through which the steam passes into the cylinder. A chain passes around, pulling on the piston head. This chain goes through the train, connected by sections of rods and chains, and the brakes are applied through the agency of small standards in the center of the car. By means of the safety-valve in the brake cylinder the steam escapes when the pressure becomes greater than required for the best braking. By this means the great evil to railroad economy—of sliding wheels—is obviated.

At the trial the brake showed a power of 3,500 pounds, more than double that of seven brakemen exerting their full strength with the old windlass brake. With the new brake a train of cars running at a speed of 56 miles per hour, can be stopped in 16 seconds, and in a distance of 624 feet. When running at a speed of 24 miles per hour, the usual rate, it can be stopped in a distance of 250 feet.

At the close of the experiments yesterday, a resolution was adopted by the railroad managers present, strongly recommending the adoption of the new brake on the railroads of the country, both on the score of economy and for the safety of the traveling public."

AN IMMENSE TELESCOPE.

One of the largest and most improved telescopes ever constructed in England, is now nearly completed, and is intended for Melbourne. It was made under the direction of the Royal Society, at a cost of $25,000. The form which has been selected is known as the Cassegranian telescope. It differs from the Gregorian form in apparently a very slight degree, but to an extent which confers on it some striking advantages. In the latter the reflected image is received upon a small concave speculum; in the Cassegranian the surface of the small mirror is convex. By this apparently slight difference is secured more light, and a better defined image, in consequence of the small convex mirror correcting the aberration necessarily present in the large concave mirror. The tube of the telescope is of the enormous diameter of four and a half feet, and of proportional length. The diameter of the speculum is but six inches less than that of the tube, or four feet, being 4½ inches in thickness, and weighing about twenty-seven hundred weight. The telescope will be moved by clockwork.

A POUND STERLING.

The recent decision of Judge Shipman in New York, as to the value of the pound sterling, once more directs public attention to the complicated and confusing method of reckoning this portion of our foreign exchanges. The custom of reckoning the pound sterling at $4.44 originated in causes now ended, and generally forgotten, and seldom understood. The price of gold, upon which Judge Shipman based his calculation, is stated to have been 199⅞, making the price of a sterling bill $218½, at which rate the £90 would cost $874. The pound sterling is worth $4.85, but instead of saying so it is reckoned at $4.44, and the dealer in exchange adds to this a certain premium, often 109⅛, making the result the same as if reckoned simply at the real par value of $4.85. The process is circuitous, and there is no good reason for it. In the first place the drawer names a rate, which must be multiplied with the conventional value of the pound before it can be paid for in the federal money. If the banker offered exchange at $4.85 it would be very easy both to understand and compute it. For every pound to be paid in London, four dollars and eighty-five cents is demanded here. But instead of this the banker will offer his bill at 109⅛, which means the same thing. He means that, assuming the pound to be worth $4.44-4-9, he will sell it at 9⅛ premium; and multiplying $4.44-4-9 by 109⅛, produces $485. Why not say $485 at once? Because he has fallen into the rut of the other system and cannot get out. Our other exchanges are easily computed. A hundred centimes make a franc, and when a bill in Paris is quoted at 5:20, it is meant that the dollar here will bring five francs and twenty centimes there, and so on. When Prussian thalers are quoted at 72, it is meant that a thaler in Prussia will bring seventy-two cents here. Other similar instances might be quoted.

Dogmatism.—Where men are the most sure and arrogant, they are commonly the most mistaken, and have given their reins to passion without the proper deliberation and suspense which can alone secure them from the grossest absurdities.—*Hume.*

THE PRAIRIE DOG AT HOME.

In the preceding illustration the reader will find a spirited representation of the home or city of the Prairie Dog, (*Spermophilus Ludovicianus,*) as he appears to the traveler over the great plains of the west. They raise tumuli of earth as fortifications or watch towers, at the apex of which are openings to their subterranean habitations beneath. These are numerous, and in such proximity to each other are these burrows, that the entire area of their city or encampment is one vast honeycomb, rendering it hazardous for mounted men to ride through or over one of these dog cities without special care. The entrance to the underground abode of the dogs is made at an angle of about forty-five degrees, with the plane of the horizon and the holes continued at that angle to a considerable depth, when they rise with a corresponding inclination till a point within two or three feet of the surface is reached, where the burrow terminates in the home or hybernating apartment. There they pass the season of winter, venturing out but rarely, and then only when a considerable mitigation in the wintry aspect outside takes place.

Captain Marcy, in his journal of the Red River expedition, states that his road, during one entire day, lay through a continuous dog town, involving the necessity of frequent detours to avoid the mounds raised around their burrows. While thus passing, these little animals were seen in countless numbers sitting upright at the mouths of their domicils, presenting much the appearance of stumps of small trees; and so incessant is the clatter of their barking that it requires but little effort of the imagination to fancy oneself surrounded by the busy hum of a city. The space covered by this city was equal to a square of about twenty-five miles, or to eight hundred and ninety-six thousand acres. The population of this one city was estimated to be greater than that of any one inhabited by man in the universe. These dogs are remarkably prolific, as they must needs be to cover the western prairies with the population they do. They are a rather pleasant looking, inquisitive little animal, about sixteen inches in length, body circular and rather flat, the head especially so. The fur is of a grayish red or grizzled hue, produced by the alternate chestnut and gray color of each hair. They are of a social disposition, as would be inferred from their city-like habit of domiciliation.

With respect to their habits Captain Marcy says:—"In the selection of a site or position for their towns they appear to have regard to their food, which is a species of short, wiry grass growing upon the elevated plains, where there is often no water near," a fact which induces the conclusion that they require very little water aside from that obtained upon the grass constituting their principal food. They have also a kind of camp discipline, by the aid of which any approaching danger is communicated to the entire encampment or colony. Perched on a hillock the dog sentinel is enabled to survey a wide extent of horizon, and should an intruder appear a sharp yelp of alarm is given. This is taken up by others, till the whole camp is apprised of danger and the multitudinous population is soon safely housed in their underground retreats. Soon after this retreat they may be seen peeping forth from their holes in countless thousands, anxious to see what the cause of the fright was. They are as inquisitive as shy, hence this hurry to come forth after an alarm.

A species of owl is always found among the dog-mounds, leading to a suspicion that an occasional pup is snatched up and borne away by them. Rattlesnakes also find their way into the burrows, making free with the pups, as appetite prompts. It is proper to say that some doubt the correctness of this imputation against the snakes, but the balance of testimony seems to be in favor of its truthfulness. Neither the snakes nor the owls can hardly be regarded as allies of the dogs, but more likely unwelcome guests and difficult of expulsion.

When the Prairie Dog first feels the approach of the sleeping season, generally about the first of November, he closes all the passages to his dormitory, to exclude the cold air, and betakes himself to his brumal slumber with the greatest possible care. He remains housed until the warm days of spring, when he removes the obstructions from his door and again appears above ground as frolicsome as ever.

ALCOHOLIC TREATMENT OF DISEASE.

In an article on this subject in the Medical and Surgical Reporter, the experience of Mr. Higginbottom of Nottingham, is quoted, who for thirty years has never prescribed stimulants, and finds his results perfectly satisfactory. Dr. Collenette of Germany, says:

"For twenty-one years I have banished all intoxicants from my practice, and during that period I have not made fewer than 180,000 medical visits, and I hesitate not to say that the recoveries have been more numerous and more rapid than they were during the five years I followed the usual practice, and administered brandy, wine and beer."

Mr. Smith, the governor of the Edinburgh jail, states that out of 150,000 criminals who had passed through his hands—many of whom had been great drinkers, and whose liquor was cut off when they crossed the jail door—not one case of injury had occurred by the drink being taken from the person at once.

A Costly Watch.—The costliest watch that was ever made is said to have been one which was constructed in 1814, for the Sultan Abdul Medjid, who must have found it inconvenient, since it was five inches in diameter, and struck hours and quarters on wires, with a sound resembling that of a powerful cathedral clock. It cost 1,500 guineas.

Reading for the Young.

PERSEVERANCE.

BY JESSIE CARROLL.

A boy or girl in antique costume, enters the room, books and maps over the shoulder, and staff in hand, bearing a small ensign lettered "Perseverance"—bows low and thus addresses the scholars:

1. How'd do, masters and misses,
   Your faces I'm glad to see;
   To greet this band of children,
   I've traversed land and sea,
   A pack upon my shoulders,
   A walking stick in hand,
   O'er many a lofty mountain,
   And waters vast and grand.

2. I am an ancient mariner [*or matron,*]
   Of the good old Diligence bark';
   And though no wondrous genius,
   Quite well I have made my mark!
   Up laurel-crowned Parnassus,
   I never strove to climb,
   And yet my name has echoed
   Through the corridors of time!

3. For Progress was my motto,
   And Perseverance, too,
   See graven on my pennon,
   As I sail life's journey through—
   Which is the secret, children,
   Of my marvelous success;
   So I come with a wand of promise,
   This little band to bless.

4. A word now at parting,
   You're all on life's great sea,
   So you must strike your oars *together,*
   If successful you would be.

5. And another word at parting,
   To instruction's voice give ear;
   Heed the counsels of your teacher,
   Her pathway strive to cheer.
   But lean not upon each other,
   There's work for all to do,
   Each one must learn to paddle,
   To paddle his own canoe. [*Exit.*]

ORIGINAL FABLES.

I. LOOK TO THE ROOT OF THE FAMILY TREE.

"Gentlemen," said an old Tea Kettle that lay in a corner of a shed, in which some worn-out Locomotives had been stowed away, "gentlemen, I am sorry to see you in this place; I wasn't brought here till I had more than once lost my spout and handle, and been patched and soldered till very little of my original was left. I concluded therefore that like me, you have seen your best days, and are now to be laid aside as useless."

The Locomotives frowned at one another, but didn't answer.

"Well, gentlemen and brothers," cried the Kettle again, "don't be down-hearted; we have played busy and useful parts in our day, and may comfort ourselves now in thinking over the things we have respectively achieved. As for *me,* the remembrance of the domestic delight and refreshment that I have been the means of affording affects me deeply."

"What is that little old tin thing whistling about up in the corner?" asked one of the Locomotives of his companion; "where are his *brothers?*"

"Hey-day! Is that it?" cried the Kettle, all alive with indignation; "so you don't own the relationship. Let me tell you, with all your pitiful pride, that though you won't own me as a brother, I am father and mother to you; for who would ever have heard of a steam engine if it hadn't been for a tea-kettle?"

II. LOOK UP AS WELL AS DOWN.

"O father! O mother! the moon is drowned; she is, indeed; we have seen her lying trembling in the lake," cried the owlets, bustling back to the tower, where their parents sat among the ivy.

"Children," said the old birds; "you looked *down* and saw the image in the lake; if you had looked *up* you would have seen the moon herself in the sky; but it is the way with novices to be led astray by representations of a subject which a little further inquiry would have shown them were wholly deceptive."

III. A SHUT UP TO AN EVEN QUESTION.

"How well I whistle!" said the Wind to the Keyhole.

"Well, if that isn't rich!" said the Keyhole to the Wind; "you mean how well *I* whistle."

"Get me some paper," said the old woman, "and stuff up that keyhole and stop the draft."

And so neither Wind nor Keyhole whistled any longer.—*Leisure Hour.*

BEAUTIFUL LESSON.

Some time ago a boy was discovered in the street, evidently intelligent, but sick. A man who had the feeling of kindness strongly developed, went to ask him what he was doing there.

"Waiting for God to come to me."

"What do you mean?" said the gentleman, touched by the pathetic tone of the answer of the boy, in whose eyes and flushed face he saw the evidence of fever.

"God sent for mother, and father, and little brother," said he, "and took them away to His home up in the sky; and mother told me when she was sick that God would take care of me. I have no home; nobody to give me anything; and so I came here, and have been looking so long up in the sky for God to come and take care of me, as mother said he would. He will come, won't He? Mother never told a lie."

"Yes, my lad," said the man, overcome with emotion; "He has sent me to take care of you."

You should have seen his eyes flash, and the smile of triumph break over his face as he said:

"Mother never told me a lie, sir; but you have been so long on the way."

Debts.—Lose not thy own for want of asking for it; 'twill get thee no thanks.—*Fuller.*

Our Fall Campaign!

A NEW QUARTER--VOLUME XIX.

A NEW QUARTER of the RURAL began last week, (Oct. 5,) and Volume XIX in January next. Now, therefore, is a good time to subscribe and form Clubs; as subscriptions can begin with October or January, or any time between. The 13 numbers of this (Oct. to Jan.) or any preceding Quarter of this year, will be sent on trial, or as specimens, for ONLY FIFTY CENTS.

GOOD PAY FOR DOING GOOD!

All who form clubs, either to begin with the New Quarter (Oct. 5th,) or next Volume (Jan. 4, 1868,) will be substantially rewarded, as our inducements are extraordinary—more liberal than ever before. Specimen Numbers, Show-Bills, Premium Lists, &c., sent free to all disposed to act as club agents.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., OCTOBER 12, 1867.

NEWS OF THE WEEK.

New York State Items.

SEVEN United States vessels were sold at the Brooklyn Navy Yard on the 1st inst. The old receiving ship North Carolina brought thirty thousand dollars.

Mrs. Abraham Lincoln, owing to the inadequacy of her income, has been obliged to offer for sale in New York city, some $45,000 worth of jewels and dresses.

About $10,000 has been sent from the metropolis to the yellow fever sufferers at the South.

The State Temperance Convention assembled in Albany on the 2d inst., Albert Day, President. It passed resolutions praying the Constitutional Convention to submit to the people a separate article prohibiting the sale of intoxicating liquor as a beverage, declaring it a duty to nominate temperance men for the Legislature, and proclaiming the conviction that only in total abstinence is there safety for the people and the country.

Gov. Fenton sent a letter to Gen. Sheridan inviting him to visit Albany. The General accepted, and has received the hospitalities of the old Dutch city.

The Eighteenth Annual Meeting of the American Bible Union was held in the First Baptist Church in New York city on the 2d inst., Rev. Dr. Armitage presiding. The Treasurer's report showed the receipts of the year to be $55,127.79. The expenditures were $54,733.27.

The trial of Dr. Thomas J. Warner, who was indicted with Dr. J. Edward Turner for burning the Inebriate Asylum in Binghamton, having been in progress four days, closed on the 5th inst. The jury returned a verdict of not guilty.

The Democratic State Convention assembled in Albany on the 3d and 4th inst. Ex-Governor Seymour presided. The following ticket was nominated:—Secretary of State, Homer J. Nelson of Duchess; Comptroller, Judge W. F. Allen of Oswego; Treasurer, Wheeler H. Bristol of Tioga; Canal Commissioner, John D. Fay of Monroe; Attorney-General, Marshall B. Champlain of Allegany; State Engineer, Van R. Richmond of Wayne; Inspector of State Prisons, Solomon Schell of Erie; Judge of the Court of Appeals, Martin Grover.

From Washington.

IT is learned from official sources that Gov. Swann made application to Mr. Stanton, previous to his withdrawal from the War Department, for artillery equal to the amount in value of arms that Maryland was entitled to, and Mr. Stanton promised that the request should be granted. He retired from office before anything was consummated, and when the subject was renewed to Gen. Grant, Gov. Swann's application was refused, on the ground, it is said, that the law does not authorize the kind of substitution of arms proposed. This statement explains the report that Gen. Grant had refused arms to the State of Maryland.

Gen. Grant has issued another retrenchment order by which the price of the commuted ration which has for several years been one dollar is reduced to fifty cents, and the commutation for quarters, which was formerly eighteen dollars per month, is now reduced to nine. This stroke of economy reduces the pay and allowances of detached soldiers on duty in Washington to $24 per month.

R. M. T. Hunter is in Washington after a pardon, and the President has concluded to grant it as the application is strongly backed. One of the indorsers is W. H. Seward.

It is stated that one company of the 12th Infantry left last week for Phillippi, West Virginia. It is reported to the War Department that ex-rebels and their sympathizers in that section are greatly harrassing the Unionists.

The bodies of the assassination conspirators, and that of Wirz, were removed from their graves on the 1st inst., and re-interred in other portions of the Arsenal grounds. The removal of the old Penitentiary building rendered this necessary.

The body of J. Wilkes Booth was originally buried in what was known as the ware-room of the Penitentiary building. It was inclosed in an ammunition box. After the grave was filled up with dirt, the brick flooring was replaced. The burial having been accomplished, the windows were boarded up and the door made secure, Secretary Stanton taking the key with him, and it was kept at the War Department until a few weeks ago, when it was returned to the officers of the Arsenal. The bodies of Booth, Payne, Harold, Atzerodt, Wirz and Mrs. Surratt were placed in a common grave.

The Printing Bureau of the Treasury Department is printing fractional currency to the extent of one hundred thousand dollars every day, that amount being necessary to replace the defaced currency that is returned for redemption.

The Paymaster it is understood has received an order from the Secretary of War to reduce the clerical force of his department. It is estimated that about four hundred clerks will have been dismissed by similar recent orders.

Secretary Browning's health is so far improved that he will soon resume his duties instead of resigning as reported.

Rumors of Cabinet changes are again becoming current. Whether there is any in truth them or not, it is known that at least one officer of the Cabinet, Gen. Grant, anticipates being relieved from the duties of his position as Secretary of War, at no distant day.

The total national debt on the 1st inst. is officially reported to be $2,630,389,456 00. Cash in the U. S. Treasury $139,112,009.24.

From the South.

COL. FRANK, commandant of the post of Wilmington, has received instructions from Gen. Canby to oppose no longer the enforcement of civil process from the United States Circuit Court.

Interments from yellow fever in New Orleans still average nearly sixty per day. The Howard Association is now rendering assistance to eight hundred families, averaging three cases of fever to each.

The Soldiers' Monument at the National Cemetery in Hampton, was appropriately dedicated on the 3d inst. by the masons, in the presence of a large concourse of military and civilians. The different burial grounds in the vicinity of Yorktown, Suffolk and Norfolk are being broken up and the remains of soldiers transferred to Hampton Cemetery.

About half a million dollars have been expended for the relief of people at the South, under the Congressional acts.

A serious riot took place in Jefferson City, La., on the second day of the election. It commenced in a dispute between a white and black man, and was followed by a general melee, in which fire-arms were freely used. Two whites and four negroes were seriously wounded. The military were called out and quelled the riot.

From the West.

THE earnings of the Central Pacific Railroad for September were $200,400 in gold, and the operating expenses $38,702, leaving a net profit of $161,638. This was with the track open for business to the summit of the Sierra Nevadas.

The wheat shipments from San Francisco for the quarter ending Sept. 30th, were 1,492,444 sacks, valued at $275,000, and required a float of sixty-eight vessels, fifty-four of which sailed for Europe. Since Jan. 1st over three and a half million sacks of wheat have been shipped, valued at $675,000. The flour shipments for the same period were 436,547 barrels, valued at $2,500,000.

The banking house of Stone, McCoy & Co., at Independence, Mo., was entered by burglars recently and robbed of $30,000.

The steamer Only Chance, from Fort Benton, Montana, arrived at Omaha on the 4th instant with three millions in treasure, and two hundred passengers.

The candle factory of W. H. Wood & Co., in Cincinnati, was entirely destroyed by fire on the morning of the 5th inst. The loss is about $100,000—insured for $75,000.

Latest from Europe.

THERE is much distrust in political and financial circles in Paris.

The *Opinione*, a semi-official journal of Florence, says that Rome will soon belong to Italy, and that without a broken treaty.

Messrs. Buchanan & Co., a Glasgow firm largely engaged in American trade, stopped on 2d inst. The liabilities are not ascertained.

Admiral Farragut of the American Navy, has arrived in London. As in other places, he is received there with marked civilities.

It is announced that the Emperor Francis Joseph will visit Paris on the 20th inst.

It is rumored that there will be an immediate change in the Italian Cabinet, and that General Cialdini will take the place of Ratazzi at the head of the Government.

The Naplo newspaper of Pesth publishes letters and other documents to prove that Louis Kossuth was engaged in intrigues with agents of the Russian Government in 1849.

The reports from Italy are startling. The commander of the forces of the Pope has asked the Italian Government for instant assistance. Italy refuses to furnish any soldiers.

There is no longer room for doubt that the revolt is serious. There are alarming apprehensions of an interruption of the heretofore friendly relations between Italy and France.

The United States frigate Minnesota, Commodore James Alden commanding, has arrived at Lisbon. She has on board a large number of midshipmen.

The latest news from Italy says a fight occurred between the insurgents and the Papal forces, near Bagnarea. The latter were defeated. The effect of this victory is very inspiring to the party of action.

Though a prisoner at Caprera, Gen. Garibaldi has issued a stirring address to his followers, which is published all over Europe. He appeals strongly to their patriotism, and urges all of his friends to march forthwith to Rome.

It is said that Sir Augustus B. Paget, the present British Minister at Florence, will be appointed "Envoy Extraordinary and Minister Plenipotentiary" to the United States, to fill the vacancy caused by the death of Sir Frederick Bruce.

Bismarck's circular to the Prussian agents has made an unfavorable impression in Paris, and increased the probability of war next year. It is regarded as extremely irritating to France.

MEXICAN ITEMS.—A late Havana arrival from Vera Cruz brings the following news from Mexico:—The wife of Gen. Santa Anna has petitioned President Juarez for the release of her husband without trial. Baron Von Magnus, the Prussian Ambassador, has returned to the City of Mexico. General Pavon has been appointed Governor of Tamaulipas, and Gen. Antillon has been made Governor of Guanajanate. The property of Somera has not been confiscated, as was reported, but he has been fined to the amount of $50,000. Seven houses in the city of Mexico, owned by Almonte Ramitzze, Silicio Escubedera and others, have been confiscated by the Government, and will be sold at auction. Their aggregate value is appraised at $100,000.

FROM SOUTH AMERICA.—Later advices from South America have been received. They give no definite intelligence as to the result of the recent bombardment of the Paraguayan fortifications, but state that the Brazilian and Argentine fleets were lying inactive off the fortress of Humaita, and the land forces of the Allied Powers were making no preparations for any further movement.

The latest dates from Rio Janeiro report the arrival at that port of the United States steam frigate Guerriere, the flag-ship of Rear Admiral Charles H. Davis, commanding the South American squadron.

NEWS PARAGRAPHS.

A NEW YORK tailor refused to fill an order for 8,000 Fenian uniforms, because the Brotherhood wouldn't pay in advance. Sensible tailor.

THE Pneumatic Railway Company proposes to blow people from New York to Washington at a speed which will leave railroad trains far behind.

MADAME GOLDSMITH, wife of a well known Cincinnati merchant, died Monday from the effects of a fright given her by a foolish servant girl.

A CHICAGO man refused to pay $800 for a pair of horses because they did not suit him, but afterwards paid $2,000 for them at a horse fair, not knowing that they were the same.

A YOUNG lady, daughter of one of the wealthiest citizens of Pittsburg, was detected in the larceny of a valuable diamond ring from a jeweler. She made prompt restitution and was forgiven.

J. ROSS BROWNE'S second report on the resources of the Pacific States is in preparation. He calculates the product of gold this year at $70,000,000, and of Nevada silver at $19,000,000.

A NEW telegraph line, for general business, has been opened between Chicago, Milwaukee, Northern Missouri, Iowa and Minnesota, and is known as the Independent Telegraph Company.

Two men entered an Adams Express car on the Ohio & Mississippi Railroad at Seymour, Ind., a few nights since, secured the messenger and robbed the safe of about $10,000. The robbers escaped.

A TRAIN on the Northwestern Railroad, in the western part of Iowa, was a few days since delayed one hour and a quarter by grasshoppers, which covered the track so thick that the engine drivers slipped on the rails.

CAPTAIN JACK, lately deceased, owned land in the heart of Chicago many years ago, and sold it for a few hundred dollars. His wife was opposed to the sale and refused to sign the deed. She now claims her dower right.

A SNAKE was killed in a dry goods store in Peterson, N. J., on Saturday evening. The clerk heard a hiss on a shelf, and found the reptile among the fancy goods. It isn't the first time that fancy goods have sheltered a reptile.

A BARREL of new cider in a state of fermentation exploded in a store in Paris, Edgar county, Ill., the other day, knocking one man eight or ten feet, bursting the barrel into fragments, and scattering the contents in every direction.

LATE intelligence from Hayti states that the country is in an extraordinary state of agitation. Gold is fabulously high and provisions scarce—flour $20 in gold per barrel, and thirty-four Haytien dollars were worth only one Spanish silver dollar.

SIXTY years ago there was hardly a craft larger than an Indian canoe on the great Western lakes. In 1841 the lake trade amounted to $65,000,000; in 1851, to $300,000,000: in 1861, $550,000,000; and it bids fair in 1871 to reach the enormous sum of $1,000,000,000.

THERE are no letters "held for postage" at the Providence post-office. A wealthy old gentleman, who is said to have once lost a large amount by the failure of a letter to reach him, attends the office regularly and furnishes stamps for unstamped letters.

IN Gloucester, Mass., the berrypickers have done a good business this season. One gentleman in town has picked ninety-four quarts of high bush blackberries. A man and wife at the Cove picked and sold $133 worth of berries in seven weeks, averaging over $3 a day.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, October 8, 1867.

THE money market at the east is close. The Banks have not yet recovered from the pressure occasioned by the quarter-day, Oct. 1st.

WHEAT AND FLOUR.—The prices of wheat and flour have advanced. Red wheat sold in this city yesterday at $2.56 per bushel.

WOOL.—There is no great change in our wool market. Prices are nominal. The sales in Boston last week foot up some 760,000 lbs., at prices ranging from 30@50c for fleece. The Bulletin of Saturday says:—"Most of the large manufacturing corporations are temporarily supplied, and not disposed to pile up stocks of raw material, with accumulations of goods on their hands, which they find it very difficult to clear off at the bare cost of production. Most of the small consumers are similarly encumbered; and, in view of the present stringency of the money market, no one is disposed to lock up funds in any commodity not wanted for immediate use."

Payments made easy. H. PAYNE, Lockport, N. Y.

BUSINESS UNIVERSITY AND TELEGRAPHIC INSTITUTE OF ROCHESTER, N. Y. The most thorough, practical and complete institution of the kind in the world. Commercial Course, Book-Keeping, Penmanship, Commercial Law, Com'l Arithmetic, Banking, Business Correspondence and Business Customs, Optional Course, Telegraphing English Grammar, Elocution, Higher Mathematics and the Ancient and Modern Languages. This College has the unequaled advantage of being under the personal supervision of two resident Principals, who are experienced business men, practical book-keepers and accomplished instructors. They are ably assisted by an ample corps of the very best teachers. The extremely moderate rates of tuition in all branches, and the very reasonable prices for board, as compared with other cities, render this the most desirable Commercial College that young gentlemen can attend. The regular price of a Life Scholarship, (Commercial Course,) is, to gentlemen $70; to ladies $30. Telegraphing to gentlemen $40; to ladies $30. To those who enter on or before Nov. 1st, we now offer the same to gentlemen for $35; to ladies $25. Telegraphing to gentlemen $30; to ladies $20. Our object in making this reduction is to induce young gentlemen and ladies to enter *early in the season*, and thus obviate the inconvenience of the great influx which usually occurs about Dec. 1st, and which necessitates the formation of new classes at the middle of the Course, and also to enable us to do ample justice to all. We gladly assist all our graduates in procuring desirable and lucrative situations. For further particulars send for "College Advocate," and Specimens of Penmanship, inclosing 2 stamps. Address BRYANT, STRATTON & WILLIAMS.

ORTHODOXY: ITS TRUTHS AND ERRORS—By JAMES FREEMAN CLARKE, D. D.—This book, pronounced "well worth careful perusal" by Orthodox papers, should be read by candid inquirers after truth, of every religious faith.

12mo. 512 pp. Price, $1,25.

Published by the American Unitarian Association, 26 Chauncy Street, Boston, Mass., which also publishes some forty religious works,—doctrinal, devotional and practical,—the prices of which are at least one-third lower than those of an ordinary publisher.

A full descriptive catalogue furnished on application, and any book on the list sent free, on receipt of price.

A discount of twenty-five per cent. made to clergymen of every denomination. Tracts illustrating the Unitarian faith given freely to all who apply.

Applications by mail to be addressed to AMERICAN UNITARIAN ASSOCIATION, Boston, Mass.

PREMIUM CHESTER WHITE PIGS.—Bred and for sale by GEO. B. HICKMAN, Westchester, Chester Co., Pa. ☞ Send for Circular and Price List. 925-8t

BIBLIOGRAPHICAL:—Appreciating the want which has for so long a time been widely felt, namely, a Library which should extend its benefits as well to country as to city readers, the New York Circulating Library Co. has been organized for the purpose of distributing to its subscribers, both in New York or in any part of the United States, the latest works issued by the best English and American Publishing Houses.

The Company has completed arrangements with the principal Publishers in America and Europe, through which they will be enabled to receive in advance of all Booksellers, the earliest copies of new publications, which will be obtained in such numbers as to supply any demand for them.

No charge will be made for sending Books by Express, in consequence of an arrangement also entered into with prominent Express Companies.

Among other names of Periodicals in its catalogue are bound volumes of the New York Ledger, Mercury, Frank Leslie's, Waverly Magazine, Literary Companion, Harper's Magazine, &c. Not more than two books can be sent for at one time, and when another work is desired the one previously taken out must be returned. The rates of membership to the Association are:

One Year			$2 00
Six Months			1 00
Two Subscriptions for one Address			3 50
Four	do	do	6 00
Ten	do	do	16 00

Cash always in advance.
Catalogues in Paper, 50c.
Do in Cloth, $1 00

The Company will also furnish any Work desired, no matter by whom issued, at Twenty per cent. less than the regular retail price.

Newspapers and Magazines will also be mailed from this office on the same terms. Orders for Engraving, Pictures, Cart de Visites of notable people, Stationery, &c., received and punctually attended to.

Address all communications,
JAMES A. WILSON,
926-2t Manager, 80 Cedar St., New York City.

460 MILES OF THE UNION PACIFIC RAILROAD,

Running West from Omaha across the Continent,

are now completed, and it is expected that the remaining 57 miles, to carry the track to the base of the Rocky Mountains, will be finished early in October. Contracts have already been made for rock-cuttings beyond, to be done during the winter. The work is being pushed forward with equal energy on the California end of the route, under the direction of the Central Pacific Company, commencing at Sacramento, and it is confidently expected that the two roads will meet in 1870, thus completing the entire grand line connecting the Atlantic and Pacific Oceans, on which THIRTY-FIVE MILLION DOLLARS in cash have already been expended. From the liberal Government aid, the wealth and energy of the stockholders, and the ready market for the First Mortgage Bonds, there is no want of funds for the most vigorous prosecution of the work, and its early completion is as certain as any future business event can be.

NET EARNINGS OF THE UNION PACIFIC RAILROAD.

During the quarter ending July 31st of the current year, an average of 325 miles of the Union Pacific Railroad was in operation. The Superintendent's report shows the following result:

EARNINGS.

Passengers	$160,526 92
Freight	549,672 39
Telegraph	1,416 23
Mails	12,140 00
Transportation, Contractor's Materials	453,205 44
" " Men	26,077 97
	$1,203,038 95

EXPENSES.

Fuel	$131,089 58
Repair of Track	109,767 64
" " Engines, Cars, Shops, &c	50,984 44
Offices and Stations	54,907 60
Conductors, Engineers, &c	33,294 73
Trains	15,456 93
NET EARNINGS to balance	807,508 03
	$1,203,038 95

From the relative high charges, the operating expenses of the road are but 32¾ per cent. of the earnings, and the ratio would be much less if the contractor's business were not done at half rates. Throwing out charges to contractors for transportation of materials and men ($479,233 41,) and deducting from the aggregate of all operating expenses ($395,530 92) 32¾ per cent. ($157,561 12) as the proportion chargeable on the work done for contractors, which was less than actual cost, because of the half price charged for it, and we have the net operating expenses of the commercial business for the quarter, $237,966 50. The account for the *commercial business* stands as follows:

Earnings for May, June and July	$723,755 54
Expenses " " "	237,966 50
Net profit of operating 325 miles of road three months	$485 789 04

The amount of Bonds the Company can issue on 325 miles, at $16,000 per mile, is $5,200,000. Interest in gold, three months, at 6 per cent., on this sum, is $78,000; add 40 per cent. premium, to correspond with currency earnings, is $109,200.—showing that the net earnings for this quarter were *more than four times the interest* on the First Mortgage Bonds on this length of road.

First Mortgage Bonds, whose interest is so amply provided for and so thoroughly secured, must be classed among the *safest* investments. They pay

SIX PER CENT. in GOLD,

And are offered for the present at Ninety Cents on the Dollar, and accrued interest at Six Per Cent. in Currency from July 1st.

Many parties are taking advantage of the present high price of Government stocks to exchange for these Bonds, which are over 15 per cent. cheaper, and, at the current rate of premium on gold, pay

Over Nine per Cent. Interest.

Subscriptions will be received in New York at the Company's Office, No. 20 Nassau Street, and by

CONTINENTAL NATIONAL BANK, No. 7 Nassau St.,
CLARK, DODGE & CO., BANKERS, 51 Wall St.,
JOHN J. CISCO & SON, BANKERS, No. 33 Wall St.,
HENRY CLEWS & CO., BANKERS, No. 32 Wall St.,
HEDDEN, WINCHESTER & CO., No. 69 Broadway,

and by BANKS AND BANKERS generally throughout the United States, of whom maps and descriptive pamphlets may be obtained.

JOHN J. CISCO, Treasurer,
925-2t NEW YORK.

Samples furnished when desired. Also, Grape wood at moderate rates. T. G. YEOMANS, Walworth Nurseries, Walworth, N. Y.

SCHOOL TEACHERS—Everywhere, should have Atwater's System of School Government. Send for Circular. JOHN ATWATER, Box 2,083 Chicago, Ill.

ESTABLISHED 1861.
THE
GREAT AMERICAN TEA COMPANY
HAVE JUST RECEIVED
TWO FULL CARGOES
OF THE
FINEST NEW CROP TEAS.
22,000 HALF CHESTS by ship GOLDEN STATE,
12,000 HALF CHESTS by ship GEORGE SHOTTON

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune district of China, which are unrivalled for fineness and delicacy of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade, (before the establishment of the GREAT AMERICAN TEA COMPANY,) we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in the country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices, with the small additional expense of transportation, as though they bought them at our warehouse in the city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on the list, as seen in the club order published below, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

Parties sending Club or other orders for less than thirty dollars had better send Post-office drafts or money with their orders, to save the expense of collections by Express; but larger orders we will forward by Express, to "*collect on delivery.*"

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $20.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

Oolong (Black,) 70c., 80c., 90c., best **$1 ₮ lb.**
Mixed (Green and Black,) 70c., 80c., 90c., best **$1 ₮ lb.**
English Breakfast, (Black,) 80c., 90c., $1, $1.10, best **$1.20 ₮ lb.**
Imperial (Green,) 80c., 90c., $1, $1.10, best **$1.25 ₮ lb.**
Young Hyson (Green,) 80c., 90c., $1, $1.10, best **$1.25 ₮ lb.**
Uncolored Japan, 90c., $1, $1.10, best **$1.25 ₮ lb.**
Gunpowder (Green,) $1.25, best **$1.50 ₮ lb.**

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economize in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of
THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

CLUB ORDER.
Edwards, St. Lawrence Co., N. Y., June 3, 1867.
THE GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street, New York.
DEAR SIRS:—I herewith send you another order for Tea. The last was duly received, and gives general satisfaction. As long as you send us such good Tea, you may expect a continuation of our patronage. As a further evidence that the subscribers were satisfied, you will observe that I send you the names of all those that sent before who were near out of Tea, with a large addition of new subscribers. Accept my thanks for the complimentary package. Ship this as the other, and oblige
Your ob't servant, DAVID C. MCKEE

THE COLLINS AND SHATTUCK
Combined Clover Thrasher, Huller & Cleaner,
MANUFACTURED BY
GLEN & HALL, ROCHESTER, N. Y.
We beg to call the attention of Farmers to the superior characteristics of the Collins and Shattuck Clover Machine made by us, which we are now prepared to supply.
Our Machines have two bolts with counter reciprocating motion, which have proved *indispensable* in keeping the Machine still, preserving it from racking and preventing it from clogging. We will WARRANT them with proper management to Thrash, Hull and Clean Clover or Grass Seed at one operation, more rapidly and in a much better manner than any other Machine made. When thrashing grass seed they can in a moment be so arranged that the seed and chaff will pass directly from the bolts to the fanning mill without going through the huller—*an advantage possessed by no other machine.* The ratchet form of the upper bolt in our machine insures a thorough separation of the heads and seed from the straw before the latter is allowed to pass into the stack. Our machines are constructed of the best material, in the most thorough manner, handsomely painted and ornamented, and have in all cases given entire satisfaction. Persons purchasing these machines to do custom thrashing will find them even much more remunerative than Grain Thrashing Machines.
We are also prepared to supply Horse-Powers, Truck Waggons, &c., to be used with our machines, or they will be adapted to run with any other Horse Powers.
☞ Descriptive Catalogues, containing full information, with testimonials from persons using our Clover Machines, sent free to all applicants. Address GLEN & HALL, Rochester, N. Y., or Detroit, Mich. J. D. EASTER, Gen'l Western Agent, Chicago, Ill. 921-10t

PLASTIC SLATE ROOFING
JOINT STOCK COMPANY,
OFFICE 157 [Room 19] *BROADWAY*,
NEW YORK.
W. C. POTTER, *Vice-Pres't.*
J. M. ALLEN, *Sec. & Treas.* Licenses Granted.
PLASTIC SLATE FOR
ROOFING & OTHER PURPOSES.
The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of
Pulverized Slate and Viscous Matter,
(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.
AS A ROOFING MATERIAL IT STANDS UNRIVALLED.
A mastic—it adapts itself to every shape and slope. Non-combustible, impervious, non-expansive, and undecaying.
FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.
The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and
PERFECTLY FIRE-PROOF.
It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

PRINCE & CO'S.

THE GREAT NEW ENGLAND REMEDY!
Dr. J. W. POLAND'S
WHITE PINE COMPOUND
Is now offered to the afflicted throughout the country, after having been proved by the test of twelve years in the New England States, where its merits have become as well known as the tree from which, in part, it derives its virtues.
The White Pine Compound
CURES
Sore Throat, Colds, Coughs, Diptheria, Bronchitis, Spitting of Blood, and Pulmonary Affections generally. It is a remarkable Remedy for Kidney Complaints, Diabetes, Difficulty of Voiding Urine, Bleeding from the Kidneys and Bladder, Gravel, and other Complaints.
For PILES and SCURVY it will be found very valuable.
This medicine is *free from anything deleterious*, pleasant to the taste, safe, yet sure and effective in its action.

(From the Boston Journal, Jan. 20, 1866.)
POLAND'S WHITE PINE COMPOUND.—After having given it a thorough trial, we can confidently recommend *Poland's White Pine Compound* as a very valuable article for the cure of colds, coughs, and pulmonic complaints generally. In several cases we have known it to give prompt relief when all other remedies which had been tried had failed. It is an article which, in a climate so promotive of sudden and severe colds, as is that of New England, ought to be in every family; and we are sure that those who once obtain it and give it a fair trial will not thereafter be willing to be without it.
A VALUABLE MEDICINE.—*Dr. Poland's White Pine Compound*, advertised in our columns, is a successful attempt to combine and apply the medicinal virtues of the White Pine bark. It has been thoroughly tested by people in this city and vicinity, and the proprietor has testimonials to its value from persons well known to our citizens. We recommend its trial in all those cases of disease to which it is adapted. It is for sale by all our druggists.—*Independent.*

The WHITE PINE COMPOUND is now sold in every part of the United States and British Provinces.
PREPARED AT THE
New England Botanic Depot, - - Boston, Mass.

AGENTS WANTED.—Another Great Work by E. A. POLLARD, the acknowledged Historian of the South; entitled "LEE AND HIS LIEUTENANTS," comprising a Life of Gen. R. E. LEE, replete with facts never before published, including Biographies of every Southern General of distinction.
In one large volume—32 steel portraits. A companion volume to "THE LOST CAUSE," a Standard Southern History of the War, which has already obtained half a million of readers. A new and enlarged edition is now ready. One Agent sold 220 the first week. These two works form a complete library of the War from the other side. E. B. TREAT & CO.,
915-7teo Publishers, 654 Broadway, N. Y.

LAMB KNITTING MACHINE
PRICE REDUCED TO $8 DOLLARS.—It sets up its own work, knits all sizes, narrows and widens, knits the heel into the stocking, and narrows off the toe complete—producing all varieties of knit goods, from an infant's stocking, mitten, or glove, to a lady's shawl or hood. Has taken FIRST PREMIUMS—Gold and Silver Medals—at all Fairs and Exhibitions, including the Paris Exposition of 1867.
It is *simple, durable, easily operated*, and guaranteed to succeed in the hands of *every purchaser*. Send stamp for Circular and sample stocking. Address
JAMES D. ORNE, General Agent,
921-2t-co1t 176 State-st., Rochester, N. Y.

H. P. WESTCOTT'S ADJUSTABLE
DASH CHURN.
First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.
H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN
Has received the highest approval of Practical and Scientific Men and the Press.
"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*
"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*
Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.
"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*
"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag'l Ed. N. Y. Times.*
"The very best Churn extant."—*Prairie Farmer.*
"It is perfectly common sense in its structure."—*Ohio Farmer.*
"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*
☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.
☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

THE CHAMPION.

MY DREAM.

BY MARY A. E. WAGER.

I.

Alone am I, alone at last!
At last—and yet so soon!
Aye, quite alone—and still my life,
Yet far this side its noon.
I had a dream six months agone,
(Ah, me! how fast time slips!)
My father lay at fearful length,
With silence on his lips—

And blindness on his fair blue eyes,
And dampness in his hair,
And the dear cheeks and brow I kissed,
Were all too strangely fair;
And when I clasped the kindly hands
(How much they'd done for me!)
I found them cold and passionless
With some dread mystery.

I called his name—the short, sweet name
My childish lips first said—
He answered not—but some one near
Said "Child, your father's dead."
"Nay, look not so! he has but passed
On to the other shore
Where CHRIST's beloved walk in Light,
And night is known no more."

"*Oh! talk not thus! not if God lives*
Or mercy still there be!
No soul so soulless as to take
My father, sir, from me!
For he was all I had"—and then
My dream grew vague and dim,—
A hearse, a coffin, and a house
Sad toned with prayer and hymn.

I woke at length, and o'er me bent
The warm skies of the South;
One said "Why graves beneath your eyes
And sorrow 'round your mouth?"
And all the answer I could give
At best did foolish seem,
But like a pall upon my soul
Lay that remembered dream.

II.

For days I've trodden olden paths,
Sought each familiar place,
The orchard's shade—the garden walks—
The meadows emerald space;
My father's chair upon the porch
Stands empty day by day,
His hat and coat hang on the wall
In a sad, silent way.

And all the house is wrapped in gloom,
And all the words we say
Fall into echoes weird and strange,
That die in moans away;
And like the sad sound of the sea,
When waves sob on the shore,
A spirit waileth hopelessly—
"*He 'll come no more—no more!*"

Hilldale Farm, near Ludlowville, N. Y.

The Story Teller.

Written for Moore's Rural New-Yorker.

ESTELLE LA VERNE.

BY HARRIET HOLMES.

[Concluded from page 324, last number.]

CHAPTER III.

HOME again, or at least in "My own native Land," for I had no real home. "Be patient, MARY," CHARLES had said, "and six months hence you shall see to what a delightful home MINNIE and I will welcome you."

ESTELLE had written me several times since her marriage, but whether she was happy or otherwise I could not decide from her letters. Now, however, she wrote, inviting CHARLES and myself to spend the Christmas holidays at her home. I was eager to once more embrace my dear little school friend, and my brother had a desire to form the acquaintance of her husband, so we decided that we would go.

Looking at the old KINGSLY mansion from without, you would have deemed it a dreary place in the winter at least, and the last of all others you would have selected in which to spend the holiday season. It was a large, rambling, old stone dwelling, with narrow windows looking out upon the sea, and approached by a long, winding drive among masses of grim-looking evergreens. At some seasons I might have admired its air of wild romance, but beholding it as I did for the first time at the close of a dreary December day, and when wearied with my long ride, and depressed by some half-defined foreboding, I thought it the most dismal place I had ever seen.

But the interior of the house made ample amends for its outward gloominess. Welcomed by Mr. KINGSLY with grave, quiet cordiality, and by his young wife with the old impulsiveness, modified by a just discernible accession of dignity, we were conducted into the family sitting-room and made to feel at home at once. There was a brightly glowing fire in the old-fashioned grate, and the room, though large and finished after the heavy, somber style of our ancestors, was made bright and cheery by the taste of its present occupants. Indeed, it was more than bright,—it was luxurious with its mirrors and pictures, and rare old vases, and with its rich crimson draperies, that were so wholly in keeping with its beautiful young mistress that I knew her taste had been uncontrolled in its appointments.

I have called ESTELLE beautiful, but the word does not do her justice in the full development of her glorious womanhood. CHARLES said, "She is the most magnificent woman I ever saw."

We were not, by any means, the only guests. Mr. and Mrs. KINGSLY each had their friends,—as different a set of mortals, too, as one could easily find under the same roof. Herr VON REICHSTADT, a learned German scholar and *Weltweise*, and Mr. DURRAY, an English writer, since somewhat famous, were guests of the former; while Mrs. KINGSLY had half a dozen fashionable acquaintances, who were very like all fashionable young people of the present day, did and a vast amount of flirting after the most approved style.

"We have never been alone a week since we commenced housekeeping," ESTELLE said, going up to my room with me, one night, after I had been there a few days. She had been in one of her most brilliant moods all the evening, but now I thought she looked pale and wearied.

"But your husband is so occupied with his literary labors I should hardly think he would like so much company."

"Oh, it doesn't matter to him; we rarely see much of him, except when there is some one like that musty old German here."

I thought of the pale, sad-looking man she called husband, remembering how enthusiastically he had once written of wedded happiness, and wondered how far his dreams were realized; then I looked at ESTELLE, who sat with her head leaned wearily upon her slender hand and her great black eyes looking into vacancy, and I knew not what to think or what to say.

"I should think your brother would marry?" she said rather abruptly.

"Perhaps he will, sometime," I replied.

"And you?"

"Oh, I am a confirmed old maid," I laughingly answered.

"You will live with CHARLES if he marries."

"I suppose so; if his wife does not object."

"She will not, of course—yet if she should"—

"I shall patronize boarding-houses to the end of my days, doubtless," I said.

"But you are well provided for in any event."

We—CHARLES and I—shared equally our father's property, I told her. She sat a few minutes longer, conversing on some unimportant matter, then bade me "good-night" and left me to my musings.

After this I studied more closely the manner of husband and wife toward each other. Mr. KINGSLY appeared always to treat ESTELLE with the most considerate kindness. He was gentle in his manner, careful of her happiness, and yet he evidently looked upon her as little more than a child. But ESTELLE puzzled me here, as always; she might feel for her husband respect, esteem, aversion, fear or indifference, for all I could decide. Once I came near mentioning the subject of my speculations to CHARLES, but did not then, and afterward I did not find opportunity, for sometimes I would hardly see him alone a moment for days together. There was always some sleighing excursion or something to occupy the day, and in the evening cards, music and flirtation for those who liked, and CHARLES did like all three. For my own part I preferred the more instructive conversation of Mr. KINGSLY and his friends, and soon became a great favorite with Herr REICHSTADT, who never wearied of interesting me with legend's of his *faderland*. One night, after we had been several weeks at Mr. KINGSLY'S, I read him some extracts from my journal—jottings along the Rhine, descriptive of those scenes that had pleased me most. Upon going to my room I found I had forgotten the book, and wishing to write a few lines in it, concluded to go back after it. There was a bright fire in the grate I knew, and I was not timid, so I went down noiselessly in the dark, and—I don't know what I did; I remember only what I saw. Standing by the fire with their backs toward me were my brother and ESTELLE; he stooping toward her, with his arms about her waist until his brown curls mingled with her black ones; she with her head resting lovingly upon his bosom, as only a husband should have held her.

"Good night, my darling," CHARLES was saying, then—raining passionate kisses upon her lips—"a few days more and you shall be freed from this bondage; kiss me good night, my own." She put up her lips to bestow the asked for caress. I turned and fled away in the gloom to my chamber, frightened, wretched, and almost wild with grief.

CHAPTER IV.

I threw myself into a chair, half paralyzed and utterly helpless in my sorrow, indignation and astonishment. In those first moments of passionate resentment, I believe had I possessed the power, I would have crushed ESTELLE KINGSLY out of being—so apt are we to judge with the world's judgment, which visits all its scorn upon the woman.

But after a time reason asserted itself, and I was more lenient. I had not wondered that MINNIE LINDSEY loved my brother; on the other hand should have questioned her good taste if she had been indifferent to him; why should I utterly condemn in ESTELLE that which I approved in another? Understand me, I was not less grieved at my discovery—none the less fearful as to the result—but that ESTELLE, who I knew did not love her husband, should love my brother, I could scarcely wonder. Sooner or later woman's nature must assert itself—once in her life every woman must love. If she loves her husband it is well, but if she does not she either has loved or will love some one else, and then—GOD pity and help her. I did not reason thus immediately; the conviction came to me in the bitter, tearful grief of hours.

At last I arose and went out through the dark passage to my brother's room, for I knew he would not have retired. I knocked lightly, saying, "It is I, CHARLES, let me in;" and he opened the door so quickly that I knew he must have been pacing the floor, as was his way when troubled. I went in, caught both his hands, and, woman fashion, burst into a fit of hysterical sobbing. I think he had some mistrust of the reason of my strange behavior, for he seemed ill at ease, yet soothed me tenderly, inquiring the cause of my tears. And then holding fast both his hands that he could not leave me, I told him all I had seen, begging, entreating, praying him to go away and never see ESTELLE again, if not for my sake, for MINNIE'S or his own—at least for *hers*.

"But why for her sake?" he asked; "she could never be otherwise than wretched as she was,—married to a man she could never love, and who would never have thought of making her his wife but for the promise he had made her dying father, who, giving him back the wealth that had always rightfully belonged to him, had exacted a promise that he would marry his daughter."

But, I reasoned, she was better thus than the creature he would make her; at best I knew there was little happiness in store for her, but if he loved her he could do her no greater kindness than to leave her. I believe—I am sure—had I censured ESTELLE at all I should have found him unyielding, but when I spoke pityingly of her, begging him for *her* sake to never come within her presence again, he faltered. He would promise to go away and not see her more, upon condition that from this time henceforth I should never mention the subject again. I hesitated, then gave the required promise. It was the best I could do, and I could only hope and pray that my brother's better judgment might prevail over the dictates of passion.

The next day we left KINGSLY Hall, as I hoped, forever, my brother pleading a sudden business call that must be attended to. Mr. KINGSLY, in his quiet, gentlemanly way, expressed his regret at our abrupt departure, and hoped we would come again when we could make them a longer visit. My brother was visibly embarrassed, but of course our host had no suspicion of the cause. I do not know what CHARLES said to ESTELLE, but I know he had a few moments' private conversation with her, and I think she understood it all. She bade me adieu tearfully, clinging to me in the old way, and I kissed her with a tenderness I had never felt before—with a pity that I had no power to express.

How my brother met MINNIE LINDSEY I do not know. He had said he should never marry her, and I believe he fully intended, when we went back, to break his engagement with her. But he knew she loved him with all the wealth of her pure womanhood, and it was hard to cast aside such love as hers—to tell her it was unearned for. My poor CHARLES—how I pitied, and prayed, and hoped for him in those months, none can know. I knew he suffered deeply, but I could offer no consolation. At last he came to me and said, "MAMIE, shall I marry MINNIE, after all that has passed?"

"Does she know"—

"No, nor never will. I have given *her* up, but I love her as I never can any other woman. MINNIE LINDSEY is a noble girl. I am not worthy of her, but she loves me. I have no love to bestow in return, but I will try to make her a good husband—the only question is whether she will be happier as my wife under these circumstances."

I did not know what to say. It was a long time before I could decide what to tell him, but at length I said "yes," knowing at the same time that I was doing ill; I would not wish her to do were our positions reversed. Doubtless all who, a few months later, received the wedding cards of "Mr. and Mrs. CHARLES L. WATSON," pronounced it an excellent match.

CHARLES is a kind and attentive husband, feeling for his wife a respect and affection that all must feel who appreciate the qualities of her mind and heart. I believe MINNIE is happy. Loving my brother in a quiet, undemonstrative way, she perhaps looks for no stronger evidence of her husband's love for her than she finds in his constant care for her comfort and happiness. And yet I do not know—sometimes I fancy I detect in her a half, undefined yearning for something more. They have been married five years. Two years ago CHARLES knocked at the door of my room, and, when I opened it, handed me a newspaper and went away without a word. I looked at the paper wonderingly. A marked paragraph caught my eye; it was a notice of the death of Mrs. MORTIMER KINGSLY, "suddenly, of heart disease."

Poor ESTELLE!—I shed many a bitter tear over those half dozen lines that told me she had found her rest; but between CHARLES and I there has no word been spoken. I wonder sometimes if he would have been happier with ESTELLE, could she have been his wife, than he is now, but the "Might have been" is always fairer to the imagination than its reality could have proved.

I know little of MORTIMER KINGSLY now, save through his writings. For the most part these are calm and passionless, yet sometimes he strikes a note, deep and inexpressibly sad, that thrills me with something of the olden power.

A BODY PETRIFIED.

A WOMAN, wife of a blacksmith, who formerly lived on Broadway, and who died some seventeen years ago, was interred in one of the burial grounds on the hill. Last week her friends went there for the purpose of removing the body. On opening the grave, the coffin crumbled to pieces, and the body lay there as whole as when deposited. The skin was black, and covered with a substance similar to moss, and presented a moldy appearance. On feeling of the body it was found to be quite hard, and a further examination developed the fact that it was petrified. The black surface was scraped off the skin, when the latter presented a beautiful appearance like that of a cut marble. Our informant says a coffin in which a child of his was inclosed, and which had been in the earth 20 years, appeared as well as the day it was placed in the ground.—*Albany Knickerbocker.*

IT is a great blunder in the pursuit of happiness, not to know when we have got it—that is, not to be content with a reasonable and possible measure of it.

Corner for the Young.

ABOUT ILLUSTRATED REBUSES.

SEVERAL years ago we commenced publishing Illustrated Rebuses in the RURAL, and gave, as many readers will remember, some of the best ever gotten up anywhere. After a while, so many papers followed suit—including the staid and dignified Country Gentleman, which had been wont to laugh at our Enigmas, Rebuses, &c.,—that we neglected the matter, and have only given an occasional Rebus of late. However, we propose to re-enter the arena, and see if the RURAL cannot again excel. We will commence, modestly, by re-publishing (below) two or three Rebuses given in former volumes,—to be followed by original ones in future numbers. Those of our readers who have a taste for getting up such curious, amusing and often instructive hieroglyphical readings are invited to send us the results of their efforts.

MISCELLANEOUS ENIGMA.

I AM composed of 28 letters.
My 21, 6, 1, 2, 8, 5 is a boy's name.
My 19, 11, 1 is a Hebrew measure,
My 4, 10, 14, 3 is a wild animal.
My 11, 28, 25, 2, 19, 26, 22, 20, 27 is a vegetable.
My 19, 26, 2, 18, 5 is an island.
My 7, 2, 9, 14 is a musical instrument.
My 12, 8, 15, is a river in Virginia.
My 13, 11, 28, 21 is a species of deer.
My 16, 3, 6, 23 is an amphibious animal.
My 7, 24, 11, 26 is a girl's name.
My whole is an old but true saying.

Clarence Center, N. Y. MISS M. RODES.

☞ Answer in two weeks.

ANSWERS TO ENIGMAS, &c., IN No. 923.

Answer to Miscellaneous Enigma:—Never spend your money before you have it.

Answer to Charade:—Broom-corn.

Answer to Anagram:

You have heard of the snake in the grass,
Of the viper concealed in the grass;
But now you must know
Man's deadliest foe
Is a snake of a different class!
Alas!
'Tis the viper that lurks in the glass.

Answer to Algebraical Problem:—A had 16 marbles and B 27.

Wit and Humor.

MRS. PARTINGTON ON THE ROMANS.

"I NEVER did like the Romans," said Mrs. Partington, when seeing the play of Coriolanus, "since I mistook some Roman punch for an ice cream, and it got into my head. And I came pretty nigh exploding once in trying to light one of Isaac's Roman candles, thinking it was wax. I must say they are a set of fickle-minded creatures, taking the gentleman in the red table-cloth for a counsel, and then going to throw him over the Terrapin Rock. I am very glad, though, they didn't do it, because I don't see how the play could get along without him, and it would have disappointed so many—" "Stop talking," said a harsh voice behind her. Mrs. Partington looked round at the speaker, who scowled at her with the indignation of two shillings' worth of impaired enjoyment, and she, simply saying, "You needn't be so bituminous about it," was silent.

SOME wise man takes the following view of the economy question:—"When you see a man spending two or three dollars a week foolishly, the chances are five to one that he'll live long enough to know how many cents there are in a dollar; if he don't he is pretty sure to bequeath that privilege to his widow."

"I COME to steal," as the rat observed to the trap. "And I spring to embrace you," as the trap replied to the rat.

THERE is a man out West who believes that "Hon." placed before a man's name stands for honest.

MOORE'S RURAL NEW-YORKER,
THE LARGEST-CIRCULATING
Agricultural, Literary and Family Newspaper,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

THREE DOLLARS A YEAR—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2.50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2.70 is the lowest Club rate for Canada, and $3.50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time for those who wish to preserve the paper for binding, reference, etc. ☞ A new Quarter begins October 5th,—a good time for club or single subscriptions to commence. See head of News page.

CHARLES W. IDELL,
COMMISSION DEALER
IN FRUITS AND PRODUCE,
WEST STREET, FOOT OF DEY, NEW YORK.

Farmers' Produce of all kinds, Pork, Poultry, Butter Eggs, Game, Furs, Flax, Hops, Beans, &c. Maple Sugar and Syrup, Green, Dried and Canned Fruits.

In the Fruit Season, particular attention paid to the sale of all kinds of DOMESTIC FRUITS, such as Apples, Pears, Peaches, Grapes, Strawberries, Raspberries, Whortleberries, Cranberries, Cherries, &c., &c.
[Established 1843.] ☞ Consignments solicited.

HOLMES' PATRIOTIC SONGS.—Universally Popular. 3d Ed. now ready. Price, $15 ℔ 100. Will send by mail on receipt of price; 12 copies for $2, or one copy for 25 cents. Address S. N. HOLMES, Syracuse, N. Y.

AGENTS WANTED—FOR THE BEST and most Popular Selling Books of the day. Exclusive Territory given. The most liberal terms offered. For Catalogue of our Books, Bibles, &c., with full particulars, address QUAKER CITY PUBLISHING HOUSE, No. 927 Sansom St., Philadelphia, Pa. 923-2teo

PURE WATER. HEALTH AND ECONOMY. Patent Lead Encased Block-Tin Pipe—Recommended by the Croton Water Board of New York, and the Boards of Brooklyn, Philadelphia and Boston and by the most eminent medical men of the country. Costs less than Lead Pipe, and is much stronger. Recent improvements enable us to supply *this* Pipe at a *less* price per foot than common Lead Pipe. To give the cost per foot, please furnish the pressure or head of water, and bore of Pipe. Pamphlets sent FREE on application. Address THE COLWELL, SHAW & WILLARD MANUFACTURING CO., foot of West Twenty-Seventh Street, New York. We also manufacture and keep constantly on hand, all sizes and weights of Lead Pipe and Sheet Lead. 923-4t

USE PRATT & BUTCHER'S
CELEBRATED MAGIC OIL.
Warranted in cases of Rheumatism, Neuralgia, Bruises or Pains.

The Best and Cheapest Horse and Cattle Medicine in the World!

WALTER B. SLOAN'S IMPROVED CONDITION POWDER
THE GREAT STANDARD MEDICINE
For Horses and Cattle

Used throughout the United States and Canadas during the last 23 years.

For the cure of the various Diseases to which Horses and Cattle are subject; such as Founder, Distemper, Hide Bound, Loss of Appetite, Inward Strains, Yellow Water, Fistula, Poll Evil, Scratches or Grease, Mange, Inflammation of the Eyes, and Fatigue from Hard Labor; also, Rheumatism, (commonly called Stiff complaint), which proves fatal to so many valuable horses in this country.

SLOAN'S CONDITION POWDER

Has the largest sale of any Horse and Cattle Medicine in this country. It is composed of herbs and roots, and for mildness, safety, certainty and thoroughness, stands pre-eminently at the head of the list of *Horse* and *Cattle Medicines*.

It carries off all gross humors, prevents horses from becoming stiff or foundering, purifies the blood, loosens the skin, and gives it a smooth and glossy appearance cleanses the water and strengthens every part of the body. It is also a safe and certain remedy for coughs and colds, which generate so many fatal diseases.

The Cow requires to be supplied with an abundance of food—not to make her fat—this is not desirable, but to keep up a regular secretion of milk, and all owners of cows will find by giving them

SLOAN'S CONDITION POWDERS

twice a week, a large increase in quantity and quality of milk and cream. It carries off all fever and impurities of the blood. The effect is seen throughout the season by a rich and abundant flow of milk.

The farmer is beginning to be aware of the valuable properties of **Sloan's Condition Powder**, in promoting the condition of his sheep and preventing many of the diseases of all the domesticated animals.

☞ A fifty cent package of **Sloan's Condition Powder** put into a barrel of swill is better than a bushel of corn to fatten a hog, and is a certain preventive of Hog Cholera, Blind Staggers, and other diseases common among hogs.

CAUTION.—To protect ourselves and the public from being imposed upon by worthless imitations, the genuine will bear the *fac simile* signature of the proprietors on the wrapper.

PRICE 25 & 50 CTS. PER PACKAGE.

For sale by Druggists and Merchants everywhere.

Walker & Taylor.

Sole Proprietors, Chicago, Ill.

P. O. Drawer 5826.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

AGRICULTURAL.

FARM IMPLEMENTS AT THE STATE FAIR.

SOME of the most valuable lessons which we learn at our Fairs are taken among the implements. Here, if anywhere, the dull farmer is set to thinking about the possibility and the feasibility of improving his ancient methods of culture, and the wide-awake, progressive one scans with intense interest the latest additions to labor-saving machinery and the best improvements in its manufacture. The greatest want in the line of farming implements is the lack of good material put together with good workmanship. Inventors, as a general thing, have done well; machinery is well conceived for its intended purpose, but too often the manufacturer embodies the idea with dishonest material and inadequate labor. Implements at our Fairs generally look well; they have a fair finish, and the chances are they are the best that are made; so it is a very good place for one to purchase, at least it is a good time for one to fix in the mind the requirements to be made when effecting purchases in the future.

This department was a leading one, we think, of the Fair at Buffalo. Reaping and mowing machines were out in force; of these the one manufactured by DODGE, STEVENSON & CO., Auburn, attracted considerable attention on account of the new automatic self-rake which has recently been attached. The *World's* mower and reaper, manufactured at Canton, Ohio, was worthy of notice on account of the excellent workmanship and finish of its gearing. This is inclosed in a cast-iron case, which shuts out dirt, but which is readily accessible for oiling and cleaning purposes. *Jones' Seed Gathering Attachment* for mowers is a new thing, and seems to be essentially adapted to gathering timothy seed. It can be attached to any mower, and the invention consists in using a second cutting bar and knife with reel and box attached, placed high enough above the usual cutting bar to clip the heads.

There were several potato diggers exhibited, and it was unfortunate that there was no trial of the respective machines. The *Marcellus* and *Champion* diggers—familiar to RURAL readers—were prominent. SCHANCH'S machine, made at Holmdel, N. J., claimed to be an effective and reliable one.

In the line of machinery for cultivating the soil we observed nothing new. ALDEN & Co., Auburn, N. Y., showed a set of implements for cultivating the soil which were creditable. The thill attachment to their horse-hoe is adapted also to a corn-marker, a rake for gathering quack grass, roots, and to a furrower and coverer for planting potatoes. The idea of making the same draft attachment answer for several implements is a good one. Their cultivator is commendable. GIBSON & INGLIS, N. Y. Mills, exhibited a fine, flexible harrow. *Randal's Riding Attachment* for harrows, an arrangement whereby the driver is relieved from the labor of walking, was also on the ground.

There were several different kinds of drills for sowing grain, on the grounds. The *Willoughby Gum Spring and Roller Drill*, made at Carlisle, Penn., seems to be very simple and effective in arrangement, and well adapted to drilling grain in stumpy and rocky fields. Its feed attachment consists of rubber rollers between which the grain passes to the tubes, the flow being regulated by the size of the cavities and the speed at which the rollers revolve. The tubes which convey the seed to the teeth are also of gum, and the springs which hold the teeth in their places are of the same material. If the tooth strikes a fast stone there are no pins to break and be replaced, the rubber spring gives and the machine passes on. *Palmer's Universal Plaster and Grain Sower* is a new thing. It is designed to be attached to the rear end of any lumber wagon, and derives its power from friction rollers brought in contact with the hind wheels. It is not costly, and looks as if it might be a good contrivance for sowing plaster.

Perry's American Horse Power was exhibited with some recent important improvements, the chief of which is on the cog-wheel, which takes the power from the chain. This is now made for movable cogs, and any irregular link chain can be used on it without trouble. We think well of this power, and if its controllers do not try to make too much money out of it farmers will use it extensively.

Clute's Dumping Box is an attempt to furnish what farmers very much need—a wagon box that may readily be dumped. This is made to run back by turning a crank until its center passes the rear axle when it dumps. When it is in position one pin fastens it securely.

Heath's Ditching Machine was at work in one part of the grounds and dug a clean, smooth ditch in the dry, compact clay soil, suitable for laying tile. A large crowd witnessed its work with evident satisfaction. Our readers will remember an illustration of it in the RURAL during the current volume.

The clear ringing of an anvil as it resounded to the frequent strokes of a hammer, called the crowd to look at *Hunckley's & Ballintine's Power Hammer*, an invention which in most cases saves the services of one man to wield the sledge. It is operated with the foot.

But we cannot undertake to enumerate all the valuable farm machinery on the ground. There were hay rakes and hay tedders, farm gates and fences, machines for cutting and baling hay, wood sawing implements, corn huskers, cider mills, steamers for cooking food, rollers, thrashing machines, in short, a large array which we wish all the farmers in the State could have seen and studied.

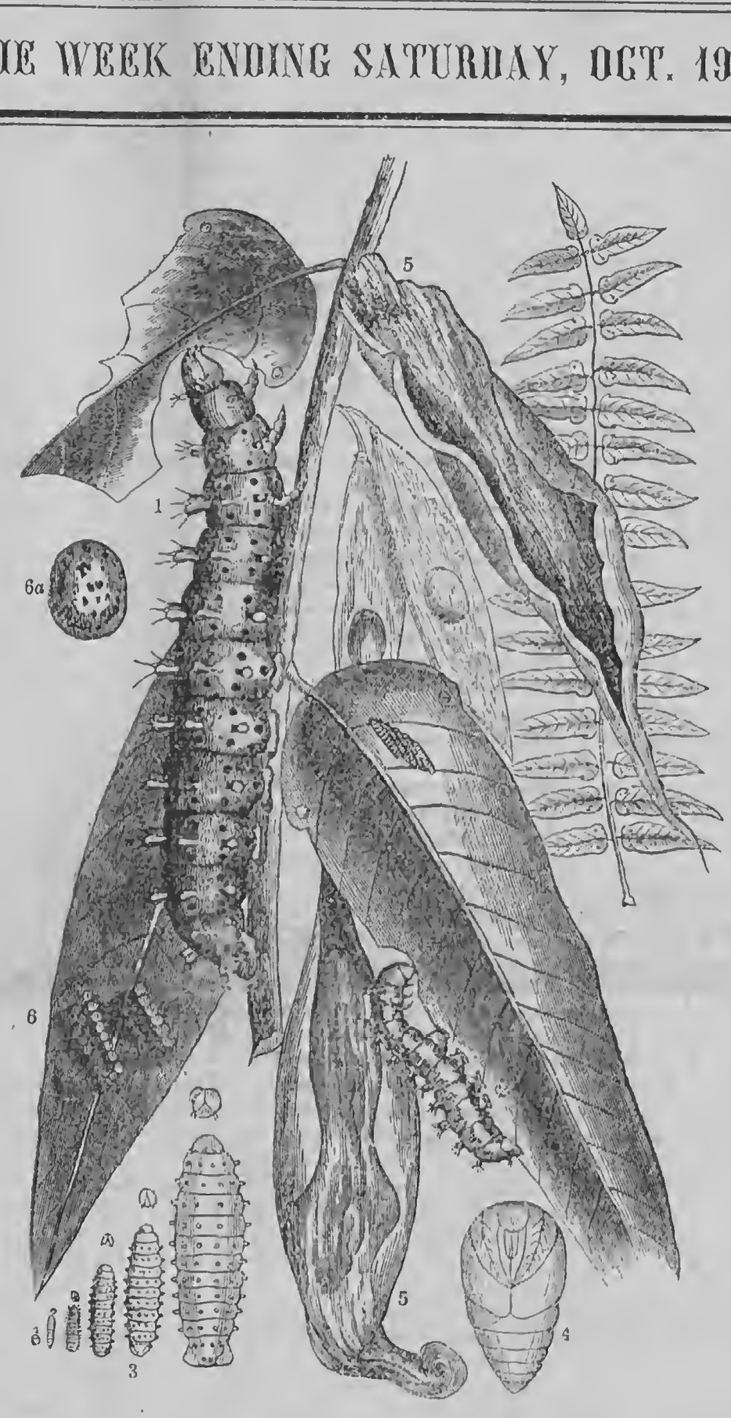
CUT-WORM—FALL AND SPRING PLOWING.

EDS. RURAL NEW-YORKER:—Under the above caption you publish the gist of an article appearing in the Germantown Telegraph of Sept. 4th, over the signature of "AGRICOLA." You say the subject has been very lucidly treated—on which point I beg to differ, and to assert that it is very vague. "AGRICOLA" who is quite observing, has honestly elaborated a theory, but he made the signal mistake of not being quite observing enough. He tells us that he collected numbers of cut-worms in early spring, and, placing them in a glass jar, watched them until they inclosed themselves in their cocoons of earth, interwoven with silk. Now this operation is but one of the many which go to make up the history of the cut-worm; notwithstanding which "AGRICOLA," while confessing that he knows nothing of the deposition of their eggs, assumes them to be deposited in the fall, and builds his theory accordingly. If a foundation be weak the building topples, and as this assumption is radically wrong, the theory falls to the ground.

By further observation "AGRICOLA" would have learnt that those worms which inclosed themselves in the earth, as described, would, after changing to pupæ, have produced, during the months of June and July, moths belonging (not to the "Linnæan genus *Phalæna*," but) to either of the genera *Agrotis* or *Hadena*. He would have found that these moths deposit eggs soon after emerging from the ground, and that the eggs soon hatch under the influence of a July sun and by fall become plump worms about three parts grown; that these burrow into the ground and *there hybernate*, and that the following spring, with appetites sharpened by their long fast, they play havoc with the first appearing vegetation. Thus neither early nor late fall, nor early or late spring plowing, will have any effect on cut-worm *eggs*, since they are deposited during summer; though *very* late fall plowing might kill some *worms*.

How often are doubts dissipated and theories dissolved by some little fact in Nature—insignificant as it may at first appear! Such slight errors are expected in the Telegraph, but we cannot let them pass in the RURAL.

Chicago, Sept. 27, 1867. C. V. RILEY.



AILANTHUS SILK-WORM.

1. Worm of full size. 2. Young worm. 3. Worm in different stages from the egg. 4. Chrysalis as found in cocoon. 5. Cocoons. 6. Eggs nat'l size. 6a. Egg magnified.

AILANTHUS SILK-WORM.

OUR engraving represents the Ailanthus Silk-Worm in its different stages, from the egg to the full grown worm feeding on the leaf. Our readers will remember that the moth was represented in the RURAL of Sept. 21st. The eggs are deposited on the leaves in clusters, and under favorable circumstances, hatch in about eight days after being laid, and the period between its exclusion from the egg and the spinning of the cocoon is about forty days. The caterpillar, in forming its cocoon, crawls in between two leaves—sometimes using only a single broad one—and gums a thread to the one side of the leaf, and then towards the other for a few times, just sufficiently to hold the leaf in place and supply a sort of covering around its body; it then carries the thread along the pedicel of the leaf to its origin with the peduncle, and after drawing it over carries it back to the leaf to which it is again attached. This process is continued until the side of the pedicel is entirely covered with silk, and the whole interior of the leaf is thickly coated. As it progresses the leaf is drawn more closely to the body of the caterpillar, so as to leave finally a neat fitting apartment in which it can lie.

The Ailanthus supplies good food for the worms—is a rapid grower, furnishing plants from the seed, in a few months after sowing, suitable for the worms to feed upon. The climate of the Central States is thought to be quite equal to that of China for the production and use of the silk worm. It is a labor well adapted to those without capital—to the comparatively aged and feeble and the very young,—but owing to the recollection of the silk fever in *morus multicaulis* days, the subject is looked upon with suspicion by most people. The time is not distant, perhaps, when this prejudice will be measurably dispelled, and the silk business assume greater prominence in the circle of our industries.

AS WINTER approaches it behooves every farmer to secure his late crops, make provision for stock, and attend to the fuel question.

RURAL FARMERS' CLUB.

Care of Machinery.

ASA FOOTE, Sherburne, N. Y., differs somewhat from our recent correspondent, PETER WYCKOFF, respecting the grinding of the knives of reapers and mowers. He thinks the stone should turn from the person holding the knife. Instead of a trough of water under the stone, a bucket should be suspended over it, perforated with a small hole, from which the water drops on the stone. This does not wash the grit from the stone, and therefore it cuts away the knife faster and does not wear itself as rapidly as if turning in a trough of water that washes off the grit. When the boxes of the machine wear he advises refilling with Babbit metal, which can be done by taking out all that the box contains, adding more and melting the whole and pouring into the box again. Lay the shaft in the boxes and close the ends with putty before pouring in the metal. This work may be done in the leisure time of winter.

Experiments with Potatoes.

"YORICK" sends us the following:—"Having often been told that anything would do for seed, I have taken the liberty to try some experiments on a small scale, but in the proper way to obtain satisfactory results, and that the readers of the RURAL may profit thereby, offer the following statement. It so happened that the rows across my patch would allow of twenty-five hills, and selecting a piece near the center, I planted four rows, with the following results:

Large seed,	1 lb a hill,	91 — 67	marketable,	24	small.
Small,	4 " "	90 — 53	"	37	"
Cut	4 " "	93 — 61	"	37	"
Eyes only	8 " "	21 — 7¼	"	13¾	"

All the seed was perfectly sound and as near as practicable of the same weight in each of the first three rows, and all received the same culture. Those from the large seed were of best form and more uniform in size. Proposing to continue the experiment I have selected some of the large from the large, and some of the small from the small to plant another season, hoping eventually to satisfy myself at least whether it is not policy to select the best potatoes, as well as the best grains for seed.

Pumpkins with Potatoes.—The result of this experiment satisfies me the first time, being perfectly convinced that potatoes do not need the shade of pumpkin vines to insure large tubers. The pumpkins however were good, taking the premium at the late county fair.

Turnips and Potatoes—Will do much better. After securing a fair crop, as good as any on the farm, we have a fine crop of turnips growing, which will seemingly cost mere expense of pulling and a trifle for seed. If any other RURAL readers have experimented with potatoes, it is to be hoped that they will publish the results. Let us compare notes that we may teach as well as learn."

Sowing Plaster on Wheat.

"G.," ONTARIO CO., N. Y., writes for our Farmers' Club as follows:—"My experience for the last fifteen years, or more, in sowing plaster on wheat in the fall, has been decidedly in favor of the operation. My method is to sow wheat between the 10th and 20th of September, (too early sowing invites the insect,) put on all the manure I can get as a top-dressing, and then sow plaster as soon after seeding as convenient. I have sometimes left strips in the field three or four rods in width unplastered, and watched the result. In a wet fall and spring the effect of the plaster was not so apparent as when the seasons were dry, but always paying. When dry the crop would often appear nearly doubled where the plaster was sown. I have often been asked by people traveling the road the cause of the poor streak (unplastered) of grain in the field; lately I don't leave any such streaks.

Many of my neighbors also use it with good results, but the subject, like politics, has two sides. People sometimes say that dust can't do any good, it draws from the land, hence the poor streak where there is no plaster; or they remark the wheat gets too tender a growth and will winter-kill. Now these arguments remind me of a Western lawyer defending his client from the charge of breaking a kettle. In his opening to the jury he said, in the first place he should prove the kettle was cracked when borrowed, next it was whole when returned, and third that his client never had the kettle. If the plaster is but dust and can do no good, how can it draw from the land and make the poor streak? If the wheat grows too luxuriant and becomes tender, will you then sow your poorest land and keep all top-dressings from it? Now, my dear RURAL, if you tell all this to your many thousand readers some of them may cry "fudge; it is mere *book-farming*;" but if I should chat to them the same thing across the top rail of a fence, ten to one but they would go home and try it. But is not the 'Farmers' Club' and the 'book-farming' that speaks to their thousands, just as practical?"

A Cribbing Colt.

[THE following answer to an inquiry respecting a "cribbing" colt should have appeared some time since, but in the Editor's absence the paper was mislaid, and has but just come to light. The author is Mr. E. MINK, V. S., Lyons, N. Y.]

"I have heard of colts crib-biting at a year old, while standing in the stable. It would be interesting to know if the colt referred to in the inquiry cribs while running in the field at pasture, or whether it is only observed while in the stable, as it is contended by some authors that cribbing is an acquired habit—the result of idleness while standing in the stable. By others it is regarded as the result of chronic indigestion. DUNN, MAYHEW, DODD and others favor the latter theory. To me the cause of cribbing is still involved in obscurity. If the theory of its resulting from indigestion is correct, then it seems to me that some of the remedies usually resorted to for this disease ought at least to succeed in palliating or mitigating the disagreeable phenomenon. I must confess that I have never yet seen any benefit from a medical course of treatment. All the subjects I have experimented upon were adults. I think a colt six months old the best possible subject for experiment with medicine. I would recommend the following remedies,—Golden seal, 2 oz.; ginger, 4 oz.; calcined magnesia, 8 oz.; mix. Dose—two teaspoonsful three times a day, to be given mixed with a small feed of oat meal each time. I think it would be well to add to each dose of this a teaspoonful of common table salt. The treatment ought to be continued for two or three weeks. If this course should fail, I have nothing more to offer."

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

OHIO WOOL GROWERS' ASSOCIATION.

We copy from the Ohio Farmer the following proceedings of the Ohio State Wool Growers' Association. We heartly subscribe to the resolutions in regard to the tariff on wool and woolens, and to those also in regard to the general protection of American labor, in their true meaning and intent.

An adequate tariff for revenue purposes is a necessity admitted by all but a few crack-brained theorists. That neither justice nor expediency requires a uniform ad valorem tariff on all imports—but that it is both right and expedient to give incidental protection to industries that need it and industries which the general good requires to be preserved and developed, has also been conceded by all our soundest and most eminent statesmen. A protection which does not preserve and develop is not protection. A protection which *grinds* the consumer is exorbitant protection.

It was in view of principles like these that the present wool tariff was framed. Let alone—allowed to work out its full results—it will secure steady and permanent success to the wool interests of our country, and by encouraging production, and therefore competition, will effectually guard the rights of the consumer. Even now, before domestic production supplies the domestic consumption, the consumer is subjected by it to no greater burthens than the wool interest and other industrial interests are subjected to for the support of government.

To repeal the wool tariff next winter under the pretense that it has been tried and found a failure, would be an insult, not only to the farming interest of the country, but to common sense and common fairness. For the reasons briefly touched upon in the Ohio resolutions below, and for others equally obvious—business derangements in the South—famine in several States—scarcity in others—an aggregate short crop—a dearth of money in the rural regions, coupled with the general onerous taxation—the immediate effect of the tariff has only been to prevent a still greater accumulation of foreign wool and woolens in our markets—and a consequent more complete prostration of the domestic wool trade, without having any sensible influence in raising the prices of the domestic product of the present year;—and this state of things must necessarily continue just so long and in just such proportions as our markets remain glutted with the foreign goods which were imported before the tariff went into operation.

A law called for by great interests as vital to their prosperty—fairly passed through Congress on its own merits, without log-rolling or the least imputation of corrupt or underhanded means—ought not to be swept from the statute book without receiving a fair trial—a trial made under circumstances which will permit its natural and legitimate effects to be properly observed and estimated:—in other words, judged by experience. To repeal it without such a test would be to exhibit an inconsistency and levity in legislation discreditable to the country, and, we repeat it, a gross indignity to the farmers and manufacturers of the United States.

The following are the Ohio proceedings:

The Ohio Wool Growers' Association held its regular State Fair meeting at Dayton on Wednesday afternoon. The meeting was called to order by Hon. COLUMBUS DELANO, President of the Association.

Hon. R. M Montgomery of Mahoning, offered the following resolutions:

Resolved, That we firmly adhere to the tariff on wool and woolens, as passed March, 1867.

Resolved, That the present depressed state of the wool market is chargeable to excessive importations in anticipation of the tariff, and an over-supply of wool and woolens, rather than in consequence of any defect in the tariff itself, or in its enforcement.

Resolved, That we will seek by all proper means to have the present tariff on wool and woolens remain in force, without alteration or abatement, until time shall have developed its fair and legitimate working.

Resolved, That we are in favor of a general tariff to such an extent as shall secure the benefit of the American market to the products of American industry.

Resolved, That under the onerous and unprecedented taxation necessary to meet our national liabilities, we regard a protective tariff as not only just and due to our industries, but as involving the financial safety of the government.

A brief discussion followed the reading of the above resolutions.

Mr. Harris of Cleveland, said that both justice and policy required an adhesion to the principles expressed in the resolutions. He had recently conversed with many leading free-trade men in the East, who unanimously declared that the present tariff was nearly a prohibition to the importation of wool and woolen goods, while the advocates of protection in the east declare with equal emphasis, that the tariff is all that has saved the wool trade this season from complete prostration. He would also admonish wool growers, that in order to retain the present measure of protection on wool, they should show a friendly sympathy with the movement for a general tariff law, to include all other branches of American production and manufacture.

Mr. Stevens of Hardin County coincided in the views expressed in the resolutions, and in favor of sustaining the present tariff.

The President spoke earnestly in favor of the resolutions, and encouragingly of the future of the wool business, if producers would persist in the production of good wool. All businesses have their fluctuations and wool growers should not be discouraged, or let their flocks depreciate in quality. Another year will show the benefit of the tariff; present low prices are in consequence of importations in anticipation of the tariff. All prices must become lower, and wool will assume a better relative rank with the prices of other articles. This association should express friendship for a general tariff, as we have a common interest with all the industrial interests of the country. In conclusion, Mr. Delano paid a high compliment to the faithful and intelligent services of Mr. Montgomery as representative of this association at Washington during the session of Congress.

The resolutions were unanimously adopted, and the meeting adjourned.

ILLINOIS WOOL GROWERS' ASSOCIATION.

We have not at the time of this writing, (Oct. 11,) received the official proceedings containing the resolutions of the Illinois State Wool Growers' Association, held during the State Fair. We learn, however, that A. M. GARLAND, Esq., of Chatham, was re-elected President by acclamation and amidst prolonged applause; SAMUEL P. BOARDMAN of Lincoln, Secretary; JOSHUA L. MILLS of Putman, Treasurer; FRANKLIN FASSETT of Springfield, Vice President for State at large; and one Vice President for each Congressional District, whose names we have not received. The resolutions will be published in our next. Their general tenor can doubtless be inferred from the unanimous election of officers so strongly identified with the passage of the present wool tariff. It will be remembered that Mr. GARLAND was one of the Wool Growers' Tariff Committee at Washington last winter, where he greatly distinguished himself by his zeal and efficiency; and we find in a Western journal, the outlines of a speech made by him at the meeting under consideration, characterized by his usual ability and felicity, and in full accord with the Ohio resolutions. FASSETT'S able and influential exertions, and BOARDMAN'S powerful pen, have never been wanting on the same side.

NEW YORK STATE WOOL.

The comparative low price of our wool in the eastern markets has long been a subject of anxious thought by some of our honest wool growers. Many of them have for years been paying high prices for fine wool sheep, and have succeeded in bringing the staple up to a high standard. They see in the market reports Pennsylvania and Ohio wools quoted at 50 to 60 cts. per pound, while New York State goes hard at 40 to 50 cts. Now, is not this mainly accounted for by the *condition* of the wool? A large share of our wool goes to market dirty, oily and gummy, and often full of hay seed or barley beards, weighing from 5½ to 9 lbs. to the fleece, tied up with *ropes* instead of twine—sheared from three to six weeks after they have been through an operation facetiously termed *washing*—occasionally, yes often, stuffed with unwashed tags and dead wool. Some may object that this is too strong a picture, but I appeal to every wool dealer in the country to say if it is not true to the life—even some honest growers will admit it. However, I am glad to be able to bear testimony to some honorable exceptions to this state of things; but like "poor Tray," they have "kept bad company" so long that they are classed with their slovenly, dishonest neighbors, and do not get paid for neatness and pains-taking—not in *money*—but they do have the proud consciousness of having maintained their integrity, and brought an article to market they are not ashamed of. To a great extent wool buyers themselves are responsible for this state of things. For years they have been in the habit of paying about the same prices for wool, without regard to quality or condition. And when a well-to-do but unscrupulous farmer came in with his dirty, stuffed fleeces, instead of having his wool shrunk one-third or one-half in weight or price, as he deserved, besides being exposed for his dishonesty, he has generally carried home the full price of prime wool. Now this is all wrong. The price should in all cases depend upon quality and condition, and not upon the particular locality in which it is clipped. Wool should be sorted and graded when bought, and prices paid accordingly. No wool buyer should be tolerated unless he is a good judge of the article he is dealing in. This subject should be thoroughly canvassed until a reform is brought about. The State of New York is producing as good staple of wool as any State in the Union, and there is no good reason why it should not bring as much as any, except its condition when brought to market. The *size* of a fleece should be no objection to it, provided it is *clean*. This is a subject alike interesting to growers and consumers. Let it be ventilated.

B.

Batavia, Sept., 1867.

Condensed Correspondence, Items, &c.

SALE REV. MR. AVERY'S SHEEP.—REV. R. A. AVERY, Gloversville, N. Y., has sold his entire flock of Atwood American Merinos to HENRY AKIN, Esq., of Lockport, Will Co., Ill.

CORRECTIONS.—In quoting from the N. H. Mirror and Farmer in this Department, Sept., 28th., the title of the paper was incorrectly printed as the Farmer and Miner.

In Mr. SWEET'S communication from the Paris Exposition, published Aug. 3d., he is made to say that "Arizona sends 30 fleeces and 100 samples of perfectly splendid wool." Mr. S. writes us that the word Arizona should have been something else—the name of a place in South America—but that he cannot tell what, as he burned his original notes after writing the letter.

SILESIAN CROSS.—In speaking of some samples, (Sept. 7,) from the get of a Silesian ram owned by S. C. SANFORD, Carlton, N. Y., out of "common ewes," we expressed the opinion that the improvement in quality was truly wonderful if the cross was taken with common *coarse* ewes. Mr. S. writes us that "the ewes were all coarse—and that about half of them can be traced back to a cross between a Leicester ram and common ewes."

SAMPLES OF WOOL.—Messrs. SHERWOOD & PERCY, Newark, N. Y., forward samples from their Merino ram North America, a cut of which we published Sept. 7th, with an account of his enormous fleeces. (This account we will now say was verified by satisfactory *proofs*, though we, personally, knowing the men, needed none to satisfy *us* of its truth.) The samples are about two inches long—are of high style and quality for a heavy fleeced ram—are heavily loaded with bright, golden tinted yolk, with very waxy ends.

HOMER D. L. SWEET, Sec'y N. Y. S. S. B. & W. G. Ass'n, forwards us four samples obtained by him at the Paris Exposition, viz., Russian wool, ¾ in. long, extremely fine; Russian, gold medal, 2½ in., moderately yolky, very choice style and quality; French, grand prize, 2½ in., quite free from yolk, quality fine, style and softness not equal to preceding; Australian, 2¾ to 3 inches the unwashed quite free from yolk, quality fine, but not so fine or of so much style as that of Australian sheep in our possession.

GOITRE—GOOD FLEECES.—R. T. WHITMAN, Belvidere, Boone Co., Ill., writes us that in the winter of 1865-6 he kept his flock in a yard about 8 rods square, feeding them mixed timothy and clover and oat straw. They wintered nicely, but one-third of his lambs had goitre and died from one to six days old. Last winter he gave a part of the same flock the range of 6 acres of corn stalks, not feeding them in the morning so as to make them roam over the field. In other respects they were fed as in the previous winter and were served by the same ram. "They had good sheds that shut up tight." The lambs, 60, came strong, not one of them having goitre. But 16 of the flock (same ram used and same feed given, except corn stalks,) were wintered in a yard 4 rods square, "with the barn floor when it stormed and at night, because, being full-bloods, he did not want them to get wet." They dropped 14 lambs—but 5 were raised—it cost more trouble to raise them than the 60. They were very weak and "had bunches on both sides of the neck." Hence Mr. W. thinks that want of exercise in a great measure causes this disease.

Mr. W.'s yearling ewes sheared 9 lbs. 9 ozs., 11 lbs. 4 ozs., 12 lbs. 8 ozs., 11 lbs.; his 2-yr.-olds 12 lbs. 8 ozs., 13 lbs 8 ozs., 12 lbs. 4 ozs., 12 lbs. 12 ozs., 11 lbs 8 ozs., 11 lbs., 14 lbs. 8 ozs., 12 lbs., 12 lbs.; three-year-olds 13 lbs., 14 lbs.; four-year-olds 12 lbs. 2 ozs. All, says Mr W., were bought "as pure Robinson," or Paular stock, of H. B WRIGHT of Shoreham, Vt. The fleeces were of one year and 18 days' growth. The three-year old which sheared 14 lbs. "had a lamb a year ago this spring, two last fall, and one this spring, making 4 lambs and 14 lbs. of wool in 14 months."

Communications, Etc.

THE PROVINCIAL EXHIBITION.

The Annual Provincial Exhibition was held in Kingston the last week in September, and was largely attended by the yeomanry of Canada, including quite a number of visitors from this side of the line. The weather was cool, dry and delightful, and nothing was wanting to make the visit of the stranger to the Exhibition Grounds one of pleasure and profit. The Crystal Palace Building is a credit to its projectors, and is the first one of the kind erected in the country—although Toronto and other western cities where exhibitions have been held, can now boast of similar structures.

The numerous departments were all well represented, and I have the authority of one of the prominent members of the Association for stating that never before was there such a display of stock of all kinds as on this occasion, particularly beef cattle. Prominent among the most noted breeders of Durham stock, I may mention Mr. F. W. STONE of Guelph. He had on exhibition a three-year old bull, "Grand Duke of Moreton," which was really a fine animal. Did space permit I might fill a page of your paper in recounting the excellencies of the various classes; but this is impossible. Suffice it to say all the breeds of cattle known to the Canadian farmer were represented; and to the visitors from this side the water it would seem that the Canadians knew what constituted good beef.

In Horses there was a fair show, the greater number being of the kind intended for agricultural purposes. I noticed one or two English draft horses, one of them being an exact likeness of the representation given in the RURAL a few weeks ago. There was rather a scarcity of carriage horses, owing to the fact, I presume, that in Canada horses are prized more for their qualities of strength than for appearance; but withal there were one or two very fine teams on the ground, and one single driving horse that would compare favorably with any of his class exhibited at Buffalo week before last.

The exhibition of Sheep was unusually large and generally good, although there were some exceptions in which individuals shown were well adapted to be killed as lambs, but were not at all well calculated for general stock. A good deal of dissatisfaction was expressed by many owners as to the award of prizes, each claiming superiority. It is a task most unpleasant, and by no means easy to judge animals of this class in a close contested show, and no matter how just the award, some one will feel aggrieved. The Leicesters and Cotswolds appeared to be the most numerous on exhibition; but there was a fair sprinkling of South Downs, and a sample or two of Spanish, French and Saxon Merinos. The Leicesters had the preference.

The remarks respecting the difficulty of judging the sheep, apply with greater force to the porcine species. The competition was very close, and there were a few exhibitors, who, if not equal to the recipients of prizes, were so close as to render them most formidable rivals. The Yorkshires and Berkshires were the principal breeds represented, and received favorable consideration; but the Essex, Suffolks and other smaller breeds, should not go unnoticed. All were alike creditable, and reflected credit on their owners for their proficiency in breeding.

I might speak of the dairy, poultry, mechanical and various other departments, but I am warned of space, and will simply close by thanking those officers of the Association who were ever ready to give me any desired information, among whom I will only mention WM. FERGUSON, Esq., Ex-President of the Provincial Association, and Sheriff of the county of Frontenac.

J. A.

KEEPING MILK.—A French chemist, having proved by practical test that fresh milk can be kept sweet and good for almost any given period, has received a prize of fifteen hundred francs from the French Academy of Science. Hereafter dairymen can keep milk sweet as long as they please, "in spite of thunder."

PREMIUMS AWARDED ON STOCK

At N. Y. State Fair, Buffalo, October 1—4, 1867.

CATTLE.—SHORT-HORNS.

Herd Prize—E. Cornell, Ithaca, N. Y., one bull, and five females, Large Gold Medal

Bulls, 3 years and over—1. A. B. Conger, Waldberg, Dip. and $20. 2. F. W. Stone, Guelph, C. W., 15. 3. A. B. Conger, Trans.

2 years—1. E. Cornell, 20.

Yearling—1 J. D. Wing, Washington, 15.

Cows, 3 years and over—1. E Cornell, Dip. and 20. 2. A. B. Conger, 15. 3. J. & S. Kinsley, Darin, Trans.

Heifers, 2 years old—1. E Cornell, 15. 2. E. Cornell, 10. 3. A. B Conger, Trans.

Yearling—1. E. Cornell, 15 2. Walcott & Campbell, N. Y. Mills, 10. 3 A. B. Conger, Trans.

Calf—1. E. Cornell, 5. 2 do. do., Trans.

DEVONS.—Bulls, 3 years and over—1. Walter Cole, Batavia, 20 and Dip. 2 Geo. Rudd, Guelph, C. W., 15.

1 year old—1 Walter Cole, 15.

Bull Calf—1. Walter Cole, 5

Cows, 3 years and over—1. Walter Cole, 20 and Dip. 2. do. do., 15. 3. do. do., Trans

Heifers, 2 years old—1. Geo. Rudd, 20.

1 year old—1. W. Cole, Batavia, 15.

Calf—1. W. Cole, 5.

HEREFORDS.—Bulls, 3 years old and over—1. F. W. Stone, Dip. and 20.

1 year old—1. F. W. Stone, 15.

Bull Calf—1. E. Corning, Jr., Albany, 5. 2. do., do., Trans.

Cows, 3 years and over—1. E. Corning, Jr., Dip. and 20. 2. F. W. Stone, 15. 3. E. Corning, Jr., Trans.

Heifers, 2 years old—1. E. Corning, Jr., 20. 2. F. W. Stone, 10. 3. do., do., Trans.

Heifer Calf—1. E. Corning, Jr., 5.

AYRSHIRES—Bulls, 3 years and over—1 J. F. Converse, Woodville, Dip. and 20. 2. O. Howland, Auburn, 15.

2 years old—1. E. Harvey, Buffalo, 20. 2. O. Howland, 10.

1 year old—1. Jas. Brodie, Rural Hill, 15. 2. J. F. Converse, 10. 3. O. Howland, Trans.

Cows, 3 years and over—Walcott & Campbell, Dip. and 20. 2. do., do., 15.

Heifers, 2 years old—1. Walcott & Campbell, 20. 2. do., do., 10. 3. J. F. Converse, Trans

1 year old—1. Walcott & Campbell, 15. 2. do., 10.

Heifer Calf—1 O. Howland, 5. 2. do., do., Trans.

ALDERNEYS OR JERSEYS—Bulls, 3 years and over—1. E. Corning, Jr., Dip. and 20. 2. W. B Dinsmore, Staatsburg, 15.

Bulls, 1 year old—1. W. B. Dinsmore, 15.

Cows, 3 years and over—1. E. Corning, Jr., Dip, and 20. 2. W. B. Dinsmore, 15. 3. do, do., Trans.

Heifer, 2 years old—1. W. B. Dinsmore, 20. 2. Geo. Cook, Medina, 10. 3. E. Corning, Jr., Trans.

Heifer, 1 year old—1. W. B Dinsmore, 15. 2. E. Corning, Jr., 10. 3. W. B Dinsmore, Trans.

Heifer Calf—1. W. B. Dinsmore, 5. 2. do. do., Trans.

GRADE CATTLE—Grade Short-Horn Cow or Heifer—1. O. Howland, 10. 2. do. do., 5

Devon Cow or Heifer—1. Jas. Tracy, Black Rock, 10. 2 G. W. Payne, North Buffalo, 5.

Ayrshire Cow or Heifer—1. O. Howland, 10. 2. G. W. Payne, 5.

Hereford Cow or Heifer—1 G. W. Payne, 10. 2. do. do., 5.

Milch Cows of any Breed—1 J. G. Wesbenbauer, Buffalo, Dip. and 15. 2. Chas. F. Miller, Buffalo, 10. 3. J. G. Wesbenbauer, Trans.

GALLOWAY BULL—Discretionary—Levi Gillett, Youngstown, 10.

WORKING OXEN, 4 years old—Single Yoke—1. Calvin Diver, West Brighton, 15. 2. John C. Hirt, West Seneca, 10.

Steers, 3 years old—Single Yoke—1. H. Ames, Leicester, 10. 2. W. B Dinsmore, 8.

FAT CATTLE—STALL FED—Ox, 4 years and upward—1. Jno. W Taylor, East Bloomfield, 12.

Cows, 4 years and over—1. John W. Taylor, 10. 2. do. do., 6. 3. do. do., Trans.

Steers, 3 years—1. Jno W. Taylor, 8. 2 do. do., 3.

Fed on Hay or Grass—Cow, 4 years and over—1. Thomas Hoseberry, Lockport, 10.

HORSES.

THOROUGHBRED.—Best Brood Mare and Foal, 4 years and over—1. T. J. Murphy, Buffalo, 20 & Dip.

OF ALL WORK.—Stallions, 4 years and over—1. H. Dunkleberger, Lockport, 20 and Dip.; 2. L S Goodrich, Lockport, 15; 3. Isaac Dysinger, Royalton, Yonatt.

DRAUGHT.—Stallions, 4 years and over—1. M. McDonald, Royalton, 20 and Dip.; 2. R. L. Howard, Buffalo, 15 3 years—1. Mtss B. J. Cheesbro, Marilla, 15 and Dip.; 2. Chas. Shos, Toronto, C. W., 15; 3. Henry Blocher, Clarence, Dadd 2 years—1. Jas. Reid, Lockport, 15; 2. J. W. and J. M. Williamston, Royalton, 10; 3. S. Welch, Grand Island, Dadd.

Yearlings—1. Gorden Merritt, Suvannah, 10; 2. J. C. Clough, Buffalo, 5; 3. Sol. Dunkenberger, Lockport, Dadd

Brood Mares, with foal at foot, 4 years and over—2. G. W. Payne, North Buffalo, 15; 3. H. Fuert, Attica, Yonatt.

Three years old Mares—1. Robt. Bell, West Brighton, 15; 2 Richard Bullymore, Buffalo, 10; 3. A Bacon, Tonawanda, Dadd.

Two years old Mares—1. Robt. Bell, 15; 2. George Hunmill, Rome, 10.

Yearlings—1. Robt. Bell, 10; 2. Richard Bullymore, 5.

MATCHED HORSES—16 hands and over—1. J. Ives Parsons, Auburn, 15; 2. C. M. Clark, Chicago, Ill., 10.

Matched Horses—over 15 hands and under 16—1. Fayette Patrick, Chicago, Ill., 15; 2. J. M. Davis, Richmond Hill, C. W., 10.

Driving or Road Horses over 14½ hands—1. D. R. Jerauld, Niagara Falls, 15; 2. E. B. Fellows, Leroy, 10.

Farm or Draught Horses—2. Dodge & Stevenson, Auburn, 10.

Single Gelding or Mare, 4 years or over, in Harness—1 Wm. Wells, Lockport, 10; 2. Jas. Reid, Lockport, 8.

Single Trotting Horse or Mare—2. Robert Owens, Buffalo, 8.

Special Premium for 1 pair 3 years old Geldings—Isaac M. Shotwell, Elba, 5.

JACK—1. Hugh Owen, Herkimer, 15.

Pair Mules—1. Miller & Plympton, Buffalo, 10.

DISCRETIONARY—Young Mules—A premium of $10 to M. V. Kibby, Kankakee City, Ill., "for the best pair of young mules the committe had ever seen"

SHEEP.

LONG-WOOLED, LEICESTERS—Rams, 2 years and over.—1. John Gill, Grahams, C. W., 10; 2. Donald Robertson, Queenstown, C. W., 8; 3. John Snell, Edmonton, C. W., Book.

Rams under two years—1. John Snell, 10; 2. Donald Robertson, 8; 3. John Gill, Book.

Five Ewes under 2 years—1. Walcott & Campbell, 10.

Committee recommended 2d premium to D. Robertson for pen of 4 Ewes.

Three Ram Lambs—1. Walcott & Campbell, 5; 2. John Gill, Book.

Three Ewe Lambs—1. Donald Robertson, 5.

LONG-WOOLED, NOT LEICESTERS—Ram 2 years and over—1. F. W. Stone, 10; 2. Walcott & Campbell, 8; 3. Isaac Aiken, Beekman, Book.

Ram under 2 years—1. John Snell, 10; 2. F. W. Stone, 8; 3. John Snell, Book

Five Ewes 2 years old and over—1. John D. Wing, Washington, N. Y., 10; 2. Walcott & Campbell, 8.

Five Ewes under 2 years—1. F. W. Stone, 10; 2. Isaac Aiken, 8; 3. John D. Wing, Book.

Three Ram Lambs—1. F. W. Stone, 5; 2. Walcott & Campbell, Book.

Three Ewe Lambs—1. John Gill, 5.

MIDDLE-WOOLED, SOUTH-DOWNS.—Ram 2 years and over—1. L. L. Lorillard, West Farms, 10; 2. F. W. Stone, 8; 3. L L. Lorillard, Book.

Ram under 2 years—1, Geo. H. Brown, Washington Hollow, 10; 2. F. W. Stone, 8; 3. do. do., Book.

Five Ewes, 2 years and upwards—1. F. W. Stone, 10.

Five Ewes under 2 years—1. F. W. Stone, 10; 2. Geo. H. Brown, 8; 3. L. L. Lorillard, Book.

Three Ram Lambs—1. F. W. Stone, 5; 2. A. McArthur, Buffalo, Book.

Three Ewe Lambs—1. S. B. Lusk, Batavia, 5; 2. H. M. Boardman, Rushville, Book.

Ram, under 2 years—1. Wm. Chamberlain, 10; 2. A Thompson, Clarence, 8.

Three Ewes, 2 years and over—1. H. M. Boardman, 10; 2. E. Townsend, Pavillion, 8.

Three Ewes, under 2 years—1. Wm. Chamberlain, 10; 2. Van Vliet, Wright & Parmelee, Weybridge, Vt., 8.

Three Ram Lambs—1. John A. Thompson, 5; 2. Wm. Chamberlain, Book.

Three Ewe Lambs—2. Wm. Chamberlain, Morrell.

CROSS BREED—Bred for Wool—Five Ewes, 2 years old and over—1. Wm. Chamberlain, 10.

Five Ewes, under 2 years—1. Wm. Chamberlain 10.

Three Ewe Lambs—1. Wm. Chamberlain.

FINE WOOL SHEEP AND THEIR FLEECES—Pen of five Ewes—1. E. Townsend, Pavillion, 20.

Shepherd's Dog—1. C. E. West, Buffalo, N. Y., 5.

Rural Notes and Items.

TO OUR AGENT-FRIENDS.—In reply to all inquiries, we would announce that our inducements for forming clubs for 1868 (or to begin with this month—Oct. 5—or later,) are *more liberal* than those offered last year,—that our Show-Bill, Premium List, &c., will soon be issued and mailed to all regular agents, and that we shall take pleasure in sending these documents (together with specimen numbers) to every person disposed to aid in extending the circulation of the RURAL and thereby augmenting its usefulness. We trust every friend of the RURAL will see that some one in his or her locality becomes an active recruiting agent for the Rural Brigade, without delay—for *this is the season to begin the good work*. If you, reader, are in a locality where we have no club agent, please do us and your neighbors the favor to act as such, or induce some active friend to do so. We will send all the necessary documents, and reward you liberally, giving you "Good Pay for Doing Good." In all localities where the RURAL is known you need not wait, but *commence taking subscriptions at once*. Many of our agents have already begun, and bid fair to double and treble their former lists.

AGRICULTURAL COLLEGES.—The Agricultural Department at Washington furnishes information as to the States which have established colleges with a view to securing the land grants made by Congress to these institutions. New Hampshire has selected Dartmouth College; Vermont the University at Burlington; Massachusetts has a separate institution at Amherst; Rhode Island assigns the scrip to Brown University; Connecticut to Yale College; New York to the Cornell University; New Jersey to Rutgers; Pennsylvania to the Agricultural School at Bellefontaine; Michigan, a separate college at Lansing; Iowa a State Institution in Story County; Wisconsin to the State University, Madison; Kansas, a separate college at Manhattan; Kentucky a thriving institution at Lexington, and West Virginia a new college at Morgantown.

PEN PICTURES.—We have been shown two specimens of chirographic art which are perfect gems. One is an Oriole's nest, surrounded by a wreath, with the mother bird sitting upon it and receiving food from its mate bending over from a twig above. The other is a simple fruit design. They were executed by Mr. T. S. CHADWICK, Teacher of Ornamental Penmanship in BRYANT, STRATTON & WILLIAMS' Business University of this city, and excel anything of the kind we ever saw before in beauty of design and delicacy of finish.

AMERICAN POULTRY SOCIETY.—The first election of officers of this Society for the annual term took place in New York, Oct 8. The officers elected are: *Pres't*—C. O. POOLE of New Jersey. *Vice-Pres't*—S. M. Saunders, Staten Island. *Rec. Sec.*—J. H Fry, Long Island. *Cor. Sec.*—A. M. Halsted, New York. *Treas.*—Wm A Fitch, Brooklyn, L. I. *Auditor*—J. G. Finnle, N. Y. city. These officers are elected for one year, the July election being only provisional.

WHICH IS RIGHT?—In publishing the awards of premiums on Sheep at the recent State Fair the Buffalo papers gave the Practical Shepherd as the book premium, but the Country Gentleman substitutes Morrell—an obsolete work, which has been out of print for years! This looks queer, to say the least. But as a book of some kind was awarded we print it *Book* in our list, and respectfully ask for the title.

SEWING MACHINES.—According to a table in the New York Commercial Chronicle the number of sewing machines manufactured and sold in the United States during the year ending June 10th, 1867, was

Double Thread,	151,135
Single Thread,	18,970
Total machines,	170,105

THE NAPLES FAIR.—A correspondent writes of the recent Fair at Naples, Ontario County:—"The show of Grapes was very fair; could not, we think, be excelled in Western New York. So was the fruit on exhibition, both canned and fresh: also vegetables, among which was one squash that weighed 95 lbs."

BUTLER COUNTY (O.) HOGS.—The Ohio Farmer says that the "Magie" breed of hogs. Butler county, distanced all competitors at the State Fair at Dayton. It adds:—"It would be difficult to model a hog which for size, form, maturity and economy, should excel these Butler county hogs."

POTATOES AND CORN—DROUTH.—A correspondent writes us:—"I have recently passed through portions of Wisconsin, Illinois, Indiana, Michigan, Northern Ohio, and Western New York, and find that potatoes and corn have suffered much by the drouth and high prices are looked for."

THE GREAT ST. LOUIS FAIR.—This Fair closed on the 12th. The gate receipts amounted to over $89,000. Those for the entire Fair will exceed $100,000. This is the telegraphic report, and if correct, Missouri heads the list in the way of Agricultural and Industrial Fairs.

DEFERRED.—Several articles in type for this number are necessarily deferred. Also quite a number of advertisements, favors in that line far exceeding our limited space. We refuse many advertisements yet shall be constrained to increase our rates—to stop the pressure—or enlarge the RURAL that more may be promptly inserted.

HORTICULTURAL.

GARDEN NOTES.

Crops in the vegetable garden should be removed and the soil spaded or plowed immediately. Farmers rarely plow their gardens in the fall; they should do so for the purposes of early spring planting, putting the soil in good tilth, and destroying weeds. Manure also in the fall; if with coarse material plow it in; if with fine, top dress. Take this time also to improve the garden by underdraining, if needed, subsoiling, and grading the surface. Introduce system in your garden operations, and plan a rotation of crops, so you will have the results all the year round. It takes considerable thought and labor to manage a garden well, making it as productive of the best fruits and vegetables as possible, but it is an investment that pays in satisfaction and profit. You should have your garden well feneed, a suitable tool house in it, and a pit for storing some vegetables during the winter. The latter is of much importance and can be cheaply built if desirable. Dig into the ground a few feet, provide drainage from the bottom, stone or brick up the sides, and roof suitably. Many garden vegetables will keep better in such a structure than in the house cellar, and vegetables stored in the latter place have not always a healthy effect on the inmates of the dwelling.

Cabbage may be safely stored for the winter in such a pit, or one may sink a large cask in the ground and bank up the earth around it, cover suitably, and store in that manner. Cabbage may be kept very well by simply turning the roots uppermost and covering the heads with soil and then with coarse litter, and we have kept them in excellent condition until spring by simply pulling and inverting them, setting the heads on the fresh earth. The snow forms a good protection.

Celery is usually packed in trenches by market gardeners for winter keeping, but for family use we should prefer to pull it, pack in sand, and place in the cold pit or in a cool cellar. It is then accessible at all times, and not as liable to be injured by frost or water. All cellars for preserving roots and vegetables should be cool and moderately dry, and, if under the dwelling house, well ventilated.

Roots of all kinds should be housed before frost affects their flavor and keeping qualities. A bin of earth in the cellar is useful for packing roots to keep them fresh till late in the season. Turnips and beets are liable to shrivel unless covered with the soil.

Asparagus beds may be cleaned with profit now, and covered over with stable manure. This can be raked off in spring, and some that is finer put on and mixed with the soil.

When gathering the apples, select a few barrels of the fairest, and the best keeping varieties, handle them very careful, and pack away for use late next spring.

Preparation for planting dwarf trees, vines, &c., should be made in the garden in the fall. Dig the holes and fill them with manure; in the spring throw out the manure and plant the trees, covering the roots with the frost ameliorated soil.

Make arrangements for the hot-bed in the way of preparing the soil for covering the manure. Leaf mold and sharp sand make the best.

Hardy vegetables—as peas, lettuce, cabbage and potatoes—that are desirable to start extremely early, may be sown in the fall, and protected by sufficient mulching until spring.

GRAPES IN N. Y. MARKET.

The N. Y. Tribune, in its market report for the first week in October, makes the following interesting remarks about grapes:

"Grapes are now absorbing all the fruit interests, the regions about Crooked and Seneca Lakes sending in immense quantities, while Croton Point and other places along the Hudson, as far up as Columbia County, Lockport, Naples, &c., in our own State, aided by very free shipments from Ohio, are piling up the cases here, notwithstanding the earnest endeavors of the dealers to work them off as fast as received. Still, with even more than can well be worked off, we advise those having Concords which they intend to market here, to send them in as soon practicable. They are not a keeping grape, and if not soon disposed of the berries fall from the clusters, or burst and sour. The Isabella and Catawba, with their thicker skin, can be cured (stems wilted) and kept for months. While Concords are selling to-day all the way from 7c. to 15c., the bulk of the sales are at 10c. to 12c.—large quantities of really good fruit going at the former price rather than hold on, for sufficient unto each day are the receipts of the grapes thereof. Isabellas do not have to be forced off so soon, hence they bring a little more, if good—say 12c. to 14c., with some poor at 8c. to 10c. Delawares have a wide range, varying from 12c. to 20c., as per quality, while Catawbas, largely from Ohio, are selling at about 15c., with some poor Steuben county at 18c. and even 20c., in a small way. The tendency is downward so long as the stock will not keep. Apples are about 50c. per barrel lower, and are coming forward quite as fast as wanted. Grapes are taking their place to quite an extent, dealers expressing their surprise at the enormity of the trade in the latter fruit.

THE BEST WATERMELON.

A subscriber, Charleston, East Tennessee, under date of Sept. 25th, writes:—"I want to learn how to produce—outside of the hot-house—the earliest, largest and best watermelons, and this, too, in the locality of lower East Tennessee"

Having had no specific acquaintance with the character of the soil and climate of the locality mentioned, we have less assurance in responding to this inquiry than we should have, were the circumstances reversed. We will state, however, that were we to make the experiments indicated, we would select ground of a loamy texture, well exposed to the sun and invigorated by manure. When in proper tilth for planting, we would sink pits at suitable distances deep enough to receive a barrel or other cask. This should be perforated with small holes and filled with a compost from the stable, pig sty and poultry house. This done we would plant the melon seeds in a circle, about the sunken cask, eighteen inches or two feet from it and furnish a trellis, of some kind, for the vines to climb upon. As soon as the plants are well out of the ground, the casks should receive a liberal supply of water in which rusty iron and bones have been soaked for several days. This water should be supplied at intervals during the growing season, depending somewhat on the character of the weather. With this appliance, and suitable cultivation, we believe the "earliest, largest and the best" quality of melons can be produced in Tennessee or elsewhere within the region suited to this product, "outside of the hot-house."

DWARF PEAR TREE WELL GROWN.

The best of artists must have a model, and the most skillful of cultivators must have a standard of perfection at which he aims in training his trees. The engraving is a very good model for a dwarf pear tree. It is stocky, low branched, pyramidal in form and graceful in proportion. It is as easy to train a pear tree (if the blight lets it alone) to this form as to any other, but how many of our readers that grow them have done it?

THE WINE BUSINESS OF CALIFORNIA.

The production of wine in California is increasing more rapidly than the demand. Hundreds of acres are planted every year with grapes, and young vineyards are coming rapidly into bearing, and there is no correspondent expansion in the export trade. The interior, which formerly purchased considerable quantities, wants now to sell instead of to buy. A number of houses in Eastern cities advertise California wines for sale, but the wines of some are either stimulated or adulterated, and of course these do us more harm than good. There is, we believe, only one large New York wine house engaged exclusively in importing California wines; whereas dozens import European wines, which are no better, but much dearer than ours.

The main obstacle to the sale of California wine is undoubtedly the poor quality of much of it. Many of the wine-growers commenced the business without experience, and they have not made enough money to pay them for studying the process of wine-making, or for taking care when they know. Some of them have not been able to purchase good casks; others have not kept them sweet after getting them. Another obstacle has been that much of the land planted in vineyard is not suitable for making good wine, communicating a bad ground taste to it. Of late years, the hills and mountains have been preferred, and an improvement is perceptible. The general quality of the wine made in the Sierra Nevada is better than that made in the low land of the valleys for this reason; and we cannot doubt that in twenty years certain vineyards favorably located in the mountain counties from Tulare to Shasta, will be as famous and as valuable as those of Johannisberg or the Cote D'Or. The traveler in the mines is not unfrequently astonished to find in some hotel in a little country town better wine on the dinner table than he would find at first-class restaurants in San Francisco,—that is, unless he ordered some very high-priced brand.

There is a common lack of bouquet and delicacy of flavor in the California wines. Quality has been sacrificed to quantity. The well established reputation of the Mission grape for hardiness and productiveness, and the abundance and cheapness of the cuttings, have given it a preference over other strange and rare varieties. But better varieties are now becoming abundant and better known; and the Mission grape must give way to others, which are equal to it in hardiness and superior to it in productiveness and flavor. Among these are the Zenfenthal, the Pinaud and the Golden Chasselas. The Zenfenthal grape is praised very highly by all who have cultivated it. Grape-growers in Toulumne, El Dorado and Placer counties speak as well of it as those in Napa and Sonoma. The Black Burgundy, the Chasselas Fontainebleau, the Reissling and the White Rhenish Muscatel, produce less than those named above, but they are better for wine purpose than the California grape, or at least they are desirable for giving bouquet.—*The Alta Californian.*

A MASSACHUSETTS APPLE ORCHARD.

The Boston Cultivator gives an account of a visit recently paid to the apple orchard of George Pierce in the town of Arlington. It consists of about two hundred trees and bears bountifully every year. The Baldwin apple is the most prolific. One tree was noticed the circuit of whose limbs measured, by pacing about them, about one hundred paces or nearly two hundred and fifty feet. Fruit men, on the ground, accustomed to judge of the quantity on a tree, rated this as high as 25 barrels. The trunk was but five and a half feet in circumference. Mr. Pierce being inquired of how he managed to raise apples while others around him, failed, said:—"I prepare and till my ground well, keep off and destroy caterpillars, canker-worms, web-worms, prune my trees myself, &c. It is no matter what I am doing, if web-worms or caterpillars are manifested from tent or web, I go and destroy them forthwith; in brief, I comply with all the conditions, so far as I know them, of a good apple crop, and I get one annually, while my neighbors, failing to do so, have become discouraged, and are and have been digging up their trees." Is he not right, reader? Is it not just as impossible for apple trees to make fruit without suitable culture and plant food, as it is for a cow to make a good mess of milk without plenty of good and suitable feed?

THE CURCULIO.

The remedies for the curculio the present season are more numerous than usual. There are seldom any of them worthy of attention. The last one appears in a Williamsport paper, from a gardener, who says it is a sure preventive. It is this:—"Take a quantity of corn cobs with a wire around terminating in a hook at the end of the cobs; then dip them into gas tar until they are well saturated. Hang a dozen or more on the tree, in different parts, and no curculio will disturb the tree." We heard of this "remedy" six or eight years ago, tried it thoroughly, and it had about as much effect upon the curculio as if the cobs or rags had been dipped in molasses. We mounted one of the trees and saw the insect at work upon a plum within three inches of the tar. We do not believe that a single one was disturbed by it. We once syringed a tree with a mixture of everything supposed to be offensive to an insect. The trees and fruit had a complete coating of it, yet we saw the curculio attacking an encrusted plum and lay its eggs in it. Not a single plum in either case escaped.—*Germantown Telegraph.*.

IRON AND VEGETABLES.

A curious discovery, says the American Farmer, Baltimore, has been made in France regarding the influence of iron on vegetables. On the chalky shores, where there is an absence of iron, vegetation is sere and withered in appearance, which, it appears, is removed by the application of a solution of the sulphate of iron. Harricot beans, watered with this substance, acquired an additional of sixty per cent. Mulberries, peaches, pears, grape vines and wheat, derive advantages from the same treatment. In the cultivation of clover, wonderful advantages have been gained by the application of the sulphate of iron on soils where it is desired to produce an early crop. In view of these facts the Farmer asks:—"What becomes of all the scales which fall from the anvils of our land?"

Horticultural Notes and Queries.

A New Pest.—A new pest has made its appearance since August in the shape of a green worm, about three-fourths of an inch long, preying upon our hawthorn hedges. At first I discovered the absence of leaves; on closer examination found the worm eating them, and as there were many thousands of them I took a pole and beat the bushes and destroyed most of them. But I suppose they will come again next year. There was also a kind of fly on the bushes. They gather in clusters on the body or limbs and have a white down issuing from their bodies, which is a complete protection against wind or rain, and nothing will disturb them unless it comes with force enough to smash them. I threw dry ashes on the bushes when the dew was on, previous to their appearance, but it did no good.—A. Willson, *Marcellus, N. Y.*

Flowers—A Large Cockscomb.—H. N. Williams writes us from Batcham, Ill., as follows:—"I notice in your paper an account of a cockscomb in Mr. Vick's grounds, measuring twenty inches across the crest. We do things on a large scale in Illinois. I have one in my garden, measuring twenty-three (23) inches and still growing. It would astonish you to see how flowers 'spread themselves' on our rich prairies. I will say, however, that our seeds came from Mr. Vick."

Grapes on the Lake Erie Islands.—W. E. Sibley writes us from Put-in-Bay that the "grape crop on the Islands is much better than was expected. Many vineyards have quite a full crop, and especially the younger ones. The Catawba was never finer and the Delaware has won many friends: the Isabella vineyards are loaded with fine fruit, and have been entirely free from disease. Many of our Islanders who were croaking two months ago about rot, &c., have now more fruit than they can sell to advantage."

The Pea Weevil.—It is stated that the New Jersey market gardeners prevent the pea weevil from destroying the germ in the early peas which they winter for seed by sprinkling the heap with spirits of turpentine after winnowing and before storing in the bins. One quart of turpentine is sufficient for fifteen twenty bushels of peas.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

Eds. Rural:—For the benefit of "Blue Belle," and all novices in the culinary department, who may choose to avail themselves of them, I send some of my choicest recipes for cake, &c.:

Gold and Silver Cake.—*White.*—The whites of 8 eggs; 1 coffee cup of sweet milk; 2 coffee cups of sugar; 4 of flour; 1 of butter; 1 teaspoon even full of saleratus; 2 of cream tartar; 2 of lemon extract.

Yellow.—The yolks of 8 eggs; 1 teacup sugar; ¾ do. butter; ½ do. milk; 2 do. of flour; 1 teaspoon cream tartar; ½ do. soda.

Muffins.—1 quart wheat flour; 1½ pints of lukewarm water; ½ cup yeast; 2 beaten eggs; 2 tablespoons melted butter; 1 teaspoon salt. Let it rise.

Albany Cake.—2 eggs; 1½ cups white sugar; ¾ cup butter; 1 cup sweet milk; 2½ cups flour; 1 teaspoon soda; 2 do. cream tartar. Flavor as you like.

Cocoanut Pie.—1 grated cocoanut; 2 eggs; 1 heaping cup sugar; nearly 2 cups sweet milk; 2 tablespoons butter. Bake with one crust.

Marble Cake.—1 cup brown sugar; ½ cup molasses; 1 cup butter; ½ cup sour milk; ½ nutmeg; 1 teaspoon cinnamon; ½ do. allspice; ½ do. cloves; ½ do. pepper; ½ do. saleratus; yolks of 4 eggs.

White.—2 cups white sugar; 1 do. butter; ½ do. milk; whites of 4 eggs; 2 teaspoons cream tartar; wet 2 cups flour and stir in; when cool add 5 well-beaten eggs. Drop in spoonsful on buttered tins, and bake in a quick oven. Take off the tops and fill with the following:—Boil ½ pint milk; add 2 beaten eggs; 1 cup sugar; ¼ cup flour, and flavoring.

Here let me say to "Blue Belle:"—When you cook by rule follow your recipe exactly. And, again, I find the recipes taken from the Rural much more reliable than any taken from books.—M. E. P., *Canadice, N. Y.*

Will some of the readers of the Rural inform me how to preserve and dry citron, and oblige—Subscriber's Wife, *Newport, N. Y.*

Fish Chowder.—The fish answer best when recently caught; skin and clean them well, split them if large; fry some good pork, peel and slice some raw potatoes; place a layer of pork on the bottom of the pot, one of potatoes, one of fish, one of crackers or hard bread, some onions—others prefer it without; one layer succeed another until the whole is in; all to be sprinkled with pepper and salt. The process of cooking should be slow so as not to break up the fish. When near done, turn in the pork fat; care should be taken not to put in too much water, just enough to cook the potatoes, and when done add some good milk, about one quart to six or eight of the chowder; let it come to a boil then remove from the fire and it will be done.

Pickle for Vegetables.—Six quarts of the very best vinegar, one pound of salt, a quarter of a pound of ginger, one ounce of mace, half a pound of shalots, one tablespoonful of cayenne pepper, two ounces of white peppercorns, and two ounces mustard seed. Boil all these ingredients well together, and when cold, put into a jar. You may add what green vegetables or fruit you like, provided they are fresh. They may be merely wiped to free them from dust.

Dutch Prune Plum Cake.—Flour 3 pounds, sugar a half pound, butter one pound, raisins two pounds, dried prunes one pound, chopped fine, eight eggs, best brandy one gill, one teacupful of yeast, one teacupful of cinnamon-water, half ounce of pulverized cinnamon; form into loaves and let it rise. Bake in a moderate oven one hour.

New Advertisements.

STRAWBERRY PLANTS.—Golden Queen, $2 per hundred. GEO. S. WALES, Rochester, N. Y.

DELAWARE WOOD.—300,000 Eyes from four year old Vines at $2 ₱ M. Address 926 3t SIBLEY & HOMER, Put-in-Bay, Ohio.

GRAPE WOOD FROM BEARING VINES, first quality and true—Iona, Israella, Delaware, Allen's Hybrid, Rogers 15 and 19; all new variety Grape Vines, very cheap. J. KERCH, Waterloo, N. Y.

50,000 MAZZARD CHERRY SEEDlings at $3 ₱ 1,000; and Peach Trees at $80 ₱ 1,000, if taken this fall, to clear the ground. J. D. CONKLIN, Locke, Cayuga Co., N. Y.

CIDER! CIDER! CIDER!—TO KEEP IT sweet the entire year and preserve its original flavor. Recipe sent for 25 cts. by return mail. Have never known it to fail. Address A. R. WOOD, Palmyra, N. Y.

READER—The North-Western Manuf'g Co. Absecla, Mich., will pay you $24 per week and expenses, to sell a new and valuable invention. Samples and particulars, sent free for 10 cts. to pay return postage.

ANDY THE 1st.—HIS HISTORY; HOW he began, and what he has done; his Western trip, and other interesting matters. 50 pages and 40 pictures. All for 20 cents; 8 for $1. There's hardly a man living that will not have it. Post-paid on receipt of price. Address HUNTER & CO., Hinsdale, N. H.

WINNER'S PERFECT GUIDE FOR THE Piano, Violin, Flute, Melodeon, Cabinet Organ, Guitar, Accordeon, Fife, Flageolet, and Clarionet, designed in its Lessons, Examples and Exercises to impart a Knowledge of playing without the aid of a teacher; with selections of choice Music. Price of each book 75 cents. Sent post-paid. OLIVER DITSON & CO., Publishers, Boston; CHAS. H. DITSON & CO., New York.

VIRGINIA PROPERTY—Improved Farms at from $5 to $20 per acre. Buildings, &c., in good order; markets available, soil fertile, climate healthy. No better chance for investment. Also, improved lands, timber and mineral properties. Valuable mills in good order, very low. ☞ Send stamp for Catalogue. MURPHY & TROUTMAN, 926-4t 32 N. 5th Street, Philadelphia, Pa.

BELLS! BELLS!! MENEELY'S WEST TROY BELL FOUNDERY, ESTABLISED IN 1826. Bells for Churches, Academies, Factories, &c., made of genuine Bell-metal, (Copper and Tin) mounted with Improved Patented Mountings, and warranted. Orders and inquiries addressed to the undersigned, will have prompt attention, and an illustrated catalogue sent free, upon application. E. A. & G. R. MENEELY, West Troy, N.Y.

DEAFNESS CURED.—DR. STILLWELL'S Organic Vibrator. It fits into the ear and is not perceptible, removes singing in the head, and enables deaf persons to hear distinctly at church and public assemblies. DR. T. H. STILLWELL, 926 2t 31 East Washington Place, N. Y.

☞ NOT A PATENT MEDICINE. ☜

TURNER'S TIC DOULOUREUX, OR Universal Neuralgia PILL.

A SAFE, CERTAIN, AND Speedy Cure FOR NEURALGIA, AND ALL NERVOUS DISEASES.

Its Effects are Magical.

It is an *unfailing remedy* in all cases of Neuralgia Facialis, often effecting a perfect cure in less than twenty-four hours, from the use of no more than *two or three pills.*

No other form of Neuralgia or Nervous Disease has failed to yield to this *wonderful remedial agent.*

Even in the severest cases of Chronic Neuralgia and general nervous derangements,—of many years standing,—affecting the entire system, its use for a few days, or a few weeks at the utmost, always affords the most astonishing relief, and very rarely fails to produce a complete and permanent cure.

It contains no drugs or other materials in the slightest degree injurious, even to the most delicate system, and can *always* be used with *perfect safety.*

It has long been in constant use by many of our *most eminent physicians,* who give it their unanimous and unqualified approval.

Sent by mail on receipt of price, and postage.

One package,	$1.00.	Postage 6 cents.	
Six "	5.00.	"	27 "
Twelve "	9.00.	"	48 "

It is sold by all wholesale and retail dealers in drugs and medicines throughout the United States, and by

TURNER & CO., Sole Proprietors, 926-26t 120 Tremont St., Boston, Mass.

TEN DOLLARS! $10. SEWING MACHINE. $10.

$25 TO $50 A DAY TO AGENTS.—Patented 1866.

Territorial Rights Given Free to Good Agents.

It is the largest, best, and strongest cheap machine sold. It makes a seam which will not rip, though every third stitch be cut. No family should be without one. The only $10 Sewing Machine sold that will sew heavy beaver cloth. Sent free by express on receipt of price, $10, packed in a wooden box with one spool machine silk, one silver hemmer, screw-driver, and 1 brass gauge. Agents wanted everywhere. EMPIRESS SEWING MACHINE CO., 923-4t 920 Broadway, New York.

GET THE BEST WEBSTER'S DICTIONARY UNABRIDGED NEW ILLUSTRATED OVER 3,000 FINE ENGRAVINGS. 10,000 *Words and Meanings not in other Dictionaries.*

A necessity to every intelligent family, student, teacher and professional man. What Library is complete without the best English Dictionary?

"Superior, in most respects, to any other English Dictionary known to me."—*Hon. Geo. P. Marsh.*

"The New Webster is glorious—it is perfect—it distances and defies competition—it leaves nothing to be desired."—*J. H. Raymond, LL. D., Prest. of Vassar Coll.*

"All young persons should have a standard Dictionary at their elbows. And while you are about it get the best; that Dictionary is Noah Webster's—*the great work unabridged* If you are too poor, save the amount from off your back and put it into your head."—*Phrenological Journal.*

"Every *farmer* should give his sons two or three square rods of ground, well prepared, with the avails of which they may buy it. Every *mechanic* should put a receiving box in some conspicuous place in the house to catch the stray pennies for the like purpose. Lay it upon your table by the side of the Bible; it is a better expounder than many which claim to be expounders. It is a great labor-saver; it has saved us time enough in one year's use to pay for itself; and that must be deemed good property which will clear itself once a year. If you have any doubt about the precise meaning of the word *clear,* in the last sentence, look at Webster's nine definitions of the *v. t.*—*Massachusetts Life Boat.*

In one vol. of 1,840 Royal Quarto Pages. Published by G. & C. MERRIAM, Springfield, Mass. Sold by all Booksellers.

☞ New Webster's National Pictorial Dictionary, 1,040 pp., Rural Octavo, 600 Engravings. Retail price, $6. 926-4t

HEDGE PLANTS FOR FALL SETTING. 200,000 English White Thorn plants, large and well-rooted, $8 and $10 per thousand. Address 922-8t GEORGE BADMAN, Skaneateles, N. Y.

AVERAGE SIZE.

HEADQUARTERS FOR ORIGINAL Kittatinny Blackberry Plants.

☞ Pronounced by the highest *disinterested* authorities in the country to be the Best Blackberry Known.

Every wide-awake Rural reader will have it, as prices are low. Catalogue, with this year's testimony, ready Oct. 1st—10 cts. Price list gratis. Address E. & J. C. WILLIAMS, Montclair, N. J.

TO WINE GROWERS!—GRAPE SUGAR Syrup for sale by HARTMANN & LAIST, 11 East 2d St., Cincinnati, Ohio. Pamphlets sent free of charge upon application. 921

FRUIT TREES AND SEEDLINGS—ALSO fine Grape Vines from *layers,* cheap. For Wholesale Price List, address 923 4t A. HAMMOND, Geneva, N. Y.

NEW RASPBERRY.—THE AUTUMN BLACK—a Seedling of great promise, producing a fine crop in July, and a bountiful one in the fall, continuing to fruit until winter. Plants by mail $1 each. Send for Descriptive Circular. H. B. LUM, Sandusky, Ohio.

WILSON'S EARLY AND KITTATINNY BLACKBERRY. PHILADELPHIA RASPBERRY, And other SMALL FRUITS, at lowest prices, all warranted true to name, with good roots. Send for Price List. EDWARD REEVE, Medford, Burlington Co., N. J.

KILPATRICK.—This Celebrated Ram, (see engraving in Rural, Dec. 15, 1866,) bred by Hon. Wm. K. Sanford, of Orwell, Vermont, will stand for service of Ewes, at Alexander, Genesee county, N. Y. Season to commence Sept. 19th.

TERMS, $15.

KILPATRICK is of pure Infantado stock; sire Comet, dam by Cross Ram. We are near the depots of N. Y. Central and Erie Railroads, where ewes will be received without delay, by freight or express, and cared for free of charge for a reasonable time. For particulars inquire by letter or call and examine. We have for sale a few choice Ewes and Rams. BOWKER & BUSH.

AGENTS WANTED—In Every Town in the United States, to sell two Patent Articles that can be sold at every house. State, County and Town rights for sale. Samples sent by Express on receipt of fifty cents. All letters answered. 922-3t HOWES NORRIS & CO., Springfield, Mass.

ATTENTION!—All Wanting Farms—In a mild, healthy climate, good soil and pure soft water; 18 miles south of Philadelphia, at the Junction of the West Jersey and Cape May Railroads, and only 13 miles by turnpike to steamboat ferry. Improved farms, fruit and village lots for sale cheap. Circulars giving full information, sent free. Address WM. ARROTT, Glassboro', N. J.

PREMIUM CHESTER WHITE PIGS.—Bred and for sale by GEO. B. HICKMAN, Westchester, Chester Co., Pa. ☞ Send for Circular and Price List. 925

Ladies' Department.

SUMMER AND AUTUMN.

BY GEORGE ARNOLD.

Gorgeous leaves are whirling down.
Homeward comes the scented hay:
O'er the stubble, sere and brown,
Flaunt the autumn flowers gay:
But alas!
Summers pass.—
Like our joys they pass away!

Fanned by many a balmy breeze,
In the spring I love to lie
'Neath the newly-budded trees,
Gazing upward to the sky;
But alas!
Time will pass,
And the flowers of Spring must die!

Oft my maiden sat with me,
Listening to the thrush's tone.
Warbled forth from every tree
Ere the meadow hay was mown:
But alas!
Summers pass,—
Now, I wander all alone!

Love, like summer-time, is fair,
Deck'd with buds and blossoms gay;
But upon this autumn air
Floats a voice, which seems to say,
"Loves, alas!
Also pass,
As the summers pass away!"

ADVERTISING MATRIMONIAL.

We have received something unique in the way of an advertisement. It comes to us together with a letter in which five dollars are inclosed, and which is signed "Homeopatrician." As an advertisement it cannot be inserted in the Rural, but for the amusement of the ladies, and to preserve it for some future collector of literary curiosities, we give it here:

HOMEOPATHIC MATRIMONY!

A Physician—*American*—age 27—earnest in his profession—desires a *permanent associate* in business.

A *good* student with a taste for science, in the person of an active, prompt, energetic, ambitious, healthy and substantially affectionate *Young Lady*—age from 18 to 22 years—who can command $3,000 ready capital *for herself*—to employ with the education, experience and $3,000 capital of the undersigned, will be a satisfactory candidate. Said association *must be made a permanent* Professional and Matrimonial alliance. Address in this connection for specific particulars, for "Bona Fide" *business* and *domestic* intentions. Must inclose a *good* and *correct* photograph, sign *full* and *honest* name, give *exact age*, complexion and weight. A confidential and truly honorable correspondence indulged, with *strictly* eligible parties. Satisfactory references furnished, and positively required from *respectable* and *responsible* persons.

Address Diagnostician, Rural New-Yorker Office, Rochester, N. Y.

Now this is evidently the work of one who has the talent of a coward splendidly developed. The fact that he asks ladies to give their "full and honest name," and does not give his own, is sufficient proof of it. If any other were needed, however, it appears in his attempted dealing with us under a disguise. We do not wonder that he is driven to advertise for "a permanent associate in business." Such a cringing, unmanly spirit as he exhibits could scarcely hope to win favor with the fair sex in an open, direct acquaintance. With so many charming girls at hand ready to be wooed and won, (for we don't know of a country town anywhere that cannot boast a good representation of feminine loveliness,) if he were even nine parts of a man he would not be compelled to publish his wants. As it is he *ought* to advertise, and—catch a Tartar.

In his letter, "Homeopatrician" says he is "a regular graduate—an honorable and successful practitioner of medicine in the State of Rhode Island." Here, then, is he endeavoring to play the "Artful Dodger" also, for the letter was posted at a town in the western part of this State, and we are requested to forward all communications that come to us for "Diagnostician" to the same place. The "regular graduate" and "honorable and successful practitioner," is respectfully informed that we do not act in the capacity of "go between" in any such business; and that if any of our readers should be foolish enough to send messages as requested, we should incontinently consign them (the messages) to the waste basket.

Though "Diagnostician" is quite explicit in stating his case, he is not as pointed as was an advertiser in the "personal" column of the New York Herald, a few months ago. Thus read his advertisement:

"Wanted—A situation as son-in-law in some small family."

We "clipped" this, at the time, considering it indeed a novelty. The crispness of its style is really charming. When "Diagnostician" fully concluded to advertise he ought to have had this as a model. But perhaps he didn't care to be so very terse. There were several things he wished well understood.

The first was that he wanted "a *permanent associate* in business." (The *italics* are his own.) Well, in view of the numerous divorces now-a-days, "*permanent*" was a wise thought. But why an "associate in *business?*" We were not aware that homeopathy admitted women to its practice. If such is the case, however, we set the fact down to homeopathy's credit.

Then he desired it known that "a satisfactory candidate" must have "a taste for science," and be "substantially affectionate." The former qualification is unobjectionable, but the latter is rather ambiguous. Does "substantially affectionate" mean that her affection must be substantial; or that *she* must be substantial *and* affectionate?

Furthermore, the eligible party must "command $3,000 ready capital *for herself*." Evidently this last is a mistake. Three thousand dollars *for herself?* Assuredly it must be for *him*. Verily, "a situation as son-in-law" would not express all he wanted. He did not wish to marry even "a *small* family." Nothing less than three thousand dollars would satisfy—three thousand *for her!*

And finally—not to be too particular—it was well to say "satisfactory references furnished;" but why add "and positively required from *respectable* and *responsible* persons?" Are we to understand that all other classes of persons would not be required to furnish any references?

We have returned to "Homeopatrician" the five dollars sent us. His advertisement has amused us, and, we trust, will not prove uninteresting to our readers, and we have no desire to "realize" further from its publication.

A word or two now regarding matrimonial advertising in general. We suppose that many who indulge in it are mainly in search of amusement. We believe that those who do it seriously have not sense enough to warrant them in marrying at all. As an amusement, no great harm may result from it, in some cases, but in many instances the injury is marked and abiding. Could we give a word of caution to every young girl we should say, never engage in correspondence with a man unknown to you. He may possibly be a gentleman,—it is more than probable that he is an unprincipled adventurer. In the brain of any one who will advertise for a companion there must be a derangement which will unfit him for conjugal felicity, and which not even a pill of three thousand dollars, sugar-coated in the best style of homeopathic art, can entirely remedy.

KIND MANNERS AT HOME.

There are many families, the members of which are, without doubt, dear to each other. If sickness or sudden trouble falls on one, all are afflicted, and make haste to sympathize, help and comfort. But in their daily life and ordinary intercourse there is not only no expression of affection, none of the pleasant and fond behavior that has, perhaps, little dignity, but which more than makes up for that in its sweetness; but there is an absolute hardness of language and actions which is shocking to every sensitive and tender feeling. Between father and mother, and brother and sister, pass rough and hasty words; yes, and angry words, far more frequently than words of endearment. To see and hear them, one would think that they hated, instead of loved each other. It does not seem to have entered into their heads that it is their duty, as it should be their best pleasure, to do and say all that they possibly can for each other's good and happiness. "Each one for himself, and bad luck take the hindermost." The father orders and growls, the mother frets, complains, and scolds, the children snap, snarl, and whine, and so goes the day. Alas! for it, if this is a type of heaven!—as "the family" is said to be—at least, it is said to be the nearest thing to heaven of anything on earth. But the spirit of selfishness, of violence, render it more like the other place—yes, and this too often, even when all the members of the household are members of the Church. Where you see—when you know it—one family where love and gentleness reign, you see ten where they only make visits, and this among Christian families as well as others.

Now, it is a sad and melancholy thing to "sit solitary" in life, but give me a cave in the bowels of earth, give me a lodge in any waste, howling wilderness, where foot nor face of human being ever came, rather than an abode with parents, friends, or kindred, in which I must hear or utter language which causes pain, or where I must see conduct which is not born of love. No wealth, no advantage of any kind, would induce me to live with people whose intercourse was of such a nature. The dearer they were to me, the less would I remain among them, if they did not do all they could to make each other happy. With mere strangers one might endure, even under such circumstances, to remain for a time; for what they say or do has but limited effect upon one's feelings; but how members of the same family, children of the same parents, can remain together, year after year, when every day they hear quarreling, if they do not join in it, and when hard words fly on all sides of them, thick as hail, and the very visitors in their house are rendered uncomfortable by them, is indeed a mystery.

"Count life by virtues; these will last
When life's lame, foiled race is o'er;
And these, when earthly joys are past,
Shall cheer us on a brighter shore."

FEMININE GOSSIP.

"Now put that back where you took it from," as the young lady said when her lover stole a kiss.

Scolding, says a good-for-nothing old bachelor, is the pepper of matrimony, and the ladies are the pepper boxes.

A coquette is a young lady of more beauty than sense; more accomplishments than learning; more charms of person than grace of mind; with more admirers than friends.

"There are two eventful periods," says the Ledger, "in the life of a woman. One, when she wonders whom she will have; the other, when she wonders who will have her."

Douglass Jerrold calls woman's arms "the serpents that wind about a man's neck, killing his best resolutions." The "oldest inhabitant" says he don't object to that kind o' serpents.

A gentleman once asked, "What is woman?" when a happy married man replied: "She is an essay on grace, in one volume, elegantly bound. Although she may be dear, every man should have a copy."

A Princess of the House of Bourbon, on being asked why the reigns of queens were in general more prosperous than the reigns of kings, replied:—"Because under kings, women govern: under queens, men."

A Paris letter states that the latest fashion in veils is to wear them so as to shade the chignon. The face is exposed to the sun to let it acquire the fashionable color of the brunette, and the dye of the chignon is preserved.

Choice Miscellany.

Written for Moore's Rural New-Yorker.

BESIDE THE SEA.

BY VERONA COE.

Watching the shadows that darken the land:
Watching the clouds drifting seaward—Ah me!
Waiting for sunlight, and waiting for calm,
And for boats to come in from the terrible Sea.

When will the sunshine break out of the cloud?
When will the waves fall asleep on the shore?
When will the winds change, and when will the tide
Bring the fisher lad's boat to the offing once more?

Yesterday morn when the world was gay,
My lad sailed merrily into the dawn—
Laughingly flung me a kiss, and the tide
Bore him out to the sea—my sailor was gone.

Hour after hour I wait by the sea
For the growing gleam of his home-bound sail.
When the tide runs out, when the tide runs in,
When the red sun shines, when the moon is pale.

For sooner or later, if breezes are fair,
He will draw in his nets, and sail homeward to me;
Now, haply, he lingers a moment, to list
To the mermaids, slow singing, low under the sea.

But the wreckers, at work by the waters at night,
Whispered something to me of a boat cast ashore
On the rocks; of a pale youth dead, with his hands
Agrip on the half of a shattered oar.

Bury him tenderly, down by the sea—
Haply some woman is waiting for him,
As *I* wait for *my* lad to sail in from the east
Through the flush of the eventide, tender and dim.

Clouds drift over me day after day,
Suns move westward, and round moons wane;
I watch for his boat sailing over the Bay,
Through sunlight and starlight and slow-falling rain.

Patient, though weary, I wait for the gleam
Of his sail on the sea; for he said "I will come
In the gray of the gloaming." I linger and dream
Of his boat gliding merrily down to his home.

And some sweet, golden evening that surely will be
He will sail softly down to the old home shore
With a song on his lips, and the day shall be glad,
And the long, weary watchings at length shall be o'er.

Berlin, Mich., Oct., 1867.

ABOVE THE CLOUDS.

Clear, crisp, and spendidly beautiful as are many of these autumn days, now and then there comes one which is dark, and dull, and dreary indeed,—when the leaden clouds shut densely over us, and, though no rain falls, the atmosphere is disagreeably damp and chilling. On such a day, if we chance to remember the fact that "every cloud has a silver lining," it is with the wish that, for once, Nature would reverse things—that the clouds might wear their lining on the outside!

Well, the silver *is* on the outside, even while we wish it, but it is on the *other* side. On the other side—just as are very many of our blessings—and so we cannot see it. It may do us good, at times, to go above the clouds, and see for ourselves the brightness reigning there. If we never do this, we may come to believe that when it is cheerless around us there is no sunlight anywhere.

We have been thinking—and with a deal of pleasure—of a sunny morning that once gladdened us, and that is set, a perfect picture which years cannot dim, in our gallery of never-to-be forgotten gems—a morning above the clouds. We were on the rock-crowned summit of New England's highest peak, and far below us lay the cloud-sea. On the afternoon previous we had left the dreamy little village of Gorham, N. H.,—had ridden away from the quiet coziness of the "Alpine," with all its comforts and attractions—and winding along the noisy little Peabody River, searching out the daintiest dells imaginable, and gaining new and bolder mountain views at frequent intervals, had looked up, after an hour's drive, to see Mount Washington towering in all its kingly proportions directly before us. Then for four hours we had slowly mounted skyward. From the warm sunlight of the valley we had passed to the dense, blinding mist that encircled the mountain's brow, and which, borne on by fierce, cutting blasts, seemed to pierce our very vitals, albeit extra wrappings were indulged in without stint.

Reaching "Tip Top" at last, half frozen, wholly bewildered, and just as a storm began to rave madly, we had tested the comforts there found, and through the brief summer evening had listened to the wild, weird tales told by the party gathered around the blazing fire in the sitting-room—tales of lost wanderers upon the mountain side, and of fearful, lonely deaths when the storm claimed its victims. All the night long the storm had raged, but at morning the clouds drifted away from the summit, settled lower down, and the sunlight above them appeared in its transcendent glory.

In every direction the cloud-sea reached away below us, lit into such wondrous beauty by the shimmering sunbeams as no pen or pencil could portray. A wide-spreading ocean, with surface white as whitest milk foam, it closed around the mountain midway up its side. Beautiful as it was, it seemed to grow every moment more beautiful by its continual changes. We had seen clouds dyed with all the splendors of the sunset, but never anything so magnificent as this. And here was the "silver lining." Indeed, was it not all silver? Could there be aught of dreariness below? We should see.

We descended. The extra wrappings of the afternoon previous were unnecessary. In place of the cutting blasts we had experienced, we felt only mildly tempered breezes. Cheeringly glowed the sun above us, and brightly glistened the strangely beautiful sea below. For an hour we wound downward, our whole being revivified and thrilled by the grandeur of the scene. Then we plunged into the cloud-sea, and its damp chilliness pierced us through and through. A half hour longer we dove through it, until the dark green of the valley was discernible below. In the valley there was no ray of sunshine. The cold, dun clouds overhung it with a thick gloom, but they could not render the day dark and dreary to us. Henceforth we should know, of a truth, that "every cloud has a silver lining." *We had seen it!*

And now, when the cheerless days come, and the air is all a-chill with never a ray of warmth to gladden it, the thought of that morning above the clouds is like a flood of sunlight. It was a beautiful lesson that we learned away up there amid the gray old rocks on the mountain top. It was worth a week of toil and of storm-battling,—it will do us good so long as clouds come over the sky or darkness enters into the heart. Would that we could impart to every reader the lesson of the clouds, in its fullest and deepest meaning. Then would doubt and despondency give way ever to glad hoping, and all hearts sing cheerily of "the good time coming!"

Written for Moore's Rural New-Yorker.

LEAVES.

Beautiful are the leaves; whether the opening leaf of spring-time, or the gorgeously dyed leaves of autumn, which blush to crimson and scarlet, or turn pale with terror at the breath of the frost-king. I watch them as they drift around me, thinking how soon we shall forget them, when May flowers shall bloom around us, and May's robe of green hide from our eyes all things which sadden the heart. All through the somber woodland, the long grey moss waves like a funeral pall over the fragile things, which, in the days agone, shielded it from the summer sun.

We sorrowfully search for the golden and tinted leaves, but find only their gauze-like framework, over which the winter winds wail their requiem. How silently they will lie, all the dreary days of winter, with the cold white snow above them for a shroud—never heeding our sorrow over their dead loveliness, only mutely teaching us that they have fulfilled their mission, delicate and frail though they are. They gladdened, for a time, some lonely lives, brought balm to some weary hearts, and, when that was done, left as silently as they came. So when our work is finished—when we have done that which our hands have found to do—we too, shall rest, and may it be "Sunday to-morrow and to-morrow!" Lockie.

Cannonsville, N. Y., 1867.

FUN AT HOME.

Don't be afraid of a little fun at home, good people! Don't shut up your house lest the sun should fade your carpets; and your hearts, lest a hearty laugh shake down some of the musty old cobwebs there. If you want to ruin your sons, let them think that all mirth and social enjoyment must be left on the threshold without, when they come home at night. When once a home is regarded as only a place to eat, drink, and sleep in, the work is begun that ends in gambling houses and reckless degradation. Young people must have fun and relaxation somewhere; if they do not find it at their own hearthstones, it will be sought at other and perhaps less profitable places. Therefore let the fire burn brightly at night, and make the homestead delightful with all those little arts that parents so perfectly understand. Don't repress the buoyant spirit of your children. Half an hour of merriment, round the lamp and fire-light of a home, blots out the remembrance of many a care and annoyance during the day; and the best safeguard they can take with them into the world is the unseen influence of a bright little domestic sanctum.

WIT AND WISDOM.

Which is the oldest tree in the world? The elder tree, of course.

He that hinders not a mischief when it is in his power, is guilty of it.

A drop of the blackest ink may diffuse a light as brilliant as the light of day.

It has been ascertained that the man who "held on to the last" was a shoemaker.

Indiscriminate eulogy and indiscriminate invective are equally good—both good for nothing.

Vehemence creates dislike, excessive mildness contempt; be neither so severe as to be hated, nor so tame as to be insulted.

Sidney Smith said to an ex-M. P. for Edinburgh, that all he wanted to make him perfect was a few brilliant flashes of silence.

The man who has nothing to boast of but his illustrious ancestry is like a potato—the only good belonging to him is under ground.

A man should know when to laugh or smile in company. It shows much more stupidity to be grave at a good thing than to be merry at a bad one.

Heaven sends us ten thousand truths; but because our doors and windows are shut to them, they sit and sing awhile upon the roof and then fly away.

A countryman, who was once charged with ten gallons of whisky, which a publican had put into an eight-gallon keg, said he didn't mind the money so much as he did the strain on the keg.

Idleness is the dead sea that swallows up all virtues, and the self-made sepulchre of a living man. The idle man is the devil's urchin whose living is rags, and whose diet and wages are famine and disease.

An Irishman applying for a license to sell spirits, being questioned as to his moral character and fitness for the trust, replied:—"Och, an its there ye are; sure an its not much of a character a man nades to sell whisky!"

Sabbath Reading.

THE TWO VILLAGES.

Over the river on the hill,
Lieth a village white and still;
All around it the forest trees
Shiver and whisper in the breeze.
Over it sailing shadows go,
Of soaring hawk and screaming crow:
And mountain grasses, low and sweet,
Grow in the middle of every street.

Over the river under the hill,
Another village lieth still:
There I see in the cooling night,
Twinkling stars of household light.
Fires that gleam from the smithy's door,
Mists that curl on the river's shore;
And in the road no grasses grow,
For the wheels that hasten to and fro.

In that village on the hill,
Never is sound of smithy or mill;
The houses are thatched with grass and flowers,
Never a clock to tell the hours:
The marble doors are always shut;
You may not enter at hall or hut.
All the village lie asleep.
Never a grain to sow or reap;
Never in dreams to moan or sigh—
Silent—and idle—and low—they lie.

In that village under the hill,
When the night is starry and still,
Many a weary soul in prayer
Looks to the other village there,
And weeping and sighing, longs to go
Up to that home from this below:—
Longs to sleep by the forest wild,
Whither have vanished wife and child.
And heareth, praying, the answer fall—
"Patience! That village shall hold ye all!"

[*Shadow of the Rock.*

THE HOME-SHADOWS.

We could write a sermon on the atmosphere of homes. That such a sermon ought to be written, and scattered broad-cast over the land, we are becoming more and more convinced. It ought to be given in such thrilling words as would search their way into every parent's heart. Home atmospheres feed the life of generations to come. In them all there will be, there must be, elements which will either greatly injure all who partake of them. But as we have not space for the sermon, we will give an extract from one by Robert Collyer on "Healing and Hurting Shadows." It speaks thus beautifully of the home-shadows:

"Friends, I wonder whether we have any deep consciousness of the shadows we are weaving about our children in the home; whether we ever ask ourselves, if, in the far future, when we are dead and gone, the shadow our home casts now will stretch over them for bane or blessing. It is possible we are full of anxiety to do our best, and to make our homes sacred to the children. We want them to come up right, to turn out good men and women, to be an honor and praise to the home out of which they sprang. But this is the pity and the danger, that, while we may not come short in any real duty of father and mother, we may yet cast no healing and sacramental shadow over the child. Believe me, friends, it was not in the words he said, in the pressure of the hand, in the kiss, that the blessing lay Jesus gave to the little ones, when he took them in his arms. So it is not in these, but in the shadow of my innermost, holiest self; in that which is to us what the perfume is to the flower, a soul within the soul,—it is that which, to the child, and in the home, is more than the tongue of men or angels, or prophecy or knowledge, or faith that will move mountains, or devotion that will give the body to be burned. I look back with wonder on that old time, and ask myself how it is that most of the things I suppose my father and mother built on especially to mould me to a right manhood are forgotten and lost out of my life. But the thing they hardly ever thought of,—the shadow of blessing cast by the home; the tender, unspoken love; the sacrifices made, and never thought of, it was so natural to make them; ten thousand little things, so simple as to attract no notice, and yet so sublime as I look back at them,—they fill my heart still and always with tenderness, when I remember them, and my eyes with tears. All these things, and all that belong to them, still come over me, and cast the shadow that forty years, many of them lived in a new world, cannot destroy.

I fear, few parents know what a supreme and holy thing is this shadow cast by the home, over, especially, the first seven years of this life of the child. I think the influence that comes in this way is the very breath and bread of life. I may do other things for duty or principle or religious training; they are all, by comparison, as when I cut and trim and train a vine; and, when I let the sun shine and the rain fall on it, the one may aid the life; the other *is* the life. Steel and string are each good in their place; but what are they to sunshine? It is said, that a child, hearing once of heaven, and that his father would be there, replied, 'Oh! then, I dinna want to gang.' He did but express the holy instinct of a child, to whom the father may be all that is good, except just goodness,—be all any child can want, except what is indispensable,—that gracious atmosphere of blessing in the healing shadow it casts, without which even heaven would come to be intolerable."

"To speak with the tongue of men or angels on religious matters, is a much less thing than to know how to stay the mind upon God, and abide with Him in the closet of our hearts, observing, loving, adoring, and obeying His holy power within us."

Faith is the key that unlocks Paradise and lets a flood of joy into the soul. Faith appropriates all to itself.

THE BLUE RIBBON;
OR, RURAL LIFE AND LOVE.

[Concluded from page 310, this No.]

Those few days in which John Everdale stood side by side with Helen Darrell at the couch of the sick and dying had been days of deep suffering as well as of cheerful work for God and man. The old struggle in his heart was aroused in tenfold strength by the sight of her noble and untiring ministry—the very touch of her hand and sound of her voice had power to thrill him to the very depths of his nature.

A sudden summons to the sick bed of her father's only sister took Helen from her self-imposed task, and she left Shelbyville on the evening before Dr. Lashley, refreshed and invigorated, came back to his "work."

Helen herself returned in October, on the first day of the County Agricultural Fair at Shelbyville. If any one of her accomplishments could take precedence of another in her father's eyes it was her daring and graceful horsemanship, and to please him she consented, year by year, to enter the list of lady-riders on the closing day of the Fair.

"I am afraid Wisp will be in poor training, papa," said Helen, as they sat together in the porch, on the evening of her arrival at home. "And, by-the-way, have you found a mate for Racer yet?"

"No, unless John Everdale should sell me that gray of his. John is going to sell out his farm and leave—did I tell you? And sorry I am for it, too. There he is now! I'll call him in and ask him about the gray."

Between the gate and the house John Everdale steeled his nerves to meet Helen calmly and achieved a brave success. If he had been less preoccupied with his own emotions he might have noticed an unaccustomed tremor in her voice.

"So you are going away, John?" she said, as her father went indoors for a moment.

"Yes, I am talking of it," he answered. "I hear that a real city is being laid out at last on my Western—I had almost said my Spanish estates," he added, with a laugh that tried to be cheery, "and who knows of the fortune that may be stored for me in corner-lots? At any rate I'm going to look after my own interests on the ground."

"Why do you go away?"

He looked at her with all the hungry, hopeless yearning of his soul in his eyes. Sure enough! Why did he go away? Could he breathe the same air she breathed—be warmed in the same light that shone upon her, and yet—

Dr. Lashley's chaise stopped at the gate.

"Helen Darrell," said John, with a white heat smothered in his eyes, and the veins knotted on his forehead as if in some mortal pang, "I cannot—*dare* not stay!"

It was not Dr. Lashley, but young Harris who handed to Helen a note and a little packet, and then drove away again.

"What is it, Nell dear?" said Square Darrell, coming out.

"Only a note from Dr. Lashley," answered Helen, speaking rapidly. "He has but just heard that I am at home; would call to-night, but is sent for suddenly; will be at the Fair Grounds to-morrow, and hopes to see me wear the scarlet ribbon he sends me—his favorite color!" Then turning, with a quick lowering of her voice, she said, "What is your color, John?"

It seemed a cruel taunt, but all John's manliness and self-respect came to his aid as he answered, with a smile, "True-blue, Miss Helen!"

The next morning dawned without a cloud. From far and near the country people crowded to the Fair Grounds. A great throng surged in and about the gayly-decorated booths, and in the cattle-yard the farmers were discussing the relative merits of Durham and Devonshire, Old English and Merino. At last the hour appointed for the riding arrived. The crowd arranged itself as best it might, surrounding the course, and the judges took their places on the stand.

John Everdale looked on wearily from a distance as the dash commenced. Nearer and nearer came the graceful riders—a little girl in a green habit and plumed jockey taking the lead; but just as they passed him, rounding the curve, the gray Arab, Wisp, shot ahead with Helen Darrell. John's heart gave a wild leap and stood still; but it was not the matchless face, flushed and eager, that had thrilled him so. He had scarcely glanced at the slender figure holding its seat in the saddle with a pliant firmness wonderful to see. There, streaming backward from her throat, a single dash of color on the black background of her riding-habit—not Dr. Lashley's scarlet token, but a ribbon that might have stolen its azure from some star-eyed violet in summer meadows.

When Dr. Lashley made his way through the crowd, mounted on his handsome black, and laid his hand with ill-concealed vexation on Helen's embroidered bridle-reins—the prize of the day's success—she bowed her thanks, but said:—"I have another escort, Dr. Lashley!" and so rode out from the inclosure with John Everdale at her side.

Not a word was spoken; but, as if by instinct, they turned aside into a more unfrequented way, and as the trees of the grove shut out all curious glances behind them, they turned and looked into each other's eyes.

"I love you, Helen! it is all I can do," said John Everdale, simply.

A bright blush spread over Helen Darrell's upturned face. She touched Wisp quickly with her riding-whip, and as John looked after her wonderingly, backward on the breeze came the refrain of an old ballad:

"'And I've no heart to give him,
For he has it now!'"

The Traveler.

Written for Moore's Rural New-Yorker.

LOUNGINGS—No. I.

BY OLOFFE THE DREAMER.

LOOKING EASTWARD.

HOLIDAY-TIME again! And, school-boy like, a hat is high in air, and a long sigh of relief springs into existence. The year has begun to robe herself in soberer garb, when once more I put aside the old desk and its surroundings. To brush away a few of the cob-webs of this round of days—to "make believe a great deal," and think it does just as well as the reality—to grow out of servitude into ordering myself—to catch the bright fancies which respite whispers are all round me, and butterfly-like, will be hovering over my path—all these, and more, shall be attempted, and—well—the way is not long to the great Depot.

It takes some time to get fixed—and just a little way off, in the other train, I see a wedding party of friends setting off on their journey—of pleasure and of life together. In the quiet thought of a friendly heart, although not always externally real, do we

"Hear the mellow wedding bells—
Golden bells!
What a world of happiness their harmony foretells!"

and we waft a "Good speed" to these two, who have clasped each other's hands, and looked into each other's faces, and felt in their souls, "Where thou goest, I will go—for ever. Amen. And as GOD liveth, not even death shall henceforth part thee and me."

A world of happiness!—Ah, what will be the sounding of the bridal bells in their years to come—will they grow jangled with the harshness of discordance, or still keep time and tune to the heart-music that is chording within?

—I do not know whether I should have cared to visit the Virtuoso's Collection, which HAWTHORNE has so quaintly described. If by chance I had strayed in, where the Lost Man kept the door, and Salathiel exhibited the strange wonders, I think I should have hesitated, even as did the dead Story-Teller, to have looked into the magic glass which imaged each one's to-morrow. For we need no long looks ahead to fit us for the betterness beyond. We should take our lives as they come, waiting for the end in humble hope,—not trespass over the stile to Doubting Castle, where we must keep peering into looking-glasses till we go mad. We forget that our futures look always backward, and think the mask they wear to be their own face, till midnight comes, when the spell is broken, and we see the countenance which the shadow had hidden.

And so when we sit looking toward sunset, it is with expectation and disappointment, with doubt and trustfulness, our moods changing with the hues and the blendings of the sun's declining path, which no poet's pen, no painter's pencil, can image for us. More splendid, more stately, more kindly in his departure than at his coming, the king of day seems whispering to desponding hearts of the bright to-morrows he will bring, soothing with hope of existence that never is, but always shall be.

But our faces are set Eastward to-day—this mellow day of September remembrance—a few of us thrown together for a dozen or so rail-hours' ride. The others are in pursuit of their business—I have left all mine behind. The others are expecting the hurry and bustle of traffic—I, in the rest of quietness, am expecting nothing—save to meet a friend or two—to drift in and out of one or two great cities, one or two loving homes—one or two of nature's audience-halls.

My fellow-travelers are talking politics—discussing the fate of the finances, arguing that the last news from the other side of the world, (a considerable of which reaches us before the events take place—in point of time—) is unfavorable for a long continuance of present relations, and, my dear sir, if not, what then? So their drone grows fainter, and through the shadow of nature I look out far beyond—even to where is no twilight, but perfect day,—no autumn, but beautiful summer,—no sorrow, but quiet happiness—for ever and ever—to them that shall overcome. And twilight deepens, and the night's sentinels, one by one, take their station on the parapets of heaven, guarding the way we know not now, but trust we shall know hereafter.

We all feel drowsy and "turn in." A sleeping car is a very comforting institution. If one cannot wholly forget himself, he can rest and doze, and feel better fitted for another day, than if he had been where he must needs keep company all night with FORTY-WINKS and his friends, embraced by wooden arms, and embracing wooden backs. The night may be long—but thought and quiet draw round the curtains, and we go "through without change of ears," over the great Hudson Bridge, and down between the North River and the high hills, that with the first streaks of dawn, seem looking at us in supremest unconsciousness.

Traveling is apt to show all sorts of qualities. It is hard to be always even-tempered, especially when jarred in the car, tossed in the steamboat, jolted in the stage, day after day. Yet why should the citadel be left ungarded, save when the inclination takes us to watch,—for it is ever in hours that we think not that the enemy comes, and finding the sentinel asleep and unwary, sounds no trumpet of alarm, but steals in over the slumberer, to an easy victory. It is in the little things, above all, that we need to be better than the mighty—greater than he that taketh a city—and GOD help us when we think we are strong!

But the engine-bell is sounding its monotone, and slowly we round into the Great Metropolis, "up town," near where the aristocracy hold high carnival, where it is almost "away from the roar and dust," into the country—of purer air, greener earth better life. I catch myself making mental memoranda, and yet wonder who of us realizes plannings, always, whose life-current runs in the channel he would have dug, or to the ocean he sees in the far dim distance? Ah, beginnings may all be alike—the ends all differ.

"From the same cradle's side—
From the same mother's knee,—
One to long silence and the frozen tide,
One to the Peaceful Sea."

SALT LAKE CITY.

IN a former number of the RURAL we gave a portrait of BRIGHAM YOUNG, the famous Mormon leader, and an illustration of his residence and grounds. We now give a representation of a portion of the city wherein Mormonism holds high carnival.

Salt Lake is naturally a place of considerable importance. It is the center from which a large section of Utah, Nevada, Idaho, Montana and Colorado radiates, and bids fair to continue, as at present, the largest city between St. Louis and San Francisco. Its population numbers something over eighteen thousand,—of which about three hundred are "Gentiles," and all others "Saints," (Mormons.) Two daily papers minister to its edification; one—"The Vidette"—representing the former sect, and the other—"The Telegraph"—being in the interest of the latter. Beside these there is a weekly journal which is the organ proper of the Mormon Church. The city is pleasantly situated, and is laid out with much regularity. All the streets are watered by little rills, one on each side—a feature peculiarly novel and attractive.

Various Topics.

HONOR YOUR BUSINESS.

IT is a good sign when a man is proud of his work or his calling. Yet nothing is more common than to hear men finding fault constantly with their particular business, and deeming themselves unfortunate because fastened to it by the necessity of gaining a livelihood. In this spirit men fret, and laboriously destroy all their comfort in the work; or they change their business and go on miserably shifting from one thing to another, till the grave or the poor-house gives them a fast grip. But while occasionally a man fails in life because he is not in the place fitted for his peculiar talent, it happens ten times oftener that failure results from neglect and even contempt of an honest business. A man should put his heart into everything that he does. There is no profession that has not its peculiar cares and vexations. No man will escape annoyance by changing business. No mechanical business is altogether agreeable. Commerce, in its endless varieties, is affected, like all other human pursuits, with trials, unwelcome duties, and spirit-tiring necessities.

It is the very wantonness of folly for a man to search out the frets and burdens of his calling, and give his mind every day to a consideration of them. They belong to human life. They are inevitable. Brooding, then, only gives them strength. On the other hand, a man has power given to him to shed beauty and pleasure upon the homeliest toil, if he is wise. Let a man adopt his business, and identify it with his life, and cover it with pleasant associations; for GOD has given us imagination, not alone to make some poets, but to enable all men to beautify homely things. Heart-varnish will cover up innumerable evils and defects. Look at the good things. Accept your lot as a man does a piece of rugged ground, and begin to get out the rocks and roots, to deepen and mellow the soil, to enrich and plant it. There is something in the most forbidding avocation around which a man may twine pleasant fancies—out of which he may develop an honest pride.—*N. Y. Economist.*

MANUFACTURING LIGHTNING.—At a late scientific re-union in London a machine for generating electricity, worked by an eight-horse steam engine, was exhibited. "The electric action developed by this power, through the intervention of immense magnets and nearly twenty hundred weight of copper wire, was so tremendous as to burn bars of iron like sticks of wood, producing a light too vivid and intense to be looked upon. Electric beacon lights are likely soon to supersede all others, as the calcium and magnesium lights have already, to some extent, superseded oil. The one lately established at Cape Grisnez, on the coast of France, flashes light across the British Channel and for some miles beyond the English shore-line. There are now three electric light-houses in Europe—two in France and one in England—and the supremacy of electricity over every other artificial illuminator seems in a fair way of being demonstrated beyond all cavil."

DESPAIR makes a despicable figure, and descends from a mean original. 'Tis the offspring of fear, of laziness, and impatience; it argues a defect of spirit and resolution, and oftentimes of honesty too. I would not despair, unless I saw my misfortune recorded in the book of Fate, and signed and sealed by necessity.—*Collier.*

BLACK WALNUT TIMBER.

A FEW years ago mahogany and rosewood were considered the only timber fit for fashionable furniture. More recently manufacturers have discovered that American native timber is just as elegant and susceptible of as high a polish. This is especially the case with the black walnut. The trade in this valuable wood is growing yearly, and there are no signs of the curtailment of the supply. The Toledo Blade says of the black lumber business at that point: "A few years ago, when the movement of black walnut lumber was but a tithe of what it has been for two years past, it was predicted that the supply would soon be exhausted, but it is shown by the receipts and shipments in 1866-67, to date, that there are no more indications of exhaustion than when the prediction alluded to was made. In 1866 the quantity of black walnut lumber received and shipped was largely in excess of any previous year, and astonished not only strangers, but our own citizens; but the increase this year to July 13th, is as great as was that of 1866 over previous seasons."

EDITORIAL DUTIES.

Mr. HUNT, in a volume on the "Fourth Estate," thus sketches the peculiar duties of the journalist:—"The man who once becomes a journalist must almost bid farewell to mental rest or mental leisure. If he fulfills his duties truthfully, his attention must be ever awake to what is passing in the world, and his whole mind must be devoted to the instant examination, and discussion, and record of current events. He has little time for literary idleness, with such literary labor on his shoulders. He has no days to spend on catalogues, or in dreamy discursive researches in public libraries. He has no months to devote to the exhaustion of any one theme. What he has to deal with must be taken up at a moment's notice, be examined, tested and dismissed at once; and thus his mind is ever kept occupied with the mental necessity of the world's passing hour."

A ROMANCE OF THE WAR.—The Milwaukee Wisconsin works up quite a story about a Milwaukee soldier in the First Regiment named Lyman, who was struck with a spent ball at the battle of Falling Waters, and laid up for a few days, when he was tenderly nursed by a young Virginia girl of fifteen, for whom he formed quite an attachment, which was reciprocated, she being strongly Union in her feelings. She was an orphan, however, and her guardian told her the day she married Lyman he would give her property to the Southern Confederacy. The lovers have patiently waited, however, visiting occasionally, and frequently exchanging letters, and at last the young lady has reached her twenty-first birthday, and is beyond her guardian's power, and young Lyman has gone to Virginia to claim his long promised bride.

CHATTANOOGA.—Chattanooga is situated on the Tennessee River, 480 miles from its mouth, and with 1,000 miles of river navigation above it on the Tennessee and its tributaries. The Tennessee drains 42,000 square miles of territory, only 3,000 miles less than the area of the whole State of Tennessee. This territory includes North Alabama above the Muscle Shoals, and twenty-six counties of East Tennessee, containing a population in 1860 of 200,125. There are 800 miles of the Tennessee River proper navigable at the present time for first-class steamers, while but 330 miles can be navigated by boats from St. Louis on account of the Muscle Shoals.

ALASKA.—The trade of our newly acquired Alaska, in skins and furs, in 1866, amounted to $1,500,000. These furs consist of sea otter, seals, blue and white foxes, mink, muskrat, beaver, and bears. Heretofore whalemen have not been allowed to land for business purposes on any part of the territory. This restriction is of course removed by the treaty. Fishing and fur companies are organizing on the Pacific coast. In San Francisco, the North Pacific Fur Company, with a capital of $1,000,000, has recently been organized. The charter is liberal in its provisions, and is in the hands of some of the best business men on the Pacific slope.

Reading for the Young.

Written for Moore's Rural New-Yorker.

LITTLE CHILDREN LOVE THE SAVIOUR.

LITTLE children love the Saviour!
Love His words, and keep them too,
Once he lived 'mid earthly sorrows,
He was once a child like you.

Think of all His love and meekness,—
Rage His bosom never stirred;
Words of anger and contention
From his lips were never heard.

Now He reigns above in glory,
Where no grief nor pain may be,
But His gentle voice still pleadeth—
"Little children come to me."

Porter, N. Y., 1867. A. E. H.

ORIGIN AND SEALS OF THE STATES.

NUMBER TWELVE.

THE SEAL OF CALIFORNIA.

CALIFORNIA—the "Golden State"—was proclaimed United States Territory in 1846 by Commodore STOCKTON, who wrested the then capital, Los Angelos, from the Mexicans. In 1850 it was admitted into the Union as a State. It has an area of 155,500 square miles, or 99,520,000 acres. Of this, 41,622,400 acres are fit for cultivation. According to the latest census the population numbers nearly 600,000. Almost every nationality is represented. The State is wonderfully prolific in mineral and agricultural products. The soil in the valleys is unusually rich, and corn, potatoes, and nearly every variety of grain yields abundantly. Fruit—especially grapes—is much cultivated. The climate, though variable, is peculiarly fine throughout much of the State. No other country has so cool summers and so warm winters. Earthquakes are quite frequent, but do little damage, being light.

The motto on the seal was well chosen. "I have found it," is its signification, and as nearly everything has been found there it has peculiar fitness.

THE SEAL OF OREGON.

OREGON was the twentieth State admitted into the Union. The name was long applied to all the great region on the Pacific coast claimed by the United States. In 1846, by treaty with Great Britain, the United States abandoned all claim to country North of latitude 49°, and thus the name came to signify much less. In 1853 there was another cutting down, and six years later another. At this time—1859—it became a State, with an area of 80,000 square miles. It borders upon the Pacific ocean, and has a sea coast of nearly three hundred miles, Portland being its chief seaport. The Columbia River intersects it, and affords inland navigation over one hundred miles. The surface of the country is for the most part rugged and mountainous, though the valley of the Williamette, one hundred and twenty miles long by thirty miles wide, is rich and arable, and the climate is variable. Oregon was long known only as a region for fur traders, and not until 1860 did the Hudson Bay Company relinquish their trading post at Fort Vancouver, Wheat, oats, potatoes and apples are now raised with success, and are the chief exports. The population in 1860 was 52,464.

THE OTHER SIDE.—Once in a happy home a sweet, bright baby died. On the evening of the day when the children gathered round their mother, all sitting very sorrowful, Alice, the eldest, said:

"Mother, you took all the care of baby while she was here, and you carried and held her in your arms all the while she was ill; now, mother, who took her on the other side?"

"On the other side of what, Alice?"

"On the other side of death; who took the baby on the other side, mother, she was so little she could not go alone?"

"Jesus met her there," answered the mother. "It is he who took little children into his arms to bless them, and said "Suffer them to come unto me and forbid them not, for of such is the kingdom of heaven!"

MOTHER.—Young man! Thy mother is thy best earthly friend. The world may forget thee—thy mother never; the world may persecute thee while living, and when dead, plant the ivy and the nightshade of slander upon thy grassless grave, but thy mother will love and cherish thee while living, and if she survive thee, will weep for thee when dead, such tears as none but a mother knows how to weep. Love thy mother!

LIFE'S BREVITY.—At best, life is not very long. A few more smiles, a few more tears, some pleasure, much pain, sunshine and song, clouds and darkness, hasty greetings, abrupt farewells—then our little play will close, and injured and injurer will pass away. Is it worth while to hate each other?

Our Fall Campaign!

A NEW QUARTER--VOLUME XIX.

A NEW QUARTER of the RURAL commenced Oct. 5, and Volume XIX will begin January 4, 1868. Now, therefore, is a good time to subscribe and form Clubs as subscriptions can begin with October or January or any time between. The 13 numbers of this (Oct. to Jan.) or any preceding Quarter of this year, will be sent on trial, or as specimens, for ONLY FIFTY CENTS.

GOOD PAY FOR DOING GOOD

All who form clubs, either to begin with the New Quarter (Oct. 5th,) or next Volume (Jan. 4, 1868,) will be substantially rewarded, as our inducements are extraordinary—more liberal than ever before. Specimen Numbers, Show-Bills, Premium Lists, &c., sent free to all disposed to act as club agents.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., OCTOBER 19, 1867.

NEWS OF THE WEEK.

New York State Items.

UNITED STATES INSPECTOR J. CONNOLLY of New York, acting under special authority of the Commissioner, seized on the 10th, in the depot of the Erie Railroad, Buffalo, 450 barrels of western high-wines, shipped from Chicago to a firm in New York, for alleged violation of the revenue laws. He also seized fifty barrels of alcohol shipped by Cuthbert & Cunningham of New York, and forty nine barrels of spirits owned by S. C. Boehm & Co., of New York.

Secretary Seward visited his home in Auburn last week.

The temperance societies of New York celebrated the anniversary birthday of Father Matthew by a parade on the 10th inst.

A grand ovation was given Gens. Sheridan and Sickles at Albany on Thursday of last week.

There was a collision on the New York Central Railroad on Saturday evening last, and one man killed. It occurred near Albany. As a freight train was running up the heavy grade west of the city the rear car broke its coupling, ran back and dashed into a passenger train.

From Washington.

IT is now generally conceded that General Grant and Secretary McCulloch will soon be called on to leave the Cabinet. The friends of the administration announce that as soon as proper persons can be selected as their successors their resignations will be asked for.

It is reported to-day that large numbers of national banks in the country have joined in with the whisky dealers in the effort to displace Secretary McCulloch, their object being to prevent the early return to specie payment indicated by the Secretary's policy.

The Washington Lincoln Monument Association has closed a contract for a monument to be built of white marble, and to have a height of thirty-six feet, including a statue of Lincoln eight feet high, of Italian marble. Over $7,000 have been collected for this purpose, almost entirely in Washington. The monument will be placed in front of the City Hall.

A detachment of infantry and three batteries of artillery were sent from this city to Fort McHenry, Baltimore, on the 9th inst. A detachment of 200 regulars from New York, has also arrived in Baltimore. The cause of these movements of troops excites much inquiry.

Information has been received that quantities of 7.30s of the June issue sent to Washington to be exchanged into 5.20s, have been discovered to be counterfeit and have been returned. They are admirably executed. Thus far the Government detectives in New York have discovered $160,000 worth, and have notified a number of banks and banking-houses that they either hold or have recently passed them. It is also thought that the counterfeits have found their way to the large Western cities. The Washington Evening Express says over $60,000 worth of these bonds have been sent to the Treasury Department for redemption by such banking houses as Jay Cooke & Co.; Vermilye & Co., Fisk & Hatch, and others. Vermilye & Co. are the heaviest losers as far as reported. All these bonds are destroyed, and the bankers sending them in are not credited with them, so that the Government loses nothing. It is the opinion of the experts connected with the Treasury Department that the counterfeit plate of the seven-thirty imitation bonds was not made in this country.

It is stated that at the suggestion of Secretary Seward, it was decided at the last Cabinet meeting not to sell any more iron-clad war vessels. There has been a great demand for them by various Governments.

The Post's Washington special pronounces the statement that the President had called the District Commanders to Washington for consultation, incorrect.

Formal charges have been filed in the Post Office Department against Wells, Fargo & Co., for gross neglect in the transmission of mails on the overland routes in California and the Territories. Included with the charges are affidavits containing statements that United States mail bags are frequently thrown from their trains and left to rot on the prairies or to be spoiled by the Indians.

The 125th U. S. colored troops, the last volunteer regiment in service, have been ordered to proceed to Louisville, Ky., where they will immediately be mustered out.

The President has issued an order remitting the sentence of the court martial in the case of sixteen soldiers, members of the 4th artillery, U. S. army, tried in Buffalo last summer for attending a Fenian pic-nic in Fenian uniform, and sentenced to forfeit two months' pay.

From the West.

A LETTER states that the Indians attacked a wagon in which a Mr. Scott and his wife were riding, on the plains, killing Mr. Scott and wounding Mrs. Scott. Though wounded, the latter seized the reins and drove through the ranks of the savages, and after a flight of three miles reached her home.

The excursion of Western editors to the Rocky Mountains arrived in Omaha on the 9th inst. A public meeting was given them in the evening by the citizens, and they left for the West the next morning.

The U. S. Circuit Court granted a writ of habeas corpus commanding the Warden of the Missouri Penitentiary to produce in court, on Monday next, William Murphy, who was sentenced by the military commission to ten years' imprisonment for boat burning on the Mississippi River during the war. The jurisdiction and power of a military tribunal to try a citizen for a military offence will be the question on which will be predicated the discharge or remanding of the prisoner.

A letter from Superintendent Murphy, dated Medicine Lodge Creek, 5th, gives the following intelligence relative to the Indians now awaiting the arrival of the Commission at that place. The following is the number of Indians now assembled:—Arrapahoes, 181 lodges; Apaches, 85; Cheyennes, 24; Kiowas, 150; Little Bigmouth Bard, 21. Whole number of Cheyenne lodges moving, 300. The Camanches have 100 lodges in camp three miles below, on the ground 431 lodges. The total number assembled is 852 lodges, averaging six persons to each lodge, making the total number of savages 5,000.

The election in Ohio was closely contested, but there seems little doubt that the Republican candidate, Hayes, is elected.

The Columbus Times special says:—Further returns of the election show that the majority of Gen. Hayes will be over 3,000.

The miners have struck for six dollars per day. Work in nearly all the mines has stopped.

A barge loaded with lumber was lost in a gale on Lake Michigan one night last week, and three of her crew perished.

From the South.

OFFICIAL RETURNS from about one-third of the parishes of Louisiana have been received. The registry was 54,136, and the aggregate vote polled is 28,681. All the parishes heard from, except New Orleans, polled more than half their registration, while that polled 2,260 less than half.

The Convention was carried by an excess of from 5,000 to 8,000. Nine-tenths of the votes cast were for the Convention.

During the month of September the City Railroad Company of New Orleans received as fare $1,900 in counterfeit nickel cents.

The Tennessee House of Representatives completed its organization on the 8th inst. James Sumner (colored) was elected Assistant Doorkeeper over several white competitors. The Governor's message has not yet been delivered. The vote for Governor (official) was counted in the Legislature on the 9th inst. Brownlow's majority is 51,844. The inauguration took place on the ensuing day.

Serious trouble is apprehended with the negroes in the neighborhood of Norfolk. They have taken possession of the Taylor farm, and refuse to yield their ground, saying the President had no right to pardon its owner.

The Board of Registry in Richmond, Va., has closed its labors.

A duel was fought near Savannah, Ga., on the 12th inst., between Col. H. P. Farrow of Atlanta, and Maj. O'Connor of Rome. After an interchange of shots the affair was settled. The difficulty grew out of a newspaper article.

It is reported that a party of negroes have torn up the South Carolina Railroad at Hopking, near Columbia. The train was thrown off the track and the cars were robbed.

Yellow fever is spreading rapidly in Memphis. The physicians have held a council, and pronounce the disease epidemic.

Latest from Europe.

THE competition between the English and American Safe Manufacturers resulted in the success of the latter.

The Commission for the statue of George Peabody, which is to be erected in London, has been given to W. W. Story, the American Sculptor.

The Bien Publique, a well informed journal of Ghent, says Cardinal Antonelli has addressed a note to the European powers, in which he charges the Italian Government with actual connivance in the revolutionary movements against Rome.

PARIS, Oct. 11.—Arrangements have at length been completed for a meeting between the Emperor Napoleon and the King of Prussia at an early day, and the city of Baden has been fixed upon as the place where the interview is to take place.

Another battle has taken place between the Garibaldians and the Papal forces, near Montalibieta. It is reported that the invaders were defeated; but no reliable account is received.

Men of the party of action assert that an insurrection will soon break out in the city of Rome itself. They say preparations for this purpose are complete. The volunteers of Garibaldi are marching upon Rome.

The excitement in the north of England about the Fenians does not abate.

IN Newark, N. J., the other day, a young child at play was so frightened by the mischievous cry of her associate, "Look out for the bull," that she fell in running with so much force as to cause her death.

STATE TEMPERANCE SOCIETY.—The Third Quarterly Meeting of this Society will be held in Homer on the 22d and 23d days of October, 1867. Temperance Organizations of every description, and all Christian Churches, are requested to send, each, two delegates to this meeting; and any Temperance man, by the payment of one dollar, becomes an Annual Member. Dr. Jewett, Horace Greeley, and other prominent friends of the cause, are expected to be present. The hospitalities of Homer are tendered to delegates from out of town. The second day will be a Mass Meeting of Temperance Men, without conditions.

SHIPWRECK.—A Fishkill vessel was lost on the New Brunswick coast last week, and Capt. Sylvester of Deer Island, with the crew, 17 in number, were drowned. The vessel was built and owned in common by the crew. Nine of the men leave families.

ELECTION IN PENNSYLVANIA.—The Democrats have carried the Judiciary by several thousand majority, but the Legislature is still Republican. The latest returns give the following result: Senate—40 Republicans and 13 Democrats. House—54 Republicans and 46 Democrats.

WE know of no musical instrument for which there is a greater demand than for the AMERICAN ORGAN, manufactured by S. D. & H. W. Smith, at Boston, Mass., the reputation of which is based upon its solid merit. The internal construction differs from all other instruments, being on a superior principle, while the absence of *complication* renders it less liable to get out of order. The action is so delicate that its response to the touch is as ready as the Pianoforte, making it desirable for light and quick music as well as for that which is connected and sustained. We trust our readers will take early opportunity to become acquainted with these fine instruments, as no home is complete without a musical instrument.—*Boston Traveller.*

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, October 15, 1867.

GOLD yesterday sold at 141½. The money market in New York continues close, and call loans are not made at less than 7 per cent. Commercial paper is dull, and prices range from 7½@9c. for best names. Second class paper in the present stringency of the market is difficult of sale. Funds are still sent West to assist the crop movement, but the weekly amount is growing less. The return in the way of payment for goods this month will be large, and will afford material relief to the eastern market. Trade, however, is dull for the season with eastern jobbers. Sickness at the South makes the trade from that section very late.

Secretary McCulloch has written a letter in relation to the various repudiation schemes. He says he considers the faith of the Government pledged to pay the 5-20 bonds in *gold*, and he believes too much importance has been attached to the utterances of half-fledged financiers. He thinks there is little danger of the 5-20s being paid in five years.

There was great excitement at the East, last week, over the discovery of a large amount of spurious or counterfeit 7-30s, sent to Washington for redemption. It was supposed at first there had been a fraudulent issue, but a more careful examination showed a difference in the two plates, and the notes in question are now generally believed to be counterfeits. How far the fraud extends is not known. About $200,000 of the spurious notes have thus far been detected, and it is said they come from the West. All the counterfeits thus far discovered are dated between Sept. 21st and October 4th, 1867. The Government has taken prompt measures to ascertain the origin and extent of the fraud.

WHEAT AND FLOUR.—It was almost universally believed about harvest time that this year's crop of wheat was unusually large. The reports from every section of the country very naturally led to this belief, and everybody was quite willing the statements should be true. It now appears, judging from more recent data, that the crop was over-estimated. The quality of the wheat raised in 1867, as a general thing, is good, decidedly above last year, and perhaps above the average, but the yield is not large, and the total is considerably less than was anticipated. Hence prices have steadily advanced as the facts become known. The advance the last week has been moderate, and possibly the highest point for the present has been reached. Red wheat is selling in this city at $2,60. The amount marketed here is not large, and sales in most localities in Western New York are light for the season. There is very little advance in flour the past week, though good brands are firmly held.

WOOL.—The sales in Boston last week amount to 700,000 lbs., at a range of 40@58c. for fleece, and 30@55c. for the various grades of pulled. The eastern market for all grades continues dull and drooping, except perhaps for very choice lots of fine fleece and combing wools. The stringency in the money market just now operates unfavorably. The Boston Bulletin of Saturday says: "There can be scarcely a doubt that, in the absence of high grade foreign wool, the entire domestic clip will be wanted for consumption before the end of the season; and hence there would seem to be no good cause for panic or necessity of making great sacrifices, on the part of those holders who are able to bide their time and await the demand which is only in abeyance."

EIGHT WEEKS FOR NOTNING!!

The Country Gentleman.

All NEW *Subscribers to the* CULTIVATOR & COUNTRY GENTLEMAN *for* 1868, *received previous to November 1st*, 1867, *with the money*, WILL RECEIVE THAT PAPER WEEKLY THROUGH NOVEMBER AND DECEMBER, *eight numbers in all* WITHOUT CHARGE.

THE CULTIVATOR & COUNTRY GENTLEMAN, is published in large weekly Numbers of 16 to 20 pages each, and designed to include EVERY DEPARTMENT of Agriculture, Stock-Raising, Horticulture and Domestic Economy.

The Publishers prefer using the following extracts from well-informed sources, rather than to speak for themselves:

The Maine Farmer speaks of THE COUNTRY GENTLEMAN as "STANDING AT THE HEAD OF THE AGRICULTURAL PRESS OF THE COUNTRY."

The Scottish Farmer calls THE COUNTRY GENTLEMAN "THE BEST OF ALL THE AMERICAN NEWSPAPERS devoted to matters of Rural Economy."

The Gardners' Monthly says that THE COUNTRY GENTLEMAN is "Conducted with a Degree of Talent equal to any European journal, and superior to most of them."

The Canada *Farmers' Advocate* says:—"We are in receipt of Agricultural publications from various parts of the world, but for truthful accounts, well written practical articles, and general management of the paper, we have seen NONE AT ALL TO COMPARE with THE CULTIVATOR & COUNTRY GENTLEMAN, published in the United States."

TERMS.—The Terms are lower than those of *any other paper* of similar standing:—One copy, **$2.50** per year; Four copies **$9**; Eight copies, **$16.**

SPECIMEN COPIES FREE OF CHARGE.

☞ Early notice of the above Offer is given in order that Clubs may be made up previously to NOV. 1st. Address LUTHER TUCKER & SON, *Publishers*, Albany, N. Y.

WINE MAKING

THE CULTIVATION OF THE NATIVE Grape and Manufactnre of American Wines, by GEORGE HUSMANN.

A practical book by a practical man. Post-paid, $1.50. F. W. WOODWARD, Ag'l Book Publisher, 37 Park Row, New York.

460 MILES OF THE

UNION PACIFIC RAILROAD,

Running West from Omaha across the Continent,

are now completed, and it is expected that the remaining 57 miles, to carry the track to the base of the Rocky Mountains, will be finished early in October. Contracts have already been made for rock-cuttings beyond, to be done during the winter. The work is being pushed forward with equal energy on the California end of the route, under the direction of the Central Pacific Company, commencing at Sacramento, and it is confidently expected that the two roads will meet in 1870, thus completing the entire grand line connecting the Atlantic and Pacific Oceans, on which THIRTY-FIVE MILLION DOLLARS in cash have already been expended. From the liberal Government aid, the wealth and energy of the stockholders, and the ready market for the First Mortgage Bonds, there is no want of funds for the most vigorous prosecution of the work, and its early completion is as certain as any future business event can be.

NET EARNINGS OF THE UNION PACIFIC RAILROAD.

During the quarter ending July 31st of the current year, an average of 325 miles of the Union Pacific Railroad was in operation. The Superintendent's report shows the following result:

EARNINGS.

Passengers	$160,526 92
Freight	549,672 39
Telegraph	1,416 23
Mails	12,140 00
Transportation, Contractor's Materials	453,205 44
" " Men	26,077 97
	$1,203,038 95

EXPENSES.

Fuel	$131,089 58
Repair of Track	109,767 61
" " Engines, Cars, Shops, &c	50,981 44
Offices and Stations	51,907 60
Conductors, Engineers, &c	33,291 73
Trains	15,486 93
NET EARNINGS to balance	807,508 03
	$1,203,038 95

From the relative high charges, the operating expenses of the road are but 32% per cent. of the earnings, and the ratio would be much less if the contractor's business were not done at half rates. Throwing out charges to contractors for transportation of materials and men ($479,283 11,) and deducting from the aggregate of all operating expenses ($395,530 92) 32½ per cent. ($157,561 43) as the proportion chargeable on the work done for contractors, which was less than actual cost, because of the half price charged for it, and we have the net operating expenses of the commercial business for the quarter, $237,966 50. The account for the *commercial business* stands as follows:

Earnings for May, June and July	$723,755 54
Expenses " " "	237,966 50
Net profit of operating 325 miles of road three months	$485 789 04

The amount of Bonds the Company can issue on 325 miles, at $16,000 per mile, is $5,200,000. Interest in gold, three months, at 6 per cent., on this sum, is $78,000; add 40 per cent. premium, to correspond with currency earnings, is $109,200,—showing that the net earnings for this quarter were *more than four times the interest* on the First Mortgage Bonds on this length of road.

First Mortgage Bonds, whose interest is so amply provided for and so thoroughly secured, must be classed among the *safest* investments. They pay

SIX PER CENT. in GOLD,

And are offered for the present at Ninety Cents on the Dollar, and accrued interest at Six Per Cent. in Currency from July 1st.

Many parties are taking advantage of the present high price of Government stocks to exchange for these Bonds, which are over 15 per cent. cheaper, and, at the current rate of premium on gold, pay

Over Nine per Cent. Interest.

Subscriptions will be received in New York at the Company's Office, No. 20 Nassau Street, and by

CONTINENTAL NATIONAL BANK, No. 7 Nassau St.,
CLARK, DODGE & Co., BANKERS, 51 Wall St.,
JOHN J. CISCO & SON, BANKERS, No. 33 Wall St.,

HEDDEN, WINCHESTER & Co., No. 69 Broadway,

and by BANKS AND BANKERS generally throughout the United States, of whom maps and descriptive pamphlets may be obtained.

JOHN J. CISCO, Treasurer,
925-2t NEW YORK.

BIBLIOGRAPHICAL!—Appreciating the want which has for so long a time been widely felt, namely, a Library which should extend its benefits as well to country as to city readers, the New York Circulating Library Co. has been organized for the purpose of distributing to its subscribers, both in New York or in any part of the United States, the latest works issued by the best English and American Publishing Houses.

The Company has completed arrangements with the principal Publishers in America and Europe, through which they will be enabled to receive in advance of all Booksellers, the earliest copies of new publications, which will be obtained in such numbers as to supply any demand for them.

No charge will be made for sending Books by Express, in consequence of an arrangement also entered into with prominent Express Companies.

Among other names of Periodicals in its catalogue are bound volumes of the New York Ledger, Mercury, Frank Leslie's, Waverly Magazine, Literary Companion, Harper's Magazine, &c. Not more than two books can be sent for at one time, and when another work is desired the one previously taken out must be returned. The rates of membership to the Association are:

One Year	$2 00
Six Months	1 00
Two Subscriptions for one address	3 50
Four do do	6 00
Ten do do	16 00

Cash always in advance.
Catalogues in Paper, 50c.
Do in Cloth, $1 00

The Company will also furnish any Work desired, no matter by whom issued, at Twenty per cent. less than the regular retail price.

Newspapers and Magazines will also be mailed from this office on the same terms. Orders for Engraving, Pictures, Cart de Visites of notable people, Stationery, &c., received and punctually attended to.

Address all communications,
JAMES A. WILSON,
926-2t Manager, 30 Cedar St., New York City.

STUMP MACHINES—TRIAL—SALE.

W. W. Willis of this city, took three of his Stump Machines to Steuben county for trial, a few days since. They were tried there and proved so satisfactory that their sale was readily effected. Abraham Walworth of Jasper, writes:—"I have bought the machine and have pulled stumps from two to four feet across the top; turned them right up and over. One pit, from which a four-foot pine stump came, was twenty-two feet in diameter. I can recommend it as a perfect machine." Mr. W. has taken two more to the same region of country.

YOUNG MEN WANTED.

The Union Telegraph College, Oberlin, Ohio, has authority from Telegraph employers to receive students and *guarantee* them *good situations* upon graduation. This is the *only* school of the kind in the Union which has such support, and in point of numbers is the largest. Offices are secured to graduates by written contract. Our letters of authority for graduating can be seen by any who doubt our ability to promise employment. Operators receive from $45 to $125 per month. For full particulars address

C. H. POND, Oberlin, Ohio.

WHEATON'S OINTMENT will cure the Itch.
WHEATON'S OINTMENT will cure Salt Rheum.
WHEATON'S OINTMENT cures Old Sores.
Wheaton's Ointment cures all Diseases of the Skin.
Price 50 cents;—by mail 60 cents. All Druggists sell it. Weeks & Potter, Boston, Proprietors. 922

GOOD READING VERY CHEAP!

We have a few extra copies of Volume XII of the Rural New-Yorker, (1861,) stitched, and in good order, which we will sell at $1 per copy at office or by express. If you wish a copy, speak quick. A few bound copies of same volume for sale at $3. We can also furnish bound copies of most of the volumes issued since 1855, at $3 each. Bound volumes of 1865 and 1866, $4 each.

Address D. D. T. MOORE, Rochester, N. Y.

The Bryant, Stratton and Williams

Business University and Telegraphic Institute of Rochester, N. Y.

The most thorough, practical and complete institution of the kind in the world. *Commercial Course*—Book-Keeping Penmanship, Commercial Law, Com'l Arithmetic, Banking, Business Correspondence and Business Customs. *Optional Course*—Telegraphing English Grammar, Elocution, Higher Mathematics and the Ancient and Modern Languages. This College has the unequaled advantage of being under the personal supervision of two resident Principals, who are experienced business men, practical book-keepers and accomplished instructors. They are ably assisted by an ample corps of the very best teachers. The extremely moderate rates of tuition in all branches, and the very reasonable prices for board, as compared with other cities, render this the most desirable Commercial College that young gentlemen can attend. The regular price of a Life Scholarship, (Commercial Course,) is, to gentlemen $40; to ladies $30. Telegraphing to gentlemen $40; to ladies $30. To those who enter on or before Nov. 1st, we now offer the same to gentlemen for $35; to ladies $25. Telegraphing to gentlemen $30; to ladies $20. Our object in making this reduction is to induce young gentlemen and ladies to enter *early in the season*, and thus obviate the inconvenience of the great influx which usually occurs about Dec. 1st and which necessitates the formation of new classes at the middle of the Course, and also to enable us to do ample justice to all. We gladly assist all our graduates in procuring desirable and lucrative situations. For further particulars send for "College Advocate," and Specimens of Penmanship inclosing 2 stamps.

All other low priced machines make the Chain Stitch. Exclusive territory given. Send for circulars. W. G. WILSON & CO., Manufacturers, Cleveland, Ohio. 922-13t

ESTABLISHED 1861.
THE
GREAT AMERICAN
TEA COMPANY
HAVE JUST RECEIVED
TWO FULL CARGOES
OF THE
FINEST NEW CROP TEAS.
22,000 HALF CHESTS by ship Golden State,
12,000 HALF CHESTS by ship George Shotton

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune district of China, which are unrivalled for fineness and delicacy of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade, (before the establishment of the Great American Tea Company,) we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in the country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices, with the small additional expense of transportation, as though they bought them at our warehouse in the city.

Some parties inquire of us now they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on the list, as seen in the club order published below, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the post, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

Parties sending Club or other orders for less than thirty dollars had better send Post-office drafts or money with their orders, to save the expense of collections by Express; but larger orders we will forward by Express, to "*collect on delivery.*"

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

Oolong (Black,) 70c., 80c., 90c., best $1 ℔ lb.
Mixed (Green and Black,) 70c., 80c., 90c., best $1 ℔ lb.
English Breakfast, (Black,) 80c., 90c., $1, $1.10, best $1.20 ℔ lb.
Imperial (Green,) 80c., 90c., $1, $1.10, best $1.25 ℔ lb.
Young Hyson (Green,) 80c., 90c., $1, $1.10, best $1.25 ℔ lb.
Uncolored Japan, 90c., $1, $1.10, best $1.25 ℔ lb.
Gunpowder (Green,) $1.25, best $1.50 ℔ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economize in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of

CLUB ORDER.

Edwards, St. Lawrence Co., N. Y., June 3, 1867.
The Great American Tea Company,
31 and 33 Vesey Street, New York.

Dear Sirs:—I herewith send you another order for Tea. The last was duly received, and gives general satisfaction. As long as you send us such good Tea, you may expect a continuation of our patronage. As a further evidence that the subscribers were satisfied, you will observe that I send you the names of all those that sent before who were near out of Tea, with a large addition of new subscribers. Accept my thanks for the complimentary package. Ship this as the other, and oblige
Your ob't servant, DAVID C. McKEE.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third (**besides the Express charges,**) by sending directly to "The Great American Tea Company."

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

POST-OFFICE orders and drafts make payable to the order of The Great American Tea Company. Direct letters and orders to

GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street.
NEW YORK.
Post-Office Box, 5643 New York city.

THE ALBANY COTTON GIN MANUFACTURING CO.,
ALBANY, N. Y. (POST-OFFICE DRAWER 162.)
Office and Factory on Thacher St., near Broadway, North End of City.

Manufacturers of Agricultural Machinery and Implements of the best and most approved kinds and patterns in use, embracing

1st Premium "Star" Cotton Gins and Condensers,
1st Premium "Star" Railway & Lever Horse-Powers,
1st Premium "Star" Threshers and Cleaners,

Threshers and Separators, Circular and Dragg Saw Mills, Vegetable Cutters, Dog Powers, &c., &c.

Important improvements recently made in our Thresher and Cleaner (which we denominate the "*Star*" *Thresher and Cleaner* to distinguish it from all others,) enable us to claim for it, without fear of contradiction, a marked superiority over all others now made, as well in the quality and quantity of the work which it will do as in the perfection of its construction, insuring the durability of the Machine and the ease with which it may be operated.

THE "STAR" RAILWAY HORSE-POWER
AND
THE "STAR" LEVER HORSE-POWER,

Made by this Company, are fully approved by all who have used them, to stand unrivalled in all the qualities which a Horse-Power must possess to give it acceptance to the Farmer—as to durability, economical use of the strength of the Horse (admitting an easy gait of the animal, with—in the Railway Power—a very moderate elevation of the platform,) facility of moving about, setting up, repairing, &c., &c. We solicit a continuance of the patronage hitherto so liberally bestowed.

Mr. WM. B. EMERY (survivor of Emery Brothers) gives his personal superintendence to all work got out by this Company. His long experience in manufacturing Agricultural Machinery affords the strongest guarantee of the superior character of the machines made by us.

☞ Our complete Illustrated Descriptive Circular and Price List will be sent *free of charge*, on application, and all information cheerfully furnished.

Agents, both Traveling and Local,

are wanted all over the country to sell our manufactures. To active and competent men liberal commissions will be paid. 923

THE COLLINS AND SHATTUCK
Combined Clover Thrasher, Huller & Cleaner,
MANUFACTURED BY
GLEN & HALL, ROCHESTER, N. Y.

We beg to call the attention of Farmers to the superior characteristics of the Collins and Shattuck Clover Machine made by us, which we are now prepared to supply.

Our Machines have two belts with connecting reciprocating motion, which have proved *indispensible* in keeping the Machine still, preserving it from racking and preventing it from clogging. We will warrant them with proper management to Thrash, Hull and Clean Clover or Grass Seed at one operation, more rapidly and in a much better manner than any other Machine made. When thrashing grass seed they can in a moment be so arranged that the seed and chaff will pass directly from the bolts to the fanning mill without going through the huller—*an advantage possessed by no other machine.* The ratchet form of the upper bolt in our machine insures a thorough separation of the heads and seed from the straw before the latter is allowed to pass into the stack. Our machines are constructed of the best material, in the most thorough manner, handsomely painted and ornamented, and have in all cases given entire satisfaction. Persons purchasing these machines to do custom thrashing will find them even much more remunerative than Grain Thrashing Machines.

We are also prepared to supply Horse-Powers, Truck Waggons, &c., to be used with our machines, or they will be adapted to run with any other Horse Powers.

☞ Descriptive Catalogues, containing full information, with testimonials from persons using our Clover Machines, sent free to all applicants. Address GLEN & HALL, Rochester, N. Y., or Detroit, Mich. J. D. Easter, Gen'l Western Agent, Chicago, Ill. 921-10t

PLASTIC SLATE ROOFING
JOINT STOCK COMPANY,
OFFICE 157 [Room 19] *BROADWAY,*
NEW YORK.
W. C. POTTER, *Vice-Pres't,*
J. M. ALLEN, *Sec. & Treas.* Licenses Granted.

PLASTIC SLATE FOR
ROOFING & OTHER PURPOSES.

The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of

Pulverized Slate and Viscous Matter,

(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.

AS A ROOFING MATERIAL IT STANDS UNRIVALLED.

A mastic—it adapts itself to every shape and slope. Non-combustable, impervious, non-expansive, and undecaying.

FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.

The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and

PERFECTLY FIRE-PROOF.

It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

CHARLES W. IDELL,
COMMISSION DEALER
IN FRUITS AND PRODUCE,
West Street, foot of Dey, New York.

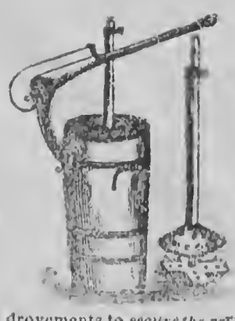
In the Fruit Season, particular attention paid to the sale of all kinds of Domestic Fruits, such as Apples, Pears, Peaches, Grapes, Strawberries, Raspberries, Whortleberries, Cranberries, Cherries, &c., &c.
[Established 1845.] ☞ Consignments solicited.

THE BOOK OF WONDERS tells how to make all kinds of Patent Medicines, Perfumery, Toilet Articles, Cosmetics, Candles, Wines, Cordials, Soaps, Dyes, and hundreds of other articles in daily demand. Easily made and sold at large profits. Sent post-paid for 25 cents, by O. A. ROORBACH, No. 122 Nassau street, N. Y. 907-tf



H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, *Improvements Pat'd April,* 1865 *and Nov.* 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.
H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. Moore, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—Solon Robinson, *Ag'l Ed. N. Y. Tribune.*

Mr. Robinson also named it first and commended it highest of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. Edwards Todd, *Ag'l Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The Seneca Falls Churn Manufacturing Co. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the patented fixtures. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. Moore, Editor Rural New-Yorker.

☞ The Michigan Churn M'f'g Co., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

AN INVALUABLE MEDICINE FOR
THE PURIFYING OF THE BLOOD.
DR. J. W. POLAND'S
HUMOR DOCTOR,
A Positive Remedy for all kinds of Humors,
PARTICULARLY
Erysipelas, Nettle Rash, Salt Rheum, Scrofula, Carbuncles, Boils, and Piles.

This excellent medicinal compound was first prepared by Dr. J. W. POLAND, in 1847, and was then employed with great success in expelling Humors from the blood; but in 1848 a medical friend, who was quite celebrated as a physician, especially in the treatment of humors, suggested some important improvements, which were adopted, and which has made it (so the people say) the very best remedy for all kinds of humors known to "the faculty."

The Humor Doctor cures Scrofula, Salt Rheum, Erysipelas, Canker, Piles, Nettle Rash, &c. Numerous individuals, who have used this remedy for Erysipelas, give it the most flattering recommendations.

This preparation is composed entirely of vegetables, among which are Sarsaparilla, Yellow Dock, Noble Pine, Mandrake and Bloodroot.

When the originator lived in New Hampshire, at Gilfordtown Center, for the space of thirty or forty miles around, and in Manchester particularly, the Humor Doctor was well known and highly valued for the numerous and wonderful cures which it effected. Though manufactured in large quantities the supply was frequently exhausted, and purchasers had to wait for more to be made. In that region some very severe cases of Erysipelas were treated with,—and they were cured! Erysipelas sores, or carbuncles,—those ugly, painful ulcers,—were entirely removed wherever this medicine was faithfully used. So it was with Scrofula and Salt Rheum. The Humor Doctor cured them.

Within the last ten years this valuable remedy has so increased in popularity that now it is more largely used all over New England than any other one preparation for cleansing the blood, and restoring the system to its healthy condition. Throughout the Western States it is now meeting with great success wherever it has been introduced. It is *free* from any dangerous drugs, is pleasant to the taste, safe, yet sure and effective in its action.

NOTE.—We are permitted to publish the following copyrighted poem from the pen of one who has written much for the RURAL. It has been set to music by its author, (whose melodies are widely sung,) and is issued as a Song and Chorus from the publishing house of H. TOLMAN & Co., Boston.

FLITTING AWAY.

BY A. A. HOPKINS.

I AM longing, so sadly I'm longing
For the flowers that have blossomed and fled,
For the hopes that about me were thronging,
That, alas! are all withered and dead.
Beauties I thought ne'er would perish
One by one vanished away,—
O! there's nothing on earth that we cherish,
That is lovely and true, that will stay!

CHORUS.
Flitting, flitting away,
All that we cherish most dear;
There is nothing on earth that will stay;
Roses must die with the year.

There are eyes that with brightness were brimming,
There are lips that our own often met,
That the mold of the grave is now dimming,
That in silence unbroken are set!
Sadly we long for their greetings—
Tender and true they had proved—
O! the hearts soonest hushed in their beatings
Are the ones the most earnestly loved!

'Tis the joys the most prized that are fleetest,
And that quickest creep out from the heart,
As perfumes that are richest and sweetest
Are the earliest ones to depart.
Tints that of all are the rarest,
Fade as upon them we gaze;
And the hours that are brightest and fairest
Soon are hid with the lost yesterdays!

Far away where the summers are sleeping
Are the beautiful dreams of the past,
And our eyes are grown weary with weeping
For the pleasures we fancied might last.
Lovingly, longingly sighing,
Over their ashes we sit;
While the roses around us are dying,
And the moments so speedily flit!

The Story Teller.

THE BLUE RIBBON;
OR, RURAL LIFE AND LOVE.

NATURE, not the schools, had made John Everdale a man. While other boys had studied or played truant he had worked—and yet I venture the assertion that, of ten college-bred young men of his native county, nearest his own age, not one could have been found better educated, in a certain true and practical sense, than he. In the absence of text-books he had thought for himself. The calculus might be beyond his comprehension, but he had learned long ago the ratio of honesty to success, and knew how to deduce from it the formula of upright living. He could not read a line of Homer or Virgil, but he did know something of the works of those great English thinkers, who have lain nearest the world's heart, thus catching and perpetuating its throbbings, and incorporating upon their own page the best of all past and present inspirations. A boy who kept a leaf of Shakspeare folded in his vest-pocket, to be taken out and learned by heart as he followed the plow, would not be likely to grow up with tastes wholly uncultivated.

Yet John Everdale loved his work. If all pathways had opened to him alike, I doubt if he would have chosen to be anything else than the farmer he was. His aspirations, though not groveling in the soil, still arose from it, grouping themselves about a home, and friends, untarnished name, and sturdy service wherever needed most.

He found himself at twenty-two in possession of his patrimony, a small farm, heavily mortgaged, together with the title to a tract of wild western land. This last the specious representations of an agent had induced his father, always over-sanguine, to purchase, only to find it quite useless thereafter, for any immediate advantage.

John saw years of hard work and close economy stretching ahead before he could hope to stand with unencumbered hold upon his ancestral acres. No golden prospect, certainly; but with his brave, hopeful heart and rugged health he saw it unflinching. Besides, he loved Helen Darrell. From the times when he had gone, a boy, to Darrell Hall, on his father's errands, and the beautiful child, with her marvelous brown eyes and golden glory of curls, had flown out to learn from him how to tame the wild ponies her father bought for her, until now, when her more mature loveliness was the pride not alone of Squire Darrell's heart but of all Shelbyville, he could not remember when his love for her had not seemed a part of his very breath and being.

This fact was itself a key to his character. If he had been less than he was he could never have dared to love her. Not that he had any puffed-up certainty of success; but the manhood within him, humble and self-respectful, claimed for him the right to love the woman who embodied his noblest ideal of womanhood, and to be judged by her, irrespective of any untoward decisions of outward circumstances.

He hoped for no pledge as yet—would not if he could have exacted such. His native sense of the fitness of things forbade it, until his own hand, under kind Providence, should have carved out for himself a more certain fortune. It might be a long labor, but the years of waiting, like Jacob's, would seem as "so many days," if only he were sure of Jacob's reward.

Meanwhile he wooed her at a distance, and had the satisfaction of knowing that at least she was not wholly indifferent to him. How much her manner meant he did not dare to guess; she was so kind to all. Forgive him if he watched all other admirers jealously; he was but human, and the daily fear went with him, "Will it not be too late when my turn comes to speak?"

All Shelbyville was shocked one morning to hear that good Dr. Mattison had been found quietly sleeping his last sleep in his bed. Every family felt a keen sense of personal loss in the death of the old physician, whose cheery presence and genial sympathy had always brought a healing influence into their sick-rooms quite independent of his careful prescriptions; who had presided at the birth of their children, and whose tender hands had closed the eyes of some of their loved ones when human care and skill could avail no longer.

The people, who came in great numbers to Dr. Mattison's funeral, saw in the place of chief mourner his nephew, Dr. Alfred Lashley, who, it was understood, would now leave his position in a city hospital, in order to succeed to his uncle's business and estate. The good old doctor had been wont to speak proudly of this nephew, as a young man of uncommon talent and thorough education; indeed it had been his cherished plan to see his practice established in these younger and stonger hands while he himself yet lived.

Dr. Lashley found a hearty welcome to Shelbyville, for his uncle's sake as well as for his own. As days passed one and another of the friends of Dr. Mattison called to grasp the young man's hand, and speak words of hearty sympathy and encouragement.

"Come up to the Hall whenever you have time and inclination; the latch-string hangs outside," said Squire Darrell, with a blunt cordiality, to which Dr. Lashley was not slow to respond.

Calling soon at Darrell Hall he met Helen for the first time in some years. He was quite unprepared to find her what she was. The most beautiful woman he had ever met—he settled that at a glance—cultivated and refined evidently, and yet with a fresh spontaneous manner, as charming as rare. How could she have kept this childish simplicity, he wondered, through all the flattery and caresses which must have been lavished upon her. The truth was that Helen Darrell had been praised too much to be spoiled by it. There may be an extreme of adulation which shall hold in itself the germ of its own antidote. The homage which enveloped Helen like an atmosphere she accepted as a tribute of love, rather than as the reward of real desert.

Squire Darrell naturally spoke much of Dr. Mattison, whom he had dearly loved, and Dr. Lashley responded with a filial enthusiasm which quite won Helen's heart. As the conversation progressed he seemed drawn unconsciously to speak of his own plans and purposes of life; of his profession, which he considered second to none in means and opportunities of good.

Alfred Lashley was not intentionally dishonest, but he had a marvelous power of expressing more than he really felt. Some tell us that the absolute possession of any great virtue is necessary to its real appreciation; but this man combined with unbounded aspirations after true nobility a constitution ready to fail at the first great trial. He did not know his own weakness—would never know it until some test-moment came suddenly upon him, and even then some loop-hole of expediency would perhaps broaden before distorted vision into a great archway over the entrance of duty.

He knew how to use the words "work" and "mission," in a way that suggested to Helen's ardent imagination all the sublimest possibilities of moral heroism, while, in the same breath, he said he felt this to be an age for saying little and doing much. Helen felt, as did all others who met him, the spell of his magnetic presence, the fascination of his brilliant intellect and fine culture. She sang for him, and, looking up between her ballads, saw his dark eyes full of tears.

Poor John Everdale, riding slowly past Darrell Hall in the winter moonlight, saw the new doctor's tall figure bend gracefully in a parting bow to Helen in the doorway, and started with a sudden pang, for which he was angry with himself a moment after. But the vague sense of pain and loss was repeated so often in the weeks and months that followed, as to grow at last into a settled sorrow, blotting out his hopes, and threatening to darken all his life. By the time that the last snow-drifts had melted away in the spring sunshine John's dream of love had vanished with them. No engagement between Dr. Lashley and Helen had been officially announced, but rumor had settled the fact of such engagement with quiet certainty.

Night after night John Everdale lay sleepless, facing his trouble, and waging unequal contest with his own heart. He believed in Dr. Lashley with all the force of his generous nature, and his whole soul ratified Helen's choice. He felt that he could not willingly cast the temporary cloud of a knowledge of his own unhappiness across her perfect sunshine. So he found courage to meet her at Dr. Lashley's side, with his old, frank smile of greeting, though he was not strong enough to go any more to Darrell Hall.

The summer heats came on with an intensity almost unparalleled. The very air seemed scorching, and man and beast drooped with exhaustion.

Shelbyville proper was built mainly upon two hills, separated from each other by a low, marshy valley, now temporarily occupied by a collection of some fifty or more wretched cabins, which had received the name of "New Dublin." These huts were tenanted by the families of a gang of the lowest class of Irish laborers, then employed in excavating a tunnel for a new railway.

An occasional breeze brought some fresh vitality to the hill-side air, but the stagnant atmosphere of the valley was foul with the fumes of a poorly drained soil and over-crowded living.

"Such weather must breed sickness, Doctor?" said Squire Darrell to Dr. Lashley, one day, as the two sat with Helen in the porch.

"In the valley, undoubtedly," was the answer. "The poor New Dublinites are ripe food for fever. I should greatly dread the appearance of any malignant form of disease among them. Their ignorant and unreasoning fears succumb to the first attack, and there is no lever by which to lift them."

"Can there be no means of prevention?" asked Helen.

"Can be? Yes. Will be? No. I rode down there only yesterday, and tried in vain to induce an effort at something like care and cleanliness. It's of no use."

Dr. Lashley's fears soon began to be realized in the breaking out of an obstinate and contagious fever in the valley. Within twenty-four hours after the appearance of the first case symptoms of the same disease manifested themselves in several others. The poor people were thrown into consternation, and showed the wildest inefficiency in ministering to the wants of those already stricken down.

Dr. Lashley found the work which seemed necessary among them in the last degree repulsive to his fastidious sense. He was unwilling to acknowledge, even to himself, how much he shrank from uniting the office of nurse to that of physician in those miserable abodes. He was anxious to leave nothing undone which duty and humanity could suggest in the case; still, as almost every day added to his list of patients, he found strength and courage failing.

Helen, going into her kitchen one morning, found Bridget Mahoney, her maid-of-all-work, sobbing bitterly over her wash-tub, and learned, on inquiry, that the poor girl's father and mother were both lying sick of the fever. Helen made Bridget dry her hands and eyes, while she herself packed a huge basket with articles useful in illness. Then, having sent the girl to her home, she put her own white hands in the tub, and finished the week's washing.

At noon Dr. Lashley made a hurried call, looking sadly worn and harassed. Helen, even while she noticed the pallor of his face, felt an indefinable disappointment that he spoke almost as much of his own sleeplessness and watching as of the condition of the poor sufferers, some of whom seemed vibrating between life and death.

"Tim Flaherty's child died this morning," he said; "and John O'Rourke, and Pat Reagan are quite past help. Oh, my dear Helen! I am utterly worn out with what I have seen and endured in those hovels!"

She did not see him again until the next afternoon, when, standing at the gate, she saw his chaise driving rapidly up the street. He wore a linen traveling suit, and a portmanteau lay beside him on the seat.

"Not going away, Dr. Lashley?" she exclaimed, as he drew rein and sprang out with extended hand.

"To the beach, for a few days," he answered, without noticing the tone of surprise in which she had spoken. "I am very sorry to be obliged to leave now; but I have not been well for some months, and the strain of the last two weeks has been terrible for me. I feel it to be an imperative duty which I owe to myself and my work in life to give myself the short rest which alone can save me from utter prostration."

"So you will leave those poor people to die?"

"My dear Helen!" Dr. Lashley looked both surprised and grieved. "Harris, my student, will give them the closest attention; besides"—he hesitated a moment—"there is Dr. Arnam, you know, at the Corners."

"The one an inexperienced boy, the other a heartless quack!"

"Helen! you are very hasty in your judgment of Dr. Arnam, and as for Harris—why, Helen, he has shown wonderful ability in these very cases, and I have spared no pains to make him fully understand the line of treatment I wish him to follow. Remember, it is only a careful balancing of the apparently conflicting claims of duty which has decided me to go."

He spoke earnestly, and with a look and tone which showed how entirely he felt himself misjudged.

"There comes the train, Dr. Lashley—you will be late!" said Helen, letting her hand rest on his a moment, and then drawing it away.

He stood an instant longer, with an expression of painful indecision on his handsome face; then he said, hastily, "Good-by, Helen! My dear Helen, I am sure that a moment's thought will convince you that I am acting for the best!" and so was gone.

Helen Darrell stood quite still for a few moments; then she turned and walked with a firm step up the garden-walk, through the hall, and into the pleasant library, where her father sat reading in his easy-chair. She stood behind him, and drew his head backward, looking into his eyes.

"Well, Lady Nell?"

"Papa, I am going to help nurse those sick people."

Squire Darrell gave a great start.

"Helen! Child! What are you thinking of?"

She put her soft hand over his lips.

"Not a word, little papa! I'm your spoiled daughter, you know. You can't deny me anything—you have said so a thousand times."

"But, Helen, this is worse than folly—it's absolute insanity! What could *you* do?"

"A little, I hope; I wish I could do a great deal more. Papa! some of them are dying, and Dr. Lashley has gone away!"

"Gone away! and where?"

"To the beach—he's ill, he said, papa," in a low tone, with her brown eyes clear and steady; "if mamma were alive she would have gone before this time. Sha'n't I go?"

"My darling!" said Squire Darrell, and drew her down into his arms."

A few hours later John Everdale, bending over poor Pat Reagan, and trying to arouse him from the deep stupor into which he was constantly falling, looked up to see Helen Darrell standing at the door. His face grew very pale for an instant, but there was no other sign of surprise.

"Good afternoon, Miss Darrell," he said, with his bright smile transfiguring all his face. He did not say,

"You here, Miss Darrell?" His whole manner seemed to recognize her right and pleasure to be there, and Helen felt that his very silence paid her a truer and more delicate compliment than Dr. Lashley's most elaborate period could ever have conveyed.

"Tell me what to do, John," she said, using the old, familiar address of her childhood.

"I fear I shall make but a poor teacher," he answered; "but if you could take my place here I could go somewhere else where help is needed. Poor Mrs. Reagan is trying to sleep a little. Patrick is very quiet, as you see; there is little to be done beyond keeping his lips moistened with this sponge—and pray don't let him sleep too heavily."

Helen sat down by the bedside, and John went out, but soon came back, saying, "You know where Mary Morrison lives, Miss Helen? The next cabin but one is hers. Her little child looks badly—head and hands burning hot. If you could help her get it into a warm bath, and show her what to do, it might throw off an attack."

Helen went gladly to do as she was bidden, and came by-and-by, laden with the blessings of the anxious mother, to report the child sleeping sweetly.

Wherever she went the praises of "Mr. Iverdale" were sounded in her ears, and she realized, as never before, how much confidence and courage a strong will, clear head, and warm heart may infuse into an ignorant and suffering community.

"I hope Dr. Lashley is not very ill?" John said, anxiously, as they parted for the night; and Helen felt her cheeks flush hotly as she answered, "He will soon be able to come back, I think."

That night a strong tempest tore down from the mountains, terrible in the hour of its strength and fury, but leaving the atmosphere cool and pure behind it. The sick, except such as were past recovery, began to mend under the favorable change, and fresh life and hope were astir in "New Dublin."—[Concluded on page 337.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

CUTTING AND STEAMING FODDER.

DURING the evening discussions at the State Fair this subject was briefly considered. Mr. E. W. STEWART, North Evans, Erie Co., N. Y., in opening the discussion, remarked:

It is unnatural for cattle to feed upon dry hay or straw; naturally they eat green, succulent, soft food, which needs much less mastication than any of our winter fodder. We have subjected animals to an unnatural condition. So it is not opposing but assisting nature not only to cut the dry hay, stalks and straw into a fine condition, but also to cook it into a soft pulp, to resemble the grass they eat while in their natural state. I think the finer we cut their food the better. We need better machines than we have—some that will not only cut but mush the fiber. All horse-feeders have discovered the advantage of feeding cut food, in the time saved, as well as saving of substance. "But," say some farmers, "the cows have plenty of time, let them use it to chew their food." Is not that exercise of masticating hard, dry hay and straw an expenditure of force? and that comes of food, and consequently requires more. With fatting animals, we know that they gain faster when we save that labor. See how much force a cow must expend to reduce to pulp 30 pounds of hay a day. My experiments have proved that all that I do toward reducing their feed to the condition needed for assimilation in the animal's stomach is a saving of quantity, and the quality being improved, it improves the animal faster and better than dry, uncut food. Beside this, everything is eaten and saved.

I find that with a two-horse power machine I can cut timothy hay one-fourth of an inch long, and feed it almost as easily as I can handle it whole and feed in racks. If I had a suitable machine I would make the hay much finer, so as to imitate nature, in giving food that does not require much labor of mastication. The object is to render it most easy for the animal to assimilate the food, not that reducing it so fine adds anything to it. Starch is found in all woody fiber, and as that will not dissolve in cold water, it needs cooking in water at 200° to 212° of Fahrenheit. A portion of the starch, but only a portion, is dissolved at 140° of heat, and therefore the animal's stomach cannot assimilate all the starch in hay, straw and grain, which contains 60 per cent. of its weight of starch, which is highly nutritive, but most so when cooked. By high pressure steam, and soda ash, the straw of our cereals is dissolved and made into a soft pulp. I believe two bushels of steamed hay of more value than three bushels that is not cooked. It is an important item to save 33⅓ per cent. of cattle feed, which can be done by cutting and cooking all our hay and straw.

To those who intend to adopt the system of steaming hay, this fact is truly important. It cannot be steamed dry. About two gallons of water must be sprinkled upon every five bushels of cut hay. Water absorbs the steam and softens the hay. If the steam is applied to dry hay, it will dry it so it will not be eaten readily by cattle. If the steam is applied at high pressure, the dry hay will be partially charred. If meal is to be fed, it should be mixed and cooked with the hay. It is also advantageous to mix straw with the hay; even that of beans and peas is of great value when mixed and cooked with hay. It is also of great value to the manure, as it is ready for immediate use. My rule is to use two quarts of bran or middlings, to a bushel of straw, and think it is then as valuable as good hay. Yet I have sold hay for the cost of middlings in Buffalo. This made the straw feed equivalent to $35 a ton. I estimate two quarts of middlings equal to one quart of Indian meal for fattening animals. For stock not fattening, bran is of equal value of meal. It contains 18 per cent of gluten, and that makes flesh. Meal contains 11 or 12 per cent. of gluten. Bran mixed with straw and steamed, makes the coat of animals as smooth as good pasture. It is the best food that can be given to a horse with a cough.

One man can do all the work of caring for 50 head. The hay or straw is cut into a six-bushel basket, and sprinkled and mixed with meal or bran. If there is any odor in any portion of the mass it is diffused by the steam. That of bean and pea straw appears to be agreeable to cattle. It can be steamed in a wooden box with iron bottom, set on an arch, but a close boiler is most economical.

In answer to a question about steamed food for sheep, Mr. STEWART said that he put up twenty-five sheep on experiment. The first day they would not eat the food. The second day they would eat a little. The third day they took hold heartily, and afterward ate greedily, and I found by weighing that they gained rapidly.

GEO. GEDDES, Onondaga County: There is no branch of farming that has been more fully proved than that it is valuable to cook food for stock. I satisfied myself years ago, by actual experiment, that cooked food was worth double; but people want more experiments.

GEO. A. MOORE, Buffalo: I have one or two facts worth knowing. I fed sheep in the ordinary way, and found it did not pay—they gained but little in weight. Then I fed cooked food, and in a short time their weight was doubled. But they gained so fast that the butcher complained of the fat being soft. I believe that steamed food will give three pounds of fat on sheep to one from raw food. I always cook food at night for breakfast, and then for dinner and supper, so that it remains in the feed-boxes a little warm. They soon learn to like warm feed.

BEES.—FALL AND WINTER MANAGEMENT.

THE honey season is rapidly approaching a close. It is true bees will work as long as honey can be obtained, be the amount ever so small. But the stormy weather of November confines them at home most of the time, and whether they have been provident in laying up stores or otherwise is a matter of much interest to the apiarian. If an examination discloses weak colonies, poorly provisioned for the winter, and the owner is reluctant to destroy them, it is recommended to unite several colonies in one, as they eat relatively less in consequence of the increased heat engendered by a large body of bees as compared with a small one. By this union of swarms there is a double saving—that of the bees themselves, probably, and in the decreased amount of honey necessary to carry them through. Such combinations are frequently made, we believe, where movable comb hives are used, greatly to the advantage of the colonies themselves, as well as to their owners. The process by which these unions are made is thus sketched by HARRISON, in his treatise on Bee-Keeping:—"Open the hives, blow smoke freely into each of them, which serves to scent all alike to prevent fighting, as well as to render them docile while operating upon them. Proceed then to put the combs, bees and all, into one hive, by lifting out the combs, with the bees adhering to them, setting aside such as contain the least honey. Should the combs be new, and the frames but partially filled, it is well to exchange some of them for frames containing older and larger combs, from some strong colony which can best spare them. If the exchange is made, any bees adhering to the combs should be brushed off into their own hive, and not be transferred with the comb to a new one. When the operation is completed and the amalgamation formed, all straggling bees should be gathered into one hive and shut up, ventilating properly. It should be kept closed till sunset the next day, when it should be opened, and closed the next morning before the bees commence flying. Open again in the evening, permitting them to fly. Early the next morning blow a little smoke into the hive or rap on it; by this means when they fly out, supposing they have been removed, they will be careful to take a new reckoning and all return to the hive; otherwise those moved from another stand, and united in the new one, will return and be lost."

Some apiarians advocate the practice of wintering bees in cellars or other dark inclosures, as being safer for them, while their keeping is, in consequence of this seclusion, less expensive than when light and liberty are accorded them. Others dissent from this view, urging that such confinement weakens the bees, rendering them less able to work when coming out—hence no saving is secured. If the hives are suitably sheltered from the driving storms and extreme cold of winter, it would seem unnecessary to entomb them in cellars or elsewhere. During warm spells in winter we have known bees take a wide range, showing that confinement was irksome. Some of them are undoubtedly lost in these excursions, but the number is generally insignificant and is supposed to find compensation in the superior healthfulness of those which remain. This, however, is a point upon which the most experienced apiarians are at variance, hence amateurs must weigh the arguments on each side and act as the preponderance of evidence shall seem to dictate.

SEDGE-GRASS—(Cyperus phymatodes.)

A PESTIFEROUS GRASS.

EDS. RURAL NEW-YORKER:—Inclosed I send you some samples of the greatest farm and garden pest, I think, that has ever yet been discovered. If I could make pictures I would send you a picture of it that you might show it to everybody. We call it *potato grass*. You want to be more careful of it than you would be of the Colorado potato bug. If it escapes your hands and falls from your window on to the solid pavement, the story will soon be told that grass grows in the streets of Rochester. It comes from the little ball or tuber which you see attached to the root of the plant. This makes it impossible to rid the earth of its obnoxious presence. It laughs at the hoe, and flourishes under the cultivator. Wherever it grows it gives the earth a yellow, sickly, bilious appearance, and vegetation looks as though it was afraid to make a start, or seems to say "it's no use." Canada thistles, quack grass and artichokes stand "no where" in comparison to it. It is a perfect nuisance in every sense of the word. You may hoe it all summer, and the next spring it makes its appearance with as much *nonchalance* as though it ranked itself among the "hoed crops." During the dry summer of 1864 I hoed a patch of it in my garden once or twice a week, for I don't know how many weeks, until I finally threw down my hoe in disgust and resolved to hoe no more where hoeing was of no avail. I then took to mowing it, and I can't tell how many crops I mowed and left on the ground. When fall came I made up my mind that the *best sod was on that part that I hoed the most.*

I know of neither beast nor bird that makes any use of this grass whatever, and even the destructive cut-worm passes by it with disdain. It is true that after the ground is plowed, hens will scratch it over, but whether they do it for spite or sport I have never been able to determine. Although it grows and flourishes upon the identical soil where modern spiritualism first burst upon a not over-credulous community, I can assure you, it is no humbug. Frequently on cutting open a potato for planting in the spring we find one of these little balls firmly imbedded in its very center, ready to spring up and spread consternation and back-ache to the unfortunate owner of the potato patch. [Speaking of hens I wish you would tell "YORICK" that I want one of his chickens. I want a cross between the scratcher and eater. If he can furnish me with one that will answer my purpose he can "retire," for his fortune is made.]

Now, I don't think that I can reasonably ask you or "any other man" to tell me how to rid myself of this pest, for I believe that is a thing that isn't known. But what I should like to know is, whether science has ever discovered its *real name or origin?*—whether it originated where a certain official thought the potato plant did, (in the state of Pennsylvania,) or whether Baron VON HUMBOLDT found it upon some tottering peak of the lofty Andes, or whether JOHN CHARLES FREMONT brought it from that airy height where he caught the wandering humble bee. There is one thing certain, it is here, and here it is likely to remain for aught I see for all time to come. J. B. T.

Newark, N. Y., 1867.

REMARKS.—We submitted the specimen of grass inclosed with the above communication to Prof. DEWEY of this city—one of the best authorities in the country on grasses—and he makes the following remarks. Our engraving represents very accurately the appearance of the roots, leaves, stem and head of the plant:

"The sedge-grass, from J. B. TIBBITS, Esq., is *Cyperus phymatodes*, named and described by MUHLENBERG in Pennsylvania, common at the South, and flourishes in Vermont, New York, Michigan, Illinois, but is not often very troublesome. It propagates by its seed, creeping root-stalks and small tubers (*abscess-like*, from which is the specific name,) along or at the end of small roots. It delights in rather wet and low rich places, and prospers under cultivation. The tubers are rather too small, rarely one-fourth inch in diameter, to give it the name *Potato-weed*, as called by Mr. TIBBITS. It can, probably, be destroyed by burning the roots, plants and seed. It will not be a dangerous effort."

ADVICE TO THOSE WHO DON'T NEED IT.

ALWAYS leave your tools where you use them. Then the next time you want them you have only to remember where you used them last, and go and get them. In this way you may avoid the annoyance of lending. A man who wants to borrow a plow is not half so likely to call upon a neighbor who generally leaves it in the back field as one who keeps it in the barn clean and bright.

Never paint your out buildings or farm tools. It is wicked; anybody knows that it will make them last twice as long, and that is robbing mechanics of their bread. "Let every man live by his trade."

Always plant your smallest potatoes, (and rotten ones if you have any.) Eat the best and you are sure of them. If you plant them you run a risk. Bugs and rot may destroy them. One potato on the plate is worth a half dozen in the ground where you have to dig for them.

Do not stable your cattle. It makes a great deal of extra work and don't do any good. They are dumb brutes. How do they know whether it is cold or warm? Stack some hay out in the middle of a field—(If you have some damaged all the better.) It will make an excellent place to winter the sheep and calves. Feed them on the ground and save hauling the manure. If some of the sheep happen to die, pull off the wool and feel thankful that you have so many less to wash and shear in the hurry of summer.

Some short-sighted people heap their manure to make it rot. This is the height of folly. Let it alone three or four years and it will rot itself. If there is so much manure in the yard that the cattle can't wade through it, get some rails and fence off a yard on the other side of the barn. If it accumulates so as to make it difficult for you to get to the barn, sell out, or move the barn.

Don't waste your money and time by trying to raise fruit trees. It requires an immense amount of labor to prune and fight the worms and mice; and then if they grow and bear fruit bad boys may steal it; you can save a great deal of annoyance by not planting any. Better spend your money for tobacco and your time smoking it.

Above all do not squander your money for books and newspapers. No matter how much weak-minded people talk about the moral influence of good reading, the benefit of the experience of practical farmers and the theories of scientific men and all such nonsense, just give them to understand that you know what is what, and let those take the papers who have no mind of their own. I know a nice old farmer who never had a paper in his house till he was fifty years of age. His father left him two hundred acres of choice land which he worked as well as he knew how, and made a comfortable living. One spring the Postmaster told him if he would subscribe for a good agricultural paper, read it carefully and work according to instructions, he would warrant him to clear a thousand dollars that year. On these conditions he paid for the paper, read it, worked faithfully, and at the end of the year he figured up carefully and found he had cleared only nine hundred and sixty dollars. He sued the rascally Postmaster for the other forty, but by some dodge of the law the villain cheated him out of it. Ever since then the old gent has been down on Postmasters and newspapers. G. W. CONE.

Stanley Corners, N. Y., Sept., 1867.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

PRESIDENT GARLAND'S SPEECH.

We had hoped in this issue to give the resolutions passed at the recent annual meeting of the Illinois Wool Growers' Association,—but at the time of this writing (Oct. 18th) we have not found them in any of our western exchanges. Below will be found the neat and forcible speech of A. M. Garland, Esq., the President of the Association, delivered on that occasion:

"Gentlemen Wool Growers:—Your very able Secretary stated in his notice for this meeting that we would meet to consider the 'situation.' It certainly is well that we should do so,—for just now our situation is somewhat peculiar.

"During the four years of the existence of this organization our combined efforts have been directed to the securing of a tariff that would give something like an adequate protection to the wool growers of the country. Slowly but surely we gained upon the advocates of free trade, both in and out of Congress, and on the 4th day of March last the bill framed by the joint committee of wool growers and manufacturers became a law.

"As one who has borne a part, humble though it may be, in this long struggle, I am happy to-day to join my congratulations with yours, and of the friends of our cause throughout the country, in view of the fact that our victory has been won by the force of argument, and an array of facts and figures against which the flimsy sophistry of the free trader was as paper bullets. Not one dollar has been paid to any man for his time and services, nor to any paper for its influence; and though some few time-serving politicians may have voted for our bill in deference to 'popular clamor,' most Congressmen supported it because they thought the idea of protection right, and our demands under it not unreasonable. Ours is a victory of which we may well feel proud; not forgetting, however, to temper our joy with the regret that many of the other great industrial interests at the same time seeking protection were less fortunate than we. We cannot afford to remain idle observers of their struggles, but must give them good help and cheer, and stop not in our labors until the great principle of a reasonable protection to American against the competitive pauper and semi-savage labor of other countries shall become so rooted into the legislative policy of the United States as that all fears for its safety shall have passed away; until the British Free Trade Leagues shall have died from among us, and the politicians and editors who do their 'blowing and striking' shall have found some other occupation more profitable to the country, though, it may be, less so to themselves. Nor must we look for bright skies and smooth seas alone in the future. The ground, though fairly won, must be held. The next session of Congress will find Washington garrisoned by gentlemen in the interests of the importers and free traders, ready to show that our tariff is the worst of all possible arrangements for the wool grower. They will exultingly point to the low price of wool at this time as proof of their assertions. Forewarned, we should be ready to meet them. Let us inform ourselves fully as to the facts in the case. My own conviction is, that the low price of wool at this time has but an indirect connection with the tariff upon wools and woolens. Congress advertised our tariff for eighteen months. Importers saw that it was coming. The consequence was an unusually heavy importation of both raw and manufactured wools. Our own manufacturers crowded the shelves of their agents with goods in advance of the demands of the country. Then came short grain crops. An inexorable tightening of money by the Secretary of the Treasury made the people slow buyers, and this heavy surplus of goods and raw material has worked and is still working off but slowly. It is no fault of our tariff that wool is so low to-day,—though I honestly believe it would be lower but for the tariff. The combination of circumstances that makes wool low to-day is one and the same with that that has brought down the price of cheese fifty per cent. and many other of the great staples in like proportion.

"A glance at the books of the Custom House in New York will show that less than *one-fifth* of the amount of 'clothing wools' have been imported from January to July of this year than for the same period in 1866. We find that in the first six months of 1866 there was received of No. 1 or clothing wools, 23,692,043 lbs. In 1867, for the same period, though during over one-third of the time our present tariff was not in operation, there was imported of No. 1 clothing wools, 4,345,183 lbs., and even of this amount 'much yet remains in bond or has been reshipped to other countries.'

"At the port of Boston, we find the figures for same period to stand as follows: For first six months of 1866 there was received of wools of all classes, 14,805,496 lbs., while for corresponding period of this year we have but 9,006,905 lbs.

"It will thus be seen that our tariff has already began to 'work'—has checked the influx of foreign wools that threatened with ruin the business of wool growing in the United States, unless we should choose to accept the alternative suggested by the Hon. Special Commissioner of the Revenue, and move with our families and flocks upon cheaper lands, where the whoop of the savage and the howl of the coyote afford the only, though it may be an unwelcome, change from the monotony of pastoral life, and where the support of churches and schools, and other adjuncts of civilization, need not be accounted as among necessary expenses.

"Having obtained such National legislation as we asked for, and demanding for it a fair trial (which, in my opinion, cannot be had in less than three years,) let us turn our attention to more local matters. We need to have some wrongs righted closer home than Washington City. One of the greatest drawbacks to sheep raising is the loss from the ravages of dogs. There are in Illinois, as near as we can estimate, 300,000 dogs—'mongrel, puppy, whelp, and hound, and cur of low degree.' The political economist might make a point of the fact that these animals (two-thirds, at least, of them worthless,) consume for their daily sustenance enough to feed well forty thousand families, and keep twice that number from starvation. But what *we* have more immediately to deal with is the fact that this grand army of curs are not content to 'live and let live,' but wantonly destroy as much more as they consume. We need to have them taxed, and that heavily. The owners of these dogs should be made to pay well for the luxury of keeping them, and the fund thus created should be set apart and applied toward making good the damages caused by their depredations. Our sister State of Indiana, though with less sheep than Illinois, I am informed, has such a law. We can and will have such a law, whenever every sheep raiser in the State makes up his mind to it. The dog that is not worth to his owner three dollars, or even five dollars per year, is not worth having, and the sooner his worthless carcass is made to add its fertilizing influence to mother earth the better for mankind generally, and wool growers in particular.

"We need by legislation to give more encouragement to capitalists to erect manufactories, not only of wool, but of iron, of cotton, flax, and farming machinery of all kinds within our State. Every pound of wool raised in Illinois should be here manufactured into cloth. This would dispense with the services of a large class of 'middle-men,' who erect wool houses between us and the factories that work up our wool, and grow rich off commissions that should properly go into our own pockets. These wool houses are becoming a power in the wool business of the country that cannot be too zealously—I might say jealously—watched. The circulars of a prominent house in Chicago have weekly contained quotations beyond which *it would not be safe for buyers to go*. A great pity 'twould have been if some sharper had happened to pay a farmer as much for his wool as it had cost to grow it, and wake up to find he hadn't made a 'good thing.' The same establishment heralded it through the land, as a fact, that the clip of wool for 1867 would be in excess of that of 1866, when any one who knew the history of the flocks of the country during the last year knew differently; and those who were not thus correctly informed should at least have kept silent.

"And now, gentlemen, though the present outlook is not what we could desire, I firmly believe the future has much good in store for us. Sheep and wool will be *at par* in less than twelve months. Some who are weak in the faith will doubtless sell out and embark in other pursuits, and wake up a few years hence to find their mistake. Let us improve our flocks. Better sheep will pay better profits. Choice animals can be had for less money than formerly. Let factories be planted above our rich coal fields, whose thousands of busy spindles shall mingle their buzz with the bleating of our flocks, and the producer and consumer both happy upon the high road to prosperity, will stand as a living argument of the justice and policy of that legislation which gives a fair protection to American labor.

RESOLUTIONS OF NATIONAL WOOL MANUFACTURERS' ASSOCIATION.

At the annual meeting of the National Association of Wool Manufacturers, held in New York city, October 2d, the following resolutions were unanimously passed:

Resolved, By the National Association of Wool Manufacturers, at its third annual meeting, held in the city of New York, on the 2d of October, 1867:

1. The present tariff on wool and woolens is as well adapted, as any legislation which can now be devised, to promote the growth and development of wool manufacturing and wool growing, and the interests of consumers and the public revenue.

2. Confidence in the stability of legislation being essential to induce the investment of capital by which agricultural and manufacturing wealth is to be developed, it is of the highest importance that the tariff policy deliberately adopted at the suggestion of those most affected by it should be persisted in, and that the business arrangements which have been made to conform to it should not be disturbed.

3. Experience having demonstrated the difficulty of adjusting the complicated relations of manufacturers with each other, and with the producers of wool, it is desirable that no change, however trivial, should be made in the present tariff, unless sanctioned jointly by the National Wool Growers' and wool Manufacturers' Associations.

4. The interests of wool manufacturers and wool growers being recognized as identical, further measures should be adopted to make each class familiar with the respective wants and necessities of the other.

5. Manufacturers have suffered from overproduction of particular kinds of goods. Wool growers have equally suffered from overproduction of certain kinds of wool. The wisest course for each class to adopt is to increase the variety of its products.

6. It would greatly benefit many branches of the woolen manufacture if, in addition to the ordinary wools now produced, there should be an increase in fine wools corresponding to the best Silesian wools, and in combing wools of English blood.

7. It is for the interest of the whole country that production should be increased by extending protection to all branches of industry whose representatives can show that they are not in a position to successfully compete with foreign producers.

Dairy Department.

BUTTER MAKING.—VARIANT PRACTICES.

Rennes, in Brittany, has a reputation for a peculiar kind of butter. The overnight milking is mixed with that of the morning, and the whole allowed to stand a few hours and then churned. This churning of the milk, it is claimed, produces more butter and of a better flavor than that obtained in the customary way.

In some portions of Scotland a favorite process is to accumulate two or three milkings, letting the cream rise. The whole is then poured into the churn till it commences to sour, when the manufacturing process takes place. We have seen this plan practiced in portions of Pennsylvania, but failed to discover any particular benefit to the butter which is not secured by the common practice of separating the cream from the milk and churning it alone. In Holland each milking is allowed to become sour—being repeatedly stirred to prevent cream from rising to the surface, and when pretty stiff churning takes place.

THE BEST BUTTER.

There is considerable diversity of opinion as to what section of the country belongs the credit of producing the best quality of butter. The subject was ventilated somewhat at a late meeting of the "Institute Farmers' Club," when the claims of Philadelphia and Orange county butter to pre-eminence were canvassed. The verdict seemed to be in favor of the latter. It is said that this excellence is owing in part to the character of the pasturage on the hills or rolling grounds of Orange county, which is remarkably sweet and rich in the butter product. It depends, too, considerably on the care taken in the process of manufacture. It is difficult to determine why better butter can be produced in Orange county than in Berkshire county, Massachusetts,—the pasturage being much alike, still the preference is given to the former in the New York market, whatever the relative merits of each may be.

AYRSHIRES—SHORT-HORNS—DAIRY.

The Mark Lane Express, of late date, gave the substance of a discussion before the Logic and Lecropt Farmers' Club, relative to the comparative merits of Ayrshire and Short-horn cows for dairy purposes. Mr. Home entered largely into the history of the cattle originally brought into England, and the different crossings which had taken place. He thought that the Short-horns gave richer milk than the Ayrshires,—though not so much of it,—and were therefore the best for butter making. On testing the milk, which he had done for many years, he found that that of the Short-horns contained from twelve to seventeen parts of cream, whilst the milk of the Ayrshire cows only contained from nine to twelve parts—hence, though the Short-horns gave somewhat less milk, the percentage of butter more than made up for the deficiency. The conclusion of the Club was that crossings of the Short-horns and Ayrshires made the most profitable dairy stock.

STRONG ON BUTTER.

S. E. Todd, Agricultural Editor of the N. Y. Times, recently read before the Farmers' Institute Club a brief essay on butter—passing some pretty strong strictures on the manufacture of the article. We quote:—"Butter is not that ring-streaked, speckled, spotted and grizzled material that is transported to the New York butter market in vessels that resemble an elegant swill pail more than a neat butter-tub, but it consists of the fragrance of green grass, the aroma of the mellifluous clover fields, the exquisite nectar of new mown hay, collected in glowing globules, like sparkling dew drops on the petals of May roses, by fairy hands that are never soiled by dirt and offensive odors; and the delicious essence is impailed in an atmosphere as sweet and pure as ether, and wrapped in a napkin as clear as the unsullied snow-drift. Dirt, foul odors, infected air, pestilential earth and butter are perfect antagonisms. Soap grease, shoe grease, wagon-wheel grease, which we see in such vast quantities in the markets in butter firkins, approximate about as nearly to butter as old mother Countryman's pie-crust shortening, which was extracted from the suet of skunks. This is the negative and affirmative of butter."

COWS SUCKING THEMSELVES.

A remedy for this practice, published recently in the Rural, has brought us two communications on the same subject. We give the substance of each for the consideration of our readers. The first preventive, of self-milking, is as follows:—"Take a piece of hard, tough wood, about 6 or 7 inches long and ½ inch thick, sharpened at each end. Cut a groove around the center about 1¼ inches long. Make a hole through the nostril and crowd the stick in. This will not interfere in the least with their feeding, and is not more cruel than rings for swine."

The other is by M. R. W., Apanilla:—"Take a strap halter, the same as for a horse, only set the ring the other way, and place on the cow's head. Pass a circingle around the cow's body, just back of the fore legs, with a ring at the bottom. Take a round stick of timber, four or five feet long, fasten one end in the ring of the halter, and let the other play back and forth in the ring between the fore legs. I kept such a cow four years with this fixture on her and found it a sure preventive. It is light and easily worn."

DAIRY ITEMS.

A New Milk Can.—The Toronto Globe mentions, among other dairy novelties exhibited at the late Provincial Fair, a milk can of large size, designed for carrying milk to factories and markets. It is furnished with an adjustable lid or cover, fitting the can closely and moving up and down readily. It is designed to diminish agitation as the milk is being moved to the factories or to market. No doubt such a can will prove valuable to the dairying fraternity.

Bone Dust.—Butter.—It is the opinion of some dairymen that cows fed upon pastures top-dressed with bone manure, will produce more and a better article of milk than from grounds otherwise manured, no matter how luxuriant the yield of grass may be. It is probable that the character of vegetation may be considerably modified by the quality of the fertilizer used.

Rural Spirit of the Press.

Subsoiling.

A correspondent of the Germantown Telegraph makes some observations on subsoiling worthy of consideration. After quoting Johnson's analysis of the surface soil and its adjoining subsoil of land on the banks of the Ohio river, showing the difference in the constituents of the two, he adds:—"From the observations we can readily see that the effect of subsoil plowing and trenching will vary with the character of the subsoil; if the latter is hard and compact it will probably arrest the downward passage of the water containing the valuable portions of the surface soil, which upon being again brought to the surface will of course enrich the surface soil; but if, on the other hand, the subsoil is light and loose and of a texture not calculated to retain the saline constituents brought from above, they will pass through it, and when it is turned up it may for a time decrease the crops,—for the only benefit gained seems to be that of deepening the surface soil, which even of itself is an important one. This may in a great measure account for the varied success which always attends subsoil plowing, and a more careful attention to the difference may be the means of preventing much disappointment, as has been the case with your new correspondent, but old reader."

Clean Grass Seed Important.

A writer in the Massachusetts Ploughman gives his experience in the use of three several parcels of grass seed purchased at as many different stores. The seed was supposed to be timothy and redtop; it came up with great uniformity, grew finely, and promised well for a time,—but soon after the commencement of June it was manifest that timothy and redtop had very little to do with it. The predominant growth was cheat or chess, and the next in order, common meadow grass. This shows the importance of having clean seed when stocking down land, as a foul article not only infests it with useless or inferior herbage, but necessitates the breaking up and re-stocking, involving both expense and loss of time. Great caution should be exercised with reference to seed, especially of the grasses, as a foul sowing is certain to result in a plentiful harvest of disappointment and vexation.

Street Mud.

"Chemicus" writes the Cultivator & Country Gentleman on the deleterious influence which the mud in the streets has on the public health. Dr. Leatherby analyzed the mud in the streets of London and found in it an average of 47.2 per cent. of organic matter. It was found to contain also 13 per cent. of abraided iron. This fact shows that though the iron on the tires of carts and carriages wears away imperceptibly and its identity is supposed to be lost, still it remains a distinct substance amid the filth with which it mingles, and may be gathered and weighed and its value determined by the aid of chemical analysis.

Three Hogs per Minute.

In one of the large pork packing houses of Cincinnati it is the rule to finish off three hogs per minute. The force required for this embraces two pen-men, one knocker-down, one sticker, two bristle-snatchers, four scrapers, six shavers, (who remove the hair from parts not reached by the scrapers,) two gamble-men, one gutter, one hose-boy, one slide-boy, one splitter, (who fastens the animal open to facilitate cooling,) two attendants upon the cutters, one weigher, two cleaver-men, four knife-men, one ham-trimmer, one shoulder-trimmer, one packer, six ham-salters, one weigher and brander, one lard-man, one book-keeper, seven porters and laborers.

Meadow and Pasture Grounds.

J. W. Clarke, Wisconsin, writes the Albany Cultivator in opposition to the somewhat prevalent opinion that meadow and pasture lands require to be frequently broken up for the purpose of augmenting or keeping up their productive powers. Both meadow and pasture lands may require underdraining, re-seeding in spots occasionally, moderate applications of manure, especially the meadows, soon after having been mowed. With these aids it is contended that pastures and meadows will improve in the quantity and quality of their productions for an indefinite series of years. In other words, "the older the sod the better the pasture."

Meadows.—Fall Dressing.

A correspondent of the Ohio Farmer makes some sensible remarks on the management of meadow lands. These need not be broken up and cultivated for re-seeding, but may be kept up by proper treatment for a long series of years. Sections of meadow which, on being mowed, show signs of exhaustion, should be thoroughly harrowed in the fall, re-seeded, and liberally supplied with well-rotted manure. The other portions should receive a good top-dressing of the same material, which will keep them in good heart for an indefinite period.

Deep Plowing.

At a late Fair in Dutchess County, Horace Greeley delivered an address on farming matters. He considered pasture lands a nuisance—being mainly seed beds for weeds; advocated the universal adoption of the soiling system and deep plowing. Belgium was pronounced the best farmed country in the world—the plow being put down to the depth of three feet. The soiling system may do for horses and cattle, but if the sheep are to have a voice in the matter we opine there will be a unanimous "ba" against it.

Horses.—Sprung Knees.

The Ohio Farmer states that corns in horses' feet are the cause, in most cases, of sprung knees. In order to relieve the heels, sore with corns, the animal throws his weight mainly on the toe, thus relaxing the tendons and suspensory ligament of the leg, contraction of which naturally follows. Corns are mainly produced by improper shoeing, which contracts the heel. Instead of beveling from without, inward, making the foot to rest in a concavity, which resists the natural expansion of the hoof and forces the heel inward, the shoe should be made level.

Splitting Rails.

A correspondent of the Iowa Homestead, alluding to the difficulty frequently experienced in making a wedge stick in frozen timber when splitting rails, advises the use of dry sand, dashed into the crevice from which the wedge rebounds. The end sought can be equally well attained by making a few checks close together, with the ax, on the end of the log to be split, and inserting the wedge between them. We never knew a wedge to rebound under such circumstances.

Rural Notes and Items

Prospects of the Rural New-Yorker.—We are sure its hosts of friends all over the land will be glad to learn, what is veritably true, that the prospects of this Journal are more encouraging at the present time than they ever were at any corresponding period since its establishment. Anticipating quite an accession of new subscribers, both annual and trial, we added several thousand copies to our regular edition at the beginning of this quarter, (Oct. 5,)—but the demand thus far has greatly exceeded our estimate. Nearly all the States are represented in each daily mail,—bringing us orders for annual and trial subscriptions, requests for specimens and posters, and the most cheering notes of approval and encouragement. Judging from the number and character of the remittances and assurances we are receiving, and other most gratifying indications, we are confident the Rural will enter upon its Nineteenth Year and Volume under far more favorable auspices than it ever opened a new year. Such unexpectedly favorable prospects induce us to be even more liberal in our arrangements and expenditures than we had anticipated,—and hence we can safely promise all our readers that no proper effort or expense will be spared in the future to render the Rural New-Yorker the most complete combination of Practical, Instructive, Entertaining and Timely Journalistic Reading obtainable—furnishing a paper each week worthy of being a home companion for intelligent and right-thinking people in both Town and Country. Arranged, as it is, in several distinct Departments, and being diversified in contents, instructive in character and elevated in sentiment—as well as profusely illustrated and neatly printed—the Rural is believed to present claims to public favor and individual encouragement, second to no other journal in the Union. And if, as we infer, a larger portion of the reading public than ever before, concede this estimate, we may reasonably expect, as we confidently do, a great accession of subscribers previous to and at the commencement of the ensuing year and volume. In conclusion, we would remind his thousands of earnest friends and supporters that *the present* is a most favorable season to manifest their appreciation of the Rural by efforts to increase and widen its circulation and influence, and that we shall gratefully acknowledge any and every movement in that direction.

Season, Crops, Prospects, &c.—The season in this locality is about one month behind the almanac. September, in point of weather, might have been taken for August, and October thus far has furnished us with genuine September days in addition to the rich coloring of the autumn-ripened foliage. The great drawback to the farmer's interest is lack of rain. There has been much lightning and thunder for the season, and on the evening of the 20th we were favored with a genuine July thunder shower, followed by a warm south wind and summer-looking sky. Early in the morning the thermometer stood at 65° and ranged up, during the day, to between 80° and 90° in the shade. From lack of sufficient rain potatoes in this region will fall much below an average crop. Grass is dry and feed in pastures short. Wheat shows a small top, and a great deal of the seed has but just sprouted. It looks healthy however. Farmers are securing their fall crops rapidly and in good order, and if autumn will take one month from grim winter, as the promise now is, the farmer's fall prospects will brighten to a hopeful promise.

Implements at the State Fair.—Among the great variety of machinery of interest to farmers exhibited at our State Fair we noticed Brinkerhoff's Corn Sheller, Seperator and Cleaner, manufactured at Auburn, N. Y. It was this machine which was sent to the Paris Exposition to represent American Corn Shellers. It wins good opinions from farmers wherever it is put in use, and is really one of those implements that are indispensable on a well ordered farm.

Mr. D. R. Prindle, East Bethany, N. Y., had on exhibition several agricultural implements, the most important of which was his well known Cauldron for cooking and steaming food for stock. He also had a flexible joint farm roller, a grass seed sower, a hydraulic paint for brick, and a paint oil for buildings; a corn planter for two horses, a portable fence, and a fine sample of black walnut timber of his own growing.

Ohio Agricultural Report.—We have received the Report of the Ohio State Board of Agriculture for 1866. It is a work of over six hundred pages, illustrated to some extent, and contains matter of interest to the farming and fruit-growing community. In the cursory examination we have only been able to give it we notice as articles of particular interest "Essays on Stall Feeding Cattle;" "Articles on the Agriculture of Several Counties;" "Subsoil Draining;" "Recent Experiences in Drill Culture;" "Thin and Thick Sowing;" and articles on the wool, dairy, and horticultural interests. Ohio farmers in particular will be amply repaid for reading this volume.

Commercial Statistics.—We are indebted to Alexander Delmar, Director of the Bureau of Statistics, for a statement of the imports and exports for the months of March, April, May and June—four months. The imports, for the above period, aggregate $138,857,377. Entered, for consumption, $72,157,842. Entered for warehouse, $66,700,535. The value of the exports, the growth and manufacture of the United States, for the same time aggregate $176,559,211—of which nearly $92,000,000 are for cotton.

Cornell University.—It is said that the buildings of this institution, at Ithaca, N. Y., are progressing favorably. The treasury is in a flourishing condition. The following are elected professors:—Eli Whitney Blake of the Vermont University, Professor of Physics and Industrial Mechanics; Prof. Geo. E. Caldwell, Pennsylvania, Professor of Agricultural Chemistry; Burt G. Wilder of the Harvard Scientific School, Professor of Natural History; and James M. Crofts of Boston, Professor of Chemistry.

Hogs—The Slaughtering Season.—Owing to the early ripening of corn at the west this year, the slaughtering of hogs will commence this season some weeks in advance of the customary time. At some points the work was to commence about the 25th of October.

Poultry Exhibition.—Those of our readers interested in Poultry breeding are referred to the announcement of the First Fall Exhibition of the American Poultry Society, to be held in New York next month—Nov. 26th to 29th.

Wheat in California.—The wheat crop of California the present year is estimated at 15,000,000 bushels—equalling New York in the production of this important farm product.

HORTICULTURAL.

AMONG THE GRAPE GROWERS.

THE Horticultural Fair held at Hammondsport the second week in October, under the auspices of the Pleasant Valley Grape Growers' Association, attracted, in spite of some unpleasant weather, a good attendance from the adjacent country, and many distinguished visitors — horticulturally and otherwise — from abroad. The attractions which drew thither this concourse of visitors were not found altogether in the exhibition of fruit and flowers, but existed likewise in the charming scenery of this region, the ravine-bounded slopes reaching far up from lake and valley, crowned with vineyards; in the wine houses with their presses, and great casks of still wines, and deep vaults with their many cords of bottles of "sparkling," and not least in the cheerful and generous hospitality which welcomed strangers, and which is one of the household divinities the people of this favored region most devotedly worship.

In the tent which sheltered the fair, grapes made the most prominent display; all the leading varieties were exhibited and there was also about the usual number of seedlings, presenting their qualities to the public. We think some visitors from abroad were disappointed in not finding the Catawbas riper, although it will be seen that they bore the Saccharometer test with credit. Frosts had already stricken the foliage on the vines, except on some slopes that rose from the lake. Judging by present appearances one must conclude that the influence of small lakes in warding off frosts does not extend much beyond the slopes that rise from the water to the distance of a quarter, or at most, half a mile, and the success in grape growing which Pleasant Valley has attained is, doubtless, owing largely to its favorable soil, and sunny, sheltered situation.

Flowers, apples, peaches, canned fruits, jams and jellies, some paintings, &c., were likewise exhibited, and the crowd that thronged the tent seemed to be amply entertained.

ABOUT THE IONA GRAPE.

The grape growers assembled one evening in the hall for discussion, and the Iona grape was pretty thoroughly reviewed. We condense our notes, but endeavor to retain the interesting points.

Mr. TERRILL, Auburn, N. Y., said the Iona had fruited well with him, but had not ripened equal to his expectations. At the present time they were not fully ripe, there being green berries on the lower part of the cluster. The vine was heavily fruited. He thought the Iona two weeks later than the Delaware, as that and the Rebecca had ripened perfectly on the same soil, and with the same exposure.

Dr. SEELYE, Vine Valley, Canandaigua Lake, said that in his locality the Iona failed to ripen with other varieties. At the recent Naples Fair there were no samples of ripe Ionas, but there were ripe Catawbas. He liked the habit of the vine; its great fault was failing to ripen. The Israella ripened early and gave good satisfaction as a table grape.

Mr. KINGSLEY, Pleasant Valley, had fruited the Iona, and thought two-thirds of the fruit was ripe. The vines were two years old, and bore from one to twelve clusters. The ripening process seems to be very slow with this variety, although the berries begin to soften as soon as those of the Delaware. The vines made too much wood.

Dr. MERRILL, Geneva, had four-year-old vines of the Iona which had borne two years. They had ripened the fruit considerably by the 15th of September, after which the boys stole the grapes.

Dr. SEELYE said with him the Iona began to color with the Delaware, but it requires a very long period afterward for it to mature. The Delaware will be gone before the Iona is fit to eat. Growing side by side with Delaware, Concord, Diana and Isabella, it was much later than either.

Dr. MERRILL said his experience was right contrary to this.

LEWIS F. ALLEN, Black Rock, had no experience with the Iona; he believed it a very good grape, but if it did not ripen earlier than the Catawba public expectation would be disappointed. He wanted more information.

BATEHAM, Ohio, had no personal experience in ripening it. There had not been Ionas enough grown in his vicinity to enable them to judge correctly. He thought it would improve with age. Had not seen a good illustration of its time of ripening. Did not consider the Iona fruit, exhibited at this Fair, ripe.

GRIFFITH, North East, Pa., said he was and had been for some time greatly inclined to endorse the Iona, but was convinced it "had not quite come up to the manifesto," but thought it would ripen, if treated properly, two weeks sooner than the Catawba, and a little later than the Delaware.

Mr. BARNEY, Sandusky, Ohio, was in a vineyard lately where the Iona was side by side with the Catawba, and one could not tell which one was riper.

LARROWE, Hammondsport, supposed most of the planters of the Iona put their vines on rich, strong soil, as it was an object to grow wood. Now, as it is a seedling of the Diana, it may partake of the nature of its parent and require a poor soil. The fruit had disappointed him, and he could account for it only on the ground that it was grown on too fat a soil.

H. T. BROOKS, Wyoming, argued from analogy that the Iona had all good qualities. It is well known that the most amiable children are puny and die early. His Iona vines were puny, and all died the first winter after being set.

Mr. GRIFFITH: The people have looked forward with great eagerness for the grape which shall be equal to the Catawba, and ripen three weeks earlier. If the Iona fails we shall hold some parties to a strict accountability. He had seen the Iona as ripe on the 3d of September at Iona Island as it was here at the present time. As compared with his vineyards of other varieties, his Ionas were in every respect ahead. If he did not have next year fifteen or twenty tons of Iona grapes, he should feel under obligation to give some good reason for the failure.

WAGENER, Pultney, described his method of planting and cultivation, and said the Iona began ripening on the 17th of August; Delawares, in the same vineyard, on the 20th; Israellas on the 14th. Thought the Iona ripened at his place with the Delaware. The growth of the Iona was perfectly satisfactory to him, and he believed it the best grape we have. Planted five thousand last spring.

SAUNDERS, Washington, said the Iona mildewed so badly with him that he could not grow it. He thought it would always be limited in the extent of its culture. Mr. S. spoke highly of the Clinton family of grapes, and thought we must look to that for the best wine grapes. His test for ripe grapes was ripe wood.

GAGE, Vineland, said that previous to going South he thought the Clinton a poor grape,—but in Baltimore many preferred it to the Catawba.

GILLETT, Penn Yan, said his experience in ripening the Iona, which was with several vines, was that those having the least fruit ripened soonest and those most not maturing at all.

An opportunity having been inadvertently given, some gentlemen made a showy display of their profound lack of geological knowledge, boring the patient audience with a torrent of declamation, until some one took advantage of a slight pause and slipped in a motion to adjourn.

THE SACCHAROMETER TEST.

The test by the must scale of the amount of sugar present in several varieties was thoroughly made and is instructive. Twelve samples of Catawbas were tried and the range was from 74 to 88, the average being 82. Five trials of Isabellas gave from 60 to 72½; average 65. Six tests of the Diana ranged from 79½ to 84; average 81. Five of Delaware showed a range from 87 to 103; average 93. One sample of Keuka marked 78. Two of Concord 71 and 75. Two of Clinton 93 and 94. The Alvey was tested twice and marked 85½ and 91. Two samples of Ives' Seedling gave 75 and 80. One of Adirondac stood at 70. Two of Norton's Virginia at 88 and 90. The Israella marked 74, and the Naples Seedling 71. Four samples of Ionas were tested, running as high as 92 and averaging 89.

NORTON'S VIRGINIA GRAPE.

THE Grape which we illustrate was raised in Richmond, Virginia, about forty years ago, by Dr. NORTON. It will probably ripen well where the Catawba will. It is especially valuable as a wine grape as it yields a rich, strong, dark red juice, mostly free from a "foxy" aroma. In Missouri it is considered one of the best and most reliable grapes for wine-making. It is a vigorous grower, and has a healthy constitution. The bunch is large and often double shouldered; the berry is small, round, thin-skinned, and soft to the center. Color black.

SWEET AND SOUR APPLES. — The New York Tribune says: — "A Lady of Skaneateles, N. Y., sends two apples, part sweet and part sour, and claims the reward of $100 offered by Solon Robinson. We answer for Mr. Robinson that a great mistake is made. The question is not as to the existence of sweet and sour apples, for nobody denies this, but it is to whether these apples grow from the halves of buds of the two varieties. Mr. Robinson offered $100 to any one who would cut the bud of a sour apple tree in two, and the same with a sweet apple tree, and unite them and make them grow and bear apples."

FIRE BLIGHT IN THE PEAR.

WE make the following extract from the address of THOS. MEEHAN, delivered before the American Pomological Society at St. Louis:

The injury from "insect" and "frozen sap" will not begin to weigh with that of "fire blight" proper, which carries off the largest branches of your trees, through the thick bark of which your *Scolytus Pyri* could not operate, nor the hottest suns or severest frosts injure by evaporation. Here I am satisfied we have to deal with a parasitic fungus, and in this place let me aim a blow at another popular fallacy, which, unlike the winter tree sap dormancy, has been abandoned by the learned, but which the multitude still cling to, namely: that fungi attack only *diseased* vegetation. Most of them feed on debris. Like the most respectable man, they want their food nicely prepared for them; but there are the wild beasts among them, as in the animal world, and these are not so particular. They swallow their food alive. I will not occupy time here to prove this. Those who think parasitic fungi will not attack healthy vegetation, are referred to the writings of our own great cryptogamist, Rev. M. A. Curtis of North Carolina, or England's celebrated botanist, Rev. M. A. Berkeley. The fungus which I think I may say causes fire-blight, germinates either on or in the bark, pushing its way along through the tissue, causing fermentation and death as it goes. It seems also to push into the wood, destroying it in the same way. Sometimes it does not work entirely around the branch, hence you will not find the leaves all die away suddenly. A little sap can rise through the uninjured parts, and the leaves only die, some wholly, some partially, by degrees, but when the bark all the way round gets eaten away—*becomes girdled*—no sap can flow up, and the whole branch dies at once for want of sap, just as if cut away or thrown into the fire.

This explanation of the cause of fire-blight points at the same time to the remedy. These minute plants propagate themselves by seeds (called spores) just as larger plants do. They must develop themselves, however, some time before they perfect reproductive organs, and if, therefore, the crop is cut away and destroyed before it can mature spores, we stop the propagation. Cutting away and burning the affected parts is therefore the best remedy to stop the progress of the fire blight.

WHITE THORN FOR HEDGES.

IN response to a recently published inquiry regarding the common thorn for hedging purposes, Mr. GEORGE BRONSON, Clinton, Oneida Co., N. Y., writes us as follows: — "In an adjoining town is a hedge some thirty rods in length of the common white thorn, which seems to be a perfect success. No animal larger than a rabbit would attempt to go through it, and getting over it is out of the question; it is about five feet high, covered with thorns, and is perfectly matted. The plants were set in a single row about six inches apart. As for saving seed and sowing it I should suppose the method adopted for ordinary apples would answer. There is another plant brought into use for a hedge by the Oneida Community which makes a very substantial one, and that is the common wild barberry of the Eastern States.

Why do not some of the Western broom corn growers advertise in your paper! We have now to get our corn from the East after it has once passed our door, and it would be a saving to them and to us if we were informed where it is grown.

THE MIAMA AND SENECA BLACK-CAP.

I NOTICED a few weeks since a cut and remarks on the "Seneca Black-cap." As I have never yet seen a superior Black-cap to the *Miama*, I am *very* anxious to get such, if it is to be had. I therefore make the following proposition, which *must* seem fair to all:

He, DOOLITTLE, to send 1,000 "Seneca Black-cap" to PURDY'S Fruit Farm, Palmyra, N. Y., this fall, and I to forward him, DOOLITTLE, 1,000 Mianas this fall. Next season the editor of the RURAL to visit my plantation of Miamas at Palmyra, N. Y., and DOOLITTLE'S plantation of Senecas when in fruiting. If the editor decides that the "Seneca" is superior, in *any* of the desirable qualifications claimed for it, to the Miama, I will pay H. H. DOOLITTLE two hundred dollars, and make no charge for the 1,000 Miamas I send him. If the editor decides it is *not* superior, we are to let the two sorts sent to each other offset. In case the editor decides for the "Seneca," I am to pay his expenses for traveling, and whatever else he may charge. If he decides against the Seneca, H. H. D. to pay said expenses. A. M. PURDY.

South Bend, Ind.

REMARKS.—We should decline the position of umpire if the above challenge should be accepted, but would suggest the Western New York Horticultural Society's Committee on Native Fruits as the proper judges.—EDS.

Horticultural Notes and Queries.

IONA GRAPES.—We have received from C. L. HOAG & Co., Lockport, N. Y., a box of very fine Iona grapes, grown in their extensive vineyards from vines set in 1865. Messrs. HOAG & Co. are very successful in growing this variety, and have made by far the best show of it this year at several fairs, of any that has come under our observation. If all cultivators could grow the Iona as free from disease, and ripen it as well as they have done in their locality we should have more faith in it. Please accept our thanks, gentlemen, for the fruit.

A PARLOR ORNAMENT. — E. E., Montezuma, states that a farmer's daughter of his acquaintance has manufactured a splendid parlor ornament. "It is composed of a collection of the kernels of all kinds of grain, made to represent roses and flowers, the whole encased in a frame with glass, making a very pretty representation of an American crown, more valuable, in one sense, than a Royal one glittering with diamonds."

HORTICULTURE AND POMOLOGY IN VIRGINIA.—The Southern Planter, Richmond, (Va.,) speaks in glowing terms of the prospects of the Horticultural and Pomological Society recently organized in that city. The first exhibition takes place the present month, and it is hoped that it will prove the harbinger of a long course of usefulness to the friends of Horticulture and Pomology in the "Old Dominion."

CATALOGUES, &C., RECEIVED.—HOVEY'S Illustrated Guide to the Winter and Spring Garden for 1867–8—A finely illustrated descriptive work on flowering bulbs. Address, HOVEY & Co., 54 North Market-st., Boston, Mass.

FINE APPLES.—We are indebted to Mr. G. T. PALMER of East Avon for very well grown specimens of Northern Spy, Snow, Wine, Baldwin, Greening and Chillicothe apples.

FLOWER NAMED. — (D. W. M.,) Winchester, Ind. The plant or flower, forwarded for a name, is *Moluccella Laevis*—Molucca Balm; sometimes called Shellflower.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

HOW TO PICKLE CABBAGE.—Take a quantity of good cabbage heads and thick meated bell peppers, and chop these up together — the peppers as one to three of cabbage in weight or quantity. To a gallon of the mixture add a full tablespoonful of ground cloves; half as much ground cinnamon; half a teacup of whole mustard and two tablespoonfuls of salt. Mix the whole thoroughly together and put in a stone jug and pour over it elder vinegar scalding hot. Put away, in a cool room, for a day or two when it will be fit for use. The quantity of vinegar should be sufficient to saturate the cabbage, but not enough to rise above it, as the mass will thereby be unnecessarily wet.

PRESERVING EGGS. — Some persons annoint eggs with butter, lard or other oily substances for the purpose of preserving them. This is a disagreeable process and less effective than an immersion in lime water. They will keep comparatively fresh for months in this way. Set the eggs in a crock, apex down, and fill in slacked lime. When the eggs are all in put in water enough to cover them, and their preservation is assured.

CUCUMBER PRESERVES.—Seed cucumbers make a very nice preserve it is said. Take large ripe ones, cut and peel them, and preserve in the ordinary way of doing up such delicacies. The preserved cucumber is said to rival the peach in flavor if properly prepared.

COLORING BLUE AND GREEN. — Will some good friend furnish through the RURAL, recipes for coloring blue and green that will bear washing, for cotton and woolen, and oblige — A READER.

VARIOUS RECIPES — SELECTED.

OLD STYLE PLAIN PLUM PUDDING.—Four ounces each of flour, suet, currants, raisins and bread-crumbs, two tablespoonsful of treacle, and half a pint of milk. Mix all well together, and boil in a mould three hours. Serve with wine or brandy-sauce.

TOMATO WINE.—Take small ripe tomatoes, pick off the stems, put them in a basket or tub, wash clean, then smash well and strain through a linen; (a bushel will make five gallons pure;) then add two and a half to three pounds of good brown sugar to each gallon, then put it into a cask and let it ferment as for raspberry wine. If two gallons of water be added to each bushel of tomatoes the wine will be as good.

APPLE MERINGUE. — Pare, core and stew ten tart apples in a very little water; season as for apple, and put it in a fruit-pie dish into a cool oven. Beat up meanwhile the whites of four eggs, as you would for icing, piling it on the apple like rocks, or irregularly, avoiding the edge of the dish. Return it to a warm oven, and brown macaroni color; slip all out carefully, by aid of knife or spoon, into a china dish, and serve with cream. If you have not cream, make a custard of the yolks, flavored with essence of vanilla.

BREAD CAKE.—Take two cups of bread dough, two cups of white sugar, one cup of butter, four eggs, one nutmeg, half teaspoonful of soda, a tablespoonful of sour cream, flour enough to make a soft dough.

SUGAR CRACKERS. — Three eggs, two cups of sugar, one cup of butter, and flour enough to make a stiff dough.

ORANGE CAKE.—One large orange, one pound of sugar, one pint of flour, whites of seven eggs; beat separately the sugar and yolks of eggs. First the sugar and yolks of eggs, then orange, whites of eggs, then flour.

RAILROAD CAKE. — Two cups of sugar, one cup of butter, one cup of sweet milk, three cups of flour, one teaspoonful of soda, three eggs, one teaspoonful of cream of tartar; the whites of eggs beat alone and put in last; the soda and cream of tartar after the flour, and before the whites of eggs.

New Advertisements.

APPLE, CHERRY AND PLUM SEEDlings, 1 year, extra fine. Also, 1 year Dwarf Cherry Trees for sale cheap. Address

AVERAGE SIZE.

HEADQUARTERS FOR ORIGINAL
Kittatinny Blackberry Plants.
☞ Pronounced by the highest *disinterested* authorities in the country to be the
Best Blackberry Known.
Every wide-awake Rural reader will have it, as prices are low. Catalogue, with this year's testimony, ready Oct. 1st—10 cts. Price list gratis. Address E. & J. C. WILLIAMS, Montclair, N. J.

TO WINE GROWERS!—GRAPE SUGAR Syrup for sale by HARTMANN & LAIST, 17 East 2d St., Cincinnati, Ohio. Pamphlets sent free of charge upon application. 921

NEW RASPBERRY.—THE AUTUMN BLACK—a Seedling of great promise, producing a fine crop in July, and a bountiful one in the fall, continuing to fruit until winter. Plants by mail $1 each. Send for Descriptive Circular. H. B. LUM, Sandusky, Ohio.

WILSON'S EARLY AND KITTATINNY BLACKBERRY,
PHILADELPHIA RASPBERRY,
And other SMALL FRUITS, at lowest prices, all warranted true to name, with good roots. Send for Price List. EDWARD REEVE, Medford, Burlington Co., N. J.

AGENTS WANTED—In Every Town in the United States, to sell two Patent Articles that can be sold at every house. State, County and Town rights for sale. Samples sent by Express on receipt of fifty cents. All letters answered.
923-3t HOWES NORRIS & CO., Springfield, Mass.

ATTENTION!—All Wanting Farms—in a mild, healthy climate, good soil and pure soft water; 18 miles south of Philadelphia, at the Junction of the West Jersey and Cape May Railroads, and only 12 miles by turnpike to steamboat ferry. Improved farms, fruit and village lots for sale cheap. Circulars giving full information, sent free. Address
WM. ARROTT, Glassboro', N. J.

PREMIUM CHESTER WHITE PIGS.—Bred and for sale by
GEO. B. HICKMAN, Westchester, Chester Co., Pa.
☞ Send for Circular and Price List. 923

ANDY THE 1st.—HIS HISTORY; HOW he began, and what he has done; his Western trip, and other interesting matters. 50 pages and 40 pictures. All for 20 cents; 8 for $1. There's hardly a man living that will not have it. Post-paid on receipt of price. Address HUNTER & CO., Hinsdale, N. H.

DEAFNESS CURED.—DR. STILLWELL'S Organic Vibrator. It fits into the ear and is not perceptible, removes singing in the head, and enables deaf persons to hear distinctly at church and public assemblies. DR. T. H. STILLWELL,
926 2t 31 East Washington Place, N. Y.

Ladies' Department.

Written for Moore's Rural New-Yorker.

TO A FRIEND.

DEAR ROSE, at your request I write
In memory of our childhood years,
When all the world seemed fair and bright,
And we were both too young for fears
That time would prove less kind and true
Than the bright scenes our fancy drew.

Our fairy castles in the air,
Have vanished like a vision sweet;
Yet life doth scarcely seem less fair,
As we its sterner duties meet.
We know both sunshine and the showers,
Must fall ere bloom life's fairest flowers.

The memories of the past remain,
The future is a phantom dim;
Life's present hours are all we claim,
Oh may we make them worthy Him
From whom all joys and sorrows flow,
The summer's sunshine and the snow.

Porter, N. Y., 1867. A. E. H.

QUEEN VICTORIA:

THE FIRST YEAR OF HER MARRIAGE.

IT is not often that Queens deign to be authors, but the Queen of England is a woman, a mother, a loving wife, and has no wish to dwell in splendid and chilling isolation, cut off by royal pomp and pride from all sweet and tender human sympathies.

Cherishing the memory of her husband, possibly too much secluded with her thoughts of him, she has filled her time by writing a book, autobiographical in part, and devoted to giving some idea of their wedded life, and of his character. This occupation may account for that seclusion from the pageantry of life in the court at London, which has been such a trial to fashionable society—and has even set busy tongues at work in tales of slander and suspicion of insanity and gloom.

This book abundantly answers all these rumors, yet passes them by in silence, as beneath its realm.

It is a feeling tribute to PRINCE ALBERT, whose signal excellence and manly worth will thus be still better known, and is a revelation, rare indeed, of the inner life,—the thoughts and motives as well as acts—of a royal husband.

In a chapter in "The First Year of Marriage" she thus speaks of ALBERT:—"It must be admitted, however, that constantly, unostentatiously, and perseveringly as he now gave himself up to the discharge of his new duties, he was exposed, almost during the whole period of his life in this country, to much misconception and much misrepresentation. Not for that, however, did he for one moment relax in his efforts, or allow his zeal to flag, in seeking to promote all that was for the good of the British people. His actions might be misunderstood, his opinions might be misrepresented (of which there was more than one notable instance)—[*Note by the Queen:* Especially at the commencement of the Russian war]—but, supported by his own conscious rectitude he still pursued the even tenor of his way. Not a complaint, not a murmur ever escaped his lips; not a single hasty expression did he ever indulge in, even towards those who were most unjust to him. He accepted such injustice as the inevitable lot of one placed, as he was, in high station, trusting surely to the coming of the time when his motives and actions would be better understood and better appreciated by his adopted country.

"The principle on which he always acted was (to use his own noble words) 'to sink his own individual existence in that of his wife, to aim at no power by himself or for himself, to shun all ostentation—to assume no separate responsibility before the public'—but making his position entirely a part of the Queen's, continually and anxiously to watch every part of the public business, in order to be able to advise or assist her at any moment in any of the multifarious and difficult questions brought before her—sometimes political or social, or personal, as the natural head of her family; superintendent of her household, manager of her private affairs, her sole confidential adviser in politics, and only assistant in her communications with the officers of the government."

The Queen and the Prince first took the sacrament together at Windsor, on Easter of 1840, in St. George's Chapel.

"The Prince," the Queen says, "had a very strong feeling about the solemnity of this act and did not like to appear in company either the evening before or on the day on which he took it, and he and the Queen almost always dined alone on these occasions." The Queen notes this strong feeling on the part of the Prince more than once in her journal for 1840 and 1841; and on another occasion, a few months later, about Christmas time, when they again took the sacrament in the private chapel at Windsor, she says, "We two dined together, as Albert likes being quite alone before he takes the sacrament; we played part of Mozart's Requiem, and then he read to me out of the *Stunden der Andacht* (Hours of Devotion) the article on *Selbsterkenntniss* (Self-Knowledge)."

On the 10th of June, of the same year, as the Queen and Prince were setting out on their usual afternoon drive, a man named Oxford made his well-known attempt on her Majesty's life by firing at her as the carriage was going slowly up Constitution Hill. The Prince himself gives the following account of this event in a letter to the then Dowager Duchess of Gotha:

"I hasten to give you an account of an event which might otherwise be misrepresented to you, which endangered my life and that of Victoria, but from which we escaped under the protection of the watchful hand of Providence. We drove out yesterday afternoon, about six o'clock, to pay Aunt Kent a visit, and to take a turn round Hyde Park. We drove in a small phaeton. I sat on the right, Victoria on the left. We had hardly proceeded a hundred yards from the Palace when I noticed, on the footpath on my side, a little mean-looking man holding something toward us, and, before I could distinguish what it was, a shot was fired, which almost stunned us both, it was so loud, and fired barely six paces from us. Victoria had just turned to the left to look at a horse, and could not, therefore, understand why her ears were ringing, as from its being so very near she could hardly distinguish that it proceeded from a shot having been fired. The horses started and the carriage stopped. I seized Victoria's hands, and asked if the fright had not shaken her, but she laughed at the thing.

"I then looked again at the man, who was still standing in the same place, his arms crossed, and a pistol in each hand. His attitude was so affected and theatrical it quite amused me. Suddenly he again pointed his pistol and fired a second time. This time Victoria also saw the shot, and stooped quickly, drawn down by me. The ball must have passed just above her head, to judge from the place where it was found sticking in an opposite wall. The many people who stood round us and the man, and were at first petrified with fright on seeing what happened, now rushed upon him. I called to the postillion to go on, and we arrived safely at Aunt Kent's."

THE SUSCEPTIBLE GIRL.

SHE preserves the vitality of her emotions by constantly exercising them. Nor is she, the susceptible lady, particular in her choice of objects. Although she will as a girl fix on a man in preference to a cat or a parrot, still, sooner than want a subject, she will even love one of her own sex. With her, love means a simple fetish worship of the present idol. Although she changes them constantly, for the time they have no cause to complain of her devotion. She exacts nothing more than that they should permit her to gush over them, to lay flowers at their feet, to praise them and to be kind to them with a sufficient intensity to satisfy her craving while the fit lasts. The gods may be sticks or stones, but the worshiper endows them with a thousand agreeable qualities and powers, which are simply the emanation of a susceptible enthusiasm on her own side.—*London Review.*

FEMININE GOSSIP.

"WOMAN is a delusion, madame!" exclaimed a crusty old bachelor to a witty young lady. "And men are always hugging some delusion or 'other," was the quick retort.

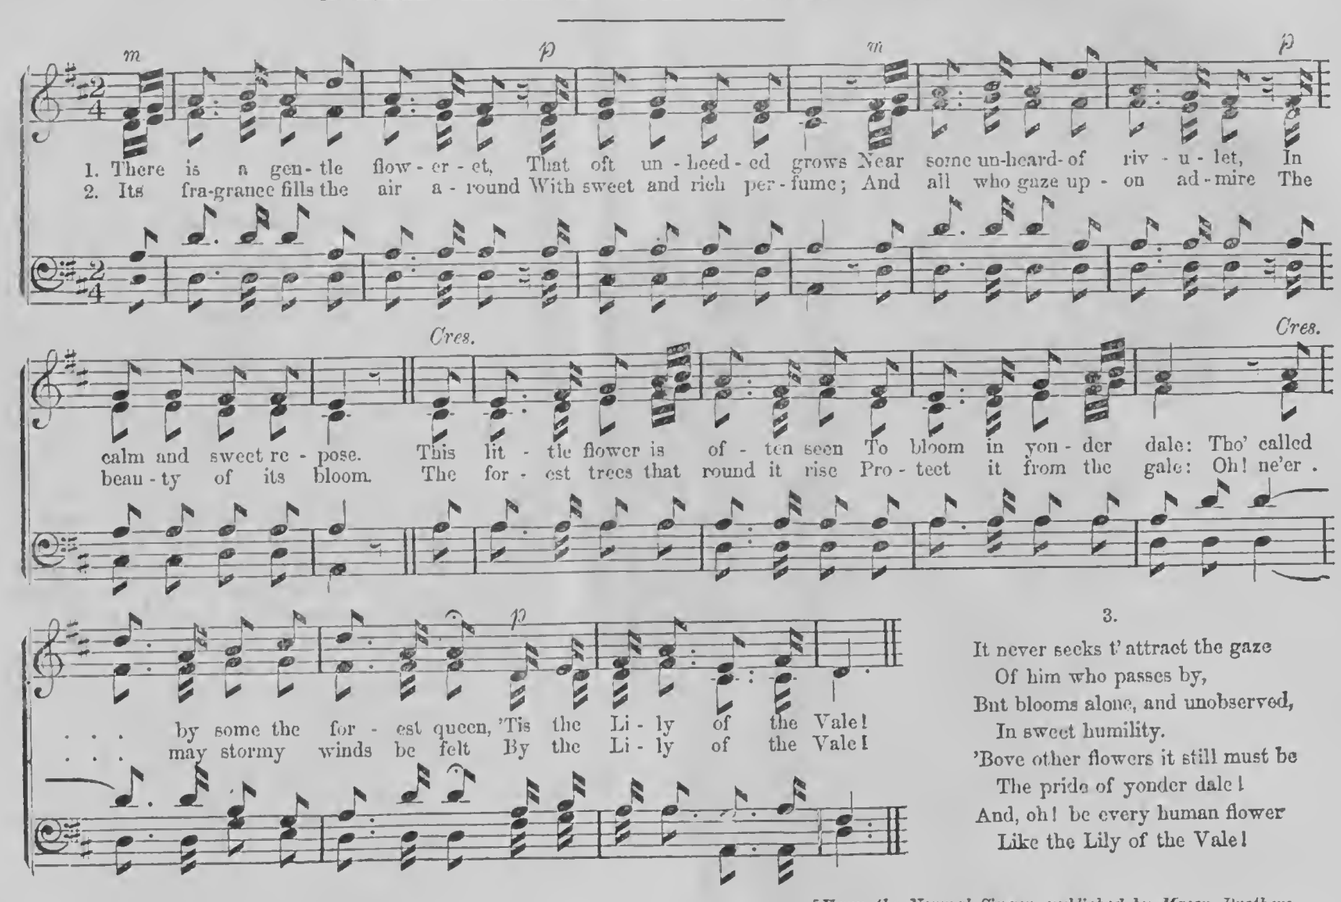
"PUT out your tongue a little farther," said a physician to a female patient; "a little farther, ma'am, if you please—a little farther, still." "Why, doctor, do you think there's no end to a woman's tongue?" cried the fair invalid.

IN the department of the Home Journal entitled "chit-chat," we are informed that in a fashionable church in Pittsfield, Mass., strangers are seated according to their dress. Moire antique and bonnet close to the pulpit, muslins half-way up the aisle, and last year's bonnets back by the door.

A NEW married lady who was very fond of her husband, notwithstanding his ugliness of person, once said to a witty friend, "What do you think? My husband has laid out ten guineas for a large baboon on purpose to please me." "The dear little man!" cried the other. "Well, it is just like him."

A PRETTY French girl, ripe as a Murillo cherry in September, and about the same color, went at the age of seventeen to be married to a gentleman of the convenient age of fifty-three. The Mayor said to her:—"Do you consent to be the wife of Monsieur le Baron D——?" The very nut-brown young lady burst out laughing, and said:—"How droll you are. This is the first time any one has thought of asking me such a question. Certainly, if I had been asked before I should have said no, but as it is, come on."

THE LILY OF THE VALE.



3.

It never seeks t' attract the gaze
Of him who passes by,
But blooms alone, and unobserved,
In sweet humility.
'Bove other flowers it still must be
The pride of yonder dale!
And, oh! be every human flower
Like the Lily of the Vale!

GREAT MEN.

THE world *loves* its great men; loves them for being the representatives of its own ideas and principles; loves them for their greatness; and then, delighted at finding they are only human, loves their follies. The history of the world is the history of those who have been its leaders in Politics, Religion, Science. Their names have been handed down from generation to generation on history's tragic page; or having been embalmed in song have roused the world to nobler actions, or crushed the fierceness of its passions. But were we to ask who are the world's great men, each class would clamor for their idols, for those whose gallant deeds, great discoveries, or bright and glowing imaginations have awakened a responsive thrill in their own hearts—have touched a secret chord that vibrated in unison with their own.

The renown of the warrior depends upon the labor of the scholar. Tradition seldom preserves the names of its champions from final forgetfulness. The fame of men or nations will last as long as the influence of their lives exists, as long as their ideas remain living, breathing principles; but beyond this they cannot hope for glory, only as some excellence in letters causes the inquiring student in after years to turn to them with a grateful heart for lessons of good. There is a wide diversity of opinion as to who are our great men. The sage, philosopher, or man of science disdains alike the warrior in his gilded trappings and the giddy throng who shout their chieftain's name and recount the victories he has won upon the gory field. And the Poet, who creates imaginative worlds, and then peoples them with bright ideals of his own,—who draws a veil of enchanting beauty and grandeur over all the deformities of *this*,—looks with an eye of pity upon the patient plodders who seek for knowledge in the laboratory, or along the rough highways of science. And the Christian of to-day, looking upon splendor, glory and fame, as the sunlight of an hour, will cherish with an holy reverence the memory of the early fathers, or the great reformers of the Christian church; and regards as truly great the long list of heroes and martyrs, who, trusting in the great Father of us all, defied the world in its fierceness and wrath, and sang their own requiems amid the devouring flames that wreathed and circled around them.

Men are wrong when they deny worth to any but particular classes, and yet there is a broad distinction between renown and glory—between splendid talents and true greatness of mind and heart. A man may possess talents most brilliant, and yet, for the want of right opportunities for display, or a lack of *will*, in certain directions, soon be forgotten. I believe, in a measure, that "circumstances make the man," and that there are many all over our broad and beautiful land, around whose noble brows the laurel wreaths of fame might have been entwined, who might have arisen to a high and honored position on the battle field of life, had not poverty or some other untoward circumstance froze the genial current of the soul.

The Poet GRAY was right (in his "Elegy written in a country church-yard,") when he said:

"*Perhaps* in this neglected spot is laid
Some heart once pregnant with celestial fire;
Hands that the rod of empire might have swayed,
Or waked to ecstacy the living lyre."

As men are made great by circumstances, and famous by education, the greater proportion of earth's inhabitants can hardly hope that theirs will be "of the few, the immortal names, that were not born to die." But let us as thinking, reasoning, hoping, longing *souls*, which we surely are, keep on the even tenor of our way as best we can, striving to work out for ourselves a gladder life, a richer inheritance, and a more glorious destiny. E. H.

Crawford Co., Penn., 1867.

GOSSIP ABOUT ROYALTY.

THE KING OF SWEDEN.—An English letter-writer at Berlin sketches the personal appearance of the King of Sweden as follows:—"The King of Sweden is a man of imposing presence. His stature even exceeds that of King William. His physiognomy resembles rather that of a Southern Frenchman than that of a native of Northern Europe. A long, full black beard surrounds an oval face of handsome and expressive features and dark complexion. The eagle nose and vivacious eye impart to the countenance an expression fully corresponding to the head, which is said to revolve aspiring and ambitious schemes. His short hair is here and there streaked with gray."

It is said that he is an odd sort of genius. He likes to travel incognito through his realm, and is never happier than when he mingles with his people without being recognized by them. Not long since, he went to the city of Calmar, where he put up at a second class hotel. A pickpocket stole from him all the money he had with him, and the unfortunate king was unable to pay his hotel bill. "My friend," he said to the landlord, "I am an honest fellow. I won't swindle you; some rascal has picked my pocket and stolen all my money. I can't pay your bill; but let me go now, and two days hence you shall have your money." The landlord could not see it. He eyed the king suspiciously, and told him that there were so many swindlers about the country that he could not trust him. He must pay his bill, and should not leave his house before doing so. The king burst into loud laughter, and exclaimed, "Poor Sweden! There will be an *interregnum*, then, until somebody goes security for her king!" Great was the consternation of the landlord when he heard who was his guest.

THE EMPEROR ALEXANDER.—Alexander the Second has a firm carriage, almost too rapid a walk to be called "dignified," and yet at once you feel that he is "every inch a king." He has moral as well as physical dignity in his manner and address when he pauses and speaks; his eyes are blue and luminous—but sometimes, when the brow is drawn down, in observation for instance, they darken into severity. His complexion is fair, but slightly bronzed; his hair in youth must have been very light—it is now a soft brown, cut short; his mustache, like all the mustaches of the present day, is cultivated and cared for. His Majesty spoke little, but observed a great deal. He passed close to us twice; returned the quiet but earnest salutations of the assembly, with smiles rather than bows—very sweet smiles for a gentleman who has numbered 49 years, when smiles generally suggest wrinkles; but the Emperor of Russia's smiles will be sweet to the last, because they are not frequent but sincere, and his lips and eyes smile in harmony.—*Birmingham Gazette.*

FLOWERS.—How the universal heart of man blesses flowers! They are wreathed round the cradle, the marriage altar, and the tomb. The Persian in the far East delights in their perfume, and writes his love in nosegays, while the Indian child of the Far West clasps his hands with glee as he gathers the abundant blossoms—the illuminated Scriptures of the Prairies. The Cupid of the ancient Hindoos tipped his arrows with flowers, and orange flowers are a bridal crown with us, a nation of yesterday. Flowers garlanded the Grecian altar, and hung in votive wreaths before the Christian shrine. All these are appropriate uses. Flowers should deck the brow of the youthful bride, for they are in themselves a lovely type of marriage. They should twine round the tomb, for their perpetually renewed beauty is a symbol of the resurrection. They should festoon the altar, for their fragrance and their beauty ascend in perpetual worship before the Most High.

DISSIMULATION is but a faint kind of policy or wisdom; for it asketh a strong wit and a strong heart to know when to tell truth, and to do it: therefore it is the weaker sort of politicians that are the greatest dissemblers.—*Lord Bacon.*

Sabbath Reading.

HYMN.

OH sweetly sinks this life of ours,
Through Age's cloudy bars;
A fading flush on hill and sky,
And lo, the world of stars!

We bless thee, gracious God, for birth
By which we hither come;
We bless thee for the gate of death—
The good man's passage home.

We bless thee for the heart to feel,
And for the eye to see;
For faith which reaches over time
And grasps eternity.

Oh, softly fades this life of ours,
Through Age's silver bars:
A tender flush on hill and sky,
And lo, the world of stars!

[*Round Table.*

"LOOKING UNTO JESUS."

THE secret of all preëminent piety, the source of all spiritual strength and growth in grace, lies in looking unto JESUS. It is only while we contemplate His character that we imbibe His perfections, or assimilate in any degree to His likeness. All men have some object of ambition, some purpose to attain, through which they hope to derive happiness. All are looking to some source for enjoyment; but of the busy thousands who tread our streets, and pursue their varied avocations, how few are looking beyond the unsatisfying things of earth.

Dr. PAYSON, illustrating the different attainments of professing Christians, speaks of one class who fix the eye so constantly upon the SAVIOUR that they bring all their work up and do it in the light of His countenance. This is the privilege of every believer. Nor has he a right to pursue any calling, or engage in any employment, upon which he may not look for the MASTER'S approbation. And what a safeguard around his pathway would such a looking unto CHRIST become. How worthless many a now eagerly pursued object of ambition would appear! How valueless the fleeting treasures men now seek with such avidity, appropriating, in their haste to be rich, the hours of GOD'S holy day to purposes of gain, if they were estimated in the light of such a contemplation. For to those who make it their constant aim to walk so as to please the SAVIOUR, who do no work they may not do in the light of His countenance, His smile outweighs all that earth can bestow. His favor is of far greater value than the gain arising from aught that is displeasing in His sight. How blest are they, who, bringing their daily lives under the perpetual influence of this great principle, so look to JESUS as to recognize His hand in all their appointments, "counting all things but loss for the excellency of the knowledge of CHRIST JESUS their LORD." Such will He own as His, in the great day of His appearing.

Sherburne, N. Y., 1867. LINA LEE.

SIFTED WHEAT.

GOTTHOLD one day looked on while a farmer's wheat was being thrashed, and observed that the men not only stoutly beat it, but trod upon it with their feet; and finally, by various experiments, separated the good grain from the chaff, dust, and other impurities. How comes it, he asked, that whatever is of useful nature, and intended to be profitable to the world, must suffer much, and be subject to every kind of ill-treatment; but that man, who himself does with other things as he lists, is unwilling to suffer, or to permit GOD to deal as he lists with him? Wheat, which is the noblest of all products of the earth, is here thrashed, trod upon, swept to and fro, tossed into the air, sifted, shaken, and shoveled, and afterwards ground, resifted and baked, and so arrives at last upon the tables of princes and kings. What, then, do I mean in being displeased with GOD, because he does not strew my path with rose-leaves or translate me to heaven in an easy chair? By what other process could the wheat be cleansed? And how could I be sanctified or saved, were I to remain a stranger to the cross and to affliction?

LADY HUNTINGDON AND THE GARDENER.

LADY HUNTINGDON, having employed a man to work in her garden, took an opportunity to urge him to take some serious thoughts about his soul. Some years afterwards she employed another man for the same purpose, and began to talk to him in the same way, expressing her fears that he never prayed nor looked to Christ for pardon. "Your ladyship is mistaken," said he. "I heard what passed between you and James, at such a time, and the word designed for him took effect on me." "How did you hear it?" she inquired. "I heard it," he replied, "on the other side of the garden, through a hole in the wall, and shall never forget the impression I received." Do any of my readers ask, "What good can *I* do?" You perceive what power there is often in a "word in due season," "fitly spoken." You know not what good you may do by watching opportunities to speak good words.

CHRISTIANITY is the most perfect kind of knowledge; it must essentially produce the most perfect kind of happiness. It is the golden, everlasting chain, let down from heaven to earth; the ladder that appeared to the patriarch in his dream, when he beheld Jehovah at its top, and the angels of GOD ascending and descending with messages of grace to mankind.

TRUE goodness is like the glowworm; it shines most when no eyes except those of heaven are upon it.

The Reviewer.

THE BOYS IN BLUE: Or, Heroes of the "Rank and File." Comprising Incidents and Reminiscences from Camp, Battle-Field and Hospital, with Narratives of the Sacrifice, Suffering and Triumphs of the Soldiers of the Republic. By Mrs. A. H. HOGE, Assistant Manager of the North-western Branch of the U. S. Sanitary Commission, Chicago. New York: E. B. Treat & Co.

MRS. HOGE labored for nearly three years among the soldiers of the South-west, and the incidents which came under her observation, illustrative of the patriotic devotion which thrilled the hearts of the country's defenders there, were such as, in a great measure, occurred throughout the entire Army of the Union. Writing of these has been with her a labor of love. Her narrative is intensely interesting. It is often peculiarly charming in style, and passages so touchingly pathetic as to brim the eyes with tears are of frequent recurrence. The book is gotten up in a style befitting the subject. It is a large octavo volume, of 477 pages; is well illustrated, having two beautiful steel engravings and a number of wood cuts; and is handsomely bound in blue muslin, gilt. It should be in every home in the land. There will come a time when those who were "veterans in the War" will be veterans on the march of life, and when the story of "The Boys in Blue" will be read with an almost holy interest. Then will every incident in relation to them be sacredly cherished, and then, if not before, will such tributes as this be fully appreciated. Sold only by Agents.

WIT AND WISDOM OF DON QUIXOTE. New York: D. Appleton & Co.

THE Spanish literature is wondrously rich in proverbs. Probably none other in the world can equal it in this respect. A distinguished Spanish scholar, JUAN YRIARTE, gathered a manuscript collection of proverbs numbering between twenty-five and thirty thousand. The book of DON QUIXOTE—the "Knight of the rueful countenance"—is a book of proverbs, poems and aphorisms, in which there is much grave thoughtfulness, and rare, quiet humor. Every one has heard of SANCHO PANZA, through that oft-quoted line of his—"GOD bless the man who first invented sleep." SANCHO PANZA served the DON during his knight-errantry, as Squire, and uttered a deal of quaint proverbial philosophy. Somewhat of its pith may be lost by its translation into English, but it is very pithy still. There is much suggestive matter in this little book of 161 pages, so neatly gotten up. Sold by ADAMS & ELLIS.

HARPERS' WRITING BOOKS. Symmetrical Penmanship, with Marginal Drawing Lessons. In 10 Numbers. New York: Harper & Brothers.

THE first four numbers of this new series of lessons in penmanship are on our table. Are unique in style, and very attractive. The system is based upon the idea expressed by HORACE MANN—"I believe a child will learn both to draw and write sooner, and with more ease, than he will learn writing alone." Each page of copy has a tinted margin, whereon are drawing lessons. As these are in white lines the first work of the pupil is merely to mark them over with his pencil, thus making an accurate copy. It is claimed that a correct tracing of straight and curved lines in this way will give freedom and accuracy of movement in the formation of characters in writing. Anything that will serve to improve the chirography of the young (and of many of the old too, for that matter,) should be greeted as a blessing. For sale by STEELE & AVERY.

CASTE. A Novel. By the Author of "Mr. Arle." New York: Harper & Brothers.

THIS—No. 279 of HARPER'S Library of Select Novels—is an attempt to illustrate the hollowness of social distinctions as to class, and to prove that birth is not noble or ignoble according to the old English creed. The story is English in style, as in location. It is deeply interesting, although not of the sensational order. Dealing mainly with quiet home life—vibrating between the cozy rooms of a tradesman and the lordly mansions of the gentry—there are few attempts at scenic display, and no confused tangling of plot and counter-plot. ISABEL WOLD, the principal character, is the tradesman's daughter, and a pretty good illustration of a nature in which sensitiveness perverts pride, develops scorn and hate, and reaps a fruitful harvest of unhappiness. Sold by STEELE & AVERY.

ANCIENT HISTORY. Illustrated by Colored Maps, and a Chronological Chart, for the use of Families and Schools; by C. A. BLOSS. Revised and improved by JOHN J. ANDERSON, A. M., author of a series of School Histories of the United States. [16 mo., pp. 415.] New York: Clark & Maynard.

This is a revision, prepared at the suggestion of several eminent educators, of a valuable text book which some time since passed out of print. The subject matter is well arranged in it, and, by aid of the Charts, must be rendered quite attractive to the student. A comprehensive and yet not bulky compendium of Ancient History is much needed for schools, and such this volume most certainly is. For sale by E. DARROW & KEMPSHALL.

WORKS OF CHARLES DICKENS. Globe Edition. Illustrated from Designs by DARLEY and GILBERT. LITTLE DORRIT. Four volumes in one. New York: Hurd and Houghton.

THIS, the tenth issue of the inimitable Globe Edition of Dickens, is in no wise behind its predecessors in point of typographical excellence and beauty. It numbers 1231 pages in all, and has four finely executed engravings. "Little Dorrit" has been so widely read that we need not make mention of the story itself. It has charmed many, heretofore; in its newest and handsomest dress it will doubtless charm many more. Sold by DEWEY.

FIRST BOOK ON CIVIL GOVERNMENT. Being an Introduction to the Government Class Book. Designed for the Younger Classes in Schools. By ANDREW W. YOUNG. New York: Clark & Maynard.

THIS little text book of 192 pages treats, as simply as possible, of "The Principles of Government," of "State Governments," and of the "Government of the United States," and presents a synopsis of the different State Governments. We doubt if it ever comes into general use, though our youth should be better posted concerning what it treats of than they now are. Sold by E. DARROW & KEMPSHALL.

BIRDS OF PREY. A Novel. By M. E. BRADDON, Author of "Aurora Floyd," &c. New York: Harper & Brothers.—1867.

A STORY with a complicated plot which it will require another volume to work out to completion. The characters are diversified, and their acts, as far as delineated, presented in a readable form. It is a scramble among unprincipled parties to appropriate a large intestate estate by the customary means of imposture and fraud. Sold by STEELE & AVERY.

ENGINEERS' AND MECHANICS' POCKET-BOOK. Containing Weights and Measures; Rules of Arithmetic; Weights of Materials; Latitude and Longitude; Cables and Anchors; Cubes and Roots, etc.; Mensuration of Surfaces and Solids; Trigonometry; Mechanics; Friction; Aerostatics; Hydraulics and Hydrodynamics; Dynamics; Gravitation; Animal Strength; Wind Mills; Strength of Materials; Lines, Mortars, Cements, etc.; Wheels; Heat; Water; Gunnery; Sewers; Combustion; Steam and the Steam-Engine; Construction of Vessels; Miscellaneous Illustrations; Dimensions of Steamers, Mills, etc.; Orthography of Technical Words and Terms, etc., etc., etc. Twenty-first Edition. Revised and enlarged. By CHAS. H. HASWELL, Civil and Marine Engineer. New York: Harper & Brothers.

Having given the very comprehensive title of this useful work, we need add little more. It is printed on fine but strong paper, gilt edged; numbers 663 pages; and is bound in flexible morocco covers. Nearly everything in the line of information on practical and scientific subjects is contained in it. Sold by STEELE & AVERY.

DICTIONARY OF THE ENGLISH LANGUAGE. Explanatory, Pronouncing, Etymological and Synonymous, with a copious Appendix. Mainly abridged from the Quarto Dictionary of NOAH WEBSTER, LL D., as revised by CHAUNCEY A. GOODRICH, D. D., and NOAH PORTER, D. D. By WILLIAM A. WHEELER. [8vo., pp. 1040.] Springfield, Mass.: G. & C. Merriam.

For all practical purposes this "National Pictorial" edition of "WEBSTER" is quite as desirable as any that has heretofore appeared. The Vocabulary is full and complete, so far as regards words now in actual use, the only omission being of words obsolete and very rare; and also includes many scientific terms and important phrases. It is a handsome octavo, finely bound, and contains over six hundred pictorial illustrations beside thirty pages of classified cuts. For sale by Booksellers generally.

A STORY OF DOOM, and other Poems. By JEAN INGELOW. Boston: Roberts Brothers.

IN this tasteful volume are the last productions of this gifted English woman, who, since ELIZABETH BROWNING and ADELAIDE PROCTOR passed on to another life, is held by many first in poetic genius, and is prized by many for the goodness and beauty of her private life.

THE WEBSTER ELEMENTARY READER. Designed to follow Webster's Elementary Spelling Book. New York: D. Appleton & Co.

A NEW reading book for beginners, in which the lessons are progressively arranged, and presented in an attractive guise. For sale by ADAMS & ELLIS.

Various Topics.

AMERICAN ADMIRALS.

ADMIRAL FARRAGUT is the only full Admiral afloat, and his blue flag, with its four stars, the insignia of his office, has the highest naval rank in the world, equal to that of the Lord High Admiral of England, when there is one. The first Lord High Admiral in commission was James, Duke of York, afterwards James the Second, appointed by Charles the Second. The last was William, the Duke of Clarence, who resigned in 1828. Since that time the office has been conducted by a commission—the Lords of the Admiralty. The place can only be filled by a Prince of the blood. Prince Alfred, the Duke of Edinburgh, is now in training for it, as the public sentiment of England now will not tolerate the appointment of green-horns to high posts where the honor of the country is concerned, which of old was too much practiced. There were in the British navy three grades of admirals—red, white and blue, and three of each grade—admiral, vice-admiral and rear-admiral; now there is but one grade of color, that of white, and three grades of rank to that color. The flag is the white ensign with the red cross, the admiral wearing his at the main, the vice-admiral at the fore, and the rear-admiral at the mizzen; and none but officers of that rank can hoist these flags.

The insignia of rank in our service is:

First—The Admiral, who wears a square flag, blue, with four white stars, worn at the main.

Second—Vice-Admiral, square flag, blue, with three white stars, worn at the fore.

Third—Rear-Admiral, square flag, blue, with two white stars, worn at the mizzen.

Fourth—Commodore, broad pennant, blue, with one white star, worn at the main.

Prior to the rebellion, the highest legal rank in our navy was that of post-captain; the title of commodore was one of courtesy. The indifference or jealousy of the country against the navy was so great that no higher rank could be obtained from Congress, although the navy won the first battle in the war of 1812. It was only after the unparalleled acts of the navy during the rebellion that ranks assimilating to those of foreign nations could be created for the navy.

ENGRAVING.—It is announced that to such wonderful extent has the engraving of test objects for microscopes been carried, that a Prussian artist has engraved lines upon glass so close together that upwards of eighty thousand would go in the space of an inch. Several series of these lines were engraved upon one slip of glass. By these the defining power of any object-glass could be ascertained. As test objects they are equal to, and even rival, many natural objects which have hitherto been employed for this purpose. The delicate lines are not more than one one-hundred-thousandth part of an inch apart.

ROADS IN SWITZERLAND.—There is not in the whole of Switzerland a toll gate. The Government forbids by law anything which may tend to interrupt or interfere with travel in or between the different cantons. The magnificent public roads which one finds everywhere throughout the country are kept in order at the expense of the cantons through which they run, the federal authorities having each paid, however, at the construction, one-half of the expense.

THE total length of electric telegraphs in the world, not including the submarine, amounts to upward of 180,000 miles, which is more than enough to go round the earth half a dozen times.

ELIAS HOWE, JR.

THE recent death of ELIAS HOWE, Jr., widely known as the inventor of the Sewing Machine, has already been briefly chronicled in the RURAL, but the departure from earth of so great a public benefactor demands a more extended notice. We therefore give a very good portrait of Mr. HOWE,—one that will at once be recognized by those of our readers who have seen the original of late years,—with a brief sketch of his life.

The Scientific American thus sketches Mr. HOWE'S career:—His personal appearance made him a marked man among those who did not know him by his intrinsic worth. His life is an instance of success under difficulties and a lesson for all who believe in the power of perseverance. He was born in 1819 at Spencer, Mass., the son of a farmer, who also carried on the business of a miller. His youth was spent on the farm, but when still a young man he learned the trade of a machinist. While working at this business in Boston he conceived the idea of a sewing machine. He succeeded in 1845 in producing a working machine, which would cost at least $300, even if manufactured in large quantities. So much opposition was made in this country to his invention that he was compelled to try to find a market in England. He succeeded in disposing of his right for two hundred and fifty pounds, reserving a royalty of three pounds on every machine sold. On his return to this country he found that machines were being made which infringed on his patent, and he immediately took means to defend his rights, and was driven into litigation to secure his patent from piracy. This occupied years and demanded large sums of money. In the meantime this invention began to pay, and from a few hundreds of dollars a year it rose to at least $175,000 annually. It was not until 1854 that Mr. HOWE'S claims were acknowledged. Having, ourselves, been employed and consulted by him from the date of his first patent until his final success, we understand thoroughly the painful and arduous labors which in Mr. HOWE'S case were necessary to his triumph. The merit of his invention and the persistence of his character combined, were the elements of his prosperity. In his death the world has lost a useful mechanic and society a valuable member.

One trait in Mr. HOWE'S character should not be unnoticed; his useful patriotism. When the country was in need of soldiers he contributed money largely, and at a public meeting in Bridgeport he enlisted as a private soldier in the 17th regiment, Connecticut Volunteers. He went to the field and performed his duties as an enlisted man. More than this, when the Government was pressed for funds to pay its soldiers he advanced the money necessary to pay the regiment of which he was a member.

HOW PAPER COLLARS ARE MADE.

A CORRESPONDENT describes the process of making paper collars and cuffs at a factory in Biddeford, Maine. The paper from which they are formed comes in large sheets of the required thickness. Some forty of these sheets are placed one upon another, and then moved under the die which cuts through the whole, giving the requisite shape of forty collars. The paper is moved under the die again, and forty more cut, and so on to the end. The button holes are next made. Some half dozen collars are placed under the dies, and the three holes cut in each instantly. Next the collars are placed one at a time under a die or mould which impresses the stitching upon them and marks the line by which the collar is to be turned or doubled. The collars are then doubled or turned over one at a time by hand, run through a machine which presses them, and they are finished. They are then packed in boxes of ten each, and ten of these boxes put in a larger one, when they are ready for market.

The cuffs are cut with dies after the same manner as the collars, the button holes cut by similar method; then they are stitched, and then packed for market. Three styles of collars are made—plain, enamel and linen surface, the paper being finished in a particular manner for each of these different styles. The average size of necks is 14½ inches. Some collars are made 16½ inches long; but most are sold of 14½, 14 and 15 inches. The present capacity of this manufactory is 25,000 collars a day, but with a new cutting machine nearly ready, its capacity will be more than doubled. Most of the work is done by females. Twelve hands are now employed, but in the autumn double this number will be required.

CONSUMPTION PRONOUNCED CONTAGIOUS.

THE first question discussed in the medical congress was a question which reaches and interests more directly, perhaps, than any other, every family. It was the question of tubercle, its contagiousness and prophylactic. The discussion turned mainly on these two points: Is tubercular consumption contagious, and may it not be prevented by innoculation? I should tell you that the profession, tired of being baffled by a disease so slow in its progress and yet so certainly fatal, have been experimenting of late years all over Europe, and that enough new facts have been arrived at to warrant a certain number of the experimenters to declare that tubular phthisis is contagious, and that a healthy and an infected person ought not to sleep in the same bed. Experiments have been made upon rabbits and other animals, by innoculating under the skin the matter from tubercles, and those innoculated animals die consumptive in three months' time. The discussions of the congress established no new doctrine in a positive way, but they brought out many valuable facts which will put the profession a step in advance in the right direction.—*Paris Cor. N. Y. Tribune.*

THE ODDITY OF HOLLAND.

EVERYTHING in Holland is interesting, and almost everything is queer. There is a piquant oddity in the artificial nature of the whole country; the sandy soil, which is a triumph of patient ingenuity and creative skill; the wind pitted against the water to keep the land from flooding; the canals instead of roads; the ditches instead of hedges; and the unvarying level of the broad flats, there being no such thing as a rising ground fifty feet high from one end of Holland to the other. Perhaps nothing strikes the English in Holland so much as the want of stones. You cannot find so much as a pebble to throw at a dog—if, indeed, the Dutch dogs were not far too well behaved (which they are) ever to suggest such an outrage. You do, it is true, see in their proper places vast masses of granite and large blocks of basalt; but all these came from Norway, and are brought here at great expense; and are economized as elsewhere people economize porphyry and marble. In fact, stones in Holland are as much an article of import, of foreign merchandize, of purchase, as wine is in England. Countless vessels arrive, or have arrived here, laden with no other cargo.

NATURE UNCHANGING.—Man dies, but nature is eternal. The seasons keep their appointed time; day returns with its golden splendor, and night with its eloquent mystery. The same stars which lit the ghastly battle field of Troy, rough with the dead bodies of ancient heroes—which shone on the marble streets of Imperial Rome, and on the sad eyes of vigil-keepers in the living glow of inspiration—the watch fires of the angels which, through centuries of devastation and change, have still burned on unceasingly—speak to us as they did to Dante and Shakspeare and Milton, of the divine glory, the omnipotence, the everlasting beauty and love of God.

OUR minds are as different as our faces; we are all traveling to one destination—Happiness; but few are going by the same road.—*Colton.*

Reading for the Young.

CATCHING SUNBEAMS.

REACHING after sunbeams,
With a dimpled hand—
That is right, my darling,
Grasp the golden band.
Fold it to your bosom,
Let it cheer your heart;
Gather radiant sunbeams,
Bid the clouds depart.

When your feet shall wander
From my side away,
You will find that evil
With the good may stray.
Never heed it, darling,
Let it pass the while;
Gather only sunbeams,
Keep your heart from guile.

Grief may be your portion,
Shadows dim your way;
Clouds may darkly threaten
To obscure the day—
Don't despair, my darling,
There's a Father's love;
How could there be shadows,
With no light above?

[*The Little Corporal.*

TALKS WITH OUR BOYS AND GIRLS.

BY UNCLE PAUL.

WHAT THE FROST DOES.

CHARLIE, MAGGIE and KATE went off nutting not very many days ago. After that first frost which CHARLIE saw when driving up the cows, the subject of a nutting excursion was talked about nearly every hour, when they were awake, by our home trio. They wanted to go the next day, which was their weekly holiday, but, much to their sorrow, the rain kept them in doors. So for a whole week they talked about going, and were busily planning to have a good time. A half-dozen of their classmates were invited, because, as they all agreed, it was to be a real merry-making, and mustn't fall from want of help. MAGGIE and KATE tried to do considerable in the way of cooking a dinner for the little party, but didn't get along very well until their mother kindly took hold of the matter. Then they were certain that a capital dinner would be provided.

When the next Friday night came they wondered if it was "going to rain." The weather *did* look rather uncertain, and they would have gone to bed quite downhearted if CHARLIE hadn't remembered hearing some one say the moon had changed and we should have a dry spell, which statement he repeated with an air of wisdom not unbecoming an almanac-maker.

Next morning they were up before the rest of the family awoke, and aroused us all with their enthusiastic running about to get things in readiness for a day's ramble in the woods. They didn't eat much breakfast, they were so anxious to get off early, but went away with baskets bountifully filled with good things, and hearts happy in anticipation of the store of chestnuts they would bring home. CHARLIE knew just where to go to find these in greatest abundance, and elected himself Captain-General of the expedition by leading the way.

At sunset the little party came back. They showed us flushed faces, but no nuts. It was not their fault that none were gathered. The Captain-General had successfully conducted them to the chestnut groves, and the nuts had been found in large numbers, but only here and there had one fallen from its bur. CHARLIE had picked up another bit of wisdom on the way home, and told us that there *hadn't been frost enough to open the burs.* And he was right. A week later they went off again, and gathered a fine lot, just as we hope all our young friends have done.

Now, Boys and Girls, you see that the frost does some good. It kills the flowers, and maybe does other things which make you grieve a little; but it helps you to nuts, and makes all the skating for you, and really does more good than we can tell. Will you understand us if we talk to you a moment or two about things that are like frost, cutting and cruel, and that may be seen in every season of the year? You guess so? Well, we guess so, too.

The frost opens the burs, and lets the good that is in them drop out. Just so the sharp and cutting circumstances that often surround us in life bring out that part in character which is worth the most. If the boy grows to be a man, without undergoing any frosts—any hard things to master—any severe lessons to learn—he wont amount to much. All, or at least many, of the men whom you hear your parents speaking of most often—men who are famous—had a pretty frosty time of it when they were boys. We suspect they thought it was rough work to overcome every hindrance, and get ahead any; and like all of you they must have been not a little discouraged, at times. But the frosts kept coming; the worthless part of their natures—the burs—gradually opened; and by-and-by the good came out where every one could see it, and then they were looked up to as great men.

Do you want to grow wise, and good, and great? Well, every trouble or hard experience that comes to you is only a touch of frost which will be of help if you accept it in the right spirit. Only don't think the frost is going to kill you, and it will open for you a better and richer life. You may need to think of this considerably; we hope you will. Whenever you see a frost, consider *what the frost does.*

IF a bee sting you, will you go to the hive and destroy it? Would not a thousand come upon you? If you receive a trifling injury don't be anxious to avenge it. Let it drop. It is wisdom to say little respecting the injuries you have received.

Our Fall Campaign!

A NEW QUARTER--VOLUME XIX.

A NEW QUARTER of the RURAL commenced Oct. 5, and Volume XIX will begin January 4, 1868. Now, therefore, is a good time to subscribe and form Clubs as subscriptions can begin with October or January or any time between. The 13 numbers of this (Oct. to Jan.) or any preceding Quarter of this year, will be sent on trial, or as specimens, for ONLY FIFTY CENTS.

GOOD PAY FOR DOING GOOD

All who form clubs, either to begin with the New Quarter (Oct. 5th,) or next Volume (Jan. 4, 1868,) will be substantially rewarded, as our inducements are extraordinary—more liberal than ever before. Specimen Numbers, Show-Bills, Premium Lists, &c., sent free to all disposed to act as club agents.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., OCTOBER 26, 1867.

NEWS OF THE WEEK.

New York State Items.

Miss RIGBY of Sing Sing, was run over and killed on the Hudson River Railroad on the 16th inst., near Sing Sing.

A meeting of the citizens of New York took place on the evening of the 17th inst., at Cooper Institute, for the purpose of taking action in regard to contemplated improvements in means and cost of intercommunication through all parts of the Union, by the establishment of a system of railways, constructed and managed with special reference to reduction of cost in the transportation of freight. Mr. Peter Cooper, Judge Daly and other influential citizens were present. Hon. Freeman Clarke of Rochester, presided.

The verdict of the Coroner's Jury in the case of William Ryan, who was drowned on board the Dean Richmond, throws the whole blame of the collision between that steamer and the Vanderbilt upon those who were navigating the latter, declaring that the collision was occasioned solely by their mismanagement or criminal intent. The officers of the Vanderbilt claim, however, that this decision is purely an *exparte* one.

An experiment was made in Whitehall street, New York, on the night of the 15th inst., with the new electric light recently invented by a Frenchman, with which he claims to be able to light up the city with a single lamp more completely than gas companies can do. The light on exhibition was so bright as to be painful to the naked eye, and cast bright gleams all over the bay.

Police officer Robert S. McChesney, was murdered by a prostitute named Fanny Wright on the evening of the 19th inst., in New York city. About 9 o'clock, the officer, being in the vicinity of Canal and Mercer streets, perceived the woman acting in a disorderly manner; and on his attempting to arrest her she stabbed him in the neck with a pocket-knife, severing the jugular vein. The man died in a few minutes.

Officials connected with the Revenue Department in New York have taken possession of several of the largest rectifying establishments. Among the places seized are the rectifying distilleries and the bonded warehouses of the following:—S. C. Boehm & Co., Hoffman & Curtiss, Joseph Jones & Co., Cuthbert & Cunningham, Samuel Engle.

From Washington.

THE President has announced that a Secretary of War will be appointed outright, in place of Mr. Stanton, thus setting aside the tenure of office bill. It is said that the Cabinet regards the bill as unconstitutional.

General Kilpatrick, Minister to Chili, has sent in his resignation of his position in the army, which is that of Captain in the First Artillery.

To pay the interest on the 5-20 bonds which falls due on the 1st of November, $22,000,000 in coin will be required. In New York there will be $17,426,501 of it disbursed.

Senator Morgan, it is said, has obtained the consent of Secretary McCulloch to leave Callicott's vacancy in the Brooklyn Revenue District unsupplied until that gentleman's trial takes place. An individual posted in revenue matters says there are 600 illicit distilleries in full operation in that district.

Members of Congress are beginning to make their appearance here in quest of apartments for the winter. Most of them make arrangements with a view of permanent occupancy.

Major Pierce, the officer who recently destroyed a printing office in Camden, Ark., for some offensive article published by the editor, has been sentenced by court martial to forfeit his pay for one year, to be degraded in rank to a captaincy, and to be reprimanded in general orders.

It has been stated that the impeachment question would be dropped in consequence of the result of the late elections; but the members of the Judiciary Committee, now here, declare that a majority of the committee favor, and are confident that the project will receive the approbation of a majority of members of the House. There is no doubt that the Committee will press this subject at an early day in the session.

Colonel Wood, Chief of the Secret Service Division of the Treasury Department, has had all his force at work since the discovery of the counterfeit 7-30 notes. It has now been definitely ascertained that over one thousand of them have been put upon the market, and that the plates were not made in Europe but in this country. It is further stated that Philadelphia has been the headquarters for printing them. The clue to the whole proceeding is said to be in possession of the secret service officers.

The amount of fractional currency issued during the last week from the Printing Bureau of the Treasury Department was $593,000.

Gen. Sheridan is expected in Washington the first week in November. It is reported that he is to take command of the new military department embracing Maryland and the District of Columbia.

It is claimed on good authority that the trial of Jeff. Davis will certainly take place at the November Term of the U. S. Court which meets at Richmond.

Judge Redfield of Vermont, the Special Agent of the Government in the Frazer-Trenholm case, will sail for England on Wednesday next for the purpose of effecting a settlement of the affair involved.

From the West.

THE North Missouri Railroad Company has sold nearly $4,000,000 of its bonds to James B. Eads and associates. Several heavy capitalists of New York and St. Louis are connected with Mr. Eads, and means are now ready to finish the road.

A verdict giving $15,755.83 to the plaintiff was rendered in the Supreme Court of Missouri lately in the case of Elisha Biggs vs. the Evansville and Illinois Railroad Company.

Late advices from New Mexico say that a large meeting of citizens of the Territory was held at Santa Fe on the 21st of September, to consider measures to secure the extension of the Kansas Pacific Railroad through New Mexico to the Pacific Ocean.

The Apaches recently made a raid upon the town of Wickenburg, and carried off the entire stock of the place. The Indians were well mounted and equipped. There was no resistance or pursuit, as the cavalry had taken all the horses in the place. The loss of stock closes the operations of the Vulture Company.

The Indians continue to commit outrages in every direction. Gen. Gregg, commanding, is vigorously prosecuting the war, and if it were not for lack of troops and the stringency of orders from headquarters, more would have been accomplished.

The Herald's Medicine Lodge Creek (Kansas) special says:—The Peace Commissioners have arrived. Five thousand Indians are assembled, numbering Cheyennes, Arapahoes, Kiowas, Camanches, Apaches and Dog Soldiers. The Indians talk well, but insist upon having arms and ammunition. The Cheyennes are afraid to come within ten miles of the camp, from fear of soldiers. We have three companies of soldiers and two Colton guns. The council will continue eight days. Thus far the prospect of peace is considered good.

Late advices from Montana report the story that two companies of mounted militia under Capt. Hughes, had deserted, and it was supposed they intended depredations on the road between Montana and Colorado, and that $1,000 reward had been offered for the capture of Hughes.

A disturbance occurred at French's circus at Eaton, Preble Co., O., during which a man named Wm. Thomas fired upon the ring master, but missing him, the ball struck a young lady named Campbell, killing her instantly, the bullet passing through her head.

Passenger trains commenced running on the 15th inst. to Hayes City, the extreme point of the Eastern Division of the Pacific Railroad. Large numbers of emigrants are flocking there. No further trouble from Indians is apprehended this winter. A party of gentlemen recently killed twenty-five Buffalo in the vicinity.

The daughter of the Hon. Wm. Dennison was united in marriage to Gen. J. W. Forsyth, of Maj.-Gen. P. H. Sheridan's Staff, at Trinity Church, Columbus, Ohio, on the 16th inst. Among the distinguished guests present were the Hon. E. M. Stanton, Maj.-Gen. P. H. Sheridan, and a large number of army officers.

Montana dates to the 8th state that the Flat Heads and other tribes of Indians threaten a serious outbreak. They are already stealing stock, plundering settlements and running off horses. They threaten to kill or drive out all the settlers. Four men were recently killed near Flat Head Lake, and all the farm products for miles around burned.

Two hundred stands of arms have been distributed among the settlers of Platte Valley.

From the South.

ABOUT 9 o'clock on the night of the 17th inst, as a militia negro regiment was parading near the corner of Franklin and Howard streets in Baltimore, about twelve or fifteen shots were fired in the street. A young man named Chas. A. Ellermeyer, (white,) eighteen years of age, was instantly killed. A number of whites soon arrived, and for a short time great excitement prevailed. A large police force was soon on the ground and prevented any further disturbance. A full investigation shows that the colored men merely acted in self-defence. They were stoned, when they returned the assault with shots, one of which proved fatal.

At 4 o'clock P. M., on the 20th inst., an explosion occurred on board the steam launch Albemarle, belonging to Admiral Porter, in Severn River, opposite the Naval Academy. Chief Engineer Hoyt of the Naval Academy, Engineer Clark, Coxswain Shea, and a negro boy, a fireman, were killed. Several other boys were injured, one of whom has since died.

Gen. Wise, at the recent Horticultural Fair in Richmond, made a speech advising the people to devote themselves to agriculture and manufactures, and labor to develop the resources of the State and recover its prosperity.

Strict quarantine has been established on the Mississippi River below Cairo. Thousands of people are said to be fleeing from Memphis in consequence of the yellow fever. Large numbers of them have arrived at and are passing through Cairo.

A dispatch from New Orleans from J. F. Caldwell, Secretary of the Howard Association, says the epidemic is declining, and further collections are not needed, as the Association has funds enough to carry it through.

Gen. Reynolds has ordered the removal of his headquarters to Austin.

Foreign Intelligence.

CERTAIN evidence has come into the hands of the London metropolitan police authorities, which leads them to believe that Col. Kelly, who was rescued from the prisoners' van at Manchester, has not left the country, but is now in that city. New rumors, some of them quite absurd, are in circulation, and serve to keep up the alarm about the Fenians. Troops and gunboats have been dispatched to Ireland, and the entire western coast of that island is guarded with extraordinary vigilance.

The French Emperor recently summoned a general council of the ministers of his Cabinet at St. Cloud to consider the condition of affairs in Italy and decide what action France should take in the matter. The result of its deliberations was a resolution that France should immediately intervene for the settlement of the Roman question, but without acting any longer in conjunction with the Italian Government to that end.

The latest dispatches received from Italy are very important. The entire press, almost without exception, favor the seizure of Rome by the Government. The strength of the party of action increases hourly. Sharp fights have occurred at several points in the province of Viterbo, in all of which the insurgents have been successful. The Pope has called an immediate meeting of the Cardinals to consider the situation.

Re-inforcements of volunteers, recruited in France and Spain for the defense of the Pope, have arrived in the city of Rome.

When last heard from, Gen. Menotti Garibaldi, with a considerable force under his command, had succeeded in reaching the vicinity of Rome, and was still advancing.

It is reported that Gen. Garibaldi has again escaped from Caprera, and that he left the island on board an American ship. The Garibaldians have appeared in the western district, between Rome and the sea. They have taken possession of the railway running between the city of Rome and the seaport of Ostia, and torn up the rails, preventing all communication.

The Moniteur asserts that the inhabitants of the city of Rome and of the Papal provinces are loyal to the Pope, and only need assistance to drive the Italian invaders from the soil.

Capt. F. E. Bille, late Secretary of the Danish Legation at Paris, has been appointed Envoy Extraordinary and Minister Plenipotentiary of Denmark to the United States of America.

Admiral Rabatti of the Italian navy, has mustered a royal squadron of eight iron-clads, which he will by order of the King take to Roman waters.

LATEST FROM SOUTH AMERICA.—The last advices received at Rio Janeiro from the scene of war on the Parana were unfavorable. No movement had been made, and no preparations were making for an attack. The land forces of the allies, under Gen. Mitroe, were lying under the Paraguayan forts; and the Argentine and Brazilian fleets were hemmed in by the guns of Lopez and compelled to remain inactive. The Brazilians were greatly discouraged by the conduct of the war, and the peace party was in the ascendancy in all the States bordering on the Rio de la Platte. It was reported that General Urguiza was dead.

SAD CATASTROPHE.—A terrible accident took place at the Hoosic Tunnel on Saturday of last week, by which thirteen men were either killed outright or suffocated to death. The gasoline works at the mouth of the shaft exploded and burned, falling down the shaft and burying the whole gang of workmen at the bottom. The bodies at last accounts, had not been recovered.

SEVERE STORM AT SEA.—A terrific gale occurred on the Labrador coast on the 9th inst., and so far as heard from some 30 vessels have been totally wrecked and 40 lives lost. Steamers have left St. Johns to afford relief to the sufferers.

NEWS PARAGRAPHS.

IT is estimated that the peanut crop in North Carolina will equal this year the crop of last. New Hanover and Onslow, the principal peanut region, then realized 600,000 bushels.

THE proposition to raise a subscription for Mrs. Lincoln's benefit has received the sanction of that lady, and 500 letters have been addressed to prominent politicians and colored clergymen calling upon them for donations.

THE French Government, says the Liberte, has just ordered 800,000 waist-belts, each having attached to it a small medicine box. The latter will contain whatever is necessary to give, in a rough way, a first dressing to a wound or to stop dysentery. The whole will cost about 1,500,000f.

THERE have recently been discovered in Maryland, near Upper Marlborough, in Prince George's county, about sixteen miles from Washington, large deposits of shells, alleged to be of great value as a fertilizer. Extensive preparations have already been made to supply the market in the Washington neighborhood.

IN Kendall County, Ill., recently, a man by the name of Alex. Eddiburn, in attempting to get on the top of a thrashing machine, while in motion, lost his balance and stepped on the cylinder, which instantly drew him half way into the machine, cutting him almost literally to pieces before the machine was stopped.

THE receipts of the Universal Exhibition from the 1st of April to the 10th of September, are estimated at seven millions and a half of francs. Therefore, during the seven weeks, or nearly so, which the Exhibition has still to remain open, a million and a half of francs must be received in order to attain the sum of nine millions, required to cover the expenditure. That this result will be obtained is not improbable.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, October 22, 1867.

THE war rumors from Europe have had some effect on the gold market. Sales in New York were made yesterday at 144¼. Money at the close of last week was rather easier in the eastern markets, though great stringency still prevails. Brokers who furnish stock collaterals were supplied more freely. The mercantile demand and the call for funds from the West are still pressing. Produce is now moving East very actively, and the New York market must shortly experience material relief.

Exchange on England is unusually low. The average rate of merchants' bills, at the close of the week, was 109¾@109¾, and some large sales are reported as low as 107¾ per cent. While anything like these prices for sterling exchange continues, there can be no large export of gold, and it would decline in price were it not for the foreign war cloud.

On the first of November some $23,000,000 in gold will be paid by the Government on account of interest. With exchange so decidedly in our favor, it would seem that the paying out so large an amount of gold would have a marked effect on the market. But rumors of war exert a great influence on the price of "hard cash."

Government securities are not active. London quotations are a little lower.

The conversion of 7-30s at the New York Sub-Treasury proceed at the rate of about $1,500,000 per day.

THE COUNTERFEIT SEVEN-THIRTIES.—The Government officials have been active the past week in endeavoring to find the origin of the counterfeit seven-thirties. It is ascertained that the plates were made in Philadelphia. One of the men connected with the affair has been arrested. He had become so emboldened by success that he commenced circulating counterfeit bank notes, and on that charge was arrested. The whole plot, and the parties concerned, will doubtless very soon be made public.

It is said the Secretary of the Treasury will demand reclamation on the persons from whom about $88,000 of the counterfeit 7-30s were received at the Department. There are rumors that something over one million dollars of these counterfeits were issued. Other statements, from well informed parties, make the amount less than $300,000.

The Journal of Commerce, which gave some currency to the idea that the spurious notes were made from Government plates, says:—"A further and critical examination of the rejected seven-thirty notes leads us to the belief that the plate has been counterfeited." The original plates are under the seal of Commissioners. The dies from which they are made are enclosed under three different locks, requiring the consent of three persons to their examination.

COTTON is lower. Dealers are speculating on the amount raised this season, and their estimates range from two to three million bales.

WOOL.—The wool market is still unsettled. Sales in Boston last week 725,000 lbs., at a range of 35@58c. for fleece, and 38@38c. for the various grades of pulled. Holders not obliged to sell are not pressing sales. Some operators are compelled by the stringency of money matters to dispose of their stocks.

DRY GOODS.—The eastern dry goods market is reported "dull, heavy and declining." A New York paper says:—"Goods which cost $5,25 in gold per yard to import, have been sold at auction for $4,50." The difference between gold and currency would make the loss about $2,75 per yard.

HOPS.—The market is dull and drooping. There is a decline in the foreign market.

WHEAT AND FLOUR.—At the close of last week prices for wheat and flour were lower at the East and at the West. Red wheat sold in this city yesterday at $2,60.

THE CATTLE MARKET at Chicago is dull. The offerings are reported very heavy recently, but the quality is inferior.

HOGS.—The western hog market is very dull. The offerings at Chicago are reported as enormously heavy, and at the close of last week sales were made at $1@6,25 for light stock to extra lots.

Rochester Wholesale Prices Current.

GET THE BEST
WEBSTER'S DICTIONARY
UNABRIDGED
NEW ILLUSTRATED
OVER 3,000 FINE ENGRAVINGS.
10,000 *Words and Meanings not in other Dictionaries.*

A necessity to every intelligent family, student, teacher and professional man. What Library is complete without the best English Dictionary?

"Superior, in most respects, to any other English Dictionary known to me."—*Hon. Geo. P. Marsh.*

"THE NEW WEBSTER is glorious—it is perfect—it distances and defies competition—it leaves nothing to be desired."—*J. H. Raymond, LL. D., Prest. of Vassar Coll.*

"All young persons should have a standard Dictionary at their elbows. And while you are about it GET THE BEST; that Dictionary is NOAH WEBSTER'S—*the great work unabridged.* If you are too poor, save the amount from off your back and put it into your head."—*Phrenological Journal.*

"Every *farmer* should give his sons two or three square rods of ground, well prepared, with the avails of which they may buy it. Every *mechanic* should put a receiving box in some conspicuous place in the house to catch the stray pennies for the like purpose. Lay it upon your table by the side of the Bible; it is a better expounder than many which claim to be expounders. It is a great labor-saver; it has saved us time enough in one year's use to pay for itself; and that must be deemed good property which will clear itself once a year. If you have any doubt about the precise meaning of the word *clear*, in the last sentence, look at Webster's nine definitions of the *v. t.*—*Massachusetts Life Boat.*

In one vol. of 1,840 Royal Quarto Pages.
Published by G. & C. MERRIAM, Springfield, Mass.
Sold by all Booksellers.

☞ New Webster's NATIONAL PICTORIAL DICTIONARY, 1,040 pp., Rural Octavo, 600 Engravings. Retail price, $6. 926-4t

☞ NOT A PATENT MEDICINE. ☜

TURNER'S DOULOUREUX, OR TIC Universal Neuralgia PILL.

A SAFE, CERTAIN, AND Speedy Cure FOR NEURALGIA, AND ALL NERVOUS DISEASES.

Its Effects are Magical.

It is an *unfailing remedy* in all cases of Neuralgia Facialis, often effecting a perfect cure in less than twenty-four hours, from the use of no more than *two or three pills.*

No other form of Neuralgia or Nervous Disease has failed to yield to this *wonderful remedial agent.*

Even in the severest cases of Chronic Neuralgia and general nervous derangements,—of many years standing,—affecting the entire system, its use for a few days, or a few weeks at the utmost, always affords the most astonishing relief, and very rarely fails to produce a complete and permanent cure.

It contains no drugs or other materials in the slightest degree injurious, even to the most delicate system, and can *always* be used with *perfect safety.*

It has long been in constant use by many of our *most eminent physicians*, who give it their unanimous and unqualified approval.

Sent by mail on receipt of price, and postage.

One package,..... $1.00..Postage 6 cents.
Six " ..... 5.00.. " 27 "
Twelve " ..... 9.00.. " 48 "

It is sold by all wholesale and retail dealers in drugs and medicines throughout the United States, and by

TURNER & CO., Sole Proprietors,

WHISKERS!—A Heavy Beard is warranted in five weeks, by using Russell's Italian Compound. Sent closely sealed from curious eyes for 50 cts.
926-13t RUSSELL & CO., Watertown, N. Y.

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introduce throughout the U. S. the GENUINE IMPROVED COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, bind, braid and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made. Address SECOMB & CO., Cleveland, Ohio.

CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap inching manufactured. 921-4t

All other low priced machines make the CHAIN STITCH. Exclusive territory given. Send for circulars. W. G. WILSON & CO., Manufacturers, Cleveland, Ohio. 922-13t

ESTABLISHED 1861.
THE
GREAT AMERICAN
TEA COMPANY
HAVE JUST RECEIVED
TWO FULL CARGOES
OF THE
FINEST NEW CROP TEAS.
22,000 HALF CHESTS by ship GOLDEN STATE,
12,000 HALF CHESTS by ship GEORGE SHOTTON

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune district of China, which are unrivalled for fineness and delicacy of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade, (before the establishment of the GREAT AMERICAN TEA COMPANY,) we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in the country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices, with the small additional expense of transportation, as though they bought them at our warehouse in the city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on the list, as seen in the club order published below, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

Parties sending Club or other orders for less than thirty dollars had better send Post-office drafts or money with their orders, to save the expense of collections by Express; but larger orders we will forward by Express, to "*collect on delivery.*"

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

Oolong (Black,) 70c., 80c., 90c., best $1 ₱ lb.
Mixed (Green and Black,) 70c., 80c., 90c., best $1 ₱ lb.
English Breakfast, (Black,) 80c., 90c., $1, $1.10, best $1.20 ₱ lb.
Imperial (Green,) 80c., 90c., $1, $1.10, best $1.25 ₱ lb.
Young Hyson (Green,) 80c., 90c., $1, $1.10, best $1.25 ₱ lb.
Uncolored Japan, 90c., $1, $1.10, best $1.25 ₱ lb.
Gunpowder (Green,) $1.25, best $1.50 ₱ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of

THE GREAT AMERICAN TEA COMPANY,

PLASTIC SLATE ROOFING
JOINT STOCK COMPANY,
OFFICE 157 [Room 19] *BROADWAY,*
NEW YORK.
W. C. POTTER, *Vice-Prest.*
J. M. ALLEN, *Sec. & Treas.* Licenses Granted.

PLASTIC SLATE FOR
ROOFING & OTHER PURPOSES.

The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of

Pulverized Slate and Viscous Matter,

(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.

AS A ROOFING MATERIAL IT STANDS UNRIVALLED.

A mastic—it adapts itself to every shape and slope. Non-combustable, impervious, non-expansive, and made cayling.

FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.

The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and

PERFECTLY FIRE-PROOF.

It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

THE COLLINS AND SHATTUCK
Combined Clover Thrasher, Huller & Cleaner,
MANUFACTURED BY
GLEN & HALL, ROCHESTER, N. Y.

We beg to call the attention of Farmers to the superior characteristics of the Collins and Shattuck Clover Machine made by us, which we are now prepared to supply.

Our Machines have two bolts with counter reciprocating motion, which have proved *indispensable* in keeping the Machine still, preserving it from rocking and preventing it from clogging. We will WARRANT them with proper management to Thrash, Hull and Clean Clover or Grass Seed at one operation, more rapidly and in a much better manner than any other Machine made. When thrashing grass seed they can in a moment be so arranged that the seed and chaff will pass directly from the bolts to the fanning mill without going through the huller—*an advantage possessed by no other machine.* The ratchet form of the upper bolt in our machine insures a thorough separation of the heads and seed from the straw before the latter is allowed to pass into the stack. Our machines are constructed of the best material, in the most thorough manner, handsomely painted and ornamented, and have in all cases given entire satisfaction. Persons purchasing these machines to do custom thrashing will find them even much more remunerative than Grain Thrashing Machines.

We are also prepared to supply Horse-Powers, Truck Waggons, &c., to be used with our machines, or they will be adapted to run with any other Horse Powers.

☞ Descriptive Catalogues, containing full information, with testimonials from persons using our Clover Machines, sent free to all applicants. Address GLEN & HALL, Rochester, N. Y., or Detroit, Mich. J. D. FASTER, Gen'l Western Agent, Chicago, Ill. 921-10t

H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, *Improvements Pat'd April,* 1865 *and Nov.* 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the richest quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (10 gal.,) $16; No. 2, (¼ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¾ bbl.,) $10; No. 5, (1 bbl.,) $8.
H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag't Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag't Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

MARYLAND AND SOUTHERN FARMS, Farms and Plantations, Coal, Timber and Oil Lands, Fruit, Dairy, Grain and Grazing Farms in Maryland, Virginia and other Southern States. Also, Country Seats near, and Dwellings and Warehouses in Baltimore, Washington and Richmond, for sale low. Accurate descriptions furnished gratis. COMPLAINT.

BY DR. J. G. HOLLAND.

River, sparkling river, I have fault to find with thee:
River, thou dost never give a word of peace to me!
Dimpling to each touch of sunshine, wimpling to each
air that blows,
Thou dost make no sweet replying to my sighing
for repose.

Flowers of mount and meadow, I have fault to find
with you:
So the breezes cross and toss you, so your cups are
filled with dew,
Matters not though sighs give motion to the ocean of
your breath:
Matters not though you are filling with the chilling
drops of death!

Birds of song and beauty, lo! I charge you all with
blame;
Though all hapless passions thrill and fill me, you are
still the same.
I can borrow for my sorrow nothing that avails
From your lonely note, that only speaks of joy that
never fails.

O! indifference of Nature to the fact of human pain!
Every grief that seeks relief entreats it at her hand
in vain;
Not a bird speaks forth its passion, not a river seeks
the sea,
Not a flower from wreaths of Summer breathes in
sympathy with me.

O! the rigid rock is frigid, though its bed be summer
mould,
And the diamond glitters ever in the grasp of change-
less gold;
And the laws that bring the seasons swing their cy-
cles as they must,
Though the ample road they trample blind the eyes
with human dust.

Moons will wax in argent glory, though man wane to
hopeless gloom;
Stars will sparkle in their splendor, though he darkle
to his doom;
Winds of heaven he calls to fan him, fan him with an
icy chill,
And the shifting crown of clouds go drifting o'er him
as they will.

Yet within my inmost spirit I can hear an undertone,
That by law of prime relation holds these voices as
its own,—
The full tonic whose harmonic grandeurs rise through
Nature's words,
From the ocean's thunderous rolling to the trolling
of the birds.

Spirit, O! my spirit! Is it thou art out of tune?
Art thou clinging to December, while the earth is in
its June?
Hast thou dropped thy part in nature? Hast thou
touched another key?
Art thou angry that the anthem will not, cannot, wait
for thee?

Spirit thou art left alone—alone on waters wild;
For God is gone, and Love is dead, and Nature spurns
her child.
Thou art drifting in a deluge, waves below and clouds
above,
And with weary wings come back to thee, thy raven
and thy dove.

The Story Teller.

Written for Moore's Rural New-Yorker.

CHESS:
A SKETCH FOR THE YOUNG.

BY JAMES L. BOWEN.

"Come down to the chess-rooms to-night, Mark, and see some fine playing. Two of the best players in the city are to have a match game there, and it will be worth witnessing, I assure you."

"Don't believe I'd better, David, replied Mark, who was a young man with fine, intellectual features, and a pleasing expression. The first speaker way a fine looking youth, but quite different in general appearance.

"Why not, Mark?" he asked, seeming half displeased at the reply. "It won't take more than an hour, and you don't find such a chance every day."

"Quite true; but then I should not understand the game well enough to derive as much advantage from it as you."

"But you can play some, and a few evenings' practice would make you a really good player. Why don't you take hold of it? There's no fun like a good game of chess."

"I allow that a good game of chess, for those who have time to devote to it, is fine amusement. Still, at this present time I have not an hour which I can spare."

"What do you do with all your time after the store closes? There are three or four hours before the time you speak of going to bed."

"I'll tell you, David. I employ every hour I can get in reading and study. When I see how little I know, and the possibilities that lay before a man in this great city, I do not feel as though I ought to neglect a moment."

"But you need not study so exclusively," said David, who seemed a little piqued at the answers of his friend. "I don't care to say it, Mark, but I do fear you are losing a great chance for working your way into society by being thus exclusive."

"No matter for that, not a bit. Business first, and then pleasure. I've not the means for making a distinguished appearance in society, if I wished."

"But you have as much salary as I, and I don't fall behind any. Besides, I expect we'll both have more another year."

"Who can tell what another year may bring? Whether I have more salary or not, I mean to have more of a business education next year than I have now."

"I don't know how you may get it better than by mingling with society as much as may be."

"I see enough of society during the day," returned Mark. "I tell you there is hard study back of this, for such as you and I, or we can never expect to succeed."

"I believe in study, but not all the time," replied David, as he turned away at the call of duties.

The result of all was that the last speaker went to the chess-rooms that evening, and witnessed a very brilliant game, returning at a late hour well satisfied with himself. His friend, on the contrary, spent the evening in hard study, and sought his pillow with an aching temple.

Mark Hall and David Worthy, the two young men with whom we have been dealing, were salesmen in the extensive house of Puffman & Stringer. The fact that both were from the country, received the same salary, and were frequently thrown together in the discharge of their duties, had created a strong feeling of friendship between them. Still many of their characteristics were quite different. While David Worthy was quite anxious to make his mark in the world, and enter society with honor, Mark Hall cared very little for any of the influences which surrounded him. He was determined to succeed, and as a means of success devoted his time to such study as he deemed most important for him.

The year of which Worthy had spoken passed away, and on one of the last days in April the young men stood together in the counting-room. It was a dull, rainy day, and none were stirring, so that they had plenty of leisure.

"Well, Mark, said David," I count myself the ninth best chess player in the city. I played four games with Rudd yesterday, and beat him every one."

"Rather a long count," said the one addressed, with a faint smile. "Had you heard that the book-keeper is going to leave us?"

"What, Sanford Henry?"

"Yes, he is going into Coon's Commission House."

"Is that a fact? Then we shall have a new one I suppose. Who may it be, I wonder? Henry is a right good fellow, and I fear we'll not get another to suit us as well."

"I wonder why Puffman hasn't said anything to us about salary," he pursued, a moment later. I know what his cry will be, 'hard times.'

"I take it we shall have to work another year for the same, though, to tell the truth, I need a rise, I've got a few debts I cannot well pay off with only six hundred. It beats all how they grind the face of clerks in a big city like this!"

Mark did not reply for a moment, and before he had resolved how to speak, the door opened and the very person of whom they had been conversing, Mr. Puffman, entered. Immediately behind him came a short, wheezy looking man, with an immense pair of spectacles.

"Ah, how do you do, Mark?" said the proprietor. "I was looking for you."

"For me, sir! I regret—"

"Never mind, never mind; I might have said I was *going* to look for you. This gentleman wishes to speak with you. Mr. Guttenschloss, my clerk, Mark Hall." The man with the big specs and mispronounceable name greeted Mark kindly, though with a fearful accent.

"*Sprecken sie Deutch?*" he asked.

Mark responded in the affirmative, and they at once entered into conversation. Mr. Guttenschloss seemed a merchant from Germany, about to open a branch house in New York, and wished a young man for assistant. But he required a perfect mastery of both German and English, with a knowledge of book-keeping in both languages. An hour's conversation satisfied him that Mark would answer.

"Me give you five hundred dollar a year," he said.

"But I get more than that where I am, with no responsibility upon me," he replied, with a smile.

Guttenschloss nodded to Puffman with a smile, muttered, "all right," and passed out.

"What does the Dutchman mean?" Hall inquired, thinking his employer might throw some light upon the transaction.

"I'll tell you," that person answered, indicating a seat, while himself took one near. "That was all a little farce, the object of which you will see. Our book-keeper, Sanford Henry, is going to leave us. Before going he wishes to see a competent man filling his place, so that there may be no vexations or uncertainty. He recommended you to fill his place. Now, you know that one of the requirements of that position is that a man be a good German scholar, as well as a perfect accountant. Mr. Guttenschloss is a perfect German linguist and merchant, so that I left it with him to determine your capability."

"And he thinks me worthy a five hundred," said Hall, uncertain how to take the matter.

"*He* offers you that," replied Puffman, "because he does not need your assistance. *I* will offer you the position of book-keeper in this establishment and the salary we now give—two thousand dollars! You can accept it, or take your chances for doing better!"

"I never should be likely to do better," was the confused reply. "But you will not find me capable, I fear."

"We are willing to try you," was the rejoinder. "Come on, you have no time to lose."

And Mark walked away to take his new position.

"You are in luck, Mark," said David Worthy, when they met again. "You have gone out of my reckoning, all at a jump. I wish I had your German education. Won't you instruct me, so that I may at least master the rudiments?"

"Certainly. But how do you suppose I learned my German, as also much of my knowledge of book-keeping?"

"I'm sure I don't know," said David, though he really had a surmise quite near the truth.

"Well, David, I learned it while you were playing chess! Did I do well?"

Worthy did not say more, for he felt a sting in the heart. That evening he went to the chess-rooms for the last time. He looked upon the brilliant game which he had mastered so thoroughly, and took his seat at the board, but far interior players defeated him repeatedly.

"See what I have lost in that room," he muttered, as he walked homeward. "Hall is book-keeper to-day, with two thousand per year, while I only get my paltry six hundred. A year ago we were equal. I'll begin to see if I can make up some of my lost time."

His good resolves were tolerably well kept, and now he is a third-rate merchant in a third-rate city,—while the returns of Internal Revenue for 1866 showed no man more prosperous than Mark Hall, no firm more sound financially than that of Hall & Stringer. Two or three years since, Puffman decided to leave the old firm, and settle in a rural district, where for the remainder of his life he might live at ease. But few negotiations were necessary to complete the bargain, when his share of the business and good-will passed happily to Mark Hall. The ambition of the latter had been to become a thorough merchant, and as he had left no stone unturned, no moment unimproved, the measure of his ambition was now full.

Young man, just starting in the world, the moral is for you. Make your business a pleasure if possible, but never make pleasure your business, while anything better or more desirable remains unaccomplished. Especially, never expect that hard application afterward will make up for the *golden opportunity* once lost.

A ROMANTIC INCIDENT.

A romantic incident occured here last week, which has been thus related to me:—A young man from Philadelphia lost his heart to a pretty girl from that city, whose father was the president of a prominent bank there, and very wealthy. He was a salaried clerk, though of very good family, and was unwilling, on account of poverty, to propose marriage, even though he had reason to believe his passion was returned. He made this confession, it seems, to one of his friends, and the story of his modesty and pride reached the young lady's ears, and touched her very naturally. A few weeks after, the fair Philadelphian was driving on the beach alone, when her horse became frightened at the surf and ran off at a furious pace. She lost all control of the terrified animal, which had run at least two miles, when the enamored swain, exactly as it happens in romances, chanced to be walking by the border of the sounding main, as Homer would put it, thinking of his cheerless furture without the idol of his soul, (for further sophomorical phrascology see Sylvanus Cobb, Jr.) In a few moments he held the horse's head; was dragged a few hundred yards before he could check the animal's course, and then snatched the half-fainting girl from the vehicle. Once in his arms she swooned wholly, of course. He held her in his embrace until she recovered. She murmured her gratitude; he his passion; and they walked to the hotel with rosy blushes all over their faces. That night the wealthy banker heard of his daughter's rescue, and, after talking with her, he discovered that she loved the fellow. The following morning he sent for the clerk, and discovered that the fellow loved the girl.

"Why in creation didn't you propose to her? How was she or I to know anything of the state of your heart unless you told her about it? You don't expect a pretty woman with $200,000 in her own right to run about with her love in her hand, asking handsome scapegraces like yourself, to take it, do you?"

"I knew, sir, that I was very poor, and you very rich, that it was not probable you would—"

"Nonsense! I don't want my daughter to marry a bank account. My own is high enough for her. You are worthy; and if you love her go and tell her so, and let me hear no more stuff about poverty and wealth."

The young man went, and I presume the two came to an understanding, as I am informed they are to be married the first week in November. The narrative is not a whit original or new, except in the fact that the pater-familias has sense enough to prefer his daughter's happiness to superfluous riches. I would like to give his name for the benefit of an example. I can't of course, though I may say if you read the sign No.— Third street, Philadelphia, you will learn who the wise Crœsus is. —*Atlantic City Cor. Cincinnati Gazette.*

HOME AFTER BUSINESS HOURS.

The road along which the man of business travels in the pursuit of competence or wealth is not a Macadamized one, nor does it ordinarily lead through pleasant scenes and by well-springs of delight. On the contrary, it is a rough and rugged path, beset with "wait-a-bit" thorns, and full of pit-falls, which can only be avoided by the watchful care of circumspection. After every day's journey over this worse than rough turnpike road, the wayfarer needs something more than rest; he requires solace and he deserves it. He is weary of the dull prose of life, and athirst for the poetry. Happy is the business man who can find that solace and that poetry at home.

Warm greetings from loving hearts, fond glances from bright eyes, and welcome shouts of children, the many thousand little arrangements for comfort and enjoyment that silently tell of thoughtful and expectant love, the gentle ministrations that disencumber us into an old and easy seat before we are aware of it; these and like tokens of affection and sympathy constitute the poetry which reconciles us to the prose of life. Think of this, ye wives and daughters of business men! Think of the toils, the anxieties, the mortification and wear that fathers undergo to secure for you comfortable homes, and compensate them for their trials by making them happy by their own firesides.

Wit and Humor.

THE LAST OF THE CHIGNONS.

MUSICAL ON DITS.

The man who sang "I am lonely since my Mother died," isn't quite so lonely now. The old man married again, and his step-mother makes it lively enough for him.

The one who gave the "Old Folks at Home" to the world has recently taken them to the poor house, as they were getting troublesome.

The author of "Shells of the Ocean" is in the clam business.

The man who wanted to "Kiss him for his Mother," attempted to kiss his mother for him, the other day, and *him* gave him a walloping "for his mother."

The one who walked so plaintively, "Do they miss me at home?" was missed the other day, together with a neighbor's wife. He is missed by a wife and seven children.

The author of "Three blind Mice," has started a menagerie with them.

"Give me a cot in the valley I love," has got a cot in the infirmary.

"I'd offer thee this hand of mine," has been sued for breach of promise.

The author of the "Old Arm Chair," is still in the furniture business.

A laborer while breaking stones on the roadside, having a shade over one eye as a guard, was thus accosted by a companion, "I say Tummy, hast 'ee lost an eye?" "Why?" replied the other: "hast 'ee found one?"

Corner for the Young.

For Moore's Rural New-Yorker.

ILLUSTRATED PRIZE REBUS.

Rochester, N. Y. M.

☞ To the person (residing out of this county) forwarding the first correct answer to the above Rebus (within two weeks) we will send the Rural New-Yorker for 1868,—or for one year from Oct. 1, 1867, if preferred.

☞ Answer in three weeks.

For Moore's Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I am composed of 14 letters.
My 6, 9, 13, 10 is a fruit.
My 7, 8, 9, 4, 4 is used in war.
My 14, 9, 12 is a boy's nic-name.
My 1, 10, 3, 12, 9 we all have a little of.
My 2, 13, 5, 4 is something we do not like.
My 7, 8, 11, 1 is something to ride in.
My whole was a distingnished General in the Union Army. Emma Kelsey.

Harrisburgh, N. Y.

MOORE'S RURAL NEW-YORKER,

THE GREAT TOWN AND COUNTRY WEEKLY.

THE RURAL is the Leading and Largest-Circulating Newspaper of its Class on the Continent,—superior in Value and Variety of Contents and Beauty of Appearance. It embraces a greater and better variety of Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with many Engravings, than any other Journal in the English Language,—for it comprises Departments devoted to or including

Agriculture,	Choice Literature,
Horticulture,	Science and Art,
Sheep Husbandry,	Education,
Grazing, Dairying,	Youth's Reading,
Rural Architecture,	General News,
Domestic Economy,	Commerce, Markets,

With Illustrations, Tales, Essays, Music, Poetry, Rebuses, Enigmas, &c., &c.

The Rural New-Yorker is a *National Journal*, circulating in every State and Territory of the Union, and also in Canada, Europe, &c. It Employs the Best Talent in all Departments. Its corps of Editors, Contributors, &c., comprises many of the most experienced and successful Farmers, Planters, Wool Growers, Breeders, Graziers, Horticulturists, Gardeners, &c., and includes Authors, Scholars, Scientists, &c., of note and ability. In brief the Rural is *Ably Edited, Profusely Illustrated, and Neatly Printed—Practical, Scientific and Useful—Moral, Instructive and Entertaining.*

Whether located in Country, City or Village,

**YOU WANT THE RURAL,
YOUR FAMILY WANT IT,
YOUR NEIGHBORS WANT IT,**

For it is adapted to the wants of all, and has thousands of enthusiastic friends and admirers in Cities and Villages, aside from its immense circulation among the Rural Population. Remember that it is *not a monthly* of only 12 issues a year, but

A LARGE AND BEAUTIFUL WEEKLY OF 52 NUMBERS!

THE RURAL NEW-YORKER comprises Eight Double Quarto Pages—is published in superior style, with Copper-faced Type, Good Paper, and more and better Illustrations than any other Journal of its Class. A Title Index, &c., at close of Volume, complete for binding.

TERMS—Only $3 a Year. To Clubs of ten, $2.50 per copy. A new Quarter begins Oct. 5, and Vol. XIX in January. *Now is the Time to Subscribe and form Clubs.* Great Inducements, Premiums, &c., to Local Club Agents, and one wanted in every town. Specimen Numbers, Show-Bills, Premium Lists, &c., SENT FREE,—or we will send the 13 numbers of this (Oct. to Jan.) or any preceding Quarter of this year, on trial, or as specimens, for ONLY FIFTY CENTS. Address

D. D. T. MOORE, Rochester, N. Y.

WHAT THE PRESS SAYS:

Moore's Rural New-Yorker is full of variety, original and select. We confess to a surprise at the variety and richness of its contents bountifully illustrated as it is. No paper on our exchange list comes so near our ideas of perfection, for a secular family paper. It maintains a high moral standard.—*New York Observer.*

The Rural New-Yorker, conducted by Hon. D. D. T. Moore, Mayor of Rochester, has attained the largest circulation of any paper of the kind in the country or the world; and this pre-eminence has been achieved by careful management, first-rate tact, judicious enterprise and liberality.—*Rochester Daily Democrat.*

The Rural New-Yorker is not only a favorite in the rural districts, but deservedly popular in the cities. No newspaper in this or any other country has ever run a more prosperous career.—*Louisville Journal.*

The Rural New-Yorker is a very valuable paper, eminently practical in its character, and pure in tone. Deserves and is achieving abundant success.—*N. Y. Times.*

This famous weekly has attained a popularity unrivalled by any similar journal. The dress, paper, engravings, printing, &c., are superb.—*Rochester Daily Union.*

The Rural New-Yorker is the *best Farm and Fireside Journal in America*, and has justly earned all its devoted editor claims for it.—*Chicago Daily Democrat.*

Mr. Moore *ought* to make a fortune out of his journal, and we trust he will, *for he is helping to make the fortune of the country.*—*Ohio Statesman.*

BUCKEYE BELLS Bell Foundry Established 1837.

VANDUZEN & TIFT, 102 & 104 East Second St., Cincinnati, O., manufacturers of Bells for Churches, Academies, Plantations, etc., made of the Genuine Bell Metal, and mounted with our Patent Improved Rotary Hangings. All Bells warranted in quality and tone. Catalogue and Price List sent on application. [917 6teo

NEW CATALOGUE FOR FALL 1867 AND SPRING OF '68.—125 acres planted with 40 varieties of Strawberries, Raspberries, Blackberries and Currants. More ground planted in Wilson's Early than all other sorts combined. Send stamp for copy to
JOHN S. COLLINS, Moorestown, N. J.

ORTHODOXY: ITS TRUTHS AND ERRORS—By James Freeman Clarke, D. D.—This book, pronounced "well worth careful perusal" by Orthodox papers, should be read by candid inquirers after truth, of every religious faith.

12mo. 512 pp. Price, $1.25.

Published by the American Unitarian Association, 26 Chauncy Street, Boston, Mass., which also publishes some forty religious works,—doctrinal, devotional and practical,—the prices of which are at least one-third lower than those of an ordinary publisher.

A full descriptive catalogue furnished on application, and any book on the list sent free, on receipt of price.

A discount of twenty-five per cent. made to clergymen of every denomination. Tracts illustrating the Unitarian faith given freely to all who apply.

Applications by mail to be addressed to AMERICAN UNITARIAN ASSOCIATION, Boston, Mass.

REAL ESTATE! REAL ESTATE!—Woolston's October Catalogue Just Out!—Valuable Delaware Farms and City Houses and Building Lots for sale. Circulars sent free to any address in the United States. A. R. WOOLSTON, Real Estate & Stock Broker, 512 King Street, Wilmington, Del. 925-6m

THE GREAT NEW ENGLAND REMEDY!
Dr. J. W. POLAND'S
WHITE PINE COMPOUND

Is now offered to the afflicted throughout the country, after having been proved by the test of twelve years in the New England States, where its merits have become as well known as the tree from which, in part, it derives its virtues.

The White Pine Compound
CURES

Sore Throat, Colds, Coughs, Diptheria, Bronchitis, Spitting of Blood, and Pulmonary Affections generally. It is a remarkable Remedy for Kidney Complaints, Diabetes, Difficulty of Voiding Urine, Bleeding from the Kidneys and Bladder, Gravel, and other Complaints.

For PILES and SCURVY it will be found very valuable.

This medicine is *free from anything deleterious*, pleasant to the taste, safe, yet sure and effective in its action.

(From the Boston Journal, Jan. 20, 1866.)

Poland's White Pine Compound.—After having given it a thorough trial, we can confidently recommend *Poland's White Pine Compound* as a very valuable article for the cure of colds, coughs, and pulmonic complaints generally. In several cases we have known it to give prompt relief when all other remedies which had been tried had failed. It is an article which, in a climate so promotive of sudden and severe colds, as is that of New England, ought to be in every family; and we are sure that those who once obtain it and give it a fair trial will not thereafter be willing to be without it.

A Valuable Medicine.—*Dr. Poland's White Pine Compound*, advertised in our columns, is a successful attempt to combine and apply the medicinal virtues of the White Pine bark. It has been thoroughly tested by people in this city and vicinity, and the proprietor has testimonials to its value from persons well known to our citizens. We recommend its trial in all those cases of disease to which it is adapted. It is for sale by all our druggists.—*Independent.*

The White Pine Compound is now sold in every part of the United States and British Provinces.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

HINTS FOR THE MONTH.

NOVEMBER is the month wherein most of the farmers, horticulturists and gardeners of the United States and Dominion of Canada must make final preparation for the incoming and reign of Winter. Though many of our readers, especially in the South and Southwest, have little cause to fear the sway of the icy monarch, the great mass of those herein addressed reside in localities where his presence will soon be felt in a greater or less degree—where it will not be necessary to consult the almanac to decide as to the arrival of the season of hybernation. And all such (in the Eastern, Northern, Middle and Western States, Canada, etc.,) guided by the experience of former years, should not delay timely provision for the season of frigidity, for it is as sure as that of the promised seed time and harvest. Balmy and beautiful as has been the past month over the greater portion of our country, both men and beasts must soon experience the discomforts of sleet, snow and Boreal blasts—a change which will be doubly uncomfortable if not provided for in advance of its occurrence. It therefore behooves every one having charge of a family, and the care of domestic animals, to provide proper fuel, food and fodder, as well as raiment and shelter, without delay, lest inconvenience and suffering may result.

But in most sections there is yet time for and need of out-door farm work. Let us enumerate a few of the most important matters requiring attention over a wide extent of country—matters by no means confined to the latitude of Western New York:

Ungathered Fall Crops should now be secured—potatoes and roots dug, and corn and fodder housed and stacked—not because the weather will no longer prove favorable for this work, but that the farmer may have time for the doing of odd jobs before winter sets in earnestly, and experience that feeling of satisfaction which comes from knowing that the farm work is ahead. But if the crops are not secured, as the case is with perhaps the majority, all other work must give way to this.

Fall Plowing is in order. Remember how hurried you were last spring to sow your barley, wheat and oats in season, and how much quicker you could have done it had the ground been fall-plowed. Plow the garden, the ground for spring sowing, and perhaps the old sod for planting.

The Buildings.—Look to these at this season. Many little repairs will be needed, boards nailed on, a little shingling done, windows made or repaired, stables refitted, yard fences and gates strengthened. In that you will find enough to keep your jack-at-all-trades busy.

Fences.—It is also a good time for repairing the farm fences, and building stone walls when the weather is fair. Protect the foundations of the latter from frost.

Ice House.—Build an ice house if you have not one already. You will find plans in this and former volumes of the RURAL. You want it so constructed as to preserve fresh meats in summer time, and then you and your family may not eat salt pork altogether.

Pick Stone from the fields to be mowed next year. The ground may be soft in the spring for teams to travel on.

Stock.—It is a difficult month for stock. Work horses should be stabled; cattle will do well in the pasture, but should be yarded or stabled during storms, and fed regularly with some hay or grain. The point is to keep the animals comfortable and thriving. Milch cows, of course, need plenty of feed. Hogs should be fattened as rapidly as possible.

Sheds and Racks should be provided, in all localities where they are needed, for cattle, sheep, etc., before severe storms and cold weather occur.

Top Dress, with any litter, spots on your wheat field that are liable to heave out the grain by freezing and thawing, or where it may freeze out by severe cold. Open temporary furrows also to carry off the stagnant water.

WEIGHT OF CATTLE.—MEASUREMENT.

E. J. E., Grafton, Iowa, asks for a rule for ascertaining the weight of cattle—the calculation being based on the measurement of the animals. Many experiments have been made by graziers and dealers in cattle to ascertain the net weight of cattle by measurement. Rules have been given and tables constructed of the results obtained. At best, these are but approximations, and the measure of correctness will depend much upon a practical acquaintance with the form and prominent points of the animals to be measured. Something will depend, too, on the breed, size, mode of fattening, the time the process has been going on and the character of the feed supplied. The following method comes as near a correct result as any known:

Measure carefully with a tape line from the top of the shoulder to where the tail is attached to the back; this will give the length. For the girth measure immediately behind the shoulder and fore legs. Multiply half the girth by itself in feet, and the sum by the length in feet, and the product will give the net weight in stones of eight pounds each. For example, with an ox or cow five feet in length and seven feet in girth, the calculation will be as follows:

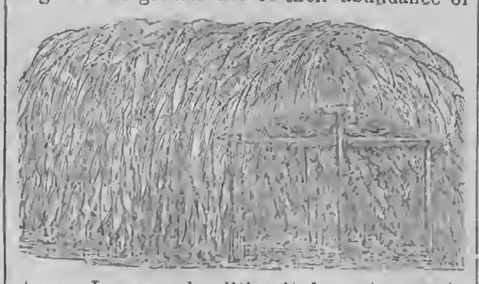
Multiply half the girth by itself in feet	3.5 × 3.5
	12.25
Multiply by length in feet	× 5
Weight in stones	61.25

This multiplied by eight, the pounds in a stone, or rather a half stone, and the result will be 490 pounds net.

RURAL FARMERS' CLUB.

Cheap Shelter for Stock.

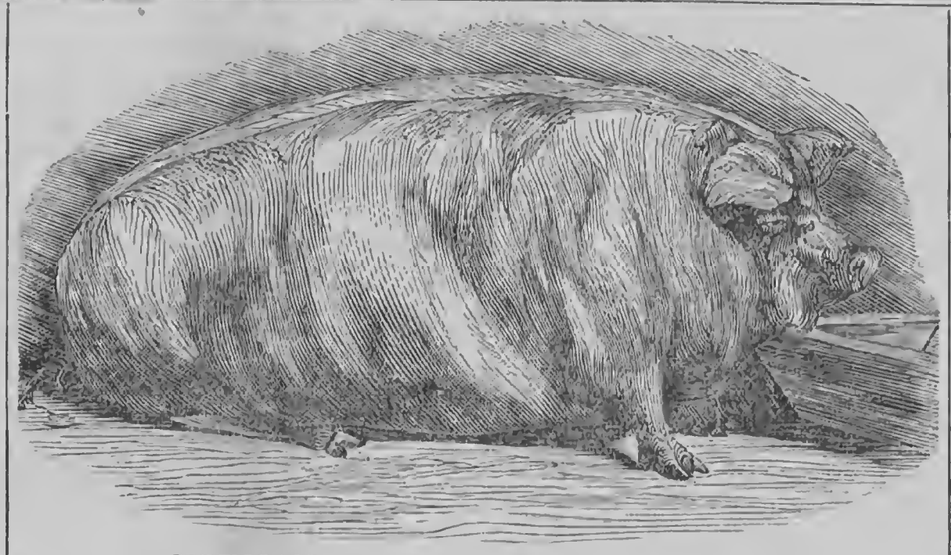
A CONTRIBUTOR to our Farmer's Club writing from Wisconsin, remarks that shelter for stock is one of the great needs of western farmers. In the Prairie States it is costly to build barns and sheds in the style we see them East, but for simple purposes of shelter, Western farmers might make greater use of their abundance of



straw. In some localities it is customary to burn this as the readiest means to get it out of the way. A much better use might be made of a portion at least in constructing shelter for all kinds of stock, both against rain and cold. A very good plan is to make a frame of poles (as the engraving represents) and stack straw over them. This work should be done at threshing time, but if it has been neglected it may be done at any later period. It pays richly in health, thrift, and in the saving of food to provide shelter, and now is the time to do it.

A Husking Table.

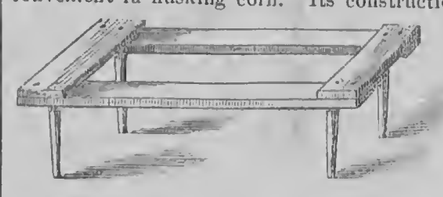
As we have previously "hinted," farmers having large crops of corn to take care of will often find it greatly to their advantage to store a quantity in the barn or under a shed to husk in stormy weather. "Farmer's Son" sends us



NORMAN AND NEW LEICESTER PIG.

ABOVE we portray a pig which received the first prize at Palffy, France, in 1866. The Journal D'Agriculture, at Longues, alluding to the exhibition says;—"The hog was 11 months and 20 days old and weighed 514 lbs. It is a cross between the Norman and New Leicester. The Norman race was taken for the strong frame, and the New Leicester for the filling up. The result is considered very profitable, not only on account of early maturity but also for increased weight." We give the portrait and description of this foreign specimen of the genus Sus for the benefit of those of our readers interested in the breeding, improvement and fattening of Swine.

the following sketch and description of a husking table, which enables the workmen to labor with greater ease and rapidity. He says:—"We have used it for several years and find it very convenient in husking corn. Its construction



is very simple, being nothing more than any boy can build who is at all handy with tools. It is made of two pieces of timber 2 by 4, and six feet long, joined together at either end by a board fifteen inches wide and two and a half feet long. The whole is set on four legs fifteen inches long. It is designed for use in the barn; the shock is thrown across the middle of the table and two persons can sit on the two seats and work."

Plowing Clay Lands in Autumn.

R. U. LEONARD, writing from Wyoming Co., N. Y., says:—"I believe it pays every farmer who works clay land to plow it as much as possible in the fall, especially that which he means to sow to spring grain. The plowing should be done when the land is dry, and if it turns up in great lumps so much the better. Plow deep and leave the surface rough. The frost and rain will pulverize and lighten the soil, making it friable and easily worked next spring. Deep plowing on clay land is better than shallow, for the reason that such lands are generally of a rich, deep soil; the great drawback on their producing largely being the imperfect pulverization given it. Only get the clay soil *loose* enough to a good depth and you are very sure of a good crop—that is if it *keeps loose* while it is growing. Draining is very necessary to secure this, as any one can readily see. Our clay soils are the best of all, if they are only rightly managed, but it takes a good deal of capital to work them; they must be drained, plowed deep, subsoiled, worked up loose and fine, so the roots can get the food they contain, and then they will prove the most productive of any."

"DIRECTIONS FOR A YOUNG FARMER."

UNDER this head we find in the proceedings of the American Institute Farmers' Club some rather queer, if not "mixed" advice. A young man who had just purchased 30 acres of land, but, having been brought up in a city, wished advice from the Club, as to what books and agricultural journals would be suitable for him to read.

Mr. N. C. MEEKER, the reporter for the Club, does "not believe in book-farming as generally understood—would not say books on farming are not important—but it is equally important to know how to work. Not logical to compare a young farmer to a medical student. Books are the doctor's tools. Plows are the farmer's tools."

Dr. TRIMBLE has "been through the mill reading books to perfect himself in farm work, and got little good. If one is to be lawyer or doctor then he wants books—but a young farmer should go and hire out to a farmer. This young man is entirely on the wrong track—had better sell his farm than undertake to learn how to farm it from books."

Mr. LAWTON thinks "if three-fourths of the books on farming were burned we would be better off." On the other hand, Mr. CARPENTER thinks "if we never read we shall never learn. He would advise the young man to read both Agricultural and Horticultural Journals—a few experiments will correct his errors."

Dr. SNODGRASS "thinks a great mistake is made when scientific agriculture is discouraged. The time has come when the denouncing of book-farming must end. Like a doctor's student, the young farmer may begin by reading books on the science he is to practice."

We quote thus freely, that no injustice may be done to the position of this leading Club. If the young farmer knows what to do, when he gets these "Directions," he will be fit to offer himself for President of the Club at its next election. Here we find a majority of the "wise men of Gotham," whose business it has been, for years, to fill books and papers with disquisitions, advice and instructions to the agriculturists of the whole country, advising this unlucky young man, who, in a moment of rural enthusiasm, ventures on the purchase of thirty acres—that he can rely upon nothing that has been done or recorded in the great business of Agriculture since the days of CATO to the present time. That he is to rely solely upon ocular demonstration and experience under the tuition of some farmer, who has not had the audacity to reduce the mysteries of his calling to the unreliable form of book-knowledge; that in Agriculture, unlike every other business, the moment an experiment is reduced to a written formula it becomes totally unreliable, and proves only a snare to entrap the unwary. According to the opinion of these members of the Club, evidently, Agriculture can flourish in perfection only under that state of civilization described by HENRY A. WISE, when he "thanked GOD! that there was neither a school-house nor a newspaper in his district."

Seriously, what do these men meet for every week? What are their proceedings published for, if book-knowledge, written information, is worthless? if farming is only to be learned by experiment and routine in the field? Have they, alone, discovered the true secret of conveying reliable information? If there are no books worthy of being read by the young farmer—if all the knowledge attempted to be conveyed by all the earnest and devoted agriculturists since the days of the noble CATO to the present era of a JOHNSTON, a LAWS, a BOUSSINGAULT, a LIEBIG, and a host of other distinguished names, is an illusion, a distraction to the young farmer, then had we not better close up the American Institute, the New York Agricultural Society, and all kindred associations? If young farmers are to be told that there is no science of Agriculture, that there is no light to shine on their path in life except the light of experience—that their highest Instructor is some farmer who knows how to drive a team and hold a plow—that it must all be re-learned by each succeeding generation—that it is like the old way of carpentering, only a cut and try system—then farmers' sons do right to flee from it and engage in something which may be understood, and has some positive landmarks.

Says Mr. MEEKER, "Books are the doctor's tools—plows are the farmers tools." Does the doctor use only books to amputate a limb? But is he fit to operate as a surgeon till he has studied books on anatomy and surgery? After he has studied the books he must learn the use of the instruments, so also the farmer after he has studied the philosophy of plowing should learn to use the plow. Mr. MEEKER and Dr. TRIMBLE seem to forget that there is any thing higher in agriculture than the mere manipulation of the implements. If so, then the Irishman who uses the shovel to grade the embankment, is equal in knowlege to the engineer who laid out the work. This young man who made the inquiry of the Club, evidently did not seek to know the hooks that would learn him the mere mechanical routine of farming, but he wanted to be posted up in the principles of agriculture. There seem to be abroad some wild opinions as to what constitutes a practical farmer. Is the man who knows, simply, how to use the tools, a practical farmer? Or does it require in addition to this, knowledge of the adaptation of crops to soil—of how to keep up the fertility of the soil—of the laws of vegetable growth—of the laws of animal life and growth—of the whole question of the food of animals? It is the man who knows how to manage a farm, in all its various branches of activity, intelligently, with a full knowledge of the means to be employed and the object to be attained, who is a practical farmer. The man who knows, merely, how to use the implements, is as near a practical farmer as the boy who knows, merely, how to write the numerals is a mathematician. A practical knowledge of the use of tools is necessary, but a knowledge of the principles which ought to guide these tools is the first requisite. We would advise the young farmer to read, most attentively, JOHNSTON'S Chemistry and Geology applied to Agriculture, which is the simplest and most practical work on that subject; BOUSSINGAULT'S Rural Economy, LIEBIG'S Natural Laws of Husbandry, and FRENCH on Drainage. These works will do to begin with, and when read and understood by a man of practical ability, will enable him to manage a farm more intelligently than a life-time of mere routine.

Let him have the knowledge of principles and then if he performs his own labor, he will soon learn the use of the implements and apply the principles.

E. W. S.

HONEY COMB.

I SEE quite generally in the various journals, like the RURAL, an article to the import that "comb *grows*,"—is not *made* by the bees. I once knew two neighbors have a fight over the phrase "stones grow in the earth." On the trial before the Justice of the Peace for assault, the questions were asked, "if pebbles and stones grow, what do they grow out of?" "Did you ever see a stone grow?"

These puerile statements do no one good; for they are false, and no dignified editor will admit them, unless he is scarce of copy to send to his type setters. Who ever saw honey comb grow? What is it to grow out of? These solve the whole matter.

Any one can make a glass honey box; and then by watching the bees, when they build the combs *next to the glass*, they will see that the underside of some of the bees have white spots when comb is forming. When these get large enough, the bee begins to wriggle and shake itself more and more violently, until the little white spot becomes detatched, and is a small scale of thin, clear beeswax. Then the same, or oftener another bee, takes the little scale of wax in its *mouth*, or rather *mandibles*, as any one can see, and runs about with it, sometimes a half minute or more, and at last stops on the edge of a honey cell, and then fixes it to the *rounded* and *thick* tip or edge of the cell. Then the same, or another bee, usually another bee, puts his mandibles over the *thick* and *rounded* edge of the comb cell and bites quite hard. This is to *thin out and shape* the cell, but always leaving the thickened edge of the cell quite strong. Thus the cells are all made. So the process of cell

making is, 1st, the wax scale formed on the cavities between the scales of the skin or *epidermis* of the bee; 2d, the molding these wax cells as a part of the rounded and thickened edge of the cell, at the base, side or cap of the cell, be it in what stage it may of completion; 3d, the thinning and expanding of the round and thick edge or tip by the mandibles of the bees, at the same time shaping the cell by instinctive rule. This is the only way cells and comb are made. I have shown it to hundreds and will verify it any time my bees are building next to the glass, where the bees cannot crowd in such numbers as to hide what they do.

There are but few things not well known as to bees. The day for "mysteries" in bees has gone. Common sense rules bees, and should all ideas about them, that every intelligent man has.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

DEATH OF GEORGE WILKINS KENDALL.

We have received the following painful announcement:

OFFICE OF THE PICAYUNE, }
NEW ORLEANS, Oct. 22. }

We regret to announce the death of our Senior Associate, GEORGE WILKINS KENDALL. By a telegraph dispatch from San Antonio, Texas, we learn that this sad event took place at his residence, at Post Oak Spring, near Boerne, yesterday evening, at 9 o'clock, caused by congestive chills. Mr. KENDALL was about 60 years of age. He leaves a wife and four children.

A. M. HOLBROOK.

Mr. KENDALL is best known to the public generally as an author and as the founder and senior editor of the New Orleans Picayune. His "Santa Fé Expedition" and work on the Battles in Mexico are familiar to all readers; his journal is one of the best conducted and readable in the United States. But he is best known to the agriculturists of our country as the great sheep farmer of the South, the pioneer of that husbandry in Texas, the writer who has done more than all others to introduce, foster and instruct the people in its management in a region so adapted by nature to its profitable pursuit. As a writer on this subject he possessed, as he deserved, the entire confidence of his countrymen. He drew up no fancy pictures—indulged in no visionary speculations. Experience was his sole guide, and in exhibiting its results to the public he always gave both sides of the medal, recording a failure as frankly as the most eminent success. As a writer on this, as on other subjects, he possessed the rare art of giving the most dry details all the vivid interest of a well told tale. His style was vigorous, direct and crisp—while it had a most captivating ease and unstudiedness:—and gleams of quaint and irresistible humor flashed frequent through his discussions of the most prosaic topics. As an epistolary writer we never knew his equal. He was our close correspondent for years, except during the war, and the grace, wit and hearty mirth of his letters—their constant novelties of thought and expression—their uniform zest—their diverting illustrations—were all inimitable. As a conversationalist, he was equally brilliant. On his way to embark for France last year, he and his family paid us a visit. We seem to see and hear him now at the table, in the drawing-room, on the ride, and in the walk. How often we thought of CHARLES LAMB! His manner was not that of a professional wit. He was not "reminded of a good story" by everything which was said or done. He did not seize on every available opportunity. The flash came suddenly and as if inadvertently. The "good thing" was often uttered *sotto voce* only to the person in the next chair, and without any of those preparatory signals by which old stagers in such matters generally bespeak the attention of the audience. He did not seem to be witty on purpose—but only because he could not help it.

Mr. KENDALL had traveled in many countries, and mixed with the most refined society of all. He knew life and society in all their phases. He was a favorite among all classes. Gentle, genial and just—he had no enemies. Manly, decided and energetic—no one ever presumed on his passiveness. Never was there a franker or more outspoken man. His generosity was unbounded. He had a helping hand for all that deserved it. He and his wife—a most beautiful, accomplished and sensible woman, transplanted from the salons of Paris to the then almost uninhabited solitudes of Texas—dispensed a hospitality of which we of the North, in our different circumstances, witness no examples. The poor and the rich shared it alike. The one found substantial assistance—the other all the enjoyments of border life. Many are the young men we have sent to him with letters of introduction. All were delighted with his kind attentions. He was ever ready to make their stay a happy one—to enter into their plans and interests, and point out to them the best localities for settlement. He loved Texas with an absolute devotion. He never was tired of writing or speaking in its praise. He loved its vast expanses of solitude, its majestic plains, its noble rivers, the green hills of the county named after him, and its masculine, energetic population. Texas will deeply miss and mourn him. Perhaps she had no citizen which she could have so ill afforded to spare. She certainly has none who can entirely fill his particular place.

We wish we could give the outlines of his biography—but we have but few materials. He was born at Mount Vernon, New Hampshire. His father was a merchant and gave him good early advantages. But his father was ruined in his pecuniary affairs by becoming security for others. Young GEORGE determined to learn the printing trade, and he and HORACE GREELEY were apprentices together in the office, we think it was, of the Concord (N. H.) Statesman. After this he led a somewhat roving life, but in 1834 "turned over a new leaf," went to New Orleans, established the Picayune and entered on his career of success. He went to the Mexican war with the Texan Rangers, under BEN. MCCULLOCH. He subsequently became an Aid of Gen. WORTH, and was in many of the battles he has described so vividly. He married ADELINE, daughter of Col. DE VALCOUR of the French Army. He left two sons and two daughters, the oldest about seventeen years of age. We do not remember the year in which he emigrated to Texas and established his great sheep farm there. He was decidedly successful in this business up to the period of the recent war. His losses were large during that struggle, but his family are left in affluent circumstances.

A year since Mr. KENDALL was in the full flush of health and strength. We had heard no complaints of illness from him since. We had recently read his lively editorial letters in the Picayune. The ink was but just dry on his last letter to us. His last disease was therefore doubtless short. It is with unspeakable sorrow that we chronicle the premature death of this able, brilliant, useful and good man.

YOUNG ROGERS,

THE PROPERTY OF ALFRED LEACH, RICHMOND, ONTARIO CO., N. Y.

"YOUNG ROGERS," two years old, bred by W. H. B. ROGERS, Honeoye Falls, N. Y., was got by Curly, by Rogers' Sweepstakes, by Hammond's Sweepstakes. Dam a first-class Atwood ewe. His second fleece of 11 mos., 27 days growth, weighed 23 lbs., 8 ozs. Mr. LEACH'S ewes sheared on an average 10 lbs., 1 oz. of washed wool.

PRESIDENT STILSON'S VIEWS.

THE National Wool Growers' Association does not contain a more energetic and faithful member than ELI STILSON, Esq., of Oshkosh, Wis., President of the State Association. The Oshkosh Northwestern of Oct. 17th publishes a letter from him, from which we cut the subjoined extracts. We omit certain political allusions, which would not comport with the political neutrality of this department, and we have not room for his closing vigorous remarks on the introduction of wool manufactures in Wisconsin:

"My attention has been called to an article in the Oshkosh City Times, which attributes the present low price of wool to the existing tariff on wool and woolens. As one of the leading wool growers of the State, and as President of the State Wool Growers' Association, I am unwilling that such sentiments should be imputed to the great mass of wool growers of the State. There may be a few wool growers whose party prejudices are so strong that they are bound to go it blind; or there may be a few who expected the price of wool to go up with a bound, regardless of the vast stock of imported wool and woolens on hand at the time of the passage of the present tariff, and it having failed to do so, they have lost faith in it. But the great mass of the wool growers of the State have the same faith in the tariff on wool and woolens that they had on the fourth of March, when the telegraph brought us the glad news that it had become a law of the land; and wo be unto the politician that lays hands on it to repeal it, until it has had a fair trial. * * * Free trade can mean but one of two things: a repudiation of the National debt, or the doubling up of the internal revenue. But while some politicians are laboring to knock the wool growers in the head, the Chicago Tribune, one of the bitterest enemies of the wool grower, is laboring for the same end, and both set up the same lamentation. 'Poor wool growers, how we pity you, because of the low prices of wool; but it is all caused by the passage of the tariff on wool and woolens.' But the truth is, and they know it, too, that if it had not been for the passage of the present wool tariff, we should have seen a perfect panic in the wool market, owing to the excessive importations of wool and woolens; wool would have gone down to 25 or 30 cents per pound. Who are these new-found friends of the wool grower, that are setting up such a wail on our behalf because of the low price of wool? Wool growers of Wisconsin, we can tell you who they are,—we know their ear-marks well. They are men who have combatted us in the halls of Congress for the last two years, and have endeavored by their chicanery to prevent the passage of the wool tariff. They are men who have endeavored to array the consumer against us by telling him that if the tariff was passed he would have to clothe in rags, woolen goods would be so high; and their prophecies having proved false, woolen goods being no higher, they turn to wool growers and say, your wools are lower because of the tariff. And here let me call the particular attention of the consumer to the fact, that these political demagogues having voluntarily taken the witness stand and testified that our wools are cheaper because of the tariff, are now precluded from testifying that other things are dearer from the same cause, without impeaching themselves. We know their hiding-place, where they will attempt to hide and dodge this conclusion,—but we will smoke them out of it before we have done with them. Their hiding-place is this: that owing to the new duty, they say that the manufacturers have not been able to import certain kinds of wool that they want to mix with ours, or to manufacture alone, so as to successfully compete in the sale of goods, and so they have closed their manufactories. At the Syracuse Convention the wool growers put the question to the manufacturers, 'What kinds of wool do the manufacturers require, that we do not now produce in the United States, so as to supply the demand?' Answer: 'Coarse carpet wools, long combing wools, and the finest Saxony wool, such as we used to get before the war from West Virginia.' Now on either of these classes the tariff has not been raised, but remains as before on wool costing less than 12 cents or more than 24 cents per pound in a foreign port, and the coarse carpet wool costs less than 12 cents, and the long combing wool and fine Saxony wool cost more than 24 cents; hence the manufacturers have not had to stop because of a change in the tariff on those kinds of wool,—for there has been no change, and these are the only kinds, they say, that is absolutely necessary to import. Hence the statement of the Chicago Tribune that the manufactories are closed or running on short time, because they cannot import certain kinds of wool that they need under the new tariff, is absurd, and recoils on the head of its promulgator. But stop, whispers a free trader at my elbow, there is one other hiding-place. Well, what is it,—out with it; but he does not like to tell. He says all the world will laugh at him if he tells. Well, if he will not tell, we will. Men may be known by the company that they keep; the answer is *Shoddy*. The wool growers have been guilty of putting up the duty on Shoddy to 12 cents per pound, or a trifle more than the duty on clothing wool; and while the honest manufacturer has been compelled to close his doors, or run on short time because of the excessive importations of woolen goods, which amounted to more than fifty millions of dollars in 1864, the Shoddy manufacturer has had to close his doors because these wicked wool growers have been guilty of levying a higher duty on Shoddy than on clothing wool; and all the world, free traders and Shoddyites excepted, say amen. We also know these sympathizers of ours as a class who have endeavored to array the wool grower against the manufacturer, by saying the manufacturers had got the advantage of us; that they had got the lion's share of the protection; that we had not asked enough; and they now say that what we asked, and got, is the reason our wools are so low; and if we had asked more, and got more by the same reasoning, our wools would have been still lower. We asked for and got that tariff, which we believed to be just and fair between the wool grower, the manufacturer, and the consumer, preferring a moderate tariff that shall give stability to wool growing, rather than a high one that will cause inflation and over-production, and finally a repeal. The Chicago Tribune has admitted that of all classes asking protection, the wool growers were the most moderate.

"'Why is clothing so high and wool so low?' The manufacturers cannot be the cause of it,—for if they were making large profits they would run on full time, and the statement that they are making 50 per cent. bears on its face the evidence of falsehood. Politicians should have better informed themselves on this point, unless they supposed the people were ignorant and would swallow their nostrums without inquiry. The true reason that clothing is higher than wool is, that there is levied upon wool and wool clothing one-sixteenth of all the internal revenue, or near twenty millions of dollars, or one-half the value of the wool clip of the United States. It is a wonder that a commodity that is taxed, and taxed again, and re-taxed, until the taxes on the article amount to one-half the cost of the raw material, should be so enhanced in value.

"'The result of being compelled to abandon wool growing.' We wish to keep our sheep that we may keep up the fertility of our farms, and diversify our industry. If we depend entirely on wheat, we soon exhaust the fertility of our farms, and our lands will soon be like the worn out cotton fields of the South. There are in the United States thirty millions of sheep, consuming annually thirty millions of bushels of corn, (sheep in Central Illinois consume more than twice that ratio,) and giving employment to 100,000 men to provide food and care for them, and they and their families number half a million, and if we are driven from wool growing we shall crowd every other class of producers, and bring down their prices, and in precisely the same ratio that we are driven from wool growing shall we crowd every other class; and to the laborer we say, if he wishes to bring down the price of woolen goods,—or, in fact, all other manufactured goods, to the price that they bring in Europe, then he must expect that the price of his labor must go down to the price of labor there, and we do not think he would relish that."

The Poultry Yard.

CHICKEN CHOLERA.

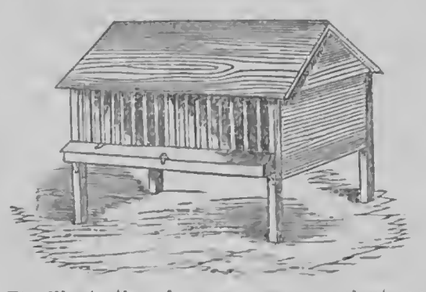
IN the Report of the Department of Agriculture for August and September were two communications from the West concerning the chicken cholera, which was so fatal there—especially in Iowa. One of these letters says:

"For the last two years my chickens have been dying of cholera; even turkeys have died the same way. When I notice the hens begin to droop and look sleepy I give them three or four teaspoonsful of strong alum-water, and repeat the next day. I also mix the feed, (say corn-meal,) with strong alum-water, feeding twice a day for two or three days; afterwards once a week. Since I have practiced the above I have not lost any."

Another gives the following remedy:—"Take, say, two eggs, a tablespoonful of finely pulverized alum, and a sufficient quantity of flour to make a thin paste, and force the chicken or turkey to swallow a portion of the mixture, and there are two chances to one that it will recover. I have used this remedy for two years with good success. I have also found it necessary, as a preventive, to use more or less alum in their feed, once a day, when the disease prevails. Fowls should never have access to slop or swill-tubs, or any other kinds of sour food."

FATTENING POULTRY.

THE poultry yard is a source of profit to the farmer, which is greatly lessened or increased according to the skill and care with which the business is managed. One branch in which much improvement may be made by most farmers, is that of fattening the poultry for market after it is nearly or quite grown; not much care is generally exercised in this respect, though it is common for dealers to buy of farmers and make a good profit by finishing it off for the market.



The illustration shows a very convenient coop for the purpose of fattening fowls. It should be made to hold one dozen, and its size is as follows:—Length three feet, width two, height two and a half. The sides and ends are composed of bars placed about three inches apart, and the bottom of round poles. It is elevated about two feet from the ground by means of legs. The feeding troughs are along the sides on the outside. The coop should be placed in a barn or some place sheltered from storm and wind, and if slightly darkened so much the better. By judicious feeding fowls can be thoroughly fattened in twenty days.

POULTRY ITEMS.

Feeding Fowls.—Fowls are partial to most kinds of vegetables when cooked, eating them as readily as grain and with manifest advantage as a change of diet. They are fond too of flesh, especially of horse meat and beef, if cooked, and supplied at suitable intervals. Refuse meat, from the butchers' stalls, can be disposed of more profitably to fowls than to cure, the majority of which are good for nothing except to worry sheep or to make night hideous by their howlings.

About Setting.—Some hens have the incubating fever so strong sometimes as to render it difficult to get them to give over the notion of setting when they are not desired to do so. To cure them of this, various plans are resorted to. Sometimes they are treated to tossings into the air,—successive immersions in cold water and other chastisements according to the temper and knowledge of the owners. A man in Ohio says he cures them by tying the hen to a stake near a path which is frequently traveled, giving a play of string of three or four feet. It is said that one day's confinement in this way, with the frequent scares she will get, will put all setting notions out of the hen's head.

Salt for Gapes.—A correspondent of the Southern Cultivator condemns the use of salt as a cure for the gapes in fowls. He says:—"Salt is a powerful styptic, and a deadly poison to all kinds of fowls." Have any of our readers tried salt as a remedy for gapes, and if so, with what results?

Guinea Fowls—Profit.—These fowls, when a number of hens are together, it is said will all lay their eggs in one place till the instinct of setting begins to operate, when each will make a nest, or sometimes two will club together in laying and setting. When the chicks come out they must have a free run, as confinement is fatal to the brood. The Guinea is a prolific layer, but her noise sometimes is rather annoying.

Poultry Houses.—It is advisable, in the construction of poultry houses, to use pine lumber—the more pitch it contains the better—as this is very offensive to poultry vermin. Some think it pays well to make the roosting cribs of pitch pine boughs as a protection from their greatest enemy—lice.

Give them Ashes.—Where fowls are confined in considerable numbers to a restricted enclosure they should have a good supply of wood ashes to wallow in. It will pay to fill a large box with ashes and place it under shelter where the fowls can use it at pleasure. It is a pleasure to them, as is manifest by the eagerness with which they avail themselves of this means of purification.

Rural Notes and Items

THANKS TO THE PRESS!—We bend in grateful (if not graceful) acknowledgment of the very kind and appreciative notices of the RURAL NEW-YORKER which are being given now-a-days by our brethren of the Press all the way from Maine to Minnesota and Canada to California. Such cordial and strong commendations of the RURAL as we are daily receiving from the best judges of journalistic merit—editors of newspapers—are most encouraging, and sincerely appreciated. We shall continuously strive to render the RURAL worthy of the highly complimentary notices of its contemporaries, and never omit an opportunity of reciprocating the fraternal kindness of which we are the recipients. Thanks, good friends!—May your sheets and shadows never be less, and your subscription lists continually elongate!

THAT SHEEP BOOK PREMIUM—*A Lucid Explanation.*—The following paragraph appeared in the RURAL of the 19th ultimo:

Which is Right?—In publishing the awards of premiums on Sheep at the recent State Fair the Buffalo papers gave the Practical Shepherd as the book premium, but the Country Gentleman substitutes Morrell—an obsolete work, which has been out of print for years! This looks queer, to say the least. But as a book of some kind was awarded we print it *Book* in our list, and respectfully ask for the title.

The Cultivator and Country Gentleman of the 24th ult. contains this explanation:

Correction.—The book premium, in the sheep classes, at Buffalo, should have been 'Practical Shepherd," instead of "Morrell," as published in this paper of Oct. 10th, p. 237. The error arose from the fact that the prize list, as we published it, was copied by our reporter, at Buffalo, from a printed blank, on which the new book had not been "substituted" for the old one, and we did not discover the lack of the correction until our attention was called to the subject.

We are glad to learn that the "substitution" was simply an "error," and not (as some sheep breeders supposed) attributable to enmity or unfriendliness toward either the author or publisher of The Practical Shepherd. But we *are* surprised that a journal which advertises itself as "The Best of All the American Newspapers devoted to Rural Economy" should be so non-progressive as to mislead its readers by the use of an obsolete "printed blank." A friend at our elbow forcibly suggests that the confession of the C. & C. G. (which must have borrowed some of the State Ag. Society's "printed blanks,") only proves the truth of our reporter's recent assertion concerning the State Fair Premiums, viz.,—"We have heard, but will not absolutely vouch for its being a fact, that this premium list was made out some forty years since, stereotyped, and even to the present day the same venerable plate is used."

HEMLOCK LAKE UNION FAIR.—F. Y. M. writes us that the Union Fair held at Short's Driving Park, Hemlock Lake, N. Y., Oct. 16th, was a decided success. The show of farm stock, of all kinds, was unexpectedly large and superior in character, showing that the farmers of the towns of Canadice, Conesus, Lima, Livonia, Richmond and Springwater, forming the "Union," are awake to their interests, and resolved to employ all proper means to promote them in the future. The Fair was attended by about 5,000 people, affording means for defraying current expenses and a surplus to aid in the erection of a suitable building for future exhibitions. The sentiment in favor of this was unanimous—a sure indication that the Society is a live one and has a bright future.

WILLIS' STUMP MACHINE.—We learn from the Addison Advertiser that Mr. WILLIS has recently been doing an extensive business in tree and root dentistry in Steuben country, with his famous stump extractor—closing by selling four machines. One of the purchasers pulled and cleaned stumps (pine) from seven acres in as many days with the help of two boys and one span of horses. The demand for this machine wherever tested, proves its value and increasing popularity. Those who have recently ordered machines will regret to learn that the Novelty Works, where they are manufactured, was burned last week—but Mr. WILLIS assures us that the delay will be only temporary, as his mechanics have already resumed operations.

PROVISIONS—PRICES.—The Ohio Farmer, alluding to the clamor of the Press at the east for cheap bread, says:—"We are under the painful necessity of telling them, they will not get cheap bread until another harvest; meanwhile they may continue to cudgel their brains for such reasons as suit their style of philosophy." This will prove consolatory to those who have breadstuffs to sell, but to such as have to buy, with restricted means of payment, the prediction will prove less cheering.

WILD GEESE ON THE WING.—The wild geese from northern lake regions have commenced their southern hegira rather earlier in the season than is customary with them. From this fact the weather-wise infer the early advent of winter. We must have a heavy fall of rain before things will be in a proper situation for a freeze-up. One thing is certain—if farmers are not ready for winter this season it is their own fault, as the weather for closing up was never better.

WESTCHESTER COUNTY WHEAT.—SAMUEL SINCLAIR, Croton Landing, raised five and a half acres of wheat the past season which yielded 150¾ bushels, or a fraction short of 30 bushels to the acre. He applied 1¾ tons of bone dust and sowed the grain on the 16th of October. This is a handsome show for any section and especially so for old ground in Westchester.

A SWAMP ON FIRE.—As an evidence of the severity of the drouth, for a long time prevalent in Western New York, the Batavia Spirit of the Times states that the Tonawanda Swamp has been on fire for several days, causing much distruction of timber, fences, &c. The swamp generally has become so dry as to ignite as readily as tinder wherever a spark of fire falls.

A TOUGH WHEAT STORY.—A correspondent of the Detroit Free Press, writing from Saline, states that JOHN A. SMITH of that town harvested from five acres 300 bushels of wheat, or 60 bushels to the acre, and from another field the yield was 40 bushels per acre. We think both these statements might be modified somewhat and be quite as near the truth.

CHEESE FACTORY IN PARMA.—The first cheese factory put in operation in Monroe County is located on the Wadhams farm on the Ridge road, Parma. It commenced in June with one hundred cows. Eleven thousand pounds of cheese have been manufactured at the establishment.

A CORN MACHINE.—A member of the "Oneida Community" has perfected a machine for cutting corn from the cob. It cuts any sized ears, and does as much work as four men could by the old process.

HORTICULTURAL.

FLOWERS THAT STAND HARD FROSTS.

EDS. RURAL:—I present you with a collection of Flowers cut this morning (Oct. 28th) for the purpose of showing the varieties that will endure quite hard frosts without injury. In September we usually have frosts that cut down every thing tender, and after this more than a month of delightful weather. It is interesting to know which of our flowers will endure the early frosts without injury, and give us plenty of blossom in the garden until winter commences in earnest. JAS. VICK.

The above note was laid on our table this (Monday) morning, Oct. 28th, and in connection therewith a collection of fresh and brilliant flowers, which at this period of the year, after the many hard frosts that have entirely defoliated the forests, is truly surprising and worthy of noting for guidance in future planting.

First here is the stately and brilliant *Tritona Uvaria*, a fine illustration and description of which will be found in the issue for May 11th of the current volume.

Phlox Drummondii is particularly varied and fresh in color. No annual exceeds this for a brilliant and constant show; it is an excellent bedding plant and makes a fine border or low hedge. It presents a mass of dazzling bloom from early summer until snow flies. We give on this page a good illustration of the flower and stem of Phlox.

Delphinium formosum, a perennial Larkspur, is a spike of brilliant blue flowers with white eyes. An illustration will be found in the issue dated Aug. 3d of this volume.

Double Dwarf Scabiosa of various colors. The Scabiosa is shown in the number dated Jan. 5th of this year. They are very showy flowers, excellent for cutting, and of many colors.

Verbena.—There are several colors in the handful of this delicate and choice bedding plant. Who does not admire a bed of fine Verbenas—especially at this season?

Ten Weeks Stock.—This fragrant flower is a great favorite, blooming, as it does from July to November. Transplanted to pots it makes a fine house plant, giving flowers and fragrance all winter; therefore, don't let Jack Frost finally have your best specimens.

Japan Pinks are rich and varied in color, and look fresh as though their season was but just begun.

Carnations are fragrant, varied in color, and full of unopened buds. They, too, will bear potting and house culture.

Antirrhinum.—Showy spikes of flowers.

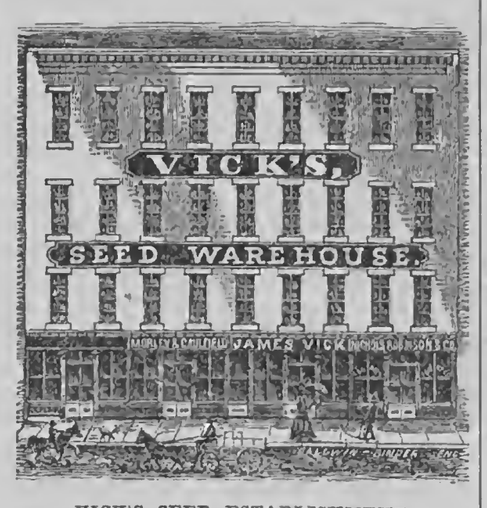
Petunias are well known as splendid bedding plants, making a brilliant show all summer. Standing the frost well adds much to their value.

Pansies grow brilliant as the season wanes; they are pre-eminently valuable for show late in the autumn and early in the spring. The collection before us embraces a great variety of colors. Pansies should be transplanted now into beds for next spring's showing.

Lychnis Chalcedonica is a bright scarlet perennial, the clusters of flowers somewhat resembling verbenas.

Hollyhock.—Very brilliant and showy.

We have indicated those varieties in the above list that have been portrayed in this volume of the RURAL; the rest have been illustrated in former volumes.



VICK'S SEED ESTABLISHMENT.

JAMES VICK is a name fast becoming famous—a household word—among the cultivators and lovers of Flowers all over the land. And its possessor is entitled to both fame and fortune for his persistent, long-continued and successful efforts to improve the taste for and culture of the most beautiful products of the Floral Kingdom. As an editor and writer Mr. VICK accomplished much, years ago, (through the pages of the Genesee Farmer, Horticulturist and RURAL NEW-YORKER,) to promote improvement in Floriculture,—and we have known him as a careful and successful cultivator of choice flowers for over a quarter of a century. For many years he was an amateur—cultivating flowers for the love of them only; but a few years ago he entered the arena as a professional cultivator, and also as an importer and grower of seeds, bulbs, etc., in which field he rapidly acquired a reputation and celebrity that places him in a most enviable position. From a comparatively small beginning Mr. V. has, by care, industry and the display of rare taste and skill, established an immense trade—so great that he has been obliged to largely increase his grounds, and seek a commodious block for his headquarters in this city—both of which are briefly described below.

Mr. VICK'S Warehouse, represented above, is in a new building on Mill st., near the post-office, and between the offices of the two principal Express Companies. The establishment occupies a block 65 by 45, and four stories in height. On the lower floor are the office and sales-room for home customers; the next consists of a large room where seeds are packed to fill orders—fifty persons, or more, being thus employed during the business season—a room devoted exclusively to the work of opening letters, of which a thousand are sometimes received in a day; another room contains the orders filed for future reference. On the third floor one large room is used for packing flower seeds in bags, another for vegetable seeds, and there is likewise a printing room filled with presses, &c., for working the colored plates and putting the Catalogues and other matter in type. The upper story is used for storage.

The Garden and Grounds of Mr. V. are principally located on East Avenue, where he resides. He here owns and cultivates twenty-three acres. These grounds are mostly devoted to growing flowers for seed. The display of flowers during the season has been far ahead of any thing of the kind ever before seen in this country. More than one hundred thousand tulips bloomed on the ground, and the most prominent varieties of annuals opened their brilliant blossoms over many acres.

—If any think the above a simple "puff," or paid for or solicited notice, they are mistaken. It is entirely voluntary, without hint or solicitation from Mr. VICK,—given because we believe the man and his establishment worthy of being commended to the tens of thousands of our readers who cultivate or admire the most beautiful of earth's products—Flowers.

PHLOX DRUMMONDII.

SENEÇA BLACK CAP vs. MIAMI RASPBERRY.

I ACCEPT Mr. PURDY'S proposal, contained in RURAL of Oct. 26, for the exchange of plants and testing of their claims by Fruit Committee, as you suggest, with this condition: that the plants exchanged be selected or assorted by some competent raspberry grower, and would name O. J. WEEKS of West Webster, N. Y., as a suitable person—each party to pay him for his services in visiting their respective grounds and assorting their plants. I make this condition because I assort out as worthless from one-tenth to one-half of all the plants I send out,—but the common practice of dealers is to call every piece of cane that has roots on a plant; and, further, I believe Mr. PURDY'S practice is to permit his irresponsible laborers to fill his orders, because a year ago last spring I received 25 plants from him in three days from packing, and not one of them could I make live. They were black and rotten, while strawberry plants, in the same package, were fresh,—*i. e.*, the raspberry plants were rotten when packed, and whoever packed them knew it, if they knew anything about their business, which I suppose Mr. PURDY does.

If Mr. PURDY accepts this condition he can notify Mr. WEEKS when he is ready for him to select the plants. H. H. DOOLITTLE.

Oaks Corners, N. Y., Oct. 26, 1867.

GRAPE CULTURE.

THE primary conditions of successful grape culture, says WM. GRIFFITH of North East, are, a well adapted climate, suitable soil, strong healthy plants, of varieties suited to the particular locality to be occupied, and thorough tillage. Many other things are important, and by no means to be disregarded; some of which, in order to secure any great measure of success should receive careful attention; but these are altogether indispensable, as experience has abundantly demonstrated.

The isothermal lines indicate with tolerable accuracy, the requisite temperature, and with due deference to different varieties, may be relied upon to determine the boundaries and fix the limits of what may be regarded as grape or wine-growing districts. It will be borne in mind that these lines are seldom found to traverse the lines of latitude, for any considerable distance, being interrupted and varied by local conditions, as by large bodies of water, altitude, &c., so that, in many instances, they cross lines of latitude at angles quite acute, so as not to be recognized, except by scientific observations; in other cases they are interrupted and diverted suddenly, with variations of several degrees.

Perhaps it may considerably abate the anxiety of some who are about to plant vineyards upon the south shore of Lake Erie, to be reminded that in the application of this test, we are nearly in range with Cincinnati; and I will take occasion here to observe, that additional encouragement is guaranteed by the fact that the rain fall, during the growing season, is at least one-fourth less on our lake shore than at Cincinnati, and along the southern boundary of Ohio; and when it is remembered that, except in the very driest seasons, we have here more rain than is desirable, the relative chances of success are seen to be greatly in our favor.

In making these comparisons, I by no means intend to undervalue the Ohio valley, as a grape or wine district. My only object is to relieve our own cultivators from their ill-founded apprehensions and misgivings, regarding low temperature, &c. Again, those districts, or sections of country, where the health and vigor of vegetation is maintained for the greatest number of days, are, as a general rule, most favorable for growing and ripening the grape.

To maintain the life and vigor of grape foliage for the longest possible period, is the great desideratum in grape culture; and hence those sections of country most favorable to this condition, may be regarded as the best grape districts. At the first view, the reader will be likely to conclude that these sections are to be sought for in the Southern States, that, as a matter of course, the country will be found less favorable for grapes as we pass to the North. But this is by no means the case. Indeed it is so far otherwise as to fix the southern limits of practical grape culture north of the 30th parallel. It is the opinion of the writer, from many years experience and careful observation, that the narrow belt of country lying along the south shore of Lake Erie, will compare very favorably with the best localities on the Continent, east of the Rocky Mountains (or west indeed, for that matter) in its adaptation to growing grapes.

Thus, while the unseasonable and blighting frosts, both late in the spring and early in autumn, are the great terror of our grape growers in Missouri and Southern Ohio, we are here so far exempt, as to be almost entirely freed from anxiety. Again, colder periods have been realized at Cincinnati, and even as far south as St. Louis, than ever have been registered along our favored "south shore."

Regarding what kind of soil is best adapted to growing grapes, there has been, and still continues to be, a great variety of opinions. On the one hand it is contended that clay soils are always to be preferred, and the stiffer and the heavier the better; while others maintain the superiority of the light soils, and, as if insisting upon the opposite extreme, they tell us the "lighter the soil the better;" while others again, planting themselves (and their vines as well) upon middle ground, prefer a gravely loam, or shale, with a slight mixture of clay, and *always*, the drifts, to any and all other conditions, or combinations of soil.

But it is worthy of remark, that very satisfactory results have frequently been realized upon every variety of soil, and therefore, by the every where recognized rule—"by their fruits," &c., no composition of soil, as yet occupied, can, as a matter of course, be rejected. The truth is, the nature and condition of the subsoil are of far more consequence than the nature or composition of the surface; and as my main object is to impress and instruct beginners, I will take the liberty to add, though perhaps out of place, in a formal discussion of this subject, that atmospheric conditions, aside from temperature, are vastly more important than anything relating to the soil, or the depths below, intermediate or remote. And yet, it must be born in mind, that a dry soil, or a porous subsoil, or such thorough and complete drainage as will allow the water to pass freely from *even the lowest roots*, is indispensable. And as this is a condition hard to maintain, or even to secure temporarily, except at an expense absolutely impracticable, upon the stiff clay beds, my own preference is for a lighter soil, and *always* for the drift soils. But more upon this point, when I come to consider the preparation of the soil for planting, &c.

In putting out a vineyard, it is all important to secure *strong*, healthy, well-rooted plants. The conditions if "feeble and sickly," and "vigorous and robust," or healthy, belong as well to the animal kingdom; and when it is considered, that these habits are as often "constitutional" in the one case as the other, the relative value of good and poor plants, or rather the desirableness of the one, and the worthlessness of the other, will be apparent. What farmer does not know that a two-year-old steer is less valuable than a yearling of the same size and proportions; and in this respect, only in a greater degree, is a "yearling" more desirable than a two-year-old vine.

I have a vineyard, embracing several acres, and planted with five varieties, in about equal proportions, in the spring of 1866—last year, *only* sixteen months since, from which, in about 14 months, I expect to gather grapes enough, at a very moderate price, to pay the entire cost of the land, which was $200 per acre; while a neighbor of mine, planting at the same time, will not get grapes enough to pay for gathering. And just here I will take occasion, most earnestly to invite and urge the neighboring grape growers to call when convenient, and examine this vineyard; and though it may seem like boasting, I will venture to suggest, that it will pay them, even though they may have to step a little out of their way.

In relation to the adaptation of varieties to particular localities, or sections of country, I observe, that our experience will not warrant a definite determination in all cases, or even generally; nor can we perhaps even expect to be able to satisfy ourselves, in a *majority* of cases, except by that only sure test, experimental demonstration, "Try all things" is wisdom's injunction, and one that should be "brought home" to every one about to plant a vineyard to a new variety, or one that has not been fairly tested in his near vicinity.

No grape should be regarded as of any value, for vineyard purposes, when, as a general rule, it does not carry a healthy leaf *throughout the growing season*, and mature both fruit and wood perfectly.

The Catawba is a splendid grape; the Delaware is even better than the Catawba; while I do not hesitate to affirm, that the Iona is better than either. But any and all of them are good, "*very good.*" Plant them, you who are so fortunate as to occupy sections and situations known to be favorable to their production; but you who are so unfortunate as to be situated outside of the boundaries of "Canaan"—(though as for myself, my Canaan is limited by these lines, and if I was not quite certain that I was safely within them, I would "strike my tent" at once and travel; nor should the sole of my foot "find rest" until I reached the "promised land," even though I might "wander in the wilderness" for forty years)—you "Egyptians," plant you only such as Providence has provided, or will approve, be they Isabellas, Hartford Prolifics, Norton's Virginia, Ives' Seedling, or even Concords; and attend *punctually and constantly* to their proper cultivation. Gather in due season (not before) their luscious fruits, eat, drink, and be content; or if you find with the writer, that you cannot be satisfied with *them*, and such as these; why then "rise up quickly" and come to the "south shore," or go to any other place, where the choicest grapes can be grown as successfully, if indeed there be such places; and I for one, shall be happy to learn that there are many, and of great breadth.

The importance of thorough tillage, frequently stirring the surface, and keeping the vineyard entirely free from grass and weeds, it is believed is not very generally appreciated, even by our oldest and most experienced cultivators; and therefore, as I do not design to write lengthy articles, I will omit the discussion of this branch of my subject, for the present.

Horticultural Notes and Queries.

A "FREAK" IN APPLES.—MR. RUSSELL PARK, Geneva, N. Y., has forwarded us a branch of an apple tree, which, from the same graft apparently produces two varieties of apples. The fruit is supposed to be the russet, and some perfect specimens are on the branch; a few inches above and at the end are some having the outside appearance of greenings, but the flavor varies but little if any from the russet. We have often seen greenings, to all outside appearance, on russet apple trees, while the flavor and flesh were true russet. This appears to be a similar case, though it is possible that a "freak" has occured and a variety differing somewhat from the original has grown on the same branch with it.

THE QUINCE BLIGHT—SALT.—We are informed that a gentleman in this city observing that his quince trees were being blighted and dying off, resorted to the use of salt as a preventive. He dug about the roots of the affected trees; supplied a liberal coating of salt to the soil and replaced that which had been removed. The result was that the present season passed over without any appearance of blight while the yield of fruit was munificent in quantity and in quality all that could have been desired. If the salt was the cause of the improvement—and such is assumed to be the fact—why may not equally beneficial results be obtained by a corresponding application to the roots of pear trees? It will cost but little to make a trial. If successful, the gain will be great, but should the experiment result in failure the loss will be a trifling one. Try the salt next year.

AMERICAN POMOLOGICAL SOCIETY.—The Secretary of this Society, F. R. ELLIOT, Cleveland, Ohio, has issued a circular letter to the friends of Pomology, soliciting communications for the biennial report of the Society, soon to be issued. Information relative to new seedlings; the comparative values of different fruits; diseases of the same; soils adapted to the growth of the various kinds, is solicited. Also samples of new seedlings or unnamed fruits, that comparisons, drawings and descriptions of the same may be made and forwarded to competent pomologists for information in regard to them. The American, United States and Union Express Companies will transport all samples and packages of fruit, for these purposes, free of charge. Due credit will be given to contributors for the information supplied. Address Secretary ELLIOT, Cleveland, Ohio.

APPLES IN MICHIGAN.—In portions of Michigan apples are quite plentiful. The price per barrel, for shipment, is from $1.75 to $2

IT is said that most failures in planting raspberries and blackberries, arise from planting too deep.

Domestic Economy.

PREMIUMS FOR LADIES.

To the many inquiries from ladies, asking whether we offer the same Sewing Machine Premiums for clubs as last year, we answer—Yes, and "more too." We offer the WHEELER & WILSON and HOWE Sewing Machines; LAMB'S Family Knitting Machine; Washing Machines and Clothes Wringers; and also Castors, Photograph Albums, and various other articles. Send for our Premium List. Many ladies have already opened the campaign, but there is yet abundant time for any one so disposed to form a club and secure a valuable premium. We send specimen numbers, show-bills, prospectuses for names, etc., free to all applicants.

CIDER MAKING—OLD AND GOOD RECIPE.

THE following letter dated Raleigh, July 25th, 1819, contains sound advice:—Three months ago I was at the house of Nicholas Nall, Esq., who lives near Deep River, at the upper extremity of Moore County, where I drank old cider of a very superior quality; and as the habitual use of cider is eminently conducive to health, insures sobriety, imparts the agreeable sensation of strength and vigor, and is a pleasant beverage that can be afforded at a small expense, I took care to be exactly informed of the manner of making, refining and preserving it, in hope that advantage might accrue in the publication of it. Mr. Nall had in his cellar, as well as I now remember, about eight or ten hogsheads and fifty or sixty barrels of cider of different ages—the oldest was best; nor did he think any was fit to drink until it was at least a year old. That which I drank was three years old, and it was excellent. His oldest cider I did not taste, as he intends it as a treat for his executors. He complained that his stock was too small to drink it of the age he wished, but intended to fill another cellar. I here copy Mr. Nall's recipe, as he gave it to me in writing in April last:

All apples fit to be eaten will make good cider. The grand secret is in cleansing it from the filth and dregs as early as possible. Each sort of apples are to be beaten and pressed by themselves. Two kinds of juice, both good, would if mixed often make bad cider. Throw out all imperfect, sorry and sunburnt apples, as well as dust and trash. Beat your apples before much mellowed, as they lose their strength, soundness and spirit, if too mellow. Let them stand half a day after being beaten, before put into the press; then press them slowly; discontinue it as soon as the juice appears thin and watery. The advantage of slow pressure is in making the liquor run pure. Let your casks, previously well cleansed, be filled quite full, to permit the froth and pumice to discharge itself at the bung. When the fermentation abates, cover the bung closely with something that may be lifted by the fixed air that escapes during the future fermentation. In a week rack off the cider carefully, ceasing the moment you observe it to run muddy; now stop the cask more firmly. In ten days rack it off a second time, and in fifteen days a third time. In every instance the cask is to be clean and perfectly filled; and when filled for the last time, to be bunged close in a deep, dry cellar, never to be moved until drawn for use. Late cider need not be racked until March, and then one racking, or at most two, will be sufficient. Be very careful that no water, not even the little that will adhere after rinsing the cask, is mixed with the cider. The smallest quantity of rain water will render cider unfit to keep. The addition of any quantity of distilled spirits is not only useless, but injurious. Mr. Nall's method is the result of long experience, and its success justifies me in recommending it to the public. I hope it will be tried.

I ought to have mentioned that Mr. Nail told me he had for many years tried various plans for clarifying cider, to prevent its souring, by means of milk, isinglass, scalding and skimming, filtering through sand, &c., and found all useful, but is satisfied that frequent racking or drawing is far preferable to any other method he has attempted.

HOW TO KEEP MEAT FRESH.—Simply immerse it in buttermilk. This will keep it for several days, when the milk should be changed, and fresh milk substituted. In this way, beef, veal, &c., can be kept for several weeks and it will be as sweet and fresh at the end of that time as when first put in. Our butcher furnished us with the receipt. The whole neighborhood is now saving its meat in this way. It is equally efficacious in the hottest weather.—F. G., *in Rural World.*

CHICKEN SOUP WITHOUT CHICKEN.—Take one dessert teaspoonsful of flour and rub smooth in one gill of milk; put in one ounce of butter, and pepper and salt to suit the taste; pour in a half pint of boiling water, boil ten minutes, and pour over toasted bread. Thyme or parsley, as is most agreeable, may be added.

COTTAGE PUDDING.—One pint of flour, two teaspoonsful of cream of tartar, a little salt, a piece of butter as large as an egg, one cupfull of white sugar, one egg, a large teacup of milk with a teaspoonfull of soda well dissolved in it. Bake half an hour.

COTTAGE CAKE.—One quart of flour, three cups of sugar, one cup of butter, two cups of milk, four eggs, two teaspoonfuls cream of tartar, one teaspoonful of soda, one-half of a nutmeg, and a few currants.

INQUIRY.—Can any reader of the RURAL tell how soft tallow may be hardened so as to make good candles?—T. P. BOYD, *Liv. Co., N. Y.*

Ladies' Department.

Written for Moore's Rural New-Yorker.

APART.

BY HOWARD THURSTON.

THE world is wide, and I have tried
To think it better that we go
Our ways apart; but oft my heart
Refuses to believe it so,
And weary, longing, do I find
The struggle 'tween my heart and mind
Still undecided, still maintained,
While neither has the vict'ry gained.

It may be best.—I know no test
By which to judge if best it be;
I cannot tell if it be well
That heart and mind do not agree:—
I know 'twould make me happier
To feel my heart-strings sweetly stir
As in the by-gone days, without
The mind's protest—this lingering doubt;

And life would seem a brighter dream,
If, loving, as I feel I must,
I could but make my judgment take
The view my heart pronounces just;
And I could henceforth live my life
Unfretted by this haunting strife
That wages on, that will not cease—
This weary, longing prayer for peace!

There is no faith that to me saith
"Sometime you will be satisfied;"
I look ahead with nameless dread
Of what the future may betide:—
And still my heart will hope and long,
However weak it be, or wrong,
That somehow, sometime, doubt may be
Removed, and love may gladden me!

Written for Moore's Rural New-Yorker.

MARRIAGE.

THE blending of two souls in one is the true essence of marriage. Let us view it from this stand-point. A true soul-union, when properly entered into,—the parties both physically and mentally well-balanced, and congenially mated,—is conducive to happiness and longevity. It is pleasant to see two loving souls working for each others' advancement; no pulling upon different cords, but both moving in harmony. Angels love to rest their white wings over such households, where love is the guiding star. Would that our earth had more such homes!—the very atmosphere filled with love. As you enter, weary and dispirited, a soft, soothing influence falls on you, and you depart refreshed and strengthened. Every look, every tone of the voice proclaims that they are not living for self alone. The soul expands under these influences and the home circle not alone receives all the warmth that the loving souls possess, but society gains better members.

Marriage is the key that unlocks to us either happiness or misery. Better bury ourselves than enter into such an association where love is not the governing principle; if we enter under any other motive it proves a pitiful failure. We have only to look around, and daily we have fresh proof that this is the most important step we take in life. A true marriage is what all should seek—any other is nothing but mockery; and as society throws off her gilded trappings, vanity and fashion no longer assume the reigning power, but intellect and affection—priceless jewels, whether in the garb of poverty or wealth—are taken at their true value. Then shall we see these hollow, false marriages discarded, for such will be attracted towards each other by that powerful magnet, the Soul, which is constantly throwing out influences that reach and permeate every heart. These unions are lasting; there is no wish to sever the bonds which every day become more firmly cemented. Calmly and pleasantly they pass down the hill of life together, and as they hear the distant surges rolling in from the untried shore, they clasp each other more closely, though they know that death cannot sever their love—that it is something to live when the clay which now enwraps it shall have mouldered with the dust. MATTIE.

Sag Harbor, N. Y., Aug., 1867.

GIVING JOY TO A CHILD.

BLESSED be the hand that prepares a pleasure for a child, for there is no saying when and where it may again bloom forth. Does not almost everybody remember some kind-hearted man who showed him a kindness in the dulcet days of his childhood? The writer of this recollects himself at this moment, as a barefooted lad, standing at the wooden fence of a poor little garden in his native village, while with longing eyes he gazed on the flowers which were blooming there quietly in the brightness of a Sunday morning. The possessor came forth from his little cottage; he was a wood-cutter by trade, and spent the whole week at work in the woods. He had come in the garden to gather flowers to stick into his coat when he went to church. He saw the boy, and breaking off the most beautiful of his carnations—it was streaked with red and white—he gave it to him. Neither the giver nor the receiver spoke a word, and with bounding steps the boy ran home. And now here, at a vast distance from that home, after so many events of so many years, the feeling of gratitude which agitated the breast of that boy expresses itself on paper. The carnation has long since withered, but now it blooms afresh.—*Douglas Jerrold.*

No one's spirits were ever hurt by doing her duty; on the contrary, one good action, one temptation resisted and overcome, one sacrifice of desire or interest, *purely for conscience sake*, will prove a cordial for weak and low spirits, far beyond what either indulgence, or diversion, or company, can do for them.

"GOOD NIGHT," represented above, is from a photograph of a statuette by JOSEPH DUNHAM, A. R. A., shown at the recent Royal Academy Exhibition, London, England. Mr. D. has made a specialty of the representation of children, and has certainly succeeded most admirably in this instance. A London paper says that "Good Night" is a portrait statue of a young friend of the sculptor, and adds:—"In setting about producing a portrait of this little lady the artist has evidently aimed solely at representing her naturally and characteristically; and we feel sure that all mothers—and fathers, too, whose testimony is worth having—will agree with us that he could hardly have chosen a more prettily characteristic incident than this of little Missie toddling off to bed, laughingly wishing us a good night!—carrying with her the inseparable doll, which must, of course, be hushed off to sleep before the little matron in embryo can compose herself for the night in her little cot."

MINIATURE PAINTERS.

IN the twelfth century we find a few miniature painters among women. MARGARETTA VON EYCK devoted most of her time to this art in the fifteenth century. An Italian lady at Palermo distinguished herself as a painter in oils two hundred years later. Mrs. WRIGHT, an English artist, died in 1802, and MARIA CONWAY, noted in London for her skill, in 1821. MARIA REIGER, was employed by the higher classes in Germany, in the seventeenth century, and ANNA WOSSUR, a Swiss woman won a name in the art.

Mrs. GOLDBECK, of English birth, Mrs. HILL of Boston, Miss C. DENNING of Plattsburgh, ANNE HALL and Miss O'HARA in New York, are the principal miniature painters in this country. Mrs. HILL receives from $75 to $100 for a miniature. The photographer's art has led many painters into the later method. Yet women of skill find profitable employment as painters. Woman's delicacy of touch and facility of expression especially fit her for this work.—*Employment for Women.*

OUR SPICE BOX.

WHAT goes most against the grain? A reaper.

A THORN in the bush is worth two in the hand.

HEIGHT of absurdity—a vegetarian at a cattle show.

MISS TUCKER says it is with bachelors as with old wood; it is easy to get them started, and when they do take flame they burn prodigiously.

REV. E. E. HALE says a collation is a dinner at which there is nothing to eat.

How early it gets late now-a-days, says the Boston Advertiser.

A SHOCKING thing to think of—a galvanic battery.

As the quickest way to make a fortune a contemporary suggests marrying a fashionable young lady and selling her clothes.

A FRENCH lady who held a glass of water in her hand, said:—"Oh, if it were only wicked to drink this, how nice it would be."

"How did you get rid of that troublesome lover of yours, Carrie?" "I married him; and I havn't been troubled with his attentions since."

IF a young woman bids you take heart, you can probably take hers.

Choice Miscellany.

MEMENTO MORI.

Ah! how the sad wind grieves
Around the lonesome eaves,
As the dreary tears of Heaven fall sobbing on the pane,
And sitting here alone,
My heart makes bitter moan,
And the wail of wind and tempest I echo back again.

I'm holding in my hand
A little shining strand
Of hair—all silver-sprinkled—that grew about his brow;
And through my tears I gaze
Upon his pictured face,
And know that these are all of him, that's left unto me now.

I cannot make it seem
That 'tis not all a dream,
That the brow is veiled forever, whence was shorn this lock of hair,
That through all the years to be
I am *nevermore* to see
The face that beamed so kindly, with the smile it used to wear!

O! life has little worth
Since 'round the household hearth
The shadows fall so darkly, as we mark the vacant seat!
We never thought our home
So dreary could become,
When we a band unbroken, and with happy hearts, did meet!

Syracuse, Aug. 13, 1867. N. A. R.

RAVELINGS.

BY T. RAVELER.

NO. I.--MISTAKEN IDENTITY.

I AM a bachelor of ——, on the whole, had I better tell how many years? I think not. It is better that my readers—my lady readers, at least—should be a little uncertain on this one point. If not fully informed, then they will be curious. For curiosity enters largely into feminine nature. If a woman were not curious I should be inclined to doubt her womanhood. Should I tell how young I am, doubtless some of my youngish young lady friends would be less interested in what I may write. Should I state just how old I happen to be, then some of the oldish young ladies would manifest less interest. Because this matter of interest between the sexes, I have noticed, goes much according to the rule of opposites. The youngest seem most attracted toward the oldest; and *vice versa*. It's only a wise ordination, probably, to keep the average good.

No, I wont tell my age. Let it suffice that I am older than I look, and not so old as I feel. The logic of which is, that I am more venerable according to feelings than according to looks—a very plain, logical sequence.

—Logic attains queer results, at times, by the way. I demonstrated this, not long since, by asking a young lady well versed in all the "branches," to parse "Woman."

"'Woman' is a Noun, and a very Proper Noun, too," was her quick reply.

"You are much mistaken," I said.

"Mistaken? And what would *you* call it?"

She laid undue emphasis upon the pronoun, I fancied. Perhaps she judged that my bachelor notions of woman extended even into the Grammar, and would govern my construction of sentences and my declinations of Nouns and Pronouns.

"'Woman' is a Verb," was my answer, "according to all Grammar and Logic."

And this was my reasoning in proof of so heretical a statement:—"A Verb signifies 'to be, to do, and to suffer.' (So says the Grammar.) Woman is 'to be, to do, and to suffer.' (So she is continually saying.) Therefore—woman is a Verb."

Was not my "therefore" well placed?

But my feminine friend got the best of me, finally—figuratively, I mean. She did it by adding—

"And when she marries, then, I suppose you call her an *Ad*-verb!"

——So much for Logic. I was speaking of my age. If I was a woman, now, may be I should think the less said about that the better. But I'm neither a woman nor a verb. Consequently I say unless one's age is exceedingly tender, it will bear dwelling upon. Mine isn't.

I have said I am older than I look. The most of bachelors are. How we preserve ourselves, is our own secret.

The fact that I feel older than I look may be accounted for on the theory that man is as old as matter. Man in the essence, of course, the theory means. It's pretty well known (by certain ones) that while our integral particles may date away back to the creation, the present moulds in which they happen to be done up date back but few years, more or less. The most of us can produce witnesses to verify the time of our birth. So, though I may be really as old as our venerable friend METHUSALAH would be if he was now alive, the fleshly dress in which I am at present "got up," doesn't wear quite so ancient an appearance.

All my life long (or short) I've been the subject of mistaken identity. Why I cannot tell. Perhaps I lack individuality. Perhaps my face and figure are capable of taking on a multiplicity of phases and forms. There are a dozen "perhaps" that might be stated as reasons why people are continually supposing me to be some other man than myself. Yet none of them are quite satisfactory to me. I have a fancy that I am a tolerably fair representation of the RAVELER family; and my pride isn't pleased with the idea that, in outward appearance, even, I represent the SMITHS, the JONES, the BROWNS and the ROBINSONS quite as well. As a boy, I cared little about the mistakes. Indeed, they scarcely surprised me. I could discern little difference between babies—they all looked pretty much alike to me—and it was not strange that boyhood developed no very marked characteristics in features. But I was often amused. I never shall forget the old lady who accosted me one morning, as I was trudging on towards school. She had a good-natured face, all overspread with wrinkles, and it wrinkled more than ever with her smiles, as she said—

"Why, how d'ye do, CHARLEY? Be you pretty well? And how's your ma?"

The grasp of her hand was like that of my grandmother, I thought. But my grandmother was dead, and my name wasn't CHARLEY. So I stammered out something about her having got hold of the wrong boy. The good old dame looked hard at me, for a moment, through her spectacles, and ejaculated, with rather a perplexed air—

"La, me! I guess I have! But you look wondrously like him, or else my old glasses are deceivin'."

My identity has been misconstrued many times since that. Sometimes under embarrassing circumstances, but often when the momentary deception was to me the amusement of the hour. It is not pleasant to dilate upon our own embarrassments, therefore I will merely mention two or three of the latter occasions. These were not when my own individuality was apparently lost in another's, but when I was taken as the representative of a class other than that to which I belong. Mistaken identity as to class may be as embarrassing, or as amusing, as mistaken identity as to persons alone.

I got on board a train once, at the Capital city of my native State, at a season when the Legislature was in session, for a short journey. Was to read a lecture next evening in a town a few hundred miles away. Being compelled to share a seat with another gentleman, we fell to conversing of political matters at the city we were leaving. Possibly I showed some slight familiarity with the matters mentioned—probably I did. Leastwise my stranger friend remarked interrogatively, after a time,

"What District do you represent, sir?"

Imagine my surprise—my astonishment—to be taken for a legislator—one of those poor unfortunates selected by the people to do the people's will, and then doomed to a brief infamy because they have a will of their own! I could't find words, at first, to express myself.

"My dear sir," at length I said, "in the course of a life not over-long I have been mistaken for a'most everything, from a minister down to a lawyer, but never before was I suspected of being a member of the Legislature."

It was the "unkindest cut of all."

Next evening I read my lecture. Was honored by presentation to several beautiful ladies, at its close. One, the handsomest of them all, brought a flush to my cheek by her compliments, and then quite struck me aghast by asserting, interrogatively—

"You are a clergyman, Mr. RAVELER?"

I recovered my equanimity in a moment, however. It was not so bad to be thought a Divine—possibly a D. D. But afterward I studied my lecture over carefully, several times, to see if there was aught in it really clerical. Concluding there was not, I laid the responsibility of the lady's mistaken opinion upon my suit of black; and studied the preacher's tone and manner, regularly, for many successive Sabbaths, to so fully acquaint myself with the clerical style of address as to be able to shun it.

Not long after, I was on my way to lecture again, dressed in the same black suit. Seated diagonally opposite, and a little back of me, were two young ladies, and their escort, a stylish looking young man. You have read that I am older than I look. When I get myself up for public appearance, I rejuvenate all that is in my power, or in the power of my barber and tailor. I must have looked presentable, at least. Now I pride myself upon having two very good eyes, and an equally excellent pair of ears. It isn't strange, then, that I saw the young ladies closely scanning me, and heard, directly, one remark to the other, as she significantly tossed her head in my direction—

"He's going to be married!"

"I'll bet he is," was the elegant reply.

There was a strong inclination on my part to tell her I'd take that bet. I was indignant. I, a respectable bachelor, aged—— well, old enough to know better—going to be married! It was preposterous. If she knew anything she'd—then I thought of my broadcloth; and then I laughed heartily to myself. Men get married in black,—though why on earth they always color a wedding the same as a funeral *I* can't see—and the young lady was not quite so rash in her judgment, after all.

I never was taken for a married man but once. It's too long a story, or I'd tell you about that. My ears tingle, even yet, to think how that pretty, young wife mistook me for her husband, and threw herself into my arms and nearly smothered me with kisses. Ah, me! But I almost wished then that there was a winsome little thing somewhere who would always do likewise, and without any mistakes!

THE OPEN FIRE.—"I am a firm believer," says Dr. Cuyler, "in the moral and spiritual influence of an *open fire*. To make home attractive, there must be somewhere in the house a family rendezvous; and that ought to present a more radiant attraction than a black hole in the floor, through which hot air pours forth from a subterranean furnace. Men will fight for their altars and their firesides; but what orator ever invoked a burst of patriotism in behalf of steam pipes and registers? I never cease to be thankful that I was brought up beside the hickory fire of a rural farm-house."

FAITH.—AN ACROSTIC.

BY GULIELMUM.

FAITH beautifies and blesses life
In all its hours of care and strife—
Does add a charm to every good—
Enriches lovely womanhood.
Lo! calming every doubt and fear
It hears the words of CHRIST, in cheer,
"Shrink not, loved one, for I am here."

Go where you will, with Faith in sight
Each darksome way will glow with light;
Roses will spring from beds of pain,
And flowers of hope will bloom again;
Loving will warm to brighter glow,
Developing a fuller flow:—
In every grief your heart will sing
"No winter comes without its spring,—
Each bitter soon a sweet will bring."

Forever may your life be led
In faith, to faith's great Fountain-head:
So shall you find that holy rest
Known only to the Perfect blest!

THE SONG OF THE WATERS.

ONE of the noblest of New England rivers flowed near the hotel where I passed the night. As I, at times, awoke, it was a pleasing occupation to listen to the "sound of many waters" as they rushed among the rocks of a neighboring waterfall. It was not jarring and harsh, but quiet and soothing. I mused pleasingly upon the service of song, and, though the music itself was monotonous, yet to me there was instructive variety in the lessons I learned, for

1. It was a song of power. I should not have heard this midnight music if there had been no power in these rushing waters. The sound proved the force with which the massive rocks were struck by the moving flood. Strong was the hand upon the harp. And the strong waters, all along in the vast course of the falls, had been made, by human skill, to subserve with great power the interests of enterprise and industry. How could I fail of musing upon Him "whose are the resplendent rivers," and who has power to hold all the oceans in "the hollow of His hand."

2. It was a song of wisdom. A drop of water! How curious its composition! And how admirably adapted this vast element to the use of man and the welfare of the world. The fertility of the soil shall answer; so shall the power it furnishes for countless mechanical operations; so shall the highway of commerce and travel it provides; so shall all the life it gives the vegetable world and all the refreshment given to thirsty man and beast. So that was a sweet song of the night, as it freshened all my waking thoughts with the music of the theme—the wisdom and goodness of God.

3. It was a song of the ages. Every time I awoke the music was going on, and no man knoweth how long ago it began. Through years, through ages—none can tell how many—the harp had not been once hung upon the willows. And the midnight music on my ear would be midday and midnight music in the unceasing roll of these running waters. Generations past had heard, generations coming would hear. Would the waters ever all run by, so that the musician should drop his harp and the song cease, and it be resumed no more? Would not this be an unfailing song? Surely, till that remote era when He who commanded the first strains of the song should say, "Let them cease!"

In the soft and soothing music of this midnight song, how easy and natural and pleasant to think of that other River "proceeding out of the throne of God and the Lamb." To my acquaintance with the sweet melody of these running waters, how blessed to add acquaintance with those to which the Lamb shall lead His redeemed people—living waters, of which, if one drinks, he shall never thirst again!—*New York Observer.*

THE WAY WILL OPEN.

IN approaching the Notch of the White Mountains from one direction, the traveler finds himself in the midst of conical hills, which seem to surround him as he advances, and forbid further progress. He can see but a short distance along his winding road; it seems as if his journey must stop abruptly at the base of these barriers. He begins to think of turning back his horse to escape from a hopeless inclosure among the impassable barriers. But let him advance, and he finds that the road curves around the frowning hill before him, and leads him into other and still other straits, from which he finds escape simply by advancing. Every new discovery of a passage around the obstructions of his path teaches him to hope in the practicability of his road. He cannot see far ahead at any time; but a passage discovers itself and he advances. He is neither required to run back, nor to scale the steep sides of towering hills. His road winds along, preserving for miles almost an exact level. Such is often the journey of life. How much of its toilsome ruggedness would be relieved by careful attention to the apostolic injunction, "Be careful for nothing; but in everything, by prayer and supplication with thanksgiving, let your request be made known unto God; and the peace of God, which passeth all understanding, shall keep (garrison) your hearts and minds through Christ Jesus."

GOD lades the wings of private prayer with the sweetest, chiefest and choicest blessings. Ah! how often hath God smiled upon the poor Christian at the beginning of private prayer, spoken peace to him in the midst of his prayer, and filled him with light, joy and assurance, upon its close!

The Traveler.

LOUNGINGS—No. II.

BY OLOFFE THE DREAMER.

II.--A METROPOLIS.

Through great stores, with their treasures of literature and art, where glitter in finest array the gilt and antique dresses of the old masters of literature, far more eloquent than ever in their magnificent silentness—where, photo-sculptured, or chiseled in marble, are images of those we know and love, though perhaps only through deed or suffering for humanity—where framed in their dark lintels are stories of yesterday, pictured in feature or landscape, almost as consonant to nature as the curtain wherewith Zeuxis was deceived—inner worlds, where one can linger for hours, forgetful of the world without, and carry away so many beautiful memories—have I been loitering to-day, in the driftingness of quiet enjoyment.

—Up and down Broadway, too, which is by no means the great wide thoroughfare I once imaged, but only a very ordinarily narrow street, peeping into windows where tiny girls with golden hair ride wonderful horses, which canter all day without tiring or going forward in the least, and startle you with their naturalness,—seeing otherwhere the most elegant furnishings, and only the plate glass in front seems to prevent the taking one's most enjoyable ease on the splendid velvet,—jostled continually on the hurrying pavement by the jewels and rags, the haste and leisure, the beauty and deformity of life, mingled more strangely than the pictures of the cosmorama on the corner, more changeful than the images of an opium smoker's dream.

It is but a little way—through Bleecker or Houston street—to the Bowery, but if we follow the leading of the long way, we find shadow which sunbeams have never cast, darkness which is not of the night, life which is only dreary existence. Past corners whereon human souls are being tortured day after day by the burning drink that has ruined their bodies—past other corners where gambling, dark and deep, revels high over its dead victims—and still on, where the Prince of Darkness seems holding outer court all the year—one shudders with aching spirit and pitying heart. Shudders for the swarms of God's images who have lost every trace, save merest outline, of likeness to their Maker—who creep a little way out of underground holes, for a breath of air, foul though it be, and are cursed back by fiends and devils.

O New York, New York,—great city of the Five Points and the Ten Avenues!—hast thou not been wept over, like Jerusalem of old, by Him who would have gathered thee, even as a hen doth gather her brood under her wings, and thou wouldst not!

Shadowy hands unlock the massive doors now and then, and bid us look at the ghastly skeleton within; the golden roses, which we imagine everlasting, fade and wither even to the hidden thorns. Ah! yes, and we

> ——tremble by the harmless bed
> Of one loved and departed;
> Our tears drop on the lips that said
> Last night, "Be stronger-hearted!"
> O God, to clasp those fingers close
> And yet to feel so lonely!
> To see a light upon such brows
> Which is the daylight only

Over the river on the splurging steamer which gives us two cents' worth of the Hudson in exchange for the coin and two minutes of time,—past the great Navy Yard where blue-coated sentinels seem pacing on forever,—and we reach the high-fenced ground where Brooklyn and Williamsburgh play so many of their games of base ball,—where champions are beaten and fingers disjointed, where thousands upon thousands of human beings assemble to see less than a score of young men exhibit wonderful performances—driven hither and thither at the will of a little hard sphere which must be followed and kept *en regle* at all hazards. And when some one exerts himself a little more than ordinary in the attempted capture, how the multitude cheer and shout, as if it were any harder for the "beautiful play" to be made, than for the lookers-on to open their throats in applause.

Through Spruce street, with its stores of hides and leather, those necessities to human "understandings,"—along Nassau street, looking into dim book shops, where one oftentimes can pick up treasures cheaper than a song's price,—by Beekman street, where so many of those tiny levers which move the world are fashioned, shaped into little shining type, which few people know much about, except to find fault with in their newspaper, when one gets frolicsome and stands on its head. Wonderful types—telling, as Frank Taylor says, of a wedding yesterday, and announcing a burial to-morrow, perhaps in the self-same letters. A world of themselves, with something in it as beautiful as spring, as rich as summer, and as grand as autumn; flowers that frost cannot wither, fruit that shall ripen to all time.

And so the day passes, and I stroll in where the gorgeous transformations at Niblo's are still delighting—the scenes too fairy-like to be only stage work, but a sort of realization of childhood's images of wonderland, and which linger in memory like dreams of the possible existence we are always fancying.

If I were not addicted to sleeping soundly, and my dreamings were not exclusively confined to daylight and dusk, I should expect to-night to be roaming the New York which lies in the land of Nod, and which is a continual repetition of the reality, with all the exaggerations of opposite mirrors re-reflecting in convexity and concavity forever and ever. But the past is past, *e per sempre*—gone, let us hope, always for good, and leaving now only the eager remembrance of the day's vagaries, of the seen and imagined in the great metropolis. And a strange fancy steals over me. I am Arthur Merlin, and Hope Wayne comes to me and smiles, as Diana smiled on Endymion. "See," she says, "I love you. Look here!" And I look, and see a full moon in a summer sky shining upon a fresh grave upon a hill-top.

MOUNTAIN SCENE, CALIFORNIA.

Our illustration represents scenery characteristic of a mountain range in California, having especial reference to Mt. Shasta and its surroundings. The trees, seen so prominently in the foreground, are of the spruce family, many of them attaining an altitude alike surprising and imposing. The construction of the Pacific Railroad is lending new interest to the great mountain chain which lies across its track. Among the points more especially noteworthy and attractive is that here selected and delineated. In the rear of the trees is seen the snow-clad summit of Mount Shasta, supposed, until recently, the most elevated in the United States. It is nearly fifteen thousand feet high, and shrouded with eternal snow. When the iron horse has free course from the Atlantic to the Pacific, Mount Shasta and its scenery will be among the wonders likely to attract the attention of travelers as they fly across the Continent.

ASCENDING MONT BLANC.

A St. Louis gentleman, Mr. S. H. Leathe, has this year ascended to the top of Mont Blanc. He was two days in accomplishing the feat, having been driven back the first day to a point half way up the mountain by a blinding snow storm. He thus describes his sensations when on the topmost peak:

"My first feeling was disappointment that it was not higher. I had not realized we were so near the top until within ten steps of the highest point. I stood for a few minutes gazing at the magnificent view spread out on all sides. All fatigue was forgotten in the excitement; in fact, I never felt better in my life; never cheered louder or jumped higher. If there had been a good hotel, should probably have remained for the season. The day was glorious; bright sunshine without a cloud, except low down in the valleys. On the Swiss side the view is uninterrupted from the Mediterranean to the Rhine, embracing all the Swiss and Italian mountains, with lakes and rivers. None of my guides had ever seen so fine a view from the summit. The wind was bitter cold and fearfully strong. Two of my guides suffered severely from the cold. One had two fingers frozen, and another was as black in the face as a negro. The blood seemed ready to burst through the pores of his skin. We stepped down a few paces under shelter, and the guides removed their packs to prepare a lunch, but found everything frozen solid except a bottle of brandy and a flask of sherry. Claret and champagne were so frozen that we were obliged to break the bottles and eat the wine. I had intended making a sherry cobbler at the summit, but the water and lemons refused to 'cobble,' and I drank the sherry without them. A bottle of coffee, which one of my guides carried for me in a pocket next his breast, was frozen solid. Pretty cold weather for the season, July 20th. What will it be in January?"

THE CAVE OF THOR.

A Salem (Oregon) paper has the following: "It is not generally known, but it is nevertheless true, that nearly all the ice used in this State is procured from a subterranean cavern, where, from time immemorial, through all changes of season, the Winter King has asserted his dominion and held everything tangible locked in his cold embrace. This cave is situated on a stream called White Salmon, which empties into the Columbia River, on the Washington Territory side, about 30 miles below the Dalles. The entrance to this icy chamber is near the base of Mount Adams, which stands 20 miles from the Columbia River, and whose melting snow constitutes the source of White Salmon. The scenery within this gloomy prison house is sublimely grand. Its dimensions are vast, extending under the snowy mountain perhaps miles. The ice is found in columns or pillars, formed by water dropping from above and congealing as it falls. These columns are cut out in blocks and conveyed to the Columbia on pack animals, and thence shipped to Portland and other markets, where it is selling at present for eight cents per pound."

Many people use their accomplishments as a spider uses his web—to catch the weak upon, that they may be mercilessly devoured.

Various Topics.

BLIND TOM.

A brief sketch, which we copy below, of this wonderful musical prodigy, brings fresh to our mind the surprise and pleasure that his performances gave us about two years ago. We presume that many of our readers attended the concerts then given by him in different parts of the country. His tour extended from Philadelphia to Chicago, and was, if we may use a stereotyped phrase, a complete success. We had heard something of the blind negro boy, whose pianoforte playing was considered almost magical, and took the first opportunity to see and hear him.

Having listened for nearly two hours to music that in its execution would have done no discredit to a thoroughly educated artist, we left the hall charmed and mystified. Feeling quite an interest in natural curiosities, we made Tom a study, and on several occasions thereafter were given unusually good facilities for learning what he knew and what he could do. What he knew was readily summed up. Almost idiotic; this, in brief, expressed his condition. Yet his guardian seemed doubtful upon this point. "Sometimes I think he don't know anything," he said, "and then again I think he has a heap o' sense." But coupled with a form ungainly and uncouth, and features absolutely apish, were actions not merely negroish, but indicative really of idiocy. So entirely lacking in intellect, the idea that there was aught of divine harmony in his organization might very naturally be considered preposterous.

He played for us, and some of his playing was characterized by a delicacy of touch and nicety of execution most exquisite. All the inner being in that uncouth form seemed music. Through his fingers it was striving to interpret itself. Seated at the instrument, he would laugh to himself like a pleased child, and pass hours, if unmolested, in utter disregard of all around him, either drawing from the fund of compositions he had heard rendered and had lain away in his memory, or improvising. In the latter he appeared to take most pleasure. What surprised us perhaps most of all, was his possession of what musicians term *absolute pitch*. Place him with his back to the piano, then strike any note in the entire scale and he would unhesitatingly give you its name. Call for any note, and quick as thought he would sound it, vocally, and with perfect precision.

Our tests and study satisfied us that he was no humbug, and yet they were unsatisfactory. They but enabled us to pronounce Blind Tom a marvel, done up in ebony. Rather more than a year ago his former master took him to Europe, and he at once aroused the curiosity of music lovers over the water. Night after night, for many weeks, he astonished immense audiences in Egyptian Hall, London; and his powers were tested by the most eminent of European pianists. To them all he was something to be wondered over and charmed by. Not long since he returned to this country, and is now, we believe, performing again in Philadelphia. The following, concerning his history, agrees with the statements made to us by his guardian, Gen. Bethune:

Thomas Green, or Bethune, as he is called, was born in Muscogee County, Georgia, near Columbus, on the 25th of May, 1849. His parents were slaves, belonging to Gen. Bethune, from whom he derives his name. Tom was the fourteenth of nineteen children, was blind and almost half-witted from his birth; but from his infancy displayed a wonderful power of imitating every sound he heard, no matter what kind, and in fact being himself entirely governed by sound. He displayed a perfect adoration for music, and on a piano being brought into the house as a present for his master's daughter, he appeared immensely delighted at its sound, and being allowed at length to touch the keys, to the astonishment of all present he played over a piece which his young mistress had just before performed. He was at this time four years old! Gen. Bethune took him to Columbus, where he exhibited his marvelous gift before a professor of music. Since then he has been playing every piece he heard, and at the age of 18 is a perfect marvel. He plays two separate pieces at once, and sings a third at the same time; will reproduce exactly a piece of music which he has never before heard, after hearing it played over once; recites, imitates, and reproduces the sound of every kind of instrument on the piano. He is a prodigy unequaled.

HOW NATURE COVERS UP BATTLE-FIELDS

"Did I ever tell you," says a correspondent of an eastern paper, "among the affecting little things one is always seeing in these battle-fields, how, on the ground upon which the battle of Bull Run was fought, I saw pretty, pure, delicate flowers growing out of the empty ammunition boxes; and a wild rose thrusting its graceful head through the top of a broken drum, which doubtless sounded its last charge in that battle; and a cunning scarlet verbena peeping out of a fragment of bursted shell, in which strange pot it was planted? Wasn't that peace growing out of war? Even so shall the beautiful and graceful ever grow out of the horrid and terrible things that transpire in this changing but ever advancing world. Nature covers even the battle-grounds with verdure and bloom. Peace and plenty spring up in the track of the devouring campaign; and all things in nature and society shall work out the progress of mankind."

ASTRONOMY.

One of the most wonderful achievements of astronomers is the weighing of the bodies comprising the solar system. The mass of the sun is 359,551 times greater than that of the earth and moon, and 700 times greater than the united masses of all the planets.

A flash of lightning on the earth would be visible on the moon in a second and a quarter; on the sun in eight minutes; on Jupiter, (when furthest from us,) in twenty-five minutes; on Uranus, in two hours; on Neptune, in four hours and a quarter; on the star Vega, of the first magnitude, in 4,000 years; yet such stars are visible through the telescope.

La Place, the great French astronomer, says: "I have ascertained that between the heavenly bodies all attractions are transmitted with a velocity which, if it be not infinite, surpasses several thousand times the velocity of light." His annotator estimates that speed as being eight millions times greater than that of light.

EUROPEAN LIBRARIES.

The city of St. Petersburg was founded nearly one hundred years after New York, and the imperial library of that capital contains not less than half a million volumes. The imperial library of France has long had the reputation of being the largest in the world. The collection is put down in round numbers at two millions of volumes. For some years past it has been the ambition of the British nation to have the name of standing first in the world in respect to this matter, and the library of the British Museum has been rapidly augmented to nearly a million of volumes. The annual expenditure in this department is now, we believe, not much short of one hundred thousand dollars. The city of Munich, with a population about twice that of Providence, has in a single collection more than six hundred thousand volumes. Florence, with the same population as Munich, has an aggregate of four hundred thousand volumes in its public libraries.

HYMEN.

Hymen was a young man of Athens, obscurely born, but extremely handsome. Falling in love with a lady of rank, he disguised himself in female attire, the better to carry on his *amour*; and as he was one day on the sea shore celebrating the Eleusinian rites with his mistress and her female companions, a gang of pirates came upon them by surprise and carried them off to a distant island, where the pirates got drunk for joy and fell asleep. Hymen then armed the virgins, and despatched the sleeping pirates, when, leaving the women upon the island, he sped to Athens, where he told his adventure, and demanded his beloved in marriage as her ransom. His request was granted, and so fortunate was the marriage that the name of Hymen was ever after invoked on all future nuptials; and in progress of time the Greeks enrolled him among their gods.

A Great Bell.—The largest bell in this country is in one of the towers of the Notre Dame Cathedral, at Montreal. It is nine feet in diameter, about ten feet in height, averages ten inches in thickness, and weighs 24,780 pounds. There is much silver in its composition, and its cost was great. In tone it is deep and powerful, nearly deafening any person who may be standing by when it is struck. Owing to its great weight it is seldom rung, and then a number of men are employed at the ropes. The usual way of sounding it is by a hammer, worked by a lever spring.

White water-lilies are like beautiful thoughts, rocked on the swells of a pure bosom.

Reading for the Young.

THE CHILD'S GOOD NIGHT.

BY SYDNEY E. HOLMES.

> Moon, moon, where are you going
> Through the clouds and over the sky?
> The crickets are chirping, the night winds are blowing,
> And I'm at my window to bid you good-by.
> Good night, Moon!
> Good night!
>
> Stars, you are sleepy, I know by your winking,
> And your mother, the Moon, comes to put you to bed;
> She'll cover you up, with the clouds, I am thinking,
> And tuck you all in till the morning is red.
> Good night, Stars!
> Good night!
>
> Birds in their nests and chicks with their mother,
> Lambs in the fold, and calves in the stall:
> I in my bed, and the kits with each other,
> And the same Heavenly Father takes care of us all.
> Good night, All!
> Good night! [*The Advance.*

ORIGIN AND SEALS OF THE STATES.

NUMBER THIRTEEN.

THE SEAL OF UTAH TERRITORY.

Utah Territory is remarkable for many things, prominent among which are Great Salt Lake and the Mormons. The surface of Utah is an immense basin, evidently once an inland sea. Two great mountain chains run transversely across it—the Humboldt and the Wahsatch—and some of their peaks reach the height of perpetual snow. Two nearly parallel chains of lakes also diversify the surface. It has an elevation of from 4,000 to 5,000 feet above the level of the sea, and possesses a fine climate, the winters being mild, with little snow, and the summers warm, but varied by cool mornings and evenings. It has its own system of lakes and rivers, none of which communicate with the ocean. Great Salt Lake is seventy miles long by thirty miles wide; is so saline that no living thing can exist in it; and has no visible outlet. The area of the territory is 131,320 square miles, or 84,044,880 acres. Only a small proportion is fertile, much of the soil being dry and unproductive. Mormon settlements occupy nearly all the available parts. The number of inhabitants, according to the census of 1860, is something over 40,000, a large majority of which are Mormons.

We close our series of articles on the Seals of the States, &c., by giving that of the Republic.

SEAL OF THE UNITED STATES.

Nearly every one is aware that the motto on the seal of the United States—*E Pluribus Unum*—signifies "One from many." Thirty-seven States and eight Territories now make up the grand whole. We have given the seals of thirty-five States, and there are two others—Nebraska and Nevada—which were so recently admitted that they are not represented in our series. The total area of the States and Territories, including the recent purchases in Russian America, comprises in round numbers something over three millions of square miles. Of this amount but 820,680 square miles belonged to the Republic when peace was concluded with Great Britian, in 1783. The remainder has been acquired by purchase and treaty, at various times since. The population of the thirteen Colonies at the beginning of the Revolution (1775) was but 2,803,000, and of this number 500,000 were slaves. The returns of the last census showed a population of 31,443,322 in the States and Territories. Within the limits of the United States nearly every variety of climate is found, and the list of agricultural and mineral products includes about everything known. It has become common to speak of our country as the greatest and best on the globe, and when we consider all that is comprised in its vast extent we can but realize that the statement is perfectly true. Our national emblem glitters with thirty-seven stars now, and let us reverently sing

"God bless our stars forever!"

God Counts.—A brother and sister were playing in the dining-room, when their mother set a basket of cakes on the tea-table, and went out.

"How nice they look!" said the boy, reaching to take one. His sister earnestly objected, and even drew back his hand, repeating that it was against their mother's direction.

"She did not count them," said he.

"But perhaps God did," answered the sister.

So he withdrew from the temptation, and, sitting down, seemed to meditate. "You are right," replied he, looking at her with a cheerful yet serious air; "God *does count*; for the Bible says the hairs of our head are all numbered."

The Boys and Girls of to-day should remember that they are to be the Men and Women of to-morrow, and govern themselves accordingly.

Our Fall Campaign!

A NEW QUARTER--VOLUME XIX.

A NEW QUARTER of the RURAL commenced Oct. 5, and Volume XIX will begin January 4, 1868. Now, therefore, is a good time to subscribe and form Clubs as subscriptions can begin with October or January or any time between. The 13 numbers of this (Oct. to Jan.) or any preceding Quarter of this year, will be sent on trial, or as specimens, for ONLY FIFTY CENTS.

GOOD PAY FOR DOING GOOD

All who form clubs, either to begin with the New Quarter (Oct. 5th,) or next Volume (Jan. 4, 1868,) will be substantially rewarded, as our inducements are extraordinary—more liberal than ever before. Specimen Numbers, Show-Bills, Premium Lists, &c., sent free to all disposed to act as club agents.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., NOVEMBER 2, 1867.

NEWS OF THE WEEK.

New York State Items.

THE extensive malt house of Jno. G. Tweddle in Albany, took fire one day last week. Although the flames were speedily subdued, and only a small portion of the building was destroyed, the loss is estimated to be very heavy, as the floors were covered with barley and malt.

Hon. Thomas Hillhouse has been unanimously nominated by the Republican State Committee for the office of Comptroller, to fill the vacancy occasioned by the declination of Hon. Calvin T. Hulburd, and has accepted the nomination.

Governor Fenton has appointed John Jay of New York city, Special Commissioner to cooperate with the Commissioners from Maryland and other States, and with the Board of Managers of the Antietam National Cemetery.

An extensive gold mine swindle has just been made public in Rensselaer county, by which the perpetrator is said to have realized $350,000. He deposited specimens of gold and quartz upon the Snyder farm in Pittstown, then "discovered" them, had them assayed by a noted chemist who pronounced them uncommonly rich, organized a stock company known as the Rensselaer County Gold and Silver Mining Company, with a capital of $350,000, sold all the stock and decamped.

From Washington.

THE President has directed a reservation for military purposes at Fort Wadsworth, Dakota Territory, covering an area of 135 square miles.

The impeachment testimony is in the hands of the compositors at the Government printing office, who, it is said, are sworn to secrecy.

The Comptroller of the Currency has received all the quarterly reports from the National Banks, excepting the First National Bank of Fort Smith, Arkansas. Amount of circulation of National Banks issue and deposits in New York city on the 7th of October, $190,000,000.

A new jury panel has been ordered in the Surratt case, the former having been quashed on account of some informality.

The President has issued a Proclamation appointing Thursday, the 28th of November, a day of National Thanksgiving.

The monthly debt statement for the month of October will show a contraction of four millions in the currency.

From the West.

THE mill of Higby & Sons, Milwaukee, was burned on the 23d ult. Loss $150,000, on which there is $30,000 insurance.

The latest official information from Kansas is to the effect that both the Commissioners and Indians assembled at Medicine Creek Lodge think that the Council will result in a lasting peace. The Commissioners will not be able to hold a Council at the Upper Platte until after the 10th of November.

The Commissioners concluded a treaty with the Kiowa and Camanche tribes. These tribes are to go on reservations in Indian territory, on the North Fork of Red River, near Withelow Monutain. They promise peace and are to receive annually $25,000, an agency house and clothing, provisions, &c. Satisfactory treaties will probably be made with all the Southern Indians.

A serious railroad accident occurred on the Little Miami Railroad in Ohio on the 27th ult. A passenger train ran into a freight caboose, resulting in the wrecking of the latter and several passenger cars, and the death of one man and the severe injury of several others.

While some shells were being opened at the Union Rolling Mills in St. Louis on the 26th ult., one of them exploded, killing a young man named Richard Walsh and badly wounding Charles Williams and John Lean, the former fatally.

The U. S. steamer Ossipee, with Gen. Rosseau and the Russian Commission, left San Francisco for Fort Simpson Oct. 14th, and expected to reach Sitka on the 16th.

The Sacramento Union says it is understood that arrangements have been completed by the Pacific Railroad Company for the purchase of the Lincoln and Marysville and Western Pacific Railroad.

From the South.

THE yellow fever in New Orleans still continues to decline.

The Legislature of Tennessee has enacted a law making it punishable for common carriers to make discrimination on account of race or color. This places the negroes on an equality with the whites on the Tennessee railroads, &c.

The whites in North Carolina are taking more interest in the approaching election since the result of the election in Virginia has been made known.

The municipal and judicial election in Baltimore on the 23d ult. passed off very quietly. The entire Democratic ticket, for Mayor, both branches of the City Council and Judges, was elected. The vote for Mayor was—Robert T. Banks, Dem., 18,389; Andrew W. Dennison, Rep., 4,831. Banks' majority, 13,558.

Governor Brownlow of Tennessee, has been elected United States Senator.

Col. Charles Healy, a brother of Gen. Healy, U. S. Marshal for Alabama, died in Mobile last week of yellow fever.

The late election in Virginia was quite exciting. The polls in Richmond were held open several days, and riotous disturbances became frequent, as the blacks massed themselves in some places to the exclusion of the whites. Full returns are not received, but the majority is largely Republican. The vote throughout the State was strictly between the races. Negroes voted everywhere as one man. In counties where there were two Republican tickets, they uniformly voted for the extreme Radical.

The Regulators, who have made considerable trouble in Kentucky of late, are quieting down.

Gen. Mower has designated November 23d as the day for the Constitutional Convention to assemble in Louisiana.

The Chemical Works of Davison, Symington & Co., Spring Garden, in the suburbs of Baltimore, were destroyed by fire on the 25th ult. Losses estimated at from $90,000 to $100,000.

Fourteen colored delegates are selected for the Alabama Convention.

A large fire occurred in Memphis on the 26th. J. Bantil & Co., Moody & Co., and R. P. Wall & Co., all wholesale grocers, are the principal sufferers. Loss $200,000.

Latest from Europe.

INTELLIGENCE has been received from China that a great battle had been fought between the rebel army of invasion and the Tartar forces of the Emperor of China. The Imperialists were defeated. The battle took place within thirty miles of Pekin, and that city was in great danger of falling into the hands of the victorious rebels.

Gen. Garibaldi has again been heard from. Without regarding the prohibition of the Italian authorities, he left Foligno and pushed on toward the South. At last accounts he had arrived at Rieta, a town in the southern district of Umbria, not far from the Papal frontier and within forty-two miles of the city of Rome.

Late dispatches from Rome state that the party of action in that city, who have hitherto been very quiet, attempted an insurrection on the 22d ult. A mine was placed under the barracks of the Papal Zouaves, which at a given signal was fired. The attempt was a decided failure.

It is reported that the Emperor Napoleon has requested the European powers to unite with France in a General Conference for the settlement of the Roman question and to prevent the recurrence of the recent events in Italy.

Francis Joseph, Emperor of Austria, arrived at Paris on the 23d ult., and was received at the railway station by the Emperor Napoleon. After exchanging congratulations, the Emperors entered a state carriage and were driven to the Tuileries. The Moniteur says this visit of the Emperor Francis Joseph adds a new pledge of amity to the cordial relations established between Austria and France.

Tumults have occurred among the laborers in Brittany, owing to the want of employment and scarcity of food. Crowds get together in towns and clamor for bread, and in some places attempts have been made to pillage the bakeries.

It is reported in Ireland that a Fenian craft has been captured by the British gunboats off the Northern coast of Ireland.

The very latest dispatches state that General Garibaldi was marching on the city of Rome. His command was divided in two columns, which were taking different directions. The column under Garibaldi had arrived at Monte Rotunda, only a few miles from and in sight of the Holy City. The Papal troops were retiring slowly before the victorious march of the insurgents, but contesting the ground as they retreated. Bagnorea, in the line of march, was again captured and is now held by the Garibaldians.

HAYTIEN NEWS.—An arrival from the island of Hayti brings advices that the rebellion against the authority of General Salnare has been ended. The Haytien army assaulted the stronghold of the rebels, near the frontier of St. Domingo, on the 10th, and the next day carried the place with the bayonet. The revolutionists fled into St. Domingo. The Haytien Government had since issued a proclamation suspending the state of siege.

CUBAN AFFAIRS.—Late advices from Cuba state that there were $80,000 in the treasury at Havana when the Government at Madrid sent a requisiton by telegraph for $300,000; the Cuban merchants clubbed together and supplied the balance, and the cash was sent out by the last mail steamer for Spain. Another demand made upon Cuba by the Spanish Government for $2,000,000 has not been complied with, as the treasury is empty.

REDUCTION IN CABLE RATES.—It is understood that an arrangement has been perfected between the Anglo-American Company and the Atlantic Company, whereby the present rates by the cable will be reduced fully fifty per cent. It is further understood that the reduction will go into effect on the 15th of November.

THERE is now a continuous railroad communication between Chicago and St. Paul. The last rail in the chain was laid at Adams, Mower county, Minnesota, on the 21st ult.

NEWS PARAGRAPHS.

SEVERAL mercantile firms have suspended in Philadelphia with the last two days. The liabilities of one are reported at $200,000.

FOURTEEN cashmere goats have arrived at Mineral Point, Wis., the only ones now in the State. The animals are the property of a company, and have been imported at an expense of $2,500.

HARLEM Bridge is completed and thrown open to the public. The structure is nearly 1,000 feet in length. It cost a little less than a million of dollars, and has been about seven years in building.

FOUR men who were repairing a sky-light at West Albany, the other day, were precipitated to the ground, a distance of fifty feet, by the giving way of the scaffold. All of them were seriously injured.

THE "Swamp Angel" gun, with which Gilmore used to send his compliments seven miles into the city of Charleston, "in war times," now lies in the street at Trenton, N. J. The "Angel" weighs seven tons.

OMAHA has four trains and three steamers daily, 100 saloons and eight churches, 2,151 houses, fifty-five hotels and boarding houses, three theatres, three printing offices, a capitol, a court house and a jail, two daily and two weekly papers, manufacturing establishments of various kinds, and unnumbered cut-throats.

A SAILING carriage, designed for crossing the plains, has been made at St. Louis. Its wheels are ten feet high; it has two upright jib sails, and a sail on each spoke of the two wheels on one side of the wagon. The steering gear acts on the forward wheels. The body is shaped like a boat, and hung low, and will be used as a boat in crossing streams.

THERE have been in all eighteen deaths from cholera on the receiving ship Potomac, lying at the navy yard at Philadelphia. The disease now presents a more favorable aspect, and it is believed that it has received an effectual check. Great care has been taken to prevent its spread beyond the vessel upon which it first made its appearance.

A SPORTSMAN of the Canton of Maubeuge has lately shot a wild pigeon, which gave another proof how highly the instinct of animals is sometimes developed. On plucking the bird, an old wound was discovered on its breast, over which several small leaves of plants had been carefully placed. The plumage of the bird had been so carefully arranged over it that no trace of the wound appeared.

WE would call especial attention to the fine AMERICAN ORGAN, manufactured by S. D. & H. W. Smith, Boston, Mass., containing two banks of keys and fourteen stops, which was used at the musical convention, to assist in supporting the chorus. At the concerts, the deep sub bass notes were plainly manifest above the 300 voices in the grand Hallelujah chorus, while in the accompaniment of the solo, "He was despised," the touching effects of the tremolo, with the soft stops, was strikingly exhibited.—*Burlington Sentinel.*

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, October 29, 1867.

THERE is no particular pressure for money in this locality, and there are few speculative operations demanding means. Regular bank customers find such accommodation as their business necessities require, but outside paper is rarely discounted. At Cincinnati, Chicago, and other points West, the call for money is beyond the ability of the banks to supply, and rates of interest among brokers rule very high. At the East, toward the close of last week money was somewhat easier, though the market is still reported stringent. On Friday and Saturday call loans were in some instances made at 6 per cent., though the ruling rate is still 7 per cent. Merchants find great difficulty in obtaining such bank accommodation as their business requires.

Gold for several days last week was decidedly lower, and on Saturday touched 141¼. Sales yesterday were made at 142¾. The decline is owing in part to the near approach of the payment of the November gold coupons. Foreign exchange is a little higher, but is still too low to cause the shipment of specie.

Considerable interest is manifested in financial circles to see the forthcoming report of the Secretary of the Treasury. It is generally expected he will take the ground in regard to the resumption of specie payments which was first set forth in his celebrated Fort Wayne speech, and which has been frequently reiterated since. That that resumption can be brought about as speedily as at first suggested, the Secretary himself does not believe, but that the event may occur as speedily as is consistent, all most earnestly desire. It is in the recollection of all that a few short months brought gold from 285 to 125, and the business of the country received no very serious shock. There has been no good reason why gold, after touching 125, should advance to its present figure. We are anxious to see it reach a much lower figure than at present—and believe nobody would be harmed in consequence.

The figures show us that we are making decided progress in some directions, and ere long the present movements must have an effect on the price of gold.

In January, 1866, there were $339,000,000 of 7-30 bonds outstanding; on the 1st of October, 1867, the amount was only $365,000,000. By next August the remaining 7-30s will all be changed into 5-20s. In January of last year $126,000,000 of greenback currency were afloat, and according to the Secretary's October statement, on the 1st of the present month there were but $361,000,000, showing a reduction of $65,000,000. The process of contraction is still going on.

The Assistant Treasurer of New York will commence paying the November coin interest early this week.

Governments are firm, and 5-20s advanced ¼c. on Saturday. American securities for some days have been firmer abroad.

WOOL.—The Boston Commercial Bulletin of Saturday says:—"The wool market exhibits unmistakable symptoms of demoralization, and is sadly deficient in backbone." On low and medium grades prices have dropped down some two or three cents. For the finer grades prices are not materially lower. The Boston sales for the week were 850,000 lbs., at a range of 27@60c for fleece, and 27½@58c. for the various grades of pulled. The woolen goods market continues seriously depressed, and the raw material suffers in consequence.

WHEAT AND FLOUR.—Red wheat sold in this city yesterday at $2,65. There is no great change in flour. The markets East and West have been rather unsettled for some days.

The receipts of grain at the five principal lake ports for the five weeks ending September 28, amounted to 17,130,000 bushels, against 11,750,000 bushels for the same period of last year—showing an increase of 5,400,000 bushels, or 46 per cent. The receipts have been large during the present month.

☞ NOT A PATENT MEDICINE. ☜

A SAFE, CERTAIN, AND Speedy Cure FOR NEURALGIA, AND ALL NERVOUS DISEASES.

Its Effects are Magical.

It is an *unfailing remedy* in all cases of Neuralgia Facialis, often effecting a perfect cure in less than twenty-four hours, from the use of no more than *two or three pills.*

No other form of Neuralgia or Nervous Disease has failed to yield to this *wonderful remedial agent.*

Even in the severest cases of Chronic Neuralgia and general nervous derangements,—of many years standing,—affecting the entire system, its use for a few days, or a few weeks at the utmost, always affords the most astonishing relief, and very rarely fails to produce a complete and permanent cure.

It contains no drugs or other materials in the slightest degree injurious, even to the most delicate system, and can *always* be used with *perfect safety.*

It has long been in constant use by many of our *most eminent physicians*, who give it their unanimous and unqualified approval.

Sent by mail on receipt of price, and postage.

ESTABLISHED 1861.
THE
GREAT AMERICAN
TEA COMPANY
HAVE JUST RECEIVED
TWO FULL CARGOES
OF THE
FINEST NEW CROP TEAS.
22,000 HALF CHESTS by ship Golden State,
12,000 HALF CHESTS by ship George Shotton

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune district of China, which are unrivalled for nicety and delicacy of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade, (before the establishment of the Great American Tea Company,) we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in the country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lots, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices, with the small additional expense of transportation, as though they bought them at our warehouse in the city.

Some parties inquire of us now they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on the list, as seen in the club order published below, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

Parties sending Club or other orders for less than thirty dollars had better send Post-office drafts or money with their orders, to save the expense of collections by Express; but larger orders we will forward by Express, to "*collect on delivery.*"

Hereafter we will send a complimentary package to the party getting up the Club. Our prouts are small, but we will be as liberal as we can afford. We send no complimentary package (or Clubs of less than $30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

Oolong (Black,) **70c., 80c., 90c.,** best **$1** ₱ lb.
Mixed (Green and Black,) **70c., 80c., 90c.,** best **$1** ₱ lb.
English Breakfast, (Black,) **80c., 90c., $1, $1.10,** best **$1.20** ₱ lb.

Gunpowder (Green,) **$1.25,** best **$1.50** ₱ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economize in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

CLUB ORDER.
Edwards, St. Lawrence Co., N. Y., June 3, 1867.
The Great American Tea Company,
31 and 33 Vesey Street, New York.

Dear Sirs:—I herewith send you another order for Tea. The last was duly received, and gives general satisfaction. As long as you send us such good Tea, you may expect a continuation of our patronage. As a further evidence that the subscribers were satisfied, you will observe that I send you the names of all those that sent before who were near out of Tea, with a large addition of new subscribers. Accept my thanks for the complimentary package. Ship this as the other, and oblige
Your ob't servant, DAVID C. McKEE.

THE ALBANY COTTON GIN MANUFACTURING CO.,
ALBANY, N. Y. (POST-OFFICE DRAWER 162.)
Office and Factory on Thacher St., near Broadway, North End of City.

Manufacturers of Agricultural Machinery and Implements of the best and most approved kinds and patterns in use, embracing

1st Premium "Star" Cotton Gins and Condensers,
1st Premium "Star" Railway & Lever Horse-Powers,
1st Premium "Star" Threshers and Cleaners,

Threshers and Separators, Circular and Dragg Saw Mills, Vegetable Cutters, Dog Powers, &c., &c.

Important Improvements recently made in our Thresher and Cleaner (which we denominate the "*Star*" *Thresher and Cleaner* to distinguish it from all others,) enable us to claim for it, without fear of contradiction, a marked superiority over all others now made, as well in the quality and quantity of the work which it will do as in the perfection of its construction, insuring the durability of the Machine and the ease with which it may be operated.

THE "STAR" RAILWAY HORSE-POWER
AND
THE "STAR" LEVER HORSE-POWER,

Made by this Company, are fully approved by all who have used them, to stand unrivalled in all the qualities which a Horse-Power must possess to give it acceptance to the Farmer—as to durability, economical use of the strength of the Horse (admitting an easy gait of the animal, with—in the Railway Power—a very moderate elevation of the platform,) facility of moving about, setting up, repairing, &c., &c. We solicit a continuance of the patronage hitherto so liberally bestowed.

Mr. Wm. B. Emery (survivor of Emery Brothers) gives his personal superintendence to all work got out by this Company. His long experience in manufacturing Agricultural Machinery affords the strongest guaranties of the superior character of the machines made by us.

☞ Our complete Illustrated Descriptive Circular and Price List will be sent *free of charge,* on application, and all information cheerfully furnished.

Agents, both Traveling and Local,

are wanted all over the country to sell our manufactures. To active and competent men liberal commissions will be paid. 923

PLASTIC SLATE ROOFING
JOINT STOCK COMPANY,
OFFICE 157 [Room 19] *BROADWAY,*
NEW YORK.
W. C. POTTER, *Vice-Pres't.*
J. M. ALLEN, *Sec. & Treas.* Licenses Granted.

PLASTIC SLATE FOR
ROOFING & OTHER PURPOSES.

The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of

Pulverized Slate and Viscous Matter,

(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.

AS A ROOFING MATERIAL IT STANDS UNRIVALLED.

A mastic—it adapts itself to every shape and slope Non-combustable, impervious, non-expansive, and undecaying.

FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.

The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and

PERFECTLY FIRE-PROOF.

It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

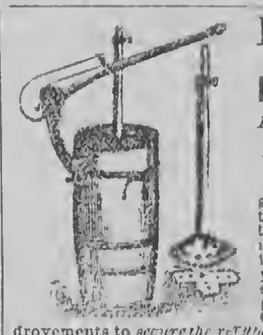
THE COLLINS AND SHATTUCK
Combined Clover Thrasher, Huller & Cleaner,
MANUFACTURED BY
GLEN & HALL, ROCHESTER, N. Y.

We beg to call the attention of Farmers to the superior characteristics of the Collins and Shattuck Clover Machine made by us, which we are now prepared to supply.

Our Machines have two bolts with counter reciprocating motion, which have proved *indispensable* in keeping the Machine still, preserving it from racking and preventing it from clogging. We will warrant them with proper management to Thrash, Hull and Clean Clover or Grass Seed at one operation, more rapidly and in a much better manner than any other Machine made. When thrashing grass seed they can in a moment be so arranged that the seed and chaff will pass directly from the bolts to the fanning mill without going through the huller—*an advantage possessed by no other machine.* The ratchet form of the upper bolt in our machine insures a thorough separation of the heads and seed from the straw before the latter is allowed to pass into the stack. Our machines are constructed of the best material, in the most thorough manner, handsomely painted and ornamented, and have in all cases given entire satisfaction. Persons purchasing these machines to do instom thrashing will find them even much more remunerative than Grain Thrashing Machines.

We are also prepared to supply Horse-Powers, Truck Waggons, &c., to be used with our machines, or they will be adapted to run with any other Horse Powers.

☞ Descriptive Catalogues, containing full information, with testimonials from persons using our Clover Machines, sent free to all applicants. Address GLEN & HALL, Rochester, N. Y., or Detroit, Mich. J. D. Eastman, Gen'l Western Agent, Chicago, Ill. 921-10t



H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the greatest quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $11; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN
Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. Moore, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—Solon Robinson, *Ag't Ed. N. Y. Tribune,*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. Edwards Todd, *Ag't Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The Seneca Falls Churn Manufacturing Co is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the Patented Fixtures. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. Moore, Editor Rural New-Yorker.

☞ The Michigan Churn Man'f'g Co., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

DO WHAT YOU CAN.

If you cannot on the ocean
Sail among the swiftest fleet,
Rocking on the highest billows,
Laughing at the storms you meet,—
You can stand among the sailors,
Anchored yet within the bay;
You can lend a hand to help them,
As they launch their boat away.

If you are too weak to journey
Up the mountain steep and high,
You can stand within the valley,
While the multitudes go by;
You can chant in happy measure,
As they slowly pass along;
Though they may forget the singer,
They will not forget the song.

If you have not gold and silver
Ever ready to command;
If you cannot tow'rd the needy
Reach an ever open hand;—
You can visit the afflicted,
O'er the erring you can weep,
You can be a true disciple
Sitting at the Saviour's feet.

If you cannot in the harvest
Garner up the richest sheave,
Many a grain both ripe and golden
Will the careless reapers leave;
Go and glean among the briars,
Growing rank against the wall,
For it may be that their shadow
Hides the heaviest wheat of all.

If you cannot in the conflict
Prove yourself a soldier true—
If, where fire and smoke are thickest,
There's no work for you to do;
When the battle field is silent,
You can go with careful tread,
You can bear away the wounded,
You can cover up the dead.

Do not, then, stand idly waiting
For some greater work to do;
Fortune is a lazy goddess—
She will never come to you.
Go and toil in any vineyard,
Do not fear to do or dare,
If you want a field of labor
You can find it anywhere.

The Story Teller.

SIX LOVE-LETTERS.

"Are there any more of these letters?"

When her father asked this question, in an awful tone, Lucilla Richmond could not say "No," and dared not say "Yes," but as an intermediate course burst into tears, and sobbed behind her handkerchief.

"Bring them to me, Lucilla," said her father, as if she had answered him, as, indeed, she had; and the girl, trembling and weeping, arose to obey him.

Then Mrs. Richmond, her daughter's very self grown older, came behind her husband's chair and patted him on the shoulder.

"Please don't be hard with her, my dear," she said, coaxingly. "He's a nice young man, and it is our fault after all as much as hers, and you won't break her young heart I'm sure."

"Perhaps you approve of the whole affair, ma'am," said Mr. Richmond.

"I—no—that is, I only"—gasped the little woman; and, hearing Lucilla coming, she sank into a chair, blaming herself dreadfully for not having been present at all her daughter's music lessons during the past year.

For all this disturbance arose from a music teacher who had given lessons to Miss Lucilla for twelve months, and who had taken the liberty of falling in love with her, knowing well that she was the daughter of one of the richest men in Yorkshire.

"It was inexcusable in a poor music teacher, who should have known his place," Mr. Richmond declared, and he clutched the little perfumed billet which had fallen into his hands as he might a scorpion, and waited for the others with a look upon his face which told of no softening. They came at last, six little white envelopes, tied together with blue ribbon, and were laid at his elbow by his despairing daughter.

"Lock these up until I return home this evening," he said to his wife; "I will read them then. Meanwhile, Lucilla is not to see this music master on any pretence."

And then Miss Lucilla went down upon her knees:

"Oh, dear papa!" she cried, "dearest papa, please don't say I must never see him again. I couldn't bear it. Indeed I could not. He's poor, I know, but he is a gentleman, and I—I like him so much, papa."

"No more of this absurdity, my dear," said Mr. Richmond. "He has been artful enough to make you think him perfection, I suppose. Your parents know what is best for your happiness. A music teacher is not a match for Miss Richmond."

With which remark Mr. Richmond put on his hat and overcoat, and departed.

Then Lucilla and her mother took the opportunity of falling into each other's arms.

"It's so naughty of you," said Mrs. Richmond. "But oh, dear, I can't blame you. It was exactly so with me. I ran away with your papa, you know, and my parents objected because of his poverty. I feel the greatest sympathy for you, and Frederick has such fine eyes, and is so pleasing. I wish I could soften your papa."

"When he has seen the letters there'll be no hope, I'm very much afraid," sobbed Miss Lucilla. "Fred is so romantic, and papa hates romance."

"He used to be very romantic himself in those old times," said Mrs. Richmond. "Such letters as he wrote me. I have them in my desk yet. He said he should die if I refused him."

"So does Fred," said Lucilla.

"And that life would be worthless without me; and about my being beautiful (he thought so, you know.) I'm sure he ought to sympathize a little," said Mrs. Richmond.

But she dared not promise that he would.

She coaxed her darling to stop crying, and made her lie down; then went up into her own room to put the letters into her desk; and, as she placed them in one pigeon-hole, she saw in another a bundle, tied exactly as those were, and drew them out.

These letters were to a Lucilla also. One who had received them twenty years before—and she was now a matron old enough to have a daughter who had heart troubles—unfolded them one by one, wondering how it came to pass that lovers' letters were all so much alike.

Half a dozen—just the same number, and much more romantic than those the music master had written to her daughter Lucilla. A strange idea came into Mrs. Richmond's mind. She dared not oppose her husband; by a look or word she had never attempted such a thing.

But she was very fond of her daughter. When she left the desk she looked guilty and frightened, and something in her pocket rustled as she moved. But she said nothing to any one on the subject until the dinner hour arrived, and with it came her husband, angrier and more determined than ever. The meal was passed in silence; then, having adjourned to the parlor, Mr. Richmond seated himself in a great arm-chair, and demanded:

"The letters," in a voice of thunder.

Mrs. Richmond put her hand into her pocket, and pulled it out again with a frightened look.

Mr. Richmond repeated, still more sternly:

"Those absurd letters, if you please, my dear ma'am."

And then the little woman faltered:

"I—that is—I believe—yes, dear—I believe I have them," and gave him a white pile of envelopes, encircled with blue ribbon, with a hand that trembled like an aspen leaf.

As for Lucilla, she began to weep as though the end of all things had come at last, and felt sure that if papa should prove cruel she should die.

"Six letters—six shameful pieces of deception, Lucilla," said the indignant parent. "I am shocked that a child of mine could practice such duplicity. Hem! let me see. Number one, I believe. June, and this is December. Half a year you have deceived us then, Lucilla. Let me see—ah! 'From the first moment he adored you,' eh? Nonsense. People don't fall in love in that absurd manner. It takes years of acquaintance and respect and attachment. 'With your smiles for his goal, he would win both fame and fortune, poor as he is!' Fiddlesticks, Lucilla! A man who has common sense would always wait until he had a fair commencement before he proposed to any girl. 'Praise of your beauty. The loveliest creature he ever saw!' Exaggeration, my dear. You are not plain, but such flattery is absurd. 'Must hear from you or die!' Dear, dear—how absurd!"

And Mr. Richmond dropped the first letter, and took up another.

"The same stuff," he commented. "I hope you don't believe a word he says. A plain, earnest, upright sort of man would never go into such rhapsodies, I am sure. Ah! now, in number three he calls you 'an angel!' He is romantic, upon my word. And what is all this?"

"'Those who would forbid me to see you can find no fault with me but my poverty. I am honest—I am earnest in my efforts. I am by birth a gentleman, and I love you from my soul. Do not let them sell you for gold, Lucilla.'

"Great heavens, what impertinence to your parents!"

"I don't remember Fred's saying anything of that kind," said poor little Lucilla. "He never knew you would object."

Mr. Richmond shook his head, frowned, and read on in silence until the last sheet lay under his hand. Then, with an ejaculation of rage, he started to his feet.

"Infamous!" he cried; "I'll go to him this instant—I'll horsewhip him!—I'll murder him! As for you, by Jove, I'll send you to a convent. Elope, elope with a music teacher! I'm ashamed to call you my daughter. Where's my hat? Give me my boots. Here, John, call a cab!—I—"

But here Lucilla caught one arm and Mrs. Richmond the other.

"Oh, papa, are you crazy?" said Lucilla. "Frederick never proposed such a thing. Let me see the letter. Oh, papa, this is not Fred's—upon my word it is not. Do look, papa; it is dated twenty years back, and Frederick's name is not Charles! Papa, these are your love-letters to mamma, written long ago. Her name is Lucilla, you know!"

Mr. Richmond sat down in his arm chair in silence, very red in the face.

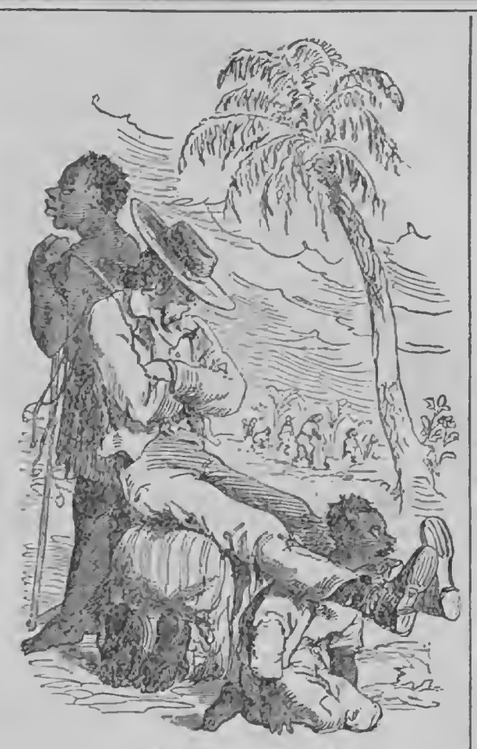
"How did this occur?" he said sternly; and little Mrs. Richmond, retreated into a corner, with her handkerchief to her eyes, sobbed:

"I did it on purpose!" and paused, as though she expected a sudden judgment. But, hearing nothing, she dared at last to rise and creep up to her husband timidly.

"You know, Charles," she said, it's so long ago since, and I thought you might not exactly remember—how you fell in love with me at first sight, how papa and mamma objected, and how at last we ran away together; and it seemed to me that if we could bring it all back plainly to you as it was then, we might let dear Lucilla marry the man she likes, who is good, if he is not rich. I did not need it to be brought back any plainer myself; women have more time to remember, you know. And we've been very happy—have we not?"

And certainly Mr. Richmond could not deny that. So Lucilla, feeling that her interests might safely be left in her mother's keeping, slipped out of the room, and heard the result of the little ruse next morning. It was favorable to the young music teacher, who had really only been sentimental, and had not gone half so far as an elopement; and, in due course of time, the two were married with all the pomp and grandeur befitting the nuptials of a wealthy merchant's daughter, with the perfect approbation of Lucilla's father and to the great joy of Lucilla's mamma, who justly believed that her little ruse had brought about all her daughter's happiness.

THE YANKEE.



A SOUTH CAROLINIAN.

CITIZENS OF THE UNITED STATES, ACCORDING TO POPULAR IMPRESSIONS.—No. I.

SOME ADVICE.

We translate the following from Josh Billings into English, especially for the perusal of the more staid of Rural readers. Of course the young men will not care to read it. It has a touch of irony, as the man said when he knocked his friend down with a poker:

My young friend, you are about to begin life, and although it may seem dreadful impossible to you, nevertheless you will be liable to make some mistakes while you are scoring, or during the first mile or two.

Let me mix up a little advice for you to take till you get to trotting steady.

You will observe the advice is designed for young gentlemen who show some signs of speed, and also that I reason right from the shoulder.

1. Treat the old man and the old woman as your equals; smile when they exhort, and laugh when they entreat, for no young man can hope for success in the ornamental walks of life who does not wear the belt at home.

2. If you cannot raise a mustache, commit suicide at once and begin again; for it is better to die than to suffer disgrace.

3. Cultivate impudence—impudence is a good substitute for bravery—only be a little careful to pick your customers when you try it.

4. Keep a trotter and fighting rooster. These animals will let you into the confidence of men who will watch over your morals and nurse your genius.

6. Avoid the old fogies; they are a miserable set of cowardly croakers, who, like a third-rate dog, have learned what little they know about virtue by simply being overmatched in a fair fight.

6. Suspect all female virtue. This will give you an easy flow of ambiguous language while in the society of the ladies, and enable you to awaken confusion, which you can call something else.

7. If you get desperate, and must marry, marry for ducats—marrying for blood or for love is too sloppy for a man of spirits. Love is a low passion, and is designed for two-story houses on one of the back streets, not for a brown stone front.

8. By all means learn to swear, and smoke freely, and don't ever mistake rain water for milk punch, unless you want a soft thing.

9. Call religion a stock-jobber's pigeon to catch flats with; say that virtue is only the galvanized impotence of cowards; that wisdom is but an egg that is addled; laugh at all things that are solemn, and swear that Bacchus and Venus are the only two gods fit to be worshiped.

Young man, cultivate all the above graces, and add to them what the ardor of your genius may inspire, and if the horse jockeys and pimps generally don't say you are a "brick" of the brightest hue, and if the devil don't make you some flattering proposals, the days of chivalry are positively over, and pudding and milk has got more glory in it than a brandy smash, a rum sour, or even a tom-and-jerry.

Young man, (a few words with you in private,) let these cheerful remarks settle down into you when you get to reflecting at 12 o'clock some rainy night.

Don't make a fool of yourself by trying to jump 65 feet at the jump and land among the "B'hoys" at once, but examine your build closely and see if you are not better constructed for something honest.

But if you find you must go to despair, then put on all the steam you can carry, and either burst or get there as soon as possible.

P. S. When you get there and have had enough of it, just drop me a line and I will see what can be done for you. But don't forget one thing—that the road back is three times as far, and is all the way up hill besides.

The more we study human nature the less we think of men, the more of man.

WIT AND HUMOR.

Lightly Dressed.—A Quaker gentleman, riding in a carriage with a fashionable lady decked with a profusion of jewelry, heard her complain of the cold. Shivering in her lace bonnet and shawl, as light as cobweb, she exclaimed:

"What shall I do to get warm?"

"I really don't know," replied the Quaker, solemnly, "unless thee should put on another breast-pin!"

Quilp, he of the Boston Post, seeing his friend bow to an extremely corpulent man who had just alighted from an omnibus, inquired who he was. "That's Smith, the great Corporation contractor." "Indeed," said Quilp, "he looks more like a corporation expander."

An usher in an English school, seeing one of the boys with a thick lump in one of his cheeks, asked "Quid est hoc?" to which the lad, spatting out a large piece of chewing tobacco, replied "Hoc est quid," for which repartee the master forgave him.

A modern philosopher, taking the motion of the earth on its axis at seventeen miles a second, says that if you take off your hat in the street to bow to a friend, you go seventeen miles bareheaded without taking cold.

Cheap Soap! Good Soap!

NATRONA REFINED

SAPONIFIER!

OR

Concentrated Lye.

2 cts. a lb. for Superior Hard Soap.

TWELVE POUNDS OF SOFT SOAP FOR ONE CENT.

EVERY FAMILY CAN MAKE THEIR OWN SOAP.

ALL VARIETIES OF SOAP.

AS EASILY MADE AS A CUP OF COFFEE.

Is a new Concentrated Lye, for making Soap, just discovered in

GREENLAND, IN THE ARCTIC SEAS,

and is composed mainly of Aluminate of Soda, which, when mixed with REFUSE FAT, produces the

BEST DETERSIVE SOAP IN THE WORLD.

1 Box will make 175 lbs. good Soft Soap, or its equivalent in superior Hard Soap.

Retailed by all Druggists and Grocers in the United States.

☞ FULL RECIPES WITH EACH BOX. ☜

Dealers can obtain it wholesale in cases, each containing 48 boxes, at a liberal discount, of the wholesale Grocers and Druggists in all the towns and cities of the United States, or of

CLIFFORD PEMBERTON,
General Agent,
PITTSBURG, PENN.

KENNEDY'S SALT RHEUM OINTMENT
CONTAINS NO MERCURY,
Or other mineral substance. One trial is sufficient to convince the most skeptical that its efficacy in allaying inflammation and reducing swellings is wonderful.
FIFTY CENTS PER BOTTLE.
Sold by all Druggists.

SEND STAMP FOR SIXTEEN Pages Description of some of the finest Imported and Thorough-Bred Animals and Fowls in America.
L. B. SILVER, Salem, O.

CHOICE SPANISH MERINO EWES AND Rams for sale at fair prices by JOHN SHELDON & SON, at Moscow, Livingston Co., N. Y., owners of the prize Ram "*Dew Drop*," the winner of the Sweepstakes prize at N. Y. State Sheep Fair at Auburn last May.

MONITOR CLOTHES WRINGER—WITH all White Rubber Rollers, with and without Cog-Wheels. See long advertisement in Rural New-Yorker of May 11th, page 154. Manufactured by JOHN YOUNG & SON, Original Wringer Inventors. 917-cowtf.

BATCHELOR'S HAIR DYE.—THIS splendid Hair Dye is the best in the world. The only *true* and *perfect Dye*—Harmless, Reliable, Instantaneous. No disappointment. No ridiculous tints. Natural Black or Brown. Remedies the ill effects of *Bad Dyes*. Invigorates the hair, leaving it soft and beautiful. The genuine is signed *William A. Batchelor*. All others are mere imitations, and should be avoided. Sold by all Druggists and Perfumers. Factory 81 Barclay St., N. Y.
☞ Beware of a Counterfeit. 882-26teo

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other Journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

PIGS—BREEDS AND MANAGEMENT.

A FOREIGN VIEW OF THE SUBJECT.

A WRITER in the London Field says that the small and large whites, the Berkshires, the Essex, and the Suffolk pigs are the most important. When it is intended to sell pigs as stores at an early age, the large white breed will be found to answer the best; these grow very rapidly, and are ready for sale at a much earlier age than their smaller brethren. For pork feeding he recommends either the small white Essex or Suffolk, and these kinds get fat very readily, and, when fed upon good food at an early age do not grow, as a large pig would, instead of laying on flesh. The black Berkshire is perhaps the hardiest, and the Essex pig, the most delicate. For bacon and general purposes no pig can be more desirable than the Berkshire, and between them and a medium-sized white pig will the choice rest.

Neither boars nor sows should be fed too highly; they will never be so successful as breeders if they are. Good store condition should be aimed at; and what that is, every pig-keeper either knows or ought to know. Before farrowing, the sows should be fed better than they have been, in order to stimulate the secretion of milk; indeed, during the whole sixteen weeks they should, if possible, be kept gradually improving in condition. They should have exercise; this they will take themselves if they have plenty of range. Poor sows will often produce the most healthy, and sometimes the largest pigs, but in nine cases out of ten the milk supply runs short, and then many deaths may be expected. Fat sows are equally objectionable; their pigs are generally weakly, and they are certain to destroy some by lying on them. At the time of farrowing, the sow must be separated from her companions, and placed in a proper house for the purpose fitted up with a rail round, to prevent her from crushing her young ones against the walls. A small quantity of cut straw chaff should only be allowed as bedding; long straw is particularly objectionable for this purpose, as the little pigs become entangled in it before they are strong, and then the sow, if she moves about much, is almost certain to kill some by treading or lying on them. Some people recommend the removal of the little pigs as they are born, and have a hamper placed in one corner of the house to hold them until the sow has done farrowing, when they are all returned to her. This plan is, however, only to be recommended in the case of very fat sows, when they are a long time in farrowing. As a rule, the less the attendant interferes the better. He would not, however, have all sows left to themselves; in cases of mal-presentation, a little help may be judiciously given. For a few days after pigging the sow should not have forcing food; if she appears to be quite right at the end of that time, she can then be treated well. Nothing will produce more milk than a little skim-milk given warm. A great deal of the after success of the pigs depends upon how they are treated at this stage.

At about a fortnight old the little pigs should begin to eat on their own account, and a small trough, hurdled off so that the mother cannot get at it, must be provided for their use. Skim-milk with a small quantity of flour in it will be most readily taken to, and they will soon begin to feed freely. In the case of pigs which are to be forced for exhibition, they may be induced to drink a little milk when a few days old; after tumbling into the trough a few times, they will soon learn to drink. In the case of ordinary rearing, however, it will hardly pay to feed them so young. It must be remembered that more than half the breed of a pig goes in at its mouth. On no account should young pigs be allowed to depend entirely on their mother's milk until weaning time. If they have been freely fed—and it will pay to feed young animals well—they will not go back when weaned—a great desideratum, as every one must know how long it takes for any animal to overcome the effects of being pinched when young. He would urge upon all pig breeders very strongly the advantages of having their pigs castrated before being weaned, care being taken that they have nothing given them for two meals beforehand. There will be fewer losses by adopting this plan than by allowing them to get a greater age. Pigs may be weaned from seven to ten weeks old; this will depend upon the season and their general condition. The better they have been done, the sooner may they be weaned; and for some time after they should be fed liberally. No reason has yet been assigned why in some cases little pigs lose their tails, and in others do not. The blame cannot be laid on the weather, as they fall off at all seasons; indeed, it is still a complete mystery to pig breeders. No animal will take so kindly to the young of another as a sow, and in some cases it will be found very convenient to give one sow the whole two litters to bring up. The only danger incurred is, that the sow from whom the pigs are taken may suffer from her milk; but with care and proper attention, no bad results need follow.

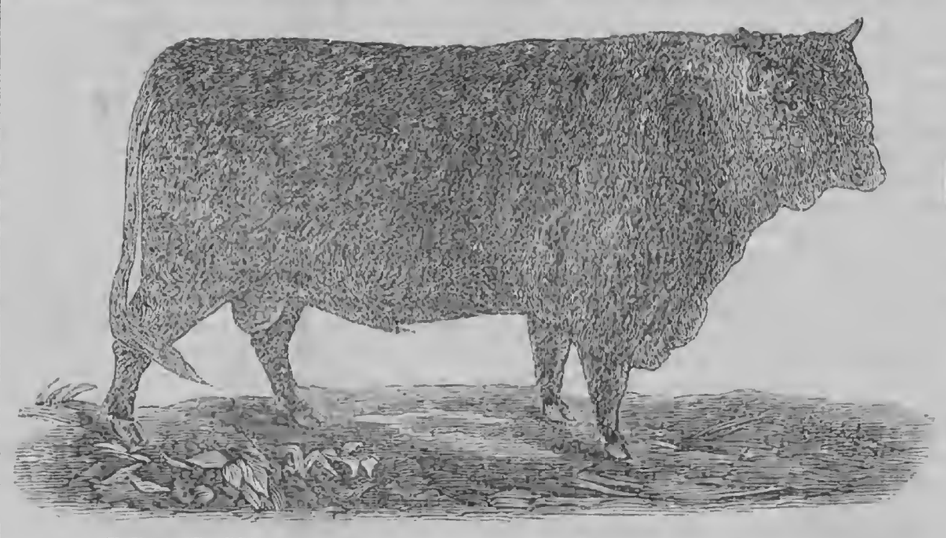
The writer strongly advocates the use of cooked food for all pigs; and in case the farmer have not accommodation for cooking, that all meal be thoroughly soaked before being given. For this purpose the food should be mixed one day before another. When roots are plentiful, they will prove capital food for fattening pigs, mixed with meal, and boiled to a pulp. The use of roots should not be continued to the end of the feeding time, or the meat will not be as firm as it should be.

ABOUT FUEL.

THE season is at hand when the fuel question will be of importance to the farmer. Those who with forethought and labor provided at the proper season for such work a sufficiency which is now well seasoned and under cover, are in good condition to look white winter in the face; but if your fuel for the ensuing six months is yet standing in the forest, his grim countenance may be suggestive of snowy work and sputtering fires that go out on a road which is hard for you to travel.

Some dry wood can be gleaned by gathering the dead poles and trees before deep snows fall, and there is one comfort in doing this work, which is that you are thereby effecting a saving of more valuable timber and bringing your forest into a better state of culture. After this you can select the best kinds of wood for burning green; probably hickory stands foremost, then maple and beech; oak is perhaps the worst of all common wood for burning in an unseasoned state, yet when well seasoned under cover is one of the very best, ranking next to hickory. If the time is short in which to season the fuel, split it fine and pile it out of doors in a situation well exposed to sun and wind. It is best to put only one or at most two tiers in a place, as this gives the wind better action on the wood. By timely and efficient action in this matter, with some aid from the stove oven to dry the morning supply, one can get along and not suffer seriously from lack of dry wood. Often there is a partial supply of the latter on hand, in which case it is best to eke it out by mixing green with it, but in any case make and keep one good resolution, namely, to provide this winter plenty of cut fuel to last a year.

SILK MANUFACTURE.—"The Circular," the organ of the Oneida and Wallingford Communists, says that they have been enabled, without other protection than that supplied by their own organization, to start the silk manufacturing business and have carried it along till it has become profitable and self-sustaining.



PRIZE KERRY BULL "KNIGHT OF KERRY."

ABOVE we portray a two-year-old Kerry Bull which was awarded the first prize as the best bull in his section, at the late Great National Cattle and Horse Show of the Royal Agricultural Society of Ireland.

As Kerry cattle are but little known in this country, the following description of them (given in a late number of the Canada Farmer,) will be read with interest in connection with our portrait of a noted specimen of the breed:

"The natural habitat of the animal is, as its name denotes, to be found among the fastnesses of the county of Kerry, in the northwest corner of Ireland, and the most westerly land in Europe. The climate is excessively humid, and the slopes of its mountains produce but a sparse and scanty vegetation. The valleys, however, are often highly productive, affording sweet and excellent pasture. This district is admirably adapted to the raising of a small and hardy race of cattle, as well as a useful breed of sheep.

"The Kerry cattle were formerly black, with a white streak along the spine, but of late years they have been of various colors—black, brown and of intermediate shades. Their horns are fine and long, generally turning upwards. They have a soft, unctious skin, of an orange tinge, which is very apparent about the nose and ears. The expression of the eye is bold, and their general form and symmetry often exceedingly graceful. These cattle are extremely hardy, and maintain themselves on scanty food in much better condition than could be expected; but when they are put on better pasture they increase considerably in size, and produce beautifully marked beef, which, being of the best quality, commands the highest price.

"The principal value of this breed consists in the adaptation of the cow to the domestic dairy. For richness and quality of milk, compared with the size of the animal and the amount of food consumed, the Kerry is, perhaps, not excelled by any other breed of cattle. For this reason the cow is highly valued by the cottagers and small farmers of Ireland, and is also used to improve the domestic dairies of gentlemen living in the vicinity of large towns in England. In many parts of Ireland this breed has been crossed with the Longhorns, producing results that are by no means always favorable. The Kerry cows make admirable first crosses with the Short-Horns or Herefords, and produce animals generally well adapted to the dairy, and very excellent for fattening purposes. It is, however, desirable to keep the breed distinct, as being specially adapted to hilly districts, where pasturage is scant and coarse. Recently more attention has been paid to the improvement of the breed, which, with a judicious selection of parents, and more attention to feeding and shelter, is much increased in size for fattening, and equally improved in milking properties."

NOTES FROM THE FARM.

HEEDING your practical and oft repeated advice, dear RURAL, to gather the autumn crops in good season, fine weather and some extra help have nearly put me to the end of the harvest. I shall have now a fine time for improvements, I think, before winter closes in. A little of this leisure I shall occupy with your permission, in endeavoring to fulfill what is every individual farmer's duty who takes an agricultural journal, namely, to furnish for its columns some practical hints and knowledge, which may be of benefit to his fellow-workers. This is the kind of book farming that is valuable; it is practical, useful experience, told not only to my neighbors, but to your thousands of readers also, and I want my neighbors to reciprocate the favor, and give liberally from their stores of farm knowledge. Let us make the "Rural Farmers' Club" what it is capable of being—the best medium in the country for the exchange of farming ideas.

AN OLD FARMER'S PLATE.

Writing about improvements reminds me that a farmer does not always *think* of what is needful and may be done when leisure times occur, and it recalls to my mind the practice of a large and successful farmer, who at his death left his affairs in a prosperous condition, and his premises in complete order. His neighbors often wondered at the ease with which he conducted his operations; he never hurried, but the right thing was always done at the right time and his work never lagged. Much of the improvement he made was in odd spells when the routine of regular farm work was broken by rainy weather, or after finishing the work on a crop, and while waiting for another to get to the proper stage. He kept a large slate hanging in the kitchen where all his workmen could see it, and whenever a job occurred to him it was noted on the slate. For instance some of his entries ran thus,—"Make a gate for the brook lot;" "Clean out the open ditch in the wheat field;" "Lay a new floor on the scaffold over the barn floor;" "Bury the large stone in the middle lot;" "Get some whitewood trees to mill for making garden fence pickets;" "Plant shade trees along the road side;" "Dig the alders out of the fence corners and look after the wild mustard that came up where the thrashing machine stood in the field last year." In this way his slate was filled, and if a leisure half day occurred his men all had plenty of work; and if the master happened to be absent the slate told the workmen what to do. After a time it was his custom to lay out the day's work on the slate each evening previous, and when a job was finished the record was erased. To get the slate clean was the ambition of the workmen.

THE PORK PROSPECT.

The prospect of profit being derived by fattening pork this fall is very dubious. Good feeders who have fattened their pork all summer and up to the present time, turning sour milk, clover, wind-fall apples, small potatoes and pumpkins, by the aid of a little meal into pork, have by far the best margins. They can hardly lose anything; but feeders that are preparing their hogs for market with good corn, stand a great chance to get a very small price for their labor, saying nothing about that of the grain. It may be worth while for some to remember that fat pigs are very much desired by butchers during the months of February, March, and April, and that winter feeding for the spring market pays well if one has warm pens and uses cooked food. September pigs can be made more profitable if fed well until they are six months old, dropped in the month of April and killed in the autumn.

DURATION OF CLOVER.

I have a meadow seeded nine years ago with red clover and timothy, and mown every year since. The after growth has always been pastured late in the autumn, and no manure has been applied during the time. The timothy, together with some rye and red top, has gradually taken possession of the field, until I had thought the red clover might be counted out." But the present season the latter appeared unusually thick again, so that I considered it a profitable operation to reap the second growth for seed. I can account for this in no other way but that it must have been self-sown last year, that season having been very favorable to the development of clover seed, and the aftermath was not fed off until the few straggling clover stools had ripened their seed; this being pressed to the ground by the trampling of stock and the snows of winter, found favorable circumstances for growth. Now is there not a practical lesson here? More or less seed ripens on all clover meadows, and wont it pay to harrow this down in the fall and give it the best chance possible for germinating and thus thickening next year's growth?

CHIEL.

FLOUR OF BONE.

SOME weeks since a correspondent of the Massachusetts Ploughman called in question the fertilizing properties of the Flour of Bone, and gave his reasons for doubting its value as a manure. It appears that, for the purpose of testing the matter, he selected three sections of land, lying alongside of each other, possessing a common natural fertility and identity of soil. One of these was liberally supplied with the flour of bone, and another less so, while the third was cropped without the application of any of the fertilizing material. The result [illegible] of products, hence an opinion was formed adverse to the claims of bone flour as a fertilizer.

This conclusion may have been just, owing to peculiar circumstances, as to that particular crop, but the experiment would have been more satisfactory had the cropping been continued for another year. It is possible, and even probable, that the ground experimented upon was sufficiently rich already in the ingredients embraced in the fertilizer, hence the addition was supererogatory and without beneficial results, and would necessarily remain so till this superabundance was measurably reduced by continuous cropping. As a general thing, the observant farmer can determine with reasonable certainty what particular stimulant his soil lacks by considering the character of the crops he has taken from it, for a series of years, and the quantity per acre produced. If careful in this respect he will rarely make a mistake in the application of fertilizers, and thus avoid doing injustice to a really valuable article.

It is probable—in fact we may say certain—that there is cheating in commercial fertilizers, and that what is vended sometimes as flour of bone is a bogus affair, and hence of no value to the farmer. But it does not follow, from this, that the pure article is not valuable when applied to soils wanting in the ingredients composing it and essential to the growth of many agricultural products.

THE COTTON GROWING SOUTH.

A PLANTER writes to a Southern paper thus: "We will make a large cotton crop this season, as there are so many more planters now induced to labor than before the war." What a blessed inducement grows out of the necessities of the transition from slave to GOD-endowed free labor. Another planter writes to the Southern Cultivator that with the "Buckeye Cultivator attached to his buggy, he 'barred off' and cleaned out the weeds from ten acres of corn and cotton in a day;" and Dr. Lee writes from Tennessee to the same paper that Stafford's Sulky Cultivator performs to the admiration of the freedmen, giving them "both cheerfulness and energy." But the planters of the South just now need encouragement; many of them are "land poor," and the cotton tax is a sore discouragement to the grower of that great staple of export, which has done so much to enrich these United States.

Many of the planter correspondents of the Southern Cultivator have a useful knowledge of agricultural chemistry, but one of them demurs to specific technicalities, and asks for "plain every-day country terms." Would he like the German plan, which calls carbon, coal stuff, oxygen, sour stuff, and hydrogen, water stuff, or would he understand the chemist better if he called nitrogen and its compounds, stinking stuff? Every farmer ought to know that these four simple elements, in the form of woody fiber, water, &c., form the bulk of his growing crop, while the thirteen mineral elements, called inorganic, are found in the ashes or debris of the crop, and also that nitrogen and its compounds

perform a double office in the growth of plants, as both a component and solvent of other matters in the soil into plant food. Pope says, "A little learning is a dangerous thing," but he never studied chemistry, or he would have known that a little chemistry gives a thirst for more. A little chemistry will give the farmer a growing, lively interest in the making, saving, and application of his manures. LXXVI.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

NATIONAL WOOL GROWERS' ASSOCIATION.

THE National Wool Growers' Association will hold its Annual Meeting in Pittsburg, Pa., on Wednesday, Nov. 27th, at 12 o'clock, M.

HENRY S. RANDALL, *President.*
WM. F. GREER, *Secretary.*

GOOD AND BAD WOOL.

EDITOR RURAL: — The writer of this fully agrees with B. of Batavia, regarding N. Y. State wool, and, from inquiry and life-long experience, is fully persuaded that there is no wool that makes so smooth and strong a thread as N. Y. State wool. The quality is the best. The condition is "what's the matter." To show how it came so, we will give a single circumstance that occurred in our experience as a wool buyer. Our factory is at Port Byron, near the center of the State, and of the county of Cayuga. We purchase our wool from farmers in this county, and also in Onondaga and Wayne, and by retail trade return it to them again made into cloth. About every year until the present we have found it necessary to go on the road and take our chances with speculators and commission men, and it is our custom to pass all lots of wool without an offer that by reason of its condition would be unprofitable to work. But the circumstance. Farmers A. and B., whose farms were adjoining, bought from a large eastern flock each 100 sheep. A. fed his what hay they would eat and enough grain to prevent their running down, tagged and washed them in a RUNNING stream of water, and when the wool was dry, sheared. We gladly paid him the highest market price, which was then 60 cents. His fleeces weighed four pounds each, and his 400 pounds of wool brought $240. B. "*fed*" his flock. "They were hog fat all the time," &c. He *didn't* tag them, nor did he wash them,—but he did turn each one over in a pond hole. They were in the water one minute by the watch, after which they ran three weeks before shearing. His wool was put up and ready to sell, when he could get "the highest price." We had bought A.'s, and called to see B.'s, which we passed without making an offer. The next day he sold to a commission agent for 60 cents, and remarked that he thought it was hard that he should get no more than A., as his was from the same flock and had been kept so much better. He knew he was dishonest in making this remark. His fleeces weighed about seven pounds, and he got for his wool $420, and thus obtained as a reward for his dishonesty $180. A. was told by us that his wool was worth 20 cts. per pound more than B.'s, and to this day A. is in doubt as to whether we cheated him 20 cts. per pound or B. cheated the agent that much. This is no imaginary case. Hundreds of very similar ones occur every year in our experience, and with those who are judges of wool. It is oftener that we find a judge of the quality of wool than we do of its condition and relative value.

In this particular branch of trade farmers are too often stimulated to dishonesty by rewards, and it has been practiced so long in some parts of the State that a farmer is not considered smart and enterprising who does not sell this dishonest wool.

We have written too much to ask space in giving remedies for the correction of this great abuse. We will say briefly: Let the manufacturer buy his wool of farmers and pay *what it is worth*, regardless of the unjust practice of deducting one-third, one-quarter, one-half, &c. for unwashed, badly washed, buck's fleeces, &c. Have the moral courage to punish the sloven and cheat, and reward the upright farmer for his neatness and honesty.

S. HAYDEN, Woolen Manufacturer,
Port Byron, N. Y.

HOW SHEEP DRINK.—PALE DISEASE.

H. S. RANDALL, Esq.— *Sir:* There has been some discussion among writers as to how sheep get water in winter. A writer in one of the Patent Office Reports says when sheep come up to the water in cold weather, and they stand by it and do not drink, it is because they are afraid of getting their wool wet around their jaws, and he says he put a plank over the water, with holes in it, and then they would drink. But he is mistaken.

I claim that Providence has provided a way for the sheep as well as the horse. The horse breaks the ice with his feet, and the sheep gets water through as thick ice as the horse can. The sheep melts a hole through the ice with its breath. I have seen them melt it through ice three inches thick; and when that man who saw them stand by the water and would not drink, the sheep were going through the process of getting water in cold weather. They will stand by good running water and go through the same operation, as though the water was frozen over. I observed them seven years before I knew why they would stand by running water when they were dry and not drink. This may be new to some,—but it is true.

There has been some inquiry about a disease called pale disease in sheep—or, by some, paper skin,—and writers on the subject claim that there is no remedy discovered as yet. But I claim there has been a remedy discovered, also the disease has been discovered. I have got the whole right to the medicine and to the discovery of the disease. There are two of us, and I have purchased his entire interest in it. I have applied for a patent, and if I succeed I will have territory to sell. Mr. J. WHITE of Licking Co., Ohio, told me he lost $1,000 worth of sheep last spring with the above disease. *I guarantee a cure or no pay.* (I have been in the sheep business 25 years.) I saw Mr. MONTGOMERY, who was sent to Washington last winter as one of the lobby members for our tariff, and he advised me to get it patented. I presume you are acquainted with him. I have been to considerable expense to discover what the disease is and a remedy. Yours truly,

P. C. SWETLAND.

Chesterville, Morrow Co, Ohio, Oct. 6th, 1867.

MARRINER & BRONSON'S EWES.

THE ewes above portrayed are the property of MARRINER & BRONSON of East Bloomfield, N. Y. They were got by the Infantado ram, Young Grimes, owned by HARLOW BROTHERS, Darien, N. Y., out of Paular ewes bred by D. E. ROBINSON, Shoreham, Vt., and got by Young Tottingham. No. 2 sheared 15 lbs. 10 ozs.; No. 3, 14 lbs. 2 ozs.; No. 5, 17 lbs. 10½ ozs.

Condensed Correspondence, Items, &c.

CUTS.—Gentlemen should be very careful to have their sheep cuts delivered at the office of the RURAL, before they write to *us* that they are so delivered, for when we direct the insertion of a particular one (and forward pedigree to accompany it) its absence from the publishing office produces a chasm which we can not be notified of in time to direct another cut to supply its place. For this sole reason the RURAL was recently without sheep illustrations for three weeks in succession. The persons who fail to deliver their cuts, when they notify us of their delivery, not only lose their own turn, but unnecessarily keep back others; and we feel compelled to say that hereafter they must be placed, as justice requires, at the bottom of the list. We notify Mr. U. C. DEARDORFF that his cuts are not in the office.

SALE OF COTSWOLDS.—There has been an unusually active demand for pure bred Cotswolds during the present fall. Mr. JOHN D. WING of Washington, Dutchess Co., N. Y., has recently sold two rams and four ewes to H. W. CHIPMAN of Texas; 2 years old ram "Ottowa" to A. TABER of Cayuga Co., N. Y.; a ram to ALEX. SCOTT, Montgomery Co., N. Y., and one to R. H. CROCKETT of Va

ILLINOIS STATE WOOL GROWERS' ASSOCIATION — This Association at its recent election of officers, elected S. P. BOARDMAN, Esq. of Lincoln, to represent the State (together with President GARLAND) in the National Association. We did not see this fact stated in any of the earlier accounts we received of the proceedings.

Bee Department.

ABOUT SAVING QUEENS.

A. GRIMM, in the Bee Journal, referring to the arrest of bee swarming, says: — "Some time ago one of my colonies of Italian bees attempted to swarm out, but I arrested it and prevented the desertion by capturing the queen. On letting her run back into the hive, the returning bees attempted to kill her. I caged her for protection, placing the cage between the two central brood combs. Next day the same colony attempted twice more to swarm out, but had to return, as the queen could not follow the bees. As the queen was a very valuable one, I removed her to a queenless colony, and substituted for her a queen cell nearly ready to hatch. Examining the colony the following day, I found that the queen cells had been destroyed, and the bees were building others from their own brood.

In every instance where a colony attempts to swarm out, the bee-keeper would do well to take away the queen and use her to supply some queenless stock, if he has any. Such removal is a useful precaution, as, with me, in a number of instances, the bees killed their queens, when for any reason she was unable to accompany them in their proposed desertion.

BEE HUNTING.

THOSE who have the inclination to hunt bees, and the necessary leisure to indulge in the excitement of it, will find the warm, sunshiny days of "Indian Summer" well suited to the purpose. It is customary, in the timbered sections of the country, to repair to some opening in the forest and ignite a portion of honey-comb on a flat stone as a lure to any stray bees which may be in the vicinity. While the comb is burning, a piece, well filled with honey, should be placed in a cup near by, where it may be readily found by such bees as are attracted by the aroma produced by the ignited portion of comb. A little patience is requisite, though sometimes the test is neither severe nor protracted. Usually a single bee will come circling around and soon settle on the honey-box and commence the work of loading himself with the store provided. This operation will soon be performed, when the bee will rise in spiral circuits to the tops of the trees and bear away for the home of the colony, should it be somewhat remote from the point of departure. Should it be near the rise will be correspondingly less. As the bee departs, its line of flight should be noted and the return awaited with philosophic patience. This, barring accidents, will not be long, and the chances are that several more will accompany the first one on his return. After this, bees will accumulate rapidly, when it will be necessary to make a move in the direction indicated by the flight of the workers.

Before moving close the honey-box, with a few bees in it, bearing them to a new position. Watch their flight from this as from the first point. If it is in the same direction, move forward again and repeat the experiment. But if the flight is reversed it will show that the home of the colony has been passed, and that the back track must be taken. Examine the trees carefully on the line, between the last two positions and its vicinity on either side, as the bees will certainly be found between these two points,—possibly not on a direct line between them, though the variance will not usually be very great.

FEEDING BEES.

E. S. T., in the Prairie Farmer, in response to an inquiry whether it will pay to feed bees for the promotion of early breeding, says: — "I have repeatedly tried feeding on a large and on a small scale, but never with any profit. Uniting two or more weak colonies in the fall, or strengthening the weak from the strong, is deemed the preferable mode of proceeding. The writer adds:

"Those commencing with bees, who have little experience and are anxious to save all colonies and increase fast, often err in their judgment of the condition of their bees, and find them in the spring a little short of stores. One such bee-keeper writes to me that he had several starve this year in May. No one need be told that it is poor economy to allow bees to perish then for want of a little aid, and here is just where feeding, in my opinion, properly "comes in." A pound or two of syrup or honey fed to a destitute colony then will save and encourage it; and as honey must of necessity soon be abundant in flowers, no bad effects can follow feeding for so short a time.

My rule in the matter therefore, seems to be rather an Irish one: — Don't have any weak colonies, but if you *do* have, feed them rather than let them starve."

ITALIANIZING COMMON BEES.—W. C. CONDIT, St. Louis, writes Colman's Rural World on the management of the honey bee and the method to pursue in Italianizing the natives. All that is necessary to make the change, he says, is to remove the native queen and introduce in her place a fertile Italian one. The young bees (Italians) will begin to emerge from the cells in three weeks after the introduction of the new queen, and a week or two after will appear on the outside of the hive. As the old bees (natives) will rapidly die off, the result will be a colony of pure Italians.

Rural Spirit of the Press.

Winter Fuel.

WHERE a wood lot is part and parcel of a farm and has "down timber" upon it, farmers will find it a paying operation to cut up and cord these fallen trees before snow storms come on. This will give the wood an opportunity to dry, rendering it better for use and more easily handled when the sleighing season arrives, if not wanted before that time. It is difficult to gather such fuel after the snow has fallen, while every day's exposure to storms renders it less valuable for market or for domestic use.

Bones and Their Uses.

THE Scientific American, discoursing upon bones, enumerates several ways in which they are made useful. Thus:—The fresh bones from the butcher's stall, as those of beef, which have been entirely stripped of the flesh, are excellent bases for soup. Indeed, bones alone make a far better soup than meat alone; and even after being cooked, unless boiled, bones are superior materials for this purpose. Even the rib bones of a piece of roasting beef, after having been placed once on the table, although marrowless, are good soup bones, and the skeleton of the turkey, gosling or chicken, which as a roast has done its duty, will make a nourishing broth. Gelatin, and not fat, is the true foundation for soup, and this is largely contained in bones. So much for the domestic uses of bones; now let us look at their other uses.

First, then, the bone boiler deprives them of their fat, which is used for a hundred purposes, from the basis of fancy soaps and pomatums to the "slush" for ships' masts. The gelatin becomes the "isinglass" put up in fancy colored papers, and sold at the groceries for making jellies, soups, and blanc mange; or it enters into the composition of jujube paste and gum drops. Old bones are the foundation of the much valued fertilizer known as superphosphate of lime. Ground and mixed with sulphuric acid they restore to the soil what it has given us in our wheat.

But they are almost invaluable in the arts. Very much of our "ivory handled" cutlery, probably nearly all of our ivory handled umbrellas, parasols and whips, many similarly ornamented canes, etc., are handled with bone, and not true ivory. In fact, some of the bones in our domestic animals approach very nearly in texture to genuine ivory. We have seen a complete set of dental instruments handled with horse bones, which made as fine an appearance as the real ivory. Bone buttons are so commonly used that only an allusion to them is necessary. Almost all, if not quite all the phosphorus employed in the arts and sciences is procured from old bones. It is probably the most valuable extract which bones yield.

Application of Manure.

THE Maryland Farmer closes an article on the subject of a proper application of manure, by saying:—"On heavy clay lands manure liberally and plow it under; on light soils top-dress in more limited quantities, but more frequently than on the heavier ones." This is brief, sensible and probably as correct a practice as the various modifications of soil will permit.

Feeding Cows.

"COSMO," in the Saturday Evening Post, ridicules the idea advanced by an agricultural journal that feeding a cow a peck of Indian meal a day besides hay, during the winter, will produce a fine flow of rich milk. "Cosmo" is right in this. A cow so fed will fatten rapidly, but her flow of milk will decrease in an equal ratio.

Rural Notes and Items

THE SEASON AND THE WEATHER.—The Attica Atlas asks whether "the oldest inhabitant" in this region can call to mind a season when snow has not fallen by the first of November, except the present one. Not being the "oldest," we cannot assert positively as to this, but our impression is that for the last thirty years the advent of November has been preceded or accompanied by flurries of snow. This season has proved an exception, since, up to the time of the present writing (Nov. 4th) there has been nothing that could be called a snow squall, and the weather remarkably warm and pleasant. It is reported that along the line of railroad between Cleveland and Toledo, snow fell to the depth of five inches on the night of the 30th ult. But, though destitute of snow storms, we have had some severe ones of wind, especially on Sunday night, Nov. 3d. Walls, in exposed places, as also chimnies, were blown down—in one instance involving the loss of a life.

CROPS, &c., IN SOUTH CAROLINA.—A subscriber writing us from Edgefield District, S. C., Oct. 24th, says:—"The cotton crop is above an average one, in this vicinity, for the land planted, — but there is not above one-third, and probably not one-fourth, of the land planted this year that there was say in 1860. Grain crops, too, have turned out well this year, but much of the lands that ought to have been planted are now a wilderness of briars, broomsedge, etc. *The cloud is dark.*"

—Aye, friend, but your report shows that "the cloud has a silver lining,"—for the fact that you have an abundant yield, in proportion to land cultivated, is most encouraging. What South Carolina (and many of her sister States,) most needs is labor, energy and capital to cultivate improve and render profitable her thousands of fertile farms and plantations, now lying waste, and the hundreds of fine water powers which are unoccupied within her borders. Were the farmers, manufacturers and capitalists of the North aware of the advantages offered them in the Carolinas, Georgia, &c.,—and that they would, as we verily believe, from observation, be well received by the people there, —many of the desert places of the South would soon be rendered pleasant, productive and profitable.

TOWNSHIP FARMERS' CLUBS.—A correspondent at Montezuma, N. Y., asks an opinion as to the feasibility of forming and sustaining a "Farmers' Club" in each township of the State, as recommended by H. GREELEY in a recent address. Our opinion is that if the effort were made and should prove successful in only half or even a less number of the towns, the investment, on the whole, would prove a paying one. Ordinarily a few stirring men can succeed in getting up a "Club" and for a time matters progress with tolerable smoothness, but as the novelty of the thing wears off and local jealousies arise the attendance falls off, the interest flags and the "Club" dies from sheer sluggishness. Farmers' Clubs supply means of improvement and are valuable institutions, but unfortunately, like precocious children, too many of them die young.

A SAFE OFFER.—A friend in Oxford Co., Me., who formed a small club for the RURAL this year, thinks he can do much better next because the paper is so well liked, and adds:—"I said to one person, 'If you will subscribe for the RURAL, and are sorry at the end of six months, I will pay you back the money, and you may have the paper for nothing.' He subscribed and likes the paper first rate." Many of its friends have made a like offer of the RURAL for a year, but we never heard of an instance in which a return of the money was demanded. It is a safe offer.

THE RURAL NEW YORKER AT THE SOUTH.—Of late we are receiving many subscriptions and renewals from the South, and confidently anticipate a large increase of the RURAL'S circulation in the border and planting States during the ensuing three months. Every mail brings us well-lined and otherwise encouraging letters — from both city and country. Among several money letters received the same day from New Orleans, one (after speaking of the writer's former acquaintance with the RURAL) closes thus: "It is just the paper needed by the planters of the South. As an agricultural paper it would be worth thousands of dollars to the planting population of Louisiana alone. Please convey to me, in some shape, how long $10 will pay a subscription for; and in case of change of residence would the office change direction of paper on notice? [We will send the RURAL four years for $10, and change address free.] I feel anxious to see your paper get a large circulation in the city and country here, and will do all in my power to aid your enterprise."

Other letters from the South say the people need the RURAL on account of the changes since the war—a different system of labor, and more mixed husbandry, (instead of growing so much cotton and sugar,) cutting up large plantations into small farms, &c., &c., creating a demand for information about the culture of various field and garden products, the planning and construction of farm houses, outbuildings, and sundry other matters discussed and illustrated in the RURAL. The encouragement we are thus receiving from the South is fully appreciated, and in return we shall, so far as consistent, endeavor to promote the best interests of the people of that vast and fertile rural region.

WHY WE DON'T "BLOVIATE."—An intelligent friend inquires why we don't "bloviate" more about the RURAL, by publishing letters, notices of the Press, &c., in its praise—"especially as you [we] have by far the best rural paper in the country. Why not do as the — — does, and occupy the most prominent pages in heralding the RURAL'S merits, inducements for clubbing, and so forth and so on."

— There are several reasons for our reticence. One is that we have not space to give one-tenth the complimentary letters, notices, etc., which we receive, without seriously infringing upon the rights of our readers. If we received but few such compliments we might give them perhaps, but they are so numerous that we refrain from publishing, except occasionally, and then generally in connection with other matters. We may, however, do better in future, as space permits,—yet it is difficult to select from so many good things, and beside some of our readers might think of the RURAL as does a Mississippi gentleman of another paper, (the same mentioned by our friend in connection with "bloviating,") who, in remitting for the RURAL, says:—"We need many improvements in Agriculture in this section, and I am looking about for light. At present I am taking a monthly journal from New York, the — —, but it takes up so much space puffing itself, &c., that it leaves out the Agricultural department, almost."

SALT AS A MANURE FOR WHEAT.—A correspondent of the Canada Farmer gives the result of his experience in using salt as a fertilizer for wheat. He says:—Last spring I thought I would try it, and bought six barrels, and applied one barrel to the acre, on three acres Genesee Club spring wheat; at the same time I sowed half a barrel across five acres of wheat in another place. Now for the result. The three acres shot out five days before the same variety sown side by side on the same day, and the strip across the field I can see as plainly as if the one was wheat and the other oats. The reason I applied salt to the Club wheat was this: I have been troubled with the straw breaking, and salt is highly recommended to stiffen the straw; whether it will or not I cannot say yet, but I can say that the wheat I salted keeps far ahead of the rest. However, by harvest I will be able to tell you if it keeps the straw bright and stiff, and if the wheat will ripen sooner.

ELECTION IS OVER!—Now that the November Elections are over, and the Country again saved, farmers and other practical, sensible people can "breathe freer" and direct special attention to other matters than politics—their own affairs, and the welfare of their families. Those who have indulged in large doses of electioneering politics, may possibly find a pleasant change by tasting such palatable and nourishing food as is furnished by the RURAL and similar journals. And should not those who partake of and like such viands give others opportunity to refresh and strengthen themselves from the same larder? Reader, need we add that now is the season to extend this kindness by introducing the RURAL to the notice and support of your friends?

A NEW POTATO.—At a recent meeting of the Hartford Co., (Conn.) Ag. Society, DAVID CLARK, of Hartford, stated he had raised the present season about forty bushels of a new seedling potato supposed to have been derived from the Colebrook. They were pronounced uncommonly fine — mealy and white, when cooked, and, so far, free from rot. As there was no name for this seedling the Society suggested that of "Hartford Seedling," which was adopted. Mr. C. proposed to distribute this new variety among the members of the Society for the purpose of testing its merits as a potato for general cultivation.

BONNER'S HORSE PREMIUM.—The N. Y. Ledger furnishes an article on the subject of premiums at Fairs in which the publisher of that paper takes occasion to air his own liberality in the premium line a little. This is shortly done by publishing a receipt for $33,000, signed by the former owner of DEXTER as the price received for that noted piece of horse flesh. This is claimed to be the largest premium of the season — beating the best given by any Society, County or State, or even the famed World Exposition at Paris.

LOUISVILLE A COTTON MARKET.—The Louisville Industrial and Commercial Gazette states that the recently inaugurated efforts to make Louisville the focus of a great cotton trade are proving eminently successful. Warehouses for the reception and storage of cotton are multiplying with the increase of business, giving promise that Louisville at no distant day is destined to become one of the most prominent cotton depots in the United States.

TWO HUNDRED AND ELEVEN TO ONE.—The Rochester Democrat states that JOHN PEACOCK of West Grecce in this county, last spring planted the eyes from a seedling Mercer potato—forty-four in number—in twenty-two hills. The yield, when dug a few days since, was two hundred and eleven good sized potatoes. Considered, with reference to the amount of seed used, the yield is an uncommon one.

A WHOLE HOG.—There was a hog on exhibition at the Illinois State Fair which weighed 1,400 lbs.

HORTICULTURAL.

APPLE TREES IN NEW ENGLAND AND EASTERN NEW YORK.

In your report of the "Discussion on Apples" at the recent State Fair (in the RURAL of Oct. 14th,) you give some statements of Mr. SOLON ROBINSON about "Apple Trees in New England and Eastern New York." In that entire section of the country, he asserts that "apple orchards are fast disappearing;" that "apple trees, as a general thing, were fast dying off;" that "we should be compelled to depend on some other fruit for supply in the future;" that "the best cultivators lost their most thrifty trees;" that "the cause of decay was inexplicable," and that "the trees begin dying at the ends of the limbs, and continue downward till the tree is used up."

There is so little in these statements that accords with my own observation and experience, and so much that will exert an unfavorable influence on the culture of apples, that will tend to check all interest in planting orchards and hasten their disappearance, that it excited both surprise and regret. The impression that his remarks will make, we believe to be essentially erroneous and hurtful,—an impression that we hope materially to modify, if not entirely to remove, by the few hints and facts that we offer on the subject.

It will hardly admit of a doubt, that apple trees in New England and Eastern New York die generally of old age. This is sometimes brought on prematurely by neglect of proper pruning, by failure in draining the land, by removal of protecting forests, or by poverty of the soil. There is no prevalent disease, nor symptoms of one, among them. They reach a certain natural term of life now, as they did fifty years ago. This term of life,—their natural longevity,—is somewhat greater probably in Western New York than it is with us, where the winds are more violent and the winters longer and colder. But they are nowhere long-lived trees, like the pine, the chestnut, the maple or the oak. Here they live from fifty to eighty years. About a mile from me is one venerable orchard, well protected from winds, but now about used up, which is eighty-one years from planting, or about eighty-four years old. Single trees from disease, or unfavorable circumstances, of course die younger. Our old orchards were planted many years before those of Western New York, where, I apprehend, the natural term of apple tree life has not yet been reached, and of course few or no decaying orchards are found. But let me warn fruit-growers in that section, that unless new orchards are set out soon, they will witness in less than forty years just what is seen now all over New England and Eastern New York,—whole orchards—those very ones now so prolific—decaying from old age; and as there will be none to supply their place, a consequent scarcity of fruit. To prevent this new orchards must be planted once in thirty or forty years. That our apple trees "begin to die at the ends of the limbs, and continue downward till the tree is used up," does not seem to us a marvellous thing. Where should they begin to die, if not at the ends of the limbs? Would Mr. ROBINSON have the roots and trunk die first, while the limbs are sound, and the leaves are green and the blossoms fair? Do other trees ever die in this manner? Did he ever hear of a man whose digestive organs died first, while the poor fellow was walking about the street lamenting the loss of so convenient an apparatus?

While old orchards have died, but few new ones have been set out. This fact mainly accounts for the small amount of apples produced at present in New England and Eastern New York. When the temperance reformation commenced, about forty years since, it spread rapidly through this whole region. An immense amount of apples—mostly natural fruit—was then produced in every town and made into cider which was converted into cider-brandy, the favorite alcoholic stimulant of the farmers of that day. As this whole business was inconsistent with temperance principles, and the apples were unsalable for other purposes, they either cut their trees down or allowed them to die prematurely from their neglect. Within the last twelve years, we knew one orchard—healthy, productive and mostly of grafted fruit—that was thus wantonly destroyed by the ax. Not one in ten of these large, first growth orchards in the Eastern States, has been replaced by new trees. Of course we have little fruit.

And yet it is not true, at the present time, that "apple orchards are fast disappearing." This might have been said fifteen or twenty years ago. But since that time a new interest has been excited in the culture of apples, which we trust, the influence of an authority so respectable as Mr. ROBINSON will not abate. Orchards have been on the increase for twenty years past in this region. Trees receive more and better care. And many young and thrifty orchards are coming on that will do something to supply the demand for this fruit in the future. And wherever they have been growing long enough to bear, they are healthy and productive. There are some dozen orchards in New Lebanon, and Stephentown, N. Y., and Hancock, Mass., which have this year brought an income nearly or quite equal to that of the entire farms besides. Nor are these orchards large; yet one of them I am informed will produce nearly 400 barrels of fruit, worth $4 per barrel on the ground. There might have been an hundred other orchards as good in these towns if they had been planted.

At the same time we have some peculiar obstacles to contend with in the culture of apples. Our climate does not allow us to succeed with as many varieties as that of Western New York. None but hardy kinds will endure well our severe winds and cold winters. But these are sufficiently numerous for all practical purposes. The Baldwins, the Northern Spy, the Vandevere, the Seek-no-further, the Alexander, and the Jenlton never fail when they are cultivated with oridinary care. In what part of New England Mr. ROBINSON found that "the best cultivators lose their most thrifty trees" of Baldwins, Spys or Vandeveres, is the only real mystery that his remarks suggest. Farmers have, however, been disappointed in their attempts to raise the Rhode Island Greening, which is the favorite apple in this region. But it will not live, thrive and produce well, except in very rich soil and with very thorough culture and pruning. Those who have Greening trees may do much to improve them by the following process: Make a compost, one-half well rotted chip manure and one-half from the barnyard and spread it liberally under the tree—not up against the trunk, but over a circle at least ten feet in diameter. Turn it under with a spade and mix it thoroughly with the earth, over which sprinkle two or three quarts of slacked lime or a half bushel of ashes. In pruning for the first time adopt the heroic practice. Take from the tree such limbs as are too low and thus relieve it of too heavy foliage and make it symmetrical. Within the top remove all branches that cross and interlace others, carefully selecting the smallest, poorest and most straggling ones for excision. Remove of course all dead limbs as well as twigs about the body. After the first season pruning may be comparatively light. It is best done for such trees in February and March. For want of such pruning and culture, the largest orchard, mostly Greenings, in this region, is almost entirely unfruitful.

In some instances orchards have failed, because they have been exposed to the merciless blasts of our winters and springs—the result generally of carelessness or ignorance. Scarcely a farm can be found that has not a good protecting forest or hill behind which an orchard might be securely planted. The first settlers had some regard generally to this obvious and important requisite for a long-lived and fruitful orchard. Yet it is sometimes now entirely ignored. In Rensselaer County, a farmer a few years since set an orchard in the most exposed and bleak part of a hill farm, although he had an old one, still vigorous and bearing well, for the reason doubtless that it was placed on the southeastern slope, and near the foot of the hill which he had crowned with his new and carefully selected trees, which already show signs of a brief existence.

Another and more serious difficulty is to obtain really good, healthy trees to plant in "New England and Eastern New York." We have few large and well conducted nurseries, and depend largely for a supply on the great nurseries of Western New York, whose agents do fleece the farmers so mercilessly as to discourage them beyond measure in attempts to enlarge their orcharding. This charge is not mere conjecture,—although we cannot say whether the agent or the nurseryman is the greater rogue. In notieing the deception practiced by agents in some of the interior counties of Massachusetts, so able and carefully conducted a journal as the Springfield Republican asserts that the greatest obstacle to the extensive cultivation of apples in New England arises from the distrust and disgust that farmers feel respecting the whole nursery traffic.*

But with these obstacles to overcome, I must not forget to mention that we have two advantages over Western New York, viz: land is cheaper and our market for apples is better and nearer. And these will at least counterbalance one disadvantage, so that farmers have every inducement to enter zealously on this important branch of agricultural industry. It is light, pleasant, and remunerative. There is no danger of overstocking the market, and will not be, if the business is increased a hundred-fold. There is no mystery about the decay of apple trees in New England and Eastern New York. It is no more "inexplicable" than their decay in other regions, or than the decay of other trees.

Stephentown, N. Y., Oct. 23. E. M. R.

*This charge of our valued correspondent we regard as unjust—far too sweeping. Rochester is the headquarters of the Nursery business of Western New York, and we do not believe there is a reputable firm in the locality that would either deceive or employ agents likely to do so. On the contrary our leading nurserymen are extremely careful to be correct in naming all their trees, and where there is any uncertainty in regard to nomenclature prefer to destroy rather than sell their stock. We refer to established nurseries of reputation. Of course there are swindlers in the business—especially speculating dealers who purchase poor trees at low figures, and label them to suit their fancy or fill orders. The best way is to order direct from reputable, reliable nurserymen,—and in all such cases we will, for a very low premium, insure purchasers against fraud and deception.—ED. R. N. Y.

COLD PITS.

WE copy the following clear directions from the Gardener's Monthly:—Those who have no green-house, and yet are desirous of preserving many half-hardy plants through the winter, employ *cold pits*. Choose the dryest situation in the garden, and sink about five feet in depth. It is important that no water can be retained at the bottom. The pit may be of any length required, and about five feet wide, so as to accommodate six feet sash. The inside of the pit may be built up of boards, or, if something more durable and substantial is required, brick or stone. The body of the frame may be built up a few feet above the level of the surrounding soil, and the earth which comes from the pit be employed in banking up to the upper level of the frame. Shelving should be made for the inside so as to extend from the base of the front to nearly the top of the back, on which to place the plants in pots. In the space which will then be under the staging, hard wooded and deciduous plants, as lemon verbena, fuschias, etc., may be safely stored, while the more succulent kinds are shelved over head. The plants to be preserved in such a pit should be potted early, and be well established and healthy before being

THE CREVELING GRAPE.

THIS variety originated in Pennsylvania. It has a reputation of being a good grower, hardy and vigorous. The fruit ripens with the Delaware, its color is black with little bloom, and the flesh is finely flavored. Our engraving, drawn from nature, gives a good idea of the size and shape of a perfect cluster of medium size. At the meeting of the Western New York Fruit Growers' Society last February, the Creveling received high commendation as an early, hardy grape of fine flavor, and valuable for garden culture. Some considered it the finest black grape grown. Mr. HOOKER, while mentioning serious faults, would not exchange it for any other variety in his collection. Its worst defect is looseness and imperfection of the bunch; it is not over productive. As a market grape it cannot be highly recommended, but for garden culture—for home use—and perhaps for wine making in localities where it will succeed best, it is worthy of general attention from amateur cultivators.

pitted; much of success depends on this. The less water they can be made to live on without withering through the winter the better they will keep. Straw mats must be employed to cover the glass when freezing time commences, and when the thermometer is likely to fall below 20°, straw or litter should be thrown over. Board shutters are also excellent, as it keeps the snow out from the straw and litter, which sometimes makes the mats very awkward to uncover when we would like to give air. Very little light or air will be required through the winter, when the plants are not growing. If a good fall of snow cover the pit, it may lie on undisturbed for two weeks or more without injury. When a warm, dry day offers, the sashes may be raised if convenient, to dry up the damp. Many kinds of border plants can be kept over in this way with little trouble.

HORTICULTURAL GLEANINGS.

Improving the Shape of Pear Trees.—Some good varieties of pears make ugly shaped tops. This can be improved by grafting the bad-growing but excellent sorts on good growing but worthless kinds. There are a great many pear trees in the country that will pay richly for grafting.

Coal Ashes for Currants.—It is stated that coal ashes applied around currant bushes to the depth of three or four inches, and over a distance of several feet on each side, will prevent the larva of the worm from rising from the ground underneath, and thus leave the bushes tolerably free from this pest. The application should be made between this time and spring.

Fire Blight in Pear Trees.—A correspondent of the American Institute Farmers' Club attributes fire blight to the growth of the roots of the tree downwards until they come in contact with some water course or a cold, wet soil. As a remedy he suggests grafting the pear on to the mountain ash, the natural habit of which is to extend its roots in a horizontal direction. He has some four hundred trees on this stock which are healthy.

Packing Grapes.—Successful packers of grapes that are intended for late keeping first put the fruit in a close, moderately warm room for twenty-four hours to induce "sweating," then expose it to the air long enough to remove the moisture from the stems and fruit. Next each cluster is inspected and all defective berries removed with sharp-pointed scissors, the fruit is then placed in shallow boxes without any packing and the covers nailed on tight. If the boxes are opened from the under side the berries alone are seen and present a splendid appearance in market.

Maine will scarcely produce apples enough for home consumption this season, and grapes have proved a decided failure.

Horticultural Notes and Queries.

HEELING IN PLANTS.—(P. H., Waterville, N. Y.) Small plants, as grapes, currants, raspberries, roses, strawberries, etc., may be taken up in the fall, "heeled in" as the nurserymen phrase it, the ground covered deep enough with manure to prevent its freezing hard above the roots, and then they can be removed earlier in the spring than if bound up by frost. The tops of the plants should not be covered. Or a limited quantity might be put in a cellar in earth, provided it was cool and dry enough to retard their growth entirely. There is some danger from frost when plants are shipped too early in the spring or latter part of winter. Grape vine cuttings in the hands of inexperienced growers, should be made long enough to embrace two or three eyes.

CATALOGUES, &C., RECEIVED.—ELLWANGER & BARRY'S Descriptive Catalogue of Ornamental Trees and Shrubs, Roses, Flowering Plants, etc., for 1867–8. This is finely illustrated and valuable for reference.

Catalogue of the Pomona Garden and Nursery, naming a great variety of Strawberries, Raspberries, Blackberries, Vines, &c. Address WILLIAM PARRY, Cinnaminson, Burlington Co., N. J.

Montclair Small Fruit Nursery, with a full description of the Kittatinny Blackberry. Address E. & J. C. WILLIAMS, Montclair, N. J.

CHOICE PEARS.—We are indebted to Messrs. ELLWANGER & BARRY of the Mt Hope Nurseries, for a basket of excellent pears, of various popular and new varieties—which are pronounced (by those who place their pedal extremities under our mahogany, and some strangers,) superior in size, beauty and flavor. With such evidence, we do not wonder at the increasing reputation of Messrs. E. & B. as nurserymen and fruit growers. "Long may they wave"—and thus remember us annually, as aforetime!

NEW NURSERY FIRM.—As announced in our advertising department the nursery firm of GOULD, BECKWITH & Co., has been dissolved, and a new one—consisting of S. H. GOULD (senior partner of the old firm) and E. P. GOULD—has been formed under the title of GOULD BROS., by whom the extensive business of the late firm will be continued. The Messrs. GOULD are intelligent and enterprising, and cannot fail of achieving a goodly portion of the great success wished them by hosts of friends.

PEACH TREES—HALE'S EARLY.—A subscriber writing from Independence, Mo., asks—"Can you inform me where I can obtain trees of Hale's early Peach,—described in the RURAL of Sept. 21?" Our advertising columns will give the desired information before the time for spring planting arrives.

A MONSTER RADISH.—Mr. F. HUBBELL, East Mendon, Monroe Co., recently left at the RURAL office a specimen of the common long-red, table radish, which measured over two and one-half feet in circumference, and weighed nine pounds!

FINE GRAPES.—Messrs F. W. LAY and H. N. LANGWORTHY of Greece, this County,—both successful fruit growers,—have favored us with fine specimens of the Delaware grape.

Domestic Economy.

CULINARY COUPLETS.

BY A RHYMING EPICURE.

ALWAYS have lobster sauce with salmon,
And put mint sauce your roasted lamb on.

Veal cutlets dip in egg and bread crumb—
Fry till you see a brownish red come.

Grate Gruyere cheese on maccaroni;
Make the top crisp but not too bony.

In venison gravy, currant jelly
Mix with old port—see Francatelli.

In dressing salad, mind this law—
With two hard yolks use one that's raw.

Roast veal with rich stock gravy serve;
And pickled mushrooms, too, observe.

Roast pork sans apple-sauce, past doubt,
Is "Hamlet" with the Prince left out.

Your mutton-chops with paper cover,
And make them amber brown all over.

Broil lightly your beefsteak—to try it
Argues contempt of Christian diet.

Buy stuffed pigeons. When you've got them.
The way to cook them is to pot them.

To roast spring chickens is to spoil 'em—
Just split 'em down the back and broil 'em.

It gives true epicures the vapors
To see broiled mutton, minus capers.

Boiled turkey, gourmonds know, of course,
Is exquisite with celery sauce.

The cook deserves a hearty cuffing
Who serves roast fowls with tasteless stuffing.

Smelts require egg and biscuit powder.
Don't put fat pork in your clam chowder.

Egg sauce—few make it right, alas!
Is good with blue fish or with bass.

Nice oyster sauce gives zest to cod—
A fish, when fresh, to feast a god.

Shad, stuffed and baked, is most delicious—
'Twould have electrified Apicius.

Roasted in paste, a haunch of mutton,
Might make ascetics play the glutton.

But one might rhyme for weeks this way,
And still have lots of things to say.

And so I'll close—for, reader mine,
This is about the hour I dine.

COOKIES, FRIED CAKES, &c.

EDS. RURAL:—Like every other housekeeper I am disappointed if the "Domestic column" is omitted, therefore I send a few recipes which I know to be good:

COOKIES.—Take one cup of sugar, one cup of cream, half teaspoon saleratus; if your cream is sweet one teaspoon cream tartar will be required; mix with enough flour to roll easily.

FRIED CAKES.—In the first place I take a piece of butter the size of an egg, half a teaspoon saleratus, one of cream tartar and rub up with five teacups flour, then add one cup sugar, half teaspoon cinnamon, then wet up with one egg and one cup of milk, a little salt, and if these are not good you must blame yourself for not frying them right, they never fail with me.

A GOOD PLAIN TEA CAKE.—Take half cup butter and one cup sugar, rub together with a spoon, then half teaspoon saleratus and one of cream tartar; dissolve in half cup milk, beat two eggs and mix with the sugar; then mix all together with 2½ cups of flour, season to taste.

INQUIRY.—Will some of the lady readers of the RURAL give a recipe to prevent a white scum from coming on pickles.—C. A. M., *LeRoy, N. Y.*

DRYING APPLES.

MANY RURAL readers have, doubtless, a quantity of fall apples that are not suitable except for cider purposes or to be fed to stock, but which might be dried with profit. I will give my plan of drying them. Last year I built an ash house of brick (stone will answer as well) and for the purpose of drying apples I filled it with movable shelves made of lath, put a stove into it and was then ready for work. It is only four by five feet on the inside, and will hold from six to eight bushels, and the time usually required for drying a batch is three or four days. Many farmers have ash houses which are also used for smoking meat, and possibly these might give the fruit a smoky taste. But such can probably be made good by white washing. I see nothing to hinder this arrangement from being successfully used for drying berries, as it can be warmed to any desired temperature. I give some ventilation at the top to accelerate the drying process.—D. WILCOX, *Springwater, N. Y.*

HOW TO MAKE METHEGLIN.

G. W., Coham Co., Mich., asks for directions "for making the old-time beverage, called metheglin." One way of making is to mix honey with water until it will float an egg to the surface, exposing a small section of it above the liquid. Strain and raise the temperature gradually, and as the scum rises, skim it off. When the boiling point is reached take from the fire and let it cool. Barrel it, leaving the bung out until properly fermented—not so long as to become sour—and then bung tightly, or if bottled, cork well. It may be used soon after making, but age greatly improves the flavor. Some persons put warm water and honey in a cask and after twelve hours or so, shake well and add hops and yeast. Of the former half a pound, and of the latter one pint for about 40 gallons. When properly fermented the air should be excluded as in the first case.

CARAMEL—TO MAKE.—Take the following ingredients: 5 lbs. sugar, 1 do. chocolate, 1 quart cream, not milk, 50 cents worth of vanilla. Cook an hour and a-half, and stir all the while, to prevent burning.—"PARSON."

Ladies' Department.

SWEET MOTHER.

BY GRACE G. SLOCUM.

THERE comes to me in dreams, an angel-vision as I stand
Surrounded by a weary waste of barren desert-land.—
Soft eyes so earnest and so deep, a brow so white and fair,
A gentle and a loving mouth, and shining bright-brown hair.

A gentle hand seems lain upon my aching, throbbing brow,
It lay there when I was a child—I feel its cool touch now,
It smooths out all the wrinkles that sorrow furrowed there,
And softly o'er my forehead creep those waves of shining hair.

Have childhood's hours come back again, far o'er the voiceless sea,
And with their joy, sweet mother, hast thou come back to me?
And when my eyes are weary, and I long so much for rest,
Can I lay it as of old upon thy pure and loving breast?

When tired of all earth's mockery, and wearied of my play,
Wilt thou hush me on thy bosom, wilt thou wipe my tears away?
And shall that dear and loving voice whose tones I've missed so long,
Yet softly murmur as of yore the low, sweet cradle-song?

My mother, when your eyes of love bent o'er my childish head,
And you prayed that "holy cherubims might guard my cradle-bed,"
When you heard the tender rustle of their shining wings of white,
And left upon my rosy mouth a mother's soft good-night;

Say, mother, in those blessed years did your dear heart e'er know
What lines of pain would yet be flung across my glad young brow?
When at the twilight-hour you rocked your little one to sleep,
Didst ever guess, sweet mother, how those laughing eyes would weep?

But a memory-bell is tolling—Ah! there came a weary day,
When your hair of shining brown was thickly silvered o'er with gray,
When o'er the jasper heights an angel whispered to you "come,"
And another softly bore you to your bright eternal home.

The gentle hands were folded, closed the holy, love-lit eyes,
And they laid thee where the willows weep beneath the bright blue skies.
I watched them, oh! my mother, till the shadows gathered gray,
And the dust they heaped above thee, seemed to shut my life away.

Sweet mother, 'tis a blessed spot,—that precious, hallowed grave,
Where through the long, glad summer-time the weeping willows wave;
I've seen the print of spirit-feet that guard thy churchyard bed,
I've heard the sweep of angel-wings that hover o'er thy head!

JAPANESE SOCIAL LIFE.

THE vast difference in the social life of various nations is quite remarkable, and is worthy more than a passing thought. Even among the most highly civilized peoples social customs are as widely different as can be well imagined. Of European customs and manners we have long known much, but Oriental countries have been so like a sealed book to a majority of the world that their peculiarities are almost entirely unknown to Americans. Since the Japanese Embassy came to the United States, a few years ago, a new interest has been felt in learning what could be learned of the country from whence the queer looking embassadors came. As the people, in one sense, make the country, the greatest interest naturally centers in them. The following sketch of their social life contrasts strongly with home-life here:

A family of a middle class generally live in a low house, with a thatched roof. These houses are built this way for safety against earthquakes, which are common. About a century ago, 100,000 people lost their lives in Jeddo, by an earthquake. The husband generally has but one wife; polygamy is allowed, and the wealthier men sometimes marry several wives, to show their independence of custom, or their ability to support a large establishment. The marriage bond is esteemed sacred and is rarely broken. Where his marital rights are invaded, the husband may kill his wife and her paramour together, without fear of punishment. Families generally take their meals together, the husband sitting a little apart from the rest to show his superior dignity. At night the family always go through a form of worship, putting their heads down and extending their hands in invocation of their deity. In the morning the father goes to the door, opens it, clasps his hands and invokes the god of day. The morning meal is soon ready and eaten, and the children are sent off to school, where they all learn reading, writing and calculating, and the girls sewing. The women are well treated, not being compelled to do heavy out-door work, and being admitted to many of the lighter avocations, such as that of clerk or book-keeper in a store. The wife and older daughter share also in the recreations of the head of the family.

Matrimonial matches are generally made up by the parents or friends of the parties interested. After the preliminaries have been discussed the parties themselves are consulted. If they object strongly, the match is not consummated, but filial obedience is made so imperative a duty that this does not very often happen. When the preliminaries are fully agreed on, the parties are openly betrothed, with the exchange of presents, and the betrothal is rarely broken. Among the aristocracy, if a lover dies, his betrothed must remain single throughout her life. Among the upper class a widow must not marry again, but in the lower classes she may. She follows her first husband to the grave with an iron pot on her head, her second, if she outlive him, with two iron pots, and so on. Death is to the oriental mind the one inevitable fate. Hence it is looked upon with comparative indifference, and in the funeral ceremonies there is no solemnity, but often the greatest levity. In the country they are all buried in cemeteries, which are well cared for. In the cities both burial and cremation are practiced. The people generally have a strong desire to be buried in the ancestral burial lot. Suicides are frequent, both on account of love affairs and of losses in business. Hanging and drowning are the most common methods. Harikari, or disemboweling one's self, is reserved for the higher classes. This is considered highly honorable, and it removes all disgrace, not only from the man but from his family, in whose presence the act is commonly committed. An honorable way of settling a family feud is for one of the parties to kill his enemy, and then terminate his own life by harikari. The last act removes the disgrace of the murder, and leaves the family without reproach in society.

THE PRINCESS OF WALES.

PRINCESS ALEXANDRA is about twenty-two years of age. She is tall and fragile, her hair is light, and so is her complexion. Her disposition and spirits are amiable. She is very accessible. She is very popular and has the sympathy of the nation, for she is known to be neglected by the Prince. She has done what she could to revive the Court and the gaiety of royal life. Her long and painful sickness was created by the Presentation she held in the name of the Queen. The Queen's Drawing-rooms last an hour and no more. When the time is up Her Majesty leaves, regardless of who are waiting to be presented. The Princess held her Reception for three hours. Not statue-like, as is Her Majesty's custom, but bowing gracefully and welcoming all. Her heavy state robes bore her down, and exhausted and faint she was carried to her home. She is very domestic, and trains her children with the utmost care. They are very popular in London. Every costermonger and street-sweeper lifts his hat to the little creatures as they pass by, and the salutation is returned by the children with a grace worthy of George the Fourth. The Princess is very beneficent. She is kind to the poor. She has under her charge a hospital for sick children. She daily visits the pallet of the sick and distributes little tokens of kindness, fruits and flowers. Some of the London poor, when they died, begged that the flowers given to *them by the Princess might* be buried with them in their graves. Such acts deeply affect the English heart. They call out the deep love and admiration of the nation.

A PARISIAN INCIDENT.

HERE is one of the thrilling incidents of Parisian life. The other day a very young girl, with something in her arms that she carried with great care and tenderness, was gamboling merrily to and fro upon the Bridge of Jena, when suddenly, by some unhappy inadvertency, she dropped her precious charge over the railing of the bridge, and it fell with a faint splash into the river Seine. "Oh, the baby! the baby!" she screamed with wild and frantic bursts—"Oh, the dear baby! will nobody save my baby?" Among the many pedestrians who were passing over the bridge at the time, was one, a young and noble looking fellow, heroism stamped upon every feature of his countenance, firmness and intrepidity settled in every glance of his eye. Without a moment's hesitation; without divesting himself of a single article of clothing, he leaped into the river, which was quite deep at the place, and swam with herculean exertion after the lost object that was bobbing up and down in the water. At length he approached it; caught it tenderly around the waist, and raised it in the air, to discover that it was a *doll-baby*. Pitching it back into the middle of the river, he made for the nearest shore; shook himself like a poodle, pulled up his coat collar, and his hat down over his eyes, then hurried away under the eaves of the houses, to avoid being carried home on the shoulders of the admiring crowd.—*Cor. Miner's Journal.*

A WIFE'S PRAYER.

IF there is anything that comes nearer to the imploration of Naomi than the subjoined, we have not seen it:

Lord bless and protect that dear person whom Thou hast chosen to be my husband: let his life be long and blessed, comfortable and holy; and let me also become a great blessing and comfort unto him, a sharer in all his sorrows, a meet helper in all the accidents and changes in the world; make me amiable forever in his eyes, and forever dear to him. Unite his heart to me in the dearest love and holiness, and mine to him in all sweetness, charity and compliance. Keep me from all ungentleness, and discontentedness and unreasonableness of passion and humor, and make me humble and obedient, useful and subservient, that we may delight each other according to Thy blessed Word, and both of us may rejoice in Thee, having our portion in the love and service of God forever. Amen.

LOVE of flattery, in most men, proceeds from the mean opinion they have of themselves; in woman, from the contrary.

Choice Miscellany.

Written for Moore's Rural New-Yorker.

QUESTIONINGS.

BY A. A. HOPKINS.

WHAT wonder that the song is sad,
If sadness prompts the heart to singing?
The sweetest songs earth ever had
From saddest hearts came springing.

What wonder if our faith grows faint,
Without reward for our believing?
For hoping changes to complaint
If trust bring no receiving.

What wonder that we never see
The good the present hour is holding?
The greatest good is yet to be:
We wait for its unfolding.

What wonder that we never grasp
The hopes complete in their fruition?
To-morrow holds within its clasp
The beautiful elysian!

What wonder that our march is slow
Along the way to the immortal?
The veil which blinds us here below
Obscures the golden portal.

What wonder that our feet will stray,
Far off in paths unknown to wander?
The light is dim: thank GOD the way
Will brighter be up yonder!

What wonder that we seldom hear
Angelic voices sweetly calling?
For siren tones upon our ear
Unceasingly are falling.

What wonder.—Ah! poor heart, and weak,
Why multiply your idle queries
When you in asking only seek
Delight that quickly wearies?

Yet evermore, as days go by,
Your questions will be felt or spoken,
For every soul longs for the Why
That sleeps in every token!

POPULARITY.

BY MRS. H. M. LINCOLN.

ASPIRATION is a characteristic of mankind. Worthy and ennobling as it may be, it possesses a deteriorating influence, as it becomes perverted from pure aspiration into far-reaching efforts for popularity. To be sure, there are really two distinct qualities; and yet often when mortals fancy themselves only aspiring they are grasping at the phantom of aspiration—popularity. I am tired of its hollow name—the sound and sight of it I dislike—since those who might, and should live for better things, are constantly reminding one of their increasing popularity. Some must needs become known; but as their names go forth and are repeated, why do they make it their constant theme and never for one moment lose sight of their important selves? One of the sweetest traits of character is humility, and one greatly the reverse of this pharisaical tendency.

Our SAVIOUR gave a touching demonstration of this in His life and teachings. He called it beautiful and blessed; and how quickly we recognize it when erring men show in *their* lives and actions its worth. When a great man or woman possesses this virtue, the poorest and most neglected find in their presence ease and an atmosphere of social warmth. They feel their kindness, and see their entire forgetfulness of self. The *pure* aspirations of such ones have led them where true nobility dwelt, and where CHRIST smiled to recognize them. If they have striven for popularity it has been only in "sympathy with CHRIST." I was once passing through the streets with a minister's wife when this same subject came to be introduced by our meeting some very poor, miserably dressed persons whom we both knew. Said the lady—"It *seems* right to recognize these persons; yet it don't give observers a very exalted idea of one's acquaintances!" This was one of the many whose *pride* pushes them on to popularity, and who are as the sounding brass and tinkling cymbal.

Among these weak representatives of religion and humility, and those who have risen to great intellectual distinction, "there is frequently an intolerance of manner—an assertion of superiority—a species of intellectual scorn for the dead level of humanity—that precludes the possibility of sympathy; yet there is no surer test of grandeur of character than a readiness to acknowledge and respect the individuality of all of GOD'S creatures."

This thirst for popularity indicates the fever that is working in the minds and hearts of mortals, and that permeates so entirely our social relations. In all degrees we find it, in all classes we see its unmistakable features. While it brings to us the results of great effort, it also brings bitterness and an empty name. This striving for position and power on the platform of public favor is a miserable waste of effort.

I see before me a young man full of promise. He enters the ministry with noble aspirations. His great humility makes him beloved and honored while as yet no brilliant sermons have made him known. He has won the hearts of his hearers—his touching simplicity could not fail of this; but at length he pens an essay on a theme just suited to his capacity. This one effort gives him a position he had not dreamed of possessing. Flattery and pride succeed, and this thirst so natural to man—this love of applause—induces the exertion of every faculty to gain preëminence. His struggles are not in vain; they give him that for which he labors, while they take his humility and leave, instead, arrogance and pride. What a loss for him! I watch the course of such an one; but prosperity does not long attend him. How many may, in looking back, remember the first false step that took from them this strength that nothing but humility could give,—the reward, too, that surely follows those who lose sight of self and labor out of pure impulses for CHRIST.

I see one who had acquired literary fame. Days and nights had she labored intensely to win it. She had fancied that another effort was to be the realization of all her hopes. How untiringly she studied as visions of worldly honor rose up before her. To become popular—to gather laurels and feast on fame—filled largely her mind as late at night she laid aside her work. She knelt to pray without the sweet humility CHRIST loves. She seemed to be pleading earnestly when I heard these imploring words:—"O Father! give me thoughts that will live forever, long after I have passed away." She paused, for through the deep silence a voice was heard softly speaking—"Mother, there in that little one are your thoughts that will live forever—in your child by whom you kneel." Her head bowed low, and the tears came streaming through her clasped hands; but what a prayer I heard. It was an humble prayer, with pleadings for patience and grace to train her child to represent her thoughts by a noble life, and by a pure and blameless love for CHRIST.

You who are seeking to leave a great name among men, seeking to be called popular ages hence, remember that your children will represent you long after you sleep forgotten by those you strove most to impress with your greatness.

Canandaigua, N. Y., Oct., 1867.

PERSONAL GOSSIP.

IN a recent issue of Harpers' Weekly there appeared a portrait of ROBERT COLLYER, the celebrated divine who is beginning to rival HENRY WARD BEECHER as an orator and a man of strong individuality. In a brief biographical notice Dr. BELLOWS, who had just listened to a sermon by the "preacher poet," thus speaks of his oratory:—"It is not oratory—it is oratorio. He is a poet, artist, and singer in spite of himself. His broad, sweet soul has dived into the deeper truth of things, and when he speaks, as he always does, out of his experience, his dainty lips refuse all superfluous or unfit words, while tender, Burns-like images cluster around his thoughts, and his voice melts into a kind of song, without the periods and pauses of ordinary speech, and flows into the ear and heart with the effect of a fugue of Bach."

Miss ALCOTT writes thus about DICKENS, as he appeared at his readings: "At the first glance I received a shock, and my idol tumbled off the pedestal whereon I placed him long ago, when I wove his hair in a locket, and thought Shakspeare was an idiot beside him. I did not expect to see the handsome, foppish young man who once paid us a visit, and caricatured us so capitally afterward; but I did think some sign of genius would be visible—some glimpse of the genial creator of *Little Nell, Tom Pinch*, and the *Cheerable Brothers* would certainly appear. Far from it; youth and comeliness were gone, but the foppishness remained; and the red-faced man, with false teeth, and the voice of a worn-out actor, had his scanty gray hair curled; a posy in his button-hole; diamond ring, pin, and studs; a ruffled front, and wristbands *a la* Cousin Fenix."

Of JOHANN STRAUSS the famous Musician of Vienna, who has written more waltzes than any other composer of our time, a Paris letter writer says: "He is all German in aspect, all American in manner. He is as lively as his own waltzes, and his manner is as finished as his education. Son of one of the greatest and queerest musicians that ever lived, he knows he ought to have his talent and use it, and he is no conceited dandy, who plays with one ear open for the approbation of his audience, and the other attentive to his music. He is one of the wonders of the Exposition. It is now not long since he arrived here, and his fame is already world-wide, partially because of the cosmopolitan character of his audience, but more particularly because of his wonderful talent, and the energy of his well-trained musicians. His great waltz, 'The Life of an Artist,' brings his audience to tears one moment, then sends their feet dancing in spite of them. Nothing can be finer than the rendering of the overture to Wagner's *Tannhauser*, by his orchestra. It is superb, finished art."

THREE IMPORTANT THINGS.

THREE things to love—Courage, gentleness, and affection.

Three things to admire—Intellectual power, dignity, and gracefulness.

Three things to hate—Cruelty, arrogance and ingratitude.

Three things to delight in—Beauty, frankness and freedom.

Three things to wish for—Health, friends and a cheerful spirit.

Three things to pray for—Faith, peace and purity of heart.

Three things to like—Cordiality, good humor, and mirthfulness.

Three things to avoid—Idleness, loquacity and flippant jesting.

Three things to cultivate—Good books, good friends, and good-humor.

Three things to contend for—Honor, country and friends.

Three things to govern—Temper, tongue, and conduct.

Three things to think about—Life, death and eternity.

WHAT IS A SNOB.—A London paper gives a brief definition of snobbishness:—"The essence of snobbishness and vulgarity is nothing more or less than display, designed to create in other persons' minds a belief that you are different from what you really are; better born, better bred, richer, more clever, or more accomplished. On the other hand, it is the perfect truthfulness and modesty which results from the absence of desire to impose upon his companions which makes a man a gentleman.

Sabbath Reading.

"I SHALL BE SATISFIED."

[PSALM xvii., 15.]

BY CAROLINE A. MASON.

Not here:—my roses bear too many thorns;
My gold has in it too much of alloy;
The purple of my robe too oft adorns
An aching soul; my sweets too often cloy.

Not now:—the present has too much of pain—
Too much, alas, of mingled hope and fear;
I set my loss too often 'gainst my gain:
I shall be satisfied not now, not here.

But *there!* but *then!* in *heaven!*—when I wake
In His dear likeness who for me once died!
Oh, fount of bliss! in thee once let me slake
My life-long thirst—I shall be satisfied!

Written for Moore's Rural New-Yorker.

SABBATHS.

IT is a grand, glorious October Sunday. It is *Nature's* Sabbath, for the world lies hushed as by the breath of the Invisible. Never was the sky bluer, or the sunlight more golden as it glints through the fast-changing foliage of the trees. In at the open church windows the breeze steals as softly as an angel's pinion moved by the breath of prayer. It breathes softly in the subdued tones of the organ, and anon it urges its strains to thunder tones grand as those of the rushing storm. Now clear and sweet and full comes the music of human voices, and I wonder what must be the melody in Heaven chanted by angels' tongues. It is morning *now*, and *here*,—*there* it is always *day*; day, golden and glorious, radiant with the smile of Him who created the Universe.

Is there not glory enough in the world—glory enough in the clouds, the sky, the stars, the flowers, yea, and in the human face divine—to lure one on to deeds which will secure a seat in the Mansions of Bliss? Why should we dwell always here? Even as I look outward the sky is changing. Yonder pearl-like clouds are already dark and threatening; the azure of the sky has suddenly become dull; and the leaves, a little time since so green, are red and yellow now, and fall with every gust of the autumn air. And we call this *change*. But surely it reaches only to that which we call *inanimate?* Alas! no. You remember an eye once bright with affection, which turns from you coldly now. You remember a form of life and grace now dead and motionless. Yes, change even visits the *animate* things of life. The thoughts which are thrilling the soul now will not thrill it forever. Your soul may now be singing psalms; but presently notes of discord and turbulence will drown their melody. Grasp these gleams of glory as they flit. Treasure them in the soul, and never let them flee away. Catch the star when it falls, remember the music when it comes, the sunshine when it gleams, and love the Sunday when it is here. Not merely do I mean the *temporal* Sunday, but these *Sabbaths of the soul*—these yearnings for a grandeur earth never realized—these aspirations which reach far beyond every-day life, far up beyond the stars—aspirations which stir feelings within us that we can never fully comprehend.

In these mysterious, holy thrills which all feel sometimes, are the glory and the song of life. Transient as the April sunshine, they nevertheless give health, strength and restoration to the forces of our being. There is a subtle power both in seen and unseen beauty to impart intense pain or intense pleasure, and which would lure us on with whisper of song and rustle of angel pinions till we rest on the blue of Eternity's Sabbath shore. SARA G. CHAFA.

EVERY-DAY RELIGION.

WE must come back to our point, which is not to urge all of you to give yourself up to mission work, but to serve God more and more in connection with your daily calling. I have heard that a woman who has a mission makes a poor wife and a bad mother; this is very possible, and at the same time very lamentable; but the mission I would urge is not of this sort. Dirty rooms, slatternly gowns, and children with unwashed faces, are swift witnesses against the sincerity of those who keep others' vineyards and neglect their own. I have no faith in that woman who talks of grace and glory abroad, and uses no soap and water at home. Let the buttons be on the shirts, let the roast mutton be done to a turn, let the house be neat as a new pin, and the home be as happy as home can be; and then, when the cannon balls, and the marbles, and the shots, and even the grains of sand, are all in the box, even then there will be room for those little deeds of love and faith which, in my Master's name, I seek of you who look for his appearing. Serve God by doing common actions in a heavenly spirit, and then, if your daily calling only leaves you cracks and crevices of time, fill these up with holy service. To use the apostle's words, "As we have opportunity, let us do good unto all men."—*Spurgeon.*

THE RIGHT PERSUASION.—In terrible agony, a soldier lay dying in the hospital. A visitor asked him,—"What church are you of?" "Of the church of Christ," he replied. "I mean of what persuasion are you?" "Persuasion!" said the dying man, as his eyes looked heavenward, beaming with love to the Saviour: "I am persuaded that neither death nor life, nor angels, nor principalities or powers, nor things present nor things to come, nor height nor depth, nor any other creature, shall be able to separate me from the love of God which is in Christ Jesus."

THERE are more sensible people who are smart than smart ones who are sensible.

The Reviewer.

THE SCIENCE OF NATURAL THEOLOGY: OR GOD the Unconditioned Cause, and GOD the Infinite and Perfect, as revealed in Creation. By Rev. ASA MAHAN, D. D. Boston: Henry Hoyt.

THROUGH "The Science of Logic," "A System of Intellectual Philosophy," and other works, Dr. MAHAN is known to the class of readers who will peruse this book. He is an earnest, thoughtful writer; and in this volume he very carefully considers "the questions at issue between Theism on the one hand, and the various forms of Antitheism on the other." His reasonings in favor of Theism are keenly analytical, and are such, it seems to us, as no Antitheist can well refute. The first 73 pages are devoted to introductory considerations; and in the remaining 326 pages the investigations are directed more closely to the different points involved in the questions at issue. For sale by ADAMS & ELLIS.

HAND-BOOK OF PRACTICAL COOKERY. For Ladies and Professional Cooks. Containing the whole Science and Art of preparing Food. By PIERRE BLOT, Professor of Gastronomy, and Founder of the New York Cooking Academy. [12mo.—pp. 478.] New York: D. Appleton & Co.

HERE is a book for house-wives. We beg pardon; the title-page says differently—"for Ladies," &c. But Professor BLOT is a Frenchman, and in France all the women are ladies or—the reverse. The *table d' hote* contains over 1600 "specifications." We have not eaten all the way through them yet, and therefore cannot at present say anything of the particular excellence of each. When we shall have done so, if our digestive organs fail not, we may be enabled to speak knowingly. The volume is gotten up in the handsome style of the house whose imprint it bears. Sold by ADAMS & ELLIS.

MANUAL OF PHYSICAL EXERCISES; comprising Gymnastics, Calisthenics, Rowing, Sailing, Skating, Swimming, Fencing, Sparring, Cricket and Base Ball: together with Rules for Training and Sanitary Suggestions. By WILLIAM WOOD, Instructor in Physical Education. With one hundred and twenty-five Illustrations. New York: Harper & Brothers.

NOW that people are beginning to appreciate, in some degree, the benefits of Physical Education, a Manual of the same, in which all its details are throughly explained and illustrated by well drawn cuts, as is the case in the work before us, will supply a desideratum. It is a neatly gotten up volume of 315 pages, and will prove especially attractive to lovers of physical sports. For sale by STEELE & AVERY.

THE PRINCIPLES OF BIOLOGY. By HERBERT SPENCER: Author of "Social Statics," "The Principles of Psycology," "Essays: Scientific, Political, and Speculative," "First Principles," etc. Vol. II. New York: D. Appleton & Co.

THIS substantial volume of 566 pages gives us the conclusion of that new system of philosophy, or what is claimed to be such, which has been given to the world by one of the best English metaphysicians. It embraces Parts IV and V of the system—"Morphological Development," and "Physical Development"—and treats most elaborately of animal, vegetable and human life and growth. Mr. SPENCER is a profound thinker, and though his writings are too abstruse to please the general reader, they find many appreciative admirers. For sale by ADAMS & ELLIS.

THE HUMAN ELEMENT IN THE INSPIRATION OF THE SACRED SCRIPTURES. By T. F. CURTIS, D. D. New York: D. Appleton & Co.

DR. CURTIS resigned the Professorship of Theology in Lewisburg University because he felt that his views on the subject of Inspiration had drifted away from those commonly entertained by the denomination whose future ministers he was instructing. He resigned with the intention of thoroughly and independently examining the subject, and publishing his conclusions. The result which his thinking attained is shown in this work of 380 pages. How far the Scriptures were divinely inspired and in how great a degree they were merely human in origin, is herein treated of at length, and in a spirit of apparent fairness. Sold by ADAMS & ELLIS.

A FOURTEEN WEEKS COURSE IN CHEMISTRY. By J. DORMAN STEELE, A. M., Principal of Elmira Free Academy. [16mo.—pp. 251.] New York: A. S. Barnes & Co.

ON this work the author says in his preface, it "is designed for the instruction of youth, and for their sake clearness and simplicity have been preferred to recondite accuracy." As an elementary text book in chemistry it supplies a want long felt by educators. The author wisely devotes most space to the practical parts of the science which more intimately concern every-day life, and illustrates the subject matter with numerous wood cuts. For sale by E. DARROW & KEMPSHALL.

IS IT I? A Book for Every Man. By Prof. H. R. STORER, M. D., Vice-President of the American Medical Association.

WOMAN'S RIGHTS. By Rev. JOHN TODD, D. D. Boston: Lee & Shepard.

THE first of these is No. 3, and the second No. 4 of "Tracts for the People." They are neatly printed pamphlets, and worthy perusal. The former contains 154 pages, and treats plainly and forcibly of matters concerning the well-being of every man and woman, albeit it is, as stated, emphatically "a book for every man." It ought to be read and pondered by all men. Sold by DEWEY.

THE CURATE'S DISCIPLINE. A Novel. By Mrs. ELIOART. New York: Harper & Brothers.

THIS is No. 295 of Harper's Library of select Novels. It is the story of two young lives,—one a Curate and the other a girl whom he loves—their trials and sorrows. As with every life other lives are more or less intimately interblended, so with the lives of these two are traced those of several others, in a pleasant and not over-drawn manner. For sale by STEELE & AVERY.

AN ELEMENTARY GRAMMAR OF THE GERMAN LANGUAGE. With Exercises, Readings, Conversations, Paradigms, and a Vocabulary. By JAS. H. WORMAN, A. M., Librarian at Drew Theological Seminary. [12mo.—pp. 222.] New York: A. S. Barnes & Co.

ANOTHER text book is here added to the list already tried and approved, or found wanting. A glance—necessarily cursory—at its contents, shows that they have been carefully arranged and simplified. Sold by E. DARROW & KEMPSHALL.

AN ESSAY ON MAN. By ALEXANDER POPE. With Illustrations and Notes by S. R. WELLS.

THE GOSPEL AMONG THE ANIMALS: Or, CHRIST with the Cattle. By SAMUEL OSGOOD, D. D. New York: Samuel R. WELLS.

HERE are two more pamphlets. We think neither the illustrations nor notes add much to the rare beauties of POPE'S Poem. The sermon by Dr. OSGOOD we commend to those who have no mercy for beasts.

Educational.

THE NEW SCHOOL SYSTEM.

EDUCATION ought to be free as the air we breathe. Just in proportion that its benefits are conferred upon all,—alike upon the rich and upon the poor,—is the country at large benefited and improved. Any approach to an educational aristocracy should never be tolerated. The property and wealth of a nation ought to educate the children of a nation. That Commonwealth which is most liberal in its endowments of schools receives the greatest interest upon its investments.

It has taken the Empire State a long time to entirely comprehend this. Our common school system has needed a reform these many years. The old requirement of so much *per capita* for the support of schools shut out from their advantages a large percentage of the youth. The results of consequent ignorance were distinctly manifest in a low state of morals, and lengthy calendars of crime. There came an earnest demand for a better system—something that should promote the general welfare—but it was given little heed. The rich were averse to paying the school bills of the poor. The school fund of the State was meager, and so the children of the poor grew up untaught.

At last the reform is begun. To-day the public schools of New York are virtually free. The doing away of the old system was accomplished very quietly by the Legislature last winter, and so little was said about it then that we presume many people knew nothing of it. But the Legislature did its work well, and with an unanimity highly commendable. The bill providing for the change became a law with scarcely a dissenting voice in both Houses. As it was to go into effect on the first of October, the reform is properly initiated. Its importance can hardly be appreciated yet, and some time is necessarily required to develop the benefits accruing from it.

Under the new law the public school fund is increased seventy-five per cent., and all deficiencies are to be supplied by direct taxation. Any District can vote this direct tax, or, if it fail to do this, the tax may be levied on the property of the District by the Trustees. There is no limitation to the time of holding the schools. The powers of Trustees and Commissioners are very greatly increased, and by judicious selection of these officers this increase of power may be made productive of much good. Electors should see to it that only well informed and energetic business men are chosen for these positions. Trustees can expend fifty dollars for repairs of a school house without a vote of the District, and with the sanction of the Commissioners can exceed that sum. Where the people fail to provide suitable school houses, the Commissioners can order them built—a prerogative we sincerely hope they will exercise. It is no longer required that a man be a freeholder, to vote at a district school meeting. Every man having children to send to school is an elector at any such meeting, and is privileged, as he ought to be, to vote upon all matters pertaining to the education of his children.

These, briefly stated, are the principal features in the new system. They comprise radical changes, and may be received in some quarters with prejudice. By increasing the public school fund the burden of the educational expense falls mainly, of necessity, upon the wealthy portions of the State, they being mostly taxed; and from them, possibly, may proceed a cry of complaint. But the natural law of reciprocity equalizes this. Their wealth is drawn, in a great measure, from the poorer rural districts which pay light taxes, and the children of which they are thus required partially to educate. With the doors of our school houses thrown open to the young of all classes, we may hope for a new era in popular education. It is a step forward and upward, and may lead to grander things than we even dare dream of. We believe that not alone should common schools be free. Let the college halls be opened, that all who choose may enter "without money and without price," and then will our free school system have attained to the greatest height of beneficence, and be of incalculable blessing.

EDUCATION OF THE FREEDMEN.

THE alacrity and earnestness with which the freedmen of the South have availed themselves of opportunities for education since the close of the war, is both surprising and encouraging. Throughout the South—in city, village and country—the freedmen of almost all ages and conditions embrace every occasion and facility for learning to read, write, etc. During our trip through several of the Southern States, last spring, nothing astonished us more than the universal desire of the blacks to avail themselves of every opportunity offered them to acquire the rudiments of education. This was observable everywhere—in railroad cars, hotels, workshops, on plantations. In nearly all places where there were negroes we found primers, primary spelling and reading books, writing materials, etc., and an earnestness to learn, and success in acquiring knowledge, which modified some of our preconceived opinions of the character and capacity of the African race. In most of the towns we visited in Virginia, the Carolinas, Georgia, Tennessee and Kentucky, we found large and flourishing day and evening schools for freedmen, and these were encouraged by the best men of all parties and classes—the people of the South wisely judging that the negroes must be educated in order to become industrious and skilful laborers and good citizens—fit to vote and manage their own affairs. The freedmen themselves have contributed liberally of their scanty means to build school houses and employ teachers for colored children

FREEDMEN'S FARM SCHOOL, NEAR WASHINGTON, D. C.

and are now very generally striving to secure the benefits derivable therefrom.

The efforts to promote education among the poorer classes of both whites and freedmen at the South are most praiseworthy, and the men and women in all parts of the Union who have contributed means and services to accomplish the laudable object sought, are entitled to great credit for their benevolence and philanthropy. A vast amount of good has already been accomplished, but much more remains to be done to insure the peace and prosperity of both races at the South.

Among the many schools established by the aid of Government, missionary associations or individuals, the *National Farm School*, for colored orphans and the children of colored soldiers, located near Washington, (and shown in our engraving,) is perhaps the most extensive. It was founded in March, 1866, by H. DE MARIEL, Esq., of New York, and under the patronage of President JOHNSON, General GRANT, Major-General O. O. HOWARD, Attorney-General SPEED, Secretary M'CULLOCH, Senator DOOLITTLE, and Marquis de MONTHOLON, Minister from France. This establishment is both a primary school and an agricultural one. It is intended to give the pupils all the necessary knowledge in the elementary branches of instruction, and, at the same time, to make of each a practical and competent farmer. With this view a farm of one hundred acres has been purchased, which was partly worked last year by the pupils, and this season on a larger scale. The raising of several useful crops has been attended with encouraging success. It is believed that this Farm School will have a most salutary influence on its pupils, by making them competent farmers by the time they leave the establishment. They will be able to act in every capacity, even as overseers on any farm or plantation. It is the ultimate intention of the persons interested in this benevolent enterprise to send pupils, as soon as they are able to take care of themselves, to various parts of the South or Southwest, where they may establish themselves on public lands, under the new Homestead Law. A flourishing village, or colony, would thus be formed in a short time. Last spring the farm had fifty pupils, from seven to eighteen years of age. When the buildings in process of erection shall be completed, it will be possible to admit over two hundred children.

Various Topics.

THE FREYBURG ORGAN.

THE little city of Freyburg in Switzerland has the largest organ in the world. When in full play it pours forth a tempest of sounds through a forest of pipes, "seven thousand and eight hundred in number," shaking the walls and the foundations of the old St. Nicholas Church in which it stands. All the musical bands in Boston, New York and Philadelphia combined would not make an orchestra equal in power to this mighty instrument alone.

It is all the work of one man named Aloys Moser. He was poor; he was not thought to be a master in his art; he never received any adequate reward for his labor. Without assistance or suggestion from others, he formed the design of building for his native city an organ which travelers from distant nations should turn aside from their journeys to hear, and which when heard in the darkness of the Cathedral at night should make an hour for them never to be forgotten. And so poor Moser began his life's work, and he persevered for long years in the face of opposition, and poverty, and ridicule, until his task and his life were finished together. His aim may not have been the highest, nor his motive the best. But he persevered with the faith of a martyr till his work was done, and now it stands among all similar works in the world, like Mt. Blanc among the mountains, peerless and alone. When skillful fingers touch the keys, the mighty instrument responds with myriad voices ranging through infinite variations in sweetness and compass and power. Now it pours forth the heart-breaking notes of the "miserere" with a voice so piteous and human that it would seem as if a lost soul were imprisoned and wailing in its wilderness of pipes,—now it rolls up the jubilant thunders of the Hallelujah chorus in such mighty volume that the entranced listener forgets the earthly temple and the work of human hands, and imagines himself surrounded with the trumpets and voices of heaven in numbers without number. Now it sounds the war note wild and high mingled with the tramp of hosts and the battle hymn of men that march as they sing. And now it warbles "sweet home," with a silvery accompaniment of singing birds and murmuring brook and rustling foliage around the peasant's door. Now it chants the unearthly strain of cloistered monks, interwoven with echoes that creep along corridors of stone and climb the sepulchral arches of the cathedral's long-drawn aisles. And then again it bursts forth with such a tempest of sound as shakes the hills when storms are abroad among the Alps and thunders leap from cloud to cloud. And all this mighty flood, this deep-resounding sea of instrumental harmony, came forth from the hand and brain of one poor man, who made its creation the task of his life, and who withdrew all thought from everything else that he might do one thing well. And his success shows how much depends upon fixing clearly in the mind what to do, and then suffering no side influence to withdraw attention from the chosen task. His experiment proves that anything best worth having is within the reach of him who has decision enough to choose it with all his heart, and self-command enough to seek it with all his strength.—*Rev. Dan. March.*

EXERCISE IN NERVOUS DISEASES.

AN English writer and surgeon, Mr. Skey, expresses his strong conviction, in which we heartily join him, that there are many diseases, at least many forms of indisposition, which, with a strong will, may be walked away provided the exercise be taken systematically and rendered a prominent feature in the daily treatment. Tone is imparted by this means to both mind and body, cheerfulness replaces gloom, and sympathy for others a morbid dwelling on self. The exercise should be active, and not consist of either strolling or sauntering out of doors, or even amateur gardening. A good brisk walk should be taken at a pace of at least three miles an hour, but always stopping short of fatigue.

People will be often heard to say that they take plenty of exercise about the house, and that they are on their legs many hours of the day.

What is wanted for the health is exercise without fatigue; for fatigue is exhaustion, and the desired object is only to be gained on the terms just stated.

The distance walked could be increased daily, and it will be found that increasing strength will give the readiness and wish for increasing exercise. There is an accumulation of incapability in those who are afflicted with what are vaguely called nervous disorders, which render such persons restless, fidgety, irritable and full of strange fancies, and which is best brought down to a healthy standard by exercise in the open air, and its concomitant change of scene and new trains of thought.

EARTH'S CURIOSITIES.—At the city of Medina, in Italy, and about four miles around it, wherever the earth is dug, when the workmen arrive at a distance of sixty-three feet, they come to a bed of chalk, which they bore with an augur five feet deep. They then withdraw from the pit before the augur is removed, and upon its extraction the water bursts up through the aperture with great violence, and quickly fills the newly made well, which continues full, and is affected neither by rains nor drouth. But what is the most remarkable in this operation is the layer of earth as we descend. At the depth of fourteen feet are found the ruins of an ancient city—paved streets, houses, floors and different pieces of mason work.

SWITZERLAND.—Switzerland has about 1,500,000 inhabitants and 345 scientific and literary publications, while France, with ten times the population, has but about 500 journals and magazines. The solution of this is in the fact that in Switzerland the people all receive some education, and consequently can read and take the papers, while in France less than one-half can read.

A HUGE ANCHOR.—The largest anchor in the world has been completed for the Great Eastern at Wolverhampton, England. Its weight is eight tons, exclusive of the stock; length of the shank, twenty feet six inches; length of wood stock, nineteen feet six inches; tread of arms, seven feet four inches. The anchor has been proved, and found to stand the strain of one hundred tons.

Reading for the Young.

Written for Moore's Rural New-Yorker.

AFTER CHESTNUTS.

BY LEWIS DAYTON BURDICK.

Each leaf that flies, and somber skies
Proclaim the summer ended;
With fruit supplies and gorgeous dyes
Fair Autumn is attended.

Yet once again we cross the plain
Where late was blooming clover,
Ere sun and rain had ripened grain
And longest days were over.

With lavish hand, throughout the land,
Her gifts kind Nature measures;
In forest grand, a happy band,
We seek rich Autumn's treasures.

Away, O care! this morning fair
Intrude not on their pleasure,
While maiden fair and youth shall share
A festive day of leisure.

Upon the ground among leaves browned,
Ripe chestnuts now are falling;
The rustling sound of leaves is drowned
By sweetest voices calling.

With right good will our sacks we fill,
And fill the groves with laughter;
And yet the hill has chestnuts still,
For those who may come after.

The summer hours and summer flowers,
Now gone from us forever,
In nature's bowers gave richer dowers
Of pleasure to us never.

HOWDEN'S STATUE OF WASHINGTON.

OUR Boys and Girls will be pleased to see the illustration which we give above. They have probably all seen many pictures of the "Father of his Country," but quite likely not one taken from a plaster cast which stands in the Rotunda of the Capitol at Washington, and that was copied from the original statue at Richmond, Virginia.

SENSIBLE BOYS.

A SON of Scranton, the founder of Scranton, Pa., joined the ranks of the laborers in his father's foundries, that he might learn the practical part of the iron business. The son of a well-known and wealthy New York publisher used to leave his elegant home every morning, with his tin pail, in the garb of a laborer, and betake himself to a machine-shop to labor as hard as the hardest, that he might learn the business. We also know the son of an eminent college professor who is doing nearly the same thing.—*New York Gazette.*

The "son of a wealthy New York publisher," alluded to above, is Gilbert Jones, son of George Jones of the New York Times. He graduated from the New York Novelty Works after a regular and severe apprenticeship, with all the honors. And he is now in a manufacturing business in the city of Brooklyn, on his own account—a business for which his mechanical knowledge and experience admirably qualify him. And young Jones is not only a first class machinist, but quite as much of a "gentleman" as if he had graduated at college and had regularly rounded off seasons at Saratoga and Newport.—*Troy Daily Times.*

The son of the "eminent professor," is Wm. W. Tyler, son of Professor Tyler of Amherst College. Young Tyler graduated at Amherst in 1864, taking the second highest honor in his class, and immediately commenced serving a regular apprenticeship in the Ames Company's Works at Chicopee, where he has remained ever since, not only studying the business theoretically, but learning to do with his own hands all kinds of work. The great need of the country and the age is for liberally educated men in the mechanical and industrial departments, and if more young men would graduate from college into a machine-shop instead of the already overcrowded professorships of law, medicine and divinity, they would do a good thing for themselves and the world.—*Springfield Republican.*

GOD has written on the flower that sweetens the air—on the breeze that rocks the flower upon the stem—upon the rain-drop that refreshes the sprig of moss that lifts its head in the desert—upon its deep chambers—upon every pencilled shell that sleeps in the cavern of the deep, no less than upon the mighty sun that warms and cheers millions of creatures which live in its light—upon all His works He has written, "None liveth for himself."

Our Fall Campaign!

A NEW QUARTER--VOLUME XIX.

A NEW QUARTER of the RURAL commenced Oct. 5, and Volume XIX will begin January 4, 1868. Now, therefore, is a good time to subscribe and form Clubs as subscriptions can begin with October or January or any time between. The 13 numbers of this (Oct. to Jan.) or any preceding Quarter of this year, will be sent on trial, or as specimens, for ONLY FIFTY CENTS.

GOOD PAY FOR DOING GOOD

All who form clubs, either to begin with the New Quarter (Oct. 5th,) or next Volume (Jan. 4, 1868,) will be substantially rewarded, as our inducements are extraordinary—more liberal than ever before. Specimen Numbers, Show-Bills, Premium Lists, &c., sent free to all disposed to act as club agents.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., NOVEMBER 9, 1867.

NEWS OF THE WEEK.

New York State Items.

COLLECTOR SHOOK, of the 32d District, New York City, reports that $240,000 were collected at his office on the 31st ult., the greatest amount ever known to be collected in one district on any particular day. One gentleman paid in his check for $93,000, probably the greatest amount ever paid by one tax payer.

James Buck, a baggage-master on the Rome and Watertown Railroad, was on a passenger train, and while passing a freight train attempted to look out, and as he did so his head came in contact with the other train, severing it from his body.

The Police of Rochester captured four burglars on the night of the 31st ult. They were in the act of pillaging the office of Mr. W. S. Little, proprietor of an extensive nursery. Their names are Philip Golden, John O'Leary, Charles Hollerin and James Baron.

Thursday, the 28th inst., has been appointed a day of Thanksgiving by Governor Fenton.

From Washington.

SOME of the detectives of the Treasury Department profess to have information leading to the conclusion that only about one hundred and fifty thousand of the counterfeit 7-30 notes were printed, and that these were divided among three parties to be put in circulation. The Department has not within the last two or three weeks received any more of these notes.

Forty-nine clerks were discharged from the Paymaster's Department a few days since, their dismissal to take effect from November 13th, and up to that time they are allowed leave of absence. There is also a reduction of the number of clerks in the Quartermaster-General's office, and in the Treasury Department.

From the South.

A SPECIAL dispatch to the Evening Post from Washington, dated the 31st ult., says:—A private letter received here this morning from one of the District Commanders in the South, says that since the result of the recent elections at the North became widely known affairs in his district have undergone a complete change. The late rebels are no longer disposed to accept the situation. They regard the elections in Ohio and Pennsylvania as an indorsement of the friends and sympathizers of the "lost cause." These sentiments, the letter says, are not confined to the lower and more ignorant classes of Southern whites, but are shared by the most intelligent and respectable. The late slave owners openly assert their belief that in a year or two slavery will be restored, or that the Government will compensate the late masters for the losses of this species of property.

Gen. Pope ordered the Alabama Constitutional Convention to assemble at Montgomery on the 5th of November.

Special orders No. 196, from the headquarters of the Fifth Military District, removes General Harvey T. Hays from the office of Sheriff in the parish of Orleans, for being an impediment to the reconstruction of Louisiana under the laws of Congress, and appoints Cuthbert Bullet in his place. Quarantine was suspended in New Orleans on the 29th ult.

The late election in Georgia passed off very quietly. Full returns are not yet received, but there was a large majority in favor of a Convention.

Gen. Reynolds has asked the War Department to make Austin the permanent headquarters of his district.

Several prominent Southerners have recently expressed their conviction that a general outbreak among the negroes is imminent. They say nearly every negro man in the South is well armed, while the whites are almost entirely without the means of defense.

The official vote cast in Virginia was as follows: Whites, 75,924; Colored, 93,656. For Convention, 14,835 whites, 92,507 colored. Against the Convention, 61,249 whites, 638 colored.

Gen. Schofield, in view of the complaints of fraud, is about to order a new census of the voting population of Richmond.

From the West.

LATE advices from Arizona state that Major Price's command had a fight with the Horaluh Indians, and killed seven of them. The Arizona Legislature had adjourned.

Trains of emigrants from Colorado to Mexico were arriving with large droves of stock. Gen. Wright's corps of Engineers were surveying the Southern Pacific Railroad, and it was daily expected that they would reach Prescott. Indian outrages are continually reported. About a hundred tons of corn and three hundred head of stock had been carried off from one county.

A treaty has been concluded with the Apaches, numbering 850 lodges. They are confederated with the Kiowas and Camanches and receive an annuity of $5,000. In the treaty with the Indians a denial of the privilege of their hunting between the Smoky Hill and Platte River would have resulted in a continuance of the war. The Kansas people are not satisfied with the treaty. They consider it a hollow truce. 2,000 Cheyennes arrived at Medicine Lodge Creek one day, including 600 warriors. They approached in five bands, formed in line of battle. On Monday a treaty of peace was agreed upon, and a reservation granted them. The reservation is bounded east by the Arkansas river, south and west by the Cimarron, and north by Kansas, and contains about 9,000 square miles. The Government gives them $30,000 annually, and a suit of clothing for each person in the tribe, and builds houses for an agent, farmer, miller, physician, blacksmith, &c.

Two men in jail at Franklin, Ind., on charge of murder, were forcibly taken therefrom on the night of the 31st ult., by a mob, conveyed to the woods near the town, and hung.

Latest European News.

THE marriage of King George of Greece, and the Princess Olga, took place at St. Petersburg on the 1st inst., with great pomp and ceremony.

The murder of two policemen in Dublin is charged upon the Fenians.

The Fenian Colonel Kelley, who was rescued at Manchester, has escaped from England. It is reported that he is in France, and that he will soon leave for America

By order of the Imperial Commission the International Exhibition will be closed on the 3d of November.

Lord Wm. Rosse, the celebrated astronomer, died on the 31st ult., in the sixty-eighth year of his age.

The London Globe says in an editorial article that although Prussia is pledged to a neutral course of policy on the Italo-Roman question, Count Bismarck, the Premier, has given an assurance to the Cabinet in Florence that he will not allow France to make war on Italy on account of the Papal complication.

The news of Gen. Garibaldi's victory over the forces of the Pope at Monte Rotonda, has been confirmed by telegrams from Florence and other cities. The General displayed great personal daring during the engagement.

Particulars of the engagement represent that the fighting was obstinate on both sides. At one time during the day, when re-inforcements for the Papal troops arrived upon the field, the issue appeared doubtful; but at the end of the conflict Gen. Garibaldi, who led his brave volunteers in person, was completely successful.

It is reported in Florence that Napoleon requires Victor Emmanuel to expel Garibaldi.

General Serrandi, to whom was tendered the office of Governor and Captain-General of Cuba, and who declined the appointment, has at the solicitation of the Government, reconsidered the matter and concluded to accept the post.

The municipality of Paris gave a grand banquet on the evening of the 29th ult., to their Imperial Highnesses the Emperor Napoleon and Empress Eugenie and their guest, the Emperor Francis Joseph of Austria. The banquet took place in the Hotel De Ville, which was splendidly decorated. The Emperor of Austria, in the course of the evening, made an eloquent speech.

The civil and military authorities of Portsmouth, England, recently visited Admiral Farragut on his flag-ship.

The Prince and Princess of Wales have returned to England, the latter greatly improved in health.

SOUTH AMERICAN NEWS.—Valparaiso dates are to the 9th ult. Uncertainty as to the movements of the Spanish fleet had a depressing influence on business. The revolt at Arequipa, Peru, continues. Troops are being sent there, but Canseco still remains in command, and no attack is yet made upon him. The Ecuadorian Congress had an imbroglio with the Government, but it was settled by the resignation of the Minister of the Interior.

As the last mail steamer was leaving Rio Janeiro for London a report reached that city that the Brazilian troops had captured the town of Pifor, the chief port of Paraguay. It was also reported that many prisoners and a great quantity of military stores had fallen into their hands.

DEATH OF GOV. ANDREW.—John A. Andrew, ex-Governor of Massachusetts, died in Boston at six o'clock on the evening of the 30th ult., of apoplexy. The public funeral obsequies took place on the 2d inst., and were very solemn and imposing. Manifestations of mourning were general throughout the State. On the evening of the 3d inst. an immense audience assembled in Music Hall, to participate in commemoration services in memory of the deceased.

WAR IN THE WEST INDIES.—Intelligence has been received that San Domingo has declared war against Hayti, on account of the sympathy and assistance given by the Haytiens to ex-President Baez. Baez was at Caraccas, where he was planning an attempt to return to San Domingo. President Cabrael and General Pesson were on the Haytien frontier with an army of 40,000 men.

LABORERS' STRIKE IN QUEBEC.—There has been great excitement in Quebec lately on account of a strike by the ship carpenters. All the ship yards were closed, and still remain so. A number of strikers were arrested, and as the mob threatened to rescue the prisoners the military were called out to prevent a riot.

NEWS PARAGRAPHS.

PITTSBURG, Pa., has two hundred and one firms who did a business of over one hundred thousand dollars last year. The most of them are manufacturers of iron, steel and glass.

THE bonded debt of St. Louis is $7,321,000, and the city owns real estate, exclusive of wharf land, worth $3,097,160. From April 9 to Sept. 30 there were 17,112 steamboat arrivals at that city.

TEN of the prisoners who took part in the revolt at the Penitentiary at Santiago, Cuba, were shot on the 21st ult. All those employed in the office have been sentenced to long terms of imprisonment.

A RUN commenced on the Royal Canadian Bank of Toronto, a few mornings since, and continued with great activity until about noon. The call for gold being promptly responded to the excitement gradually subsided.

THE Daniel Webster place, at Franklin, N. H., was sold at auction lately. The heirs of the late Rufus L Tay bid off the building and home farm of two hundred acres for $15,400. The wood lot was bought by another bidder.

AN elm tree was cut down last week in Geauga county, Ohio, which experts pronounce seven hundred and ninety-two years old. The tree weighed sixty thousand pounds, and was over four feet in diameter, and made seven thousand feet of inch boards, clear stuff.

IT is perhaps not generally known that all the sleigh bells made in the United States are manufactured in the town of Chatham, Conn., yet such is the case. The first bell made in America was manufactured in this town in 1780 by William Barton, and his grandson is proprietor of one of the six manufactories of the kind at East Hampton.

MR. M. Y. BEACH, of New York, has placed three hundred pounds sterling in the hands of our Consul at Alexandria, to enable him to send home that part of the Jaffa Colonists that desired to come. Forty of these Colonists sailed from Alexandria on the 6th of October, under the supervision of the Consuls of the United States at Alexandria and Jerusalem.

A BEAUTIFUL statue called "America honoring her fallen brave," was unveiled at the Union League House in Philadelphia, on the evening of the 31st ult., in the presence of the members of the League and their families. The statue was made in Rome by J. H. Hazeltine, by order of the League. The figure is ten feet high, and is said to be one of the finest works ever executed by an American artist.

THE Tehauntepec Route grant, in Mexico, is to continue in force seventy years. The transit is to be free to the world. Merchandize passing over the route, and capital invested in improvements, will be exempt from taxation. The neutrality of the Isthmus is guaranteed. The road is not to be subject to hypothecation without the consent of the Mexican government. The meetings of the Company are to be held in New York.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, November 5, 1867.

THERE was but little variation in the price of gold last week. Sales yesterday were made at 140.

Exchange on England has advanced. Our exports are still very large, and if continued heavy shipments of specie may be avoided. The pressure for exchange last week was caused by the payment of gold interest, much of which was payable abroad.

Money is easier at the East. There is some call for money from the South, as is usual at this time of year, but the supply sent from the West in payment of balances more than meets the demand. The New York Times of Saturday says:—"The rate of money as the rule of the Street to the Stock Brokers is generally 6 per cent., with exceptions at 5 per cent. when balances are voluntarily left on the Public Funds, and at 7 per cent. on miscellaneous collateral between the brokers themselves. Merchant paper of prime names can be placed at 7@8 per cent."

The heavy bank failure in Canada is seriously felt at Montreal and Toronto. Money is worth from 9 to 12 per cent. at the Montreal banks. The notes of the suspended bank—the "Commercial"—are selling on the other side at 20 per cent. discount.

The "repudiation" alarm is subsiding in Europe, and American securities have advanced both in London and at Frankfort.

The First National Bank of Kingston, in this State, is going into liquidation. It had a capital of $200,000.

The United States now holds in trust for National Banks, as security for circulating notes and public deposits, $378,898,700 of U. S. Bonds.

WHEAT AND FLOUR.—There is no great change in the market, though at the close of last week prices were a little easier at New York and at Chicago. Red wheat sold in this city yesterday at $2,60.

The price of wheat in England has doubled since 1861, and is now higher than it has been since the close of the Crimean war. In the first fortnight of October, it rose on the average fifteen per cent. The crop is said to turn out, on thrashing, a far lighter yield than was anticipated, and French buyers are still active in their operations in the English market.

The wheat and flour exports of California this year will not fall far short of $10,000,000.

WOOL.—The Boston Bulletin of November 2d notices the market thus:

There is nothing new or encouraging to report in the condition of the wool market, which continues relatively depressed, with prices of nearly all grades ruling in favor of buyers. This state of things, which faithfully corresponds to the depression in the goods market, bids fair to continue for some time to come. Dealers see but little prospect of a change for the better, at least until the season is much further advanced, and hence are disinclined to hold on.

The Boston sales last week foot up 325,000 lbs., at a range of 27@60c. for fleece, and 31@50c. for the various grades of pulled.

New York dealers complain in regard to the poor condition of the wool received from Ohio, Pennsylvania and Virginia.

The wool markets in Europe are depressed.

COTTON.—The cotton market is heavy. Middling sells at 18½@20c. Estimated stock on hand at all the shipping ports of this country, 105,000 bales.

COAL.—At the auction sales of Scranton coal in New York, last week, there was an advance, in most descriptions, on the September prices. In September, stove coal sold at $4,53@4,75. Sales last Wednesday for same description were made at $5,15@5,50.

PORK PACKING.—The pork packers at the West have done less up to Nov. 1st, this year, than anticipated, in consequence of the continued warm weather. An active business is expected the coming two months.

with plain directions for Sowing Seed, Culture, &c. It is beautifully illustrated, with more than one hundred fine wood engravings of Flowers and Vegetables, and a

BEAUTIFUL COLORED PLATE OF FLOWERS.

Well printed, on the finest paper, and one of the most beautiful as well as the most instructive works of the kind published.
☞ Sent to all who apply, by mail, post paid, for Ten Cents, which is not half the cost.
Address JAMES VICK, Rochester, N. Y.

1868. HOW TO GET A SEWING MACHINE WITHOUT ITS COSTING YOU ANY MONEY.

AN EASY, PLEASANT, AND CERTAIN WAY.

The publishers of "ARTHUR'S HOME MAGAZINE," and that elegant and attractive periodical, "THE CHILDREN'S HOUR," edited by T. S. ARTHUR, make the following exceedingly liberal offers:

For twenty subscribers to "The Home Magazine," (terms $2 a year,) and forty subscribers to "The Children's Hour, (terms $1,25 per year,) we will send a WILLCOX & GIBBS, a WHEELER & WILSON, or a HOWE SEWING MACHINE, worth $55, manufacturers' cash price.

For thirty subscribers to "Children's Hour" and 25 to "Home Magazine," we will send a sewing machine.

For $60 we will send ten "Home Magazines," twenty "Children's Hours," and a sewing machine as above.

The subscribers need not all be sent at one time, nor from the same office.

☞ Specimen numbers of "Home Magazine," 15 cents. Specimen numbers of "Children's Hour," 10 cents. Circulars accompany them, giving full particulars, and containing besides other and very attractive premium offers.

"The Home Magazine" is too well known to require special mention, and "The Children's Hour" is pronounced the purest, most beautiful and attractive juvenile magazine published in this or any other country.

☞ Do not be deterred from making an effort, for fear it may be labor lost. Get all the subscribers you can, and if the number falls short, then write to us, and we will let you know what additional sum of money to send in order to secure a machine. We will always make this sum as small as possible. It will range between $10 and $20. Remember that the cash price of the machine is $55. Address T. S. ARTHUR & SON,
809 & 811 Chestnut St., Philadelphia, Pa.

— During a late thunder storm the lightning struck in the midst of a flock of sheep near Canterbury Vt, killing 32 of them.

— In his will Maximilian bequeathed every little present he received during childhood to him or her who was the giver.

Special Notices.

IONA AND ISRAELLA VINES

AT HALF PRICE,

for cash orders, until the 1st of December next, either for fall delivery or to be kept until spring.

In order to make new arrangements it is very desirable that a large part of my stock should be disposed of this fall. It comprises all of the leading kinds, but consists largely of IONA and ISRAELLA, which two kinds greatly surpass all others in value for all purposes, as evinced by the interest that attaches to them from all who have the best knowledge of them, and by the general reports from all quarters in their favor. Israella makes excellent red wine.

I offer for half the prices set as published in my price list for fall of 1867, every kind there noted for Garden or Vineyard of the grade No. 1, and every grade below.

All of these vines have been grown with the most attentive regard to quality and are not dear at full prices, and it will be difficult to match the No. 2, of my list with the No. 1 from any other quarter. Pamphlet of 16 pages, giving full accounts, with price list, sent for stamp.

Vines in large quantities extremely low for Vineyards. C. W. GRANT.

Iona, near Peekskill, Westchester Co., N. Y.

HAVE JUST RECEIVED

TWO FULL CARGOES

OF THE

FINEST NEW CROP TEAS.

22,000 HALF CHESTS by ship GOLDEN STATE,
12,000 HALF CHESTS by ship GEORGE SHOTTON

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune district of China, which are unrivalled for fineness and delicacy of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade, (before the establishment of the GREAT AMERICAN TEA COMPANY,) we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in the country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices, with the small additional expense of transportation, as though they bought them at our warehouse in the city.

Some parties inquire of us now they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on the list, as seen in the club order published below, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

Parties sending Club or other orders for less than thirty dollars had better send Post-office drafts or money with their orders, to save the expense of collections by Express; but larger orders we will forward by Express, to *"collect on delivery."*

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

Oolong (Black,) 70c., 80c., 90c., best $1 ₱ lb.
Mixed (Green and Black,) 70c., 80c., 90c., best $1 ₱ lb.
English Breakfast, (Black,) 80c., 90c., $1, $1.10, best $1.20 ₱ lb.
Imperial (Green,) 80c., 90c., $1, $1.10, best $1.25 ₱ lb.
Young Hyson (Green,) 80c., 90c., $1, $1.10, best $1.25 ₱ lb.
Uncolored Japan, 90c., $1, $1.10, best $1.25 ₱ lb.
Gunpowder (Green,) $1.25, best $1,50 ₱ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

CLUB ORDER.

Edwards, St. Lawrence Co., N. Y., June 3, 1867.

THE GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street, New York.

DEAR SIRS:—I herewith send you another order for Tea. The last was duly received, and gives general satisfaction. As long as you send us such good Tea, you may expect a continuation of our patronage. As a further evidence that the subscribers were satisfied, you will observe that I send you the names of all those that sent before who were near out of Tea, with a large addition of new subscribers. Accept my thanks for the complimentary package. Ship this as the other, and oblige

Your ob't servant, DAVID C. McKEE.

IF NOT A PATENT MEDICINE.

A SAFE, CERTAIN, AND Speedy Cure FOR NEURALGIA, AND ALL NERVOUS DISEASES.

Its Effects are Magical.

It is an *unfailing remedy* in all cases of Neuralgia Facialis, often effecting a perfect cure in less than twenty-four hours, from the use of no more than *two or three pills.*

No other form of Neuralgia or Nervous Disease has failed to yield to this *wonderful remedial agent.*

Even in the severest cases of Chronic Neuralgia and general nervous derangements,—of many years standing,—affecting the entire system, its use for a few days, or a few weeks at the utmost, always affords the most astonishing relief, and very rarely fails to produce a complete and permanent cure.

It contains no drugs or other materials in the slightest degree injurious, even to the most delicate system, and can *always* be used with *perfect safety.*

It has long been in constant use by many of our *most eminent physicians,* who give it their unanimous and unqualified approval.

Sent by mail on receipt of price, and postage.

GET THE BEST

WEBSTER'S DICTIONARY

UNABRIDGED
NEW ILLUSTRATED
OVER 3,000 FINE ENGRAVINGS.
10,000 *Words and Meanings not in other Dictionaries.*

A necessity to every intelligent family, student, teacher and professional man. What Library is complete without the best English Dictionary?

"Superior, in most respects, to any other English Dictionary known to me."—*Hon. Geo. P. Marsh.*

"THE NEW WEBSTER is glorious—it is perfect—it distances and defies competition—it leaves nothing to be desired."—*J. H. Raymond, LL. D., Prest. of Vassar Coll.*

"All young persons should have a standard Dictionary at their elbows. And while you are about it GET THE BEST; that Dictionary is NOAH WEBSTER'S—*the great work unabridged.* If you are too poor, save the amount from off your back and put it into your head."—*Phrenological Journal.*

"Every *farmer* should give his sons two or three square rods of ground, well prepared, with the avails of which they may buy it. Every *mechanic* should put a reading box in some conspicuous place in the house to catch the stray pennies for the like purpose. Lay it upon your table by the side of the Bible; it is a better expounder than many which claim to be expounders. It is a great labor-saver; it has saved us time enough in one year's use to pay for itself; and that must be deemed good property which will clear itself once a year. If you have any doubt about the precise meaning of the word *clear,* in the last sentence, look at Webster's nine definitions of the *v. t.*—*Massachusetts Life Boat.*

In one vol. of 1,840 Royal Quarto Pages.
Published by G. & C. MERRIAM, Springfield, Mass.
Sold by all Booksellers.

PLASTIC SLATE ROOFING
JOINT STOCK COMPANY,
OFFICE 157 [Room 19] *BROADWAY,*
NEW YORK.
W. C. POTTER, *Vice-Prest.*
J. M. ALLEN, *Sec. & Treas.* **Licenses Granted.**

PLASTIC SLATE FOR
ROOFING & OTHER PURPOSES.

The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of

Pulverized Slate and Viscous Matter,

(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.

AS A ROOFING MATERIAL IT STANDS UNRIVALLED.

A mastic—it adapts itself to every shape and slope Non-combustable, impervious, non-expansive, and made easy.

FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.

The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and

PERFECTLY FIRE-PROOF.

It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

LAMB KNITTING MACHINE

PRICE REDUCED TO 5$ DOLLARS.—It sets up its own work, knits all sizes, narrows and widens, knits the heel into the stocking, and narrows off the toe complete—producing all varieties of knit goods, from an infant's stocking, mitten, or glove, to a lady's shawl or hood. Has taken FIRST PREMIUMS—Gold and Silver Medals—at all Fairs and Exhibitions, including the Paris Exposition of 1867.

It is *simple, durable, easily operated,* and guaranteed to succeed in the hands of *every purchaser.* Send stamp for Circular and sample stocking. Address
JAMES D. OHNE, General Agent,
921-2t-eoit 176 State-st., Rochester, N. Y.

THE COLLINS AND SHATTUCK
Combined Clover Thrasher, Huller & Cleaner,
MANUFACTURED BY
GLEN & HALL, ROCHESTER, N. Y.

We beg to call the attention of Farmers to the superior characteristics of the Collins and Shattuck Clover Machine made by us, which we are now prepared to supply.

Our Machines have two bolts with counter reciprocating motion, which have proved *indispensable* in keeping the Machine still, preserving it from racking and preventing it from clogging. We will WARRANT them with proper management to Thrash, Hull and Clean Clover or Grass Seed at one operation, more rapidly and in a much better manner than any other Machine made. When thrashing grass seed they can in a moment be so arranged that the seed and chaff will pass directly from the bolts to the fanning mill without going through the huller—*an advantage possessed by no other machine.* The ratchet form of the upper bolt in our machine insures a thorough separation of the heads and seed from the straw before the latter is allowed to pass into the stack. Our machines are constructed of the best material, in the most thorough manner, handsomely painted and ornamented, and have in all cases given entire satisfaction. Persons purchasing these machines to do custom thrashing will find them even much more remunerative than Grain Thrashing Machines.

We are all prepared to supply Horse-Powers, Truck Waggons, &c., to be used with our machines, or they will be all used to run with any other Horse Powers.

☞ Descriptive Catalogues, containing full information, with testimonials from persons using our Clover Machines, sent free to all applicants. Address GLEN & HALL, Rochester, N. Y., or Detroit, Mich. J. D. EASTER, Gen'l Western Agent, Chicago, Ill. 921-10t

H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1865, Improvements Pat'd April, 1866 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag't Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag't Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING Co is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G Co., at Farmo, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

MARYLAND AND SOUTHERN FARMS. Farms and Plantations, Coal, Timber and Oil Lands, Fruit, Dairy, Grain and Grazing Farms in Maryland, Virginia and other Southern States. Also, Country Seats near, and Dwellings and Warehouses in Baltimore, Washington and Richmond, for sale low. Accurate descriptions furnished gratis. WRINKLES.*

BY J. B. SALISBURY.

Wrinkles deep are on my forehead,
Graven there by passing years;
Withered are your forms and features,
Laden are our hearts with fears.
But our love is brightly burning,
Warm as when in youth we met.
When the rosy clouds of morning
Wrapped us in their sylvan net.

Our clasped hands are withered strangely,
Trembling, too, with weakness grown—
We have labored in life's vineyard
Having reapt what we have sown—
We are hastening to the river,
Losing sight of earthly love—
One by one the landmarks fading,
Brighter—brighter—those above.

We have lost some earthly treasures,
And our hearts were wounded sore;
But they're only gone before us—
Gone to open heaven's door.
We will cheer each in our sorrow,
Kneeling low before the throne;
Pleading there with trembling voices,
"Take us, Father, as thine own."

We've lived so many years together,
'Tis seeming that our lives are one,
And sad, ah! sad, will be the parting
When you eternal life have won.
But my old heart will cast life's moorings
When you, my aged wife, are gone,
And sail through seas of doubt and sorrow
To the haven you have won.

*Set to music by the author.

The Story Teller.

Written for Moore's Rural New-Yorker.

HOW IT HAPPENED.

BY MRS. WILKINSON.

Reader, would you like to know how it happened that I became the wife of George Arnold, the rich banker? Well, I will tell you. We were very poor at home—that is, as the world goes we would have been considered so. My father lived on a very small farm—working hard, as our scant income would allow but little outside help;—inside there was none, as I was both housekeeper and mistress, and, strange to say, was equally contented and happy.

I had no mother, but loved my kind father dearly, and his encouraging "You are a treasure, Hallie," was all the reward I asked. From him I received the better part of my education—his having been far above his station in life,—and from him I could receive instruction which it would have been impossible to obtain in the district shool which I attended. Accomplishments of a superficial nature I cared but little for, but prided myself upon my practical and thorough knowledge of everything pertaining to household affairs. My bread was the whitest (so aunt Susy said) in the neighborhood—my butter the sweetest,—and then such pastry; you can never know what a nack it is to make nice pastry, dear reader, unless you, too, have been domesticated, as I was. Well in the manufacturing of tarts and pies, no one could turn a more skillful hand than myself. I used to sing all day long at my work and never grew weary as some would have done of my cares.

We were to have a "fair" in B——, about four miles away, and premiums were offered for the best made bread, butter, cheese, &c., as well as other articles of domestic manufacture. Now I had been working busily—all my spare time for the last three months—on a "patch work" quilt, and had just taken the last stitch, when Aunt Susy came in and insisted upon my sending it, as well as a large roll of my golden butter, which I had that morning worked over and hidden away in the coolest corner of the cellar. This I at last consented to, and Aunt Susy tucked in a loaf of my new-made bread besides; and would you believe it? I took the premium on the whole three!

"Well, child, did'nt I tell you so?" and Aunt Susy's sunny face peered in at the sitting room window, where I was arranging the little white curtains and looping them back with wreaths of myrtle. "Yes, I knew it all along, and now I have a bit of news for you. There is a young gentleman, pale as a 'water lily,' at our house, who wants country board, with the best of country fare, such as light bread, fresh eggs, butter, &c., with plenty of new milk, and all that sort o' thing. I told him I had no accommodations, but if he could get board where the young lady lived who took the premiums yesterday, he would be all right. And then he asked me so gentleman-like to intercede for him that I came right over at once, and now you wont refuse him, will you dear?—for he really looks to be in need of country air and diet."

"But, pray, Aunt Susy, what am I to do with a young gentleman in the house?" I asked, laughing, "and a city sprig at that—with his city airs and notions!"

"O, Hallie! but he is *so* pale!" interposed kind-hearted Aunt Susy, "and so gentlemanly, and when I told him what a splendid little housekeeper you were, and how quiet and shady it was here, he said it was just such a place as he desired. You will not refuse him, will you dear?"

"Just as father says, dear Aunty, you are such an eloquent pleader!"

"Then you have no excuse, for I asked him on the way," she said.

"Did you?—send him over then," I laughingly replied, "and remember *you* are responsible."

Mr. Arnold must return to the city! Business called him, and he must go!

Oh! how these words thrilled and startled me into a knowledge of myself; and I saw a change had come to me in these few short weeks—a change such as comes but once in woman's life—and that one dear image was enshrined upon my heart forever! How I struggled with my pride, and choked back the tears, that I might bid him the last adieu!

"Come here, Hallie—I want to whisper to you before I go," he said. "Sit down close to me now, for it is something of vital import—to one at least—which I wish to communicate. I love you, Hallie, with all my heart; will you be my little wife?"

"*Dear* George" was all I could utter—but my little brown hand nestled in his broad white palm, while a whole shower of kisses rained down upon my burning cheeks. Then the little brown fingers were gently withdrawn, and a glittering gem trembled where no ornament had ever been—not even a golden circlet, dear reader,—and I, plain Hallie May, the little country girl, with my sun-burnt face and awkward ways, was the betrothed wife of the rich and courted George Arnold!

Yes, for though it all seemed like a beautiful dream, now that he had gone and left me alone with my great happiness—yet there it lay, idly resting upon my lap, the same hand which had done the dish-washing for so long, and the milking and butter-making. Yes, there it lay with the glittering diamond, the first I had seen in all my life, sparkling and throwing out its rainbow hues in the beautiful sun-light—which had never looked so bright before nor brought such a warmth of light and gladness to my heart!

He had told me that the next train was to bear him to the city, but that he would see me again on the morrow—and this was all I could remember, as I sat there so long, just where he had left me, thinking, thinking, thinking, until the sun sank behind the blue hills—and I arose, with a "Praise Thee, O Father!" upon my lips!

It was years ago,—and I am still the happiest little wife in the land, while my dear George still maintains that no one else makes *quite* such cake and pastry as his own little wife Hallie!

A SKETCH OF EARLY DAYS.

BY NELLIE LINDEN.

In my early life, as in that of every school-girl, there were scenes and incidents which in old age come thronging back to memory and fill my heart with pleasing sensations,—remembrances of the happy past which, while I muse upon, I seem to live all o'er again. At the age of fifteen I was sent from my childhood home to a distant city to attend a young ladies' boarding-shool. Those who have passed the trying ordeal of a "first day" at a new school can imagine my feelings when I was ushered into a room where were seated about sixty young ladies, varying in age from nine to twenty years. No smile of recognition met my eye, for I was an utter stranger to all save the Preceptress. It was a lonely day to me, and glad indeed was I when the hour of retiring came, for I longed to indulge in thoughts of the happy home and kind friends I had left, apart from the gaze of my stranger school-mates.

I was assigned a room with a young girl apparently about my own age. She was dressed in deepest mourning, and her features wore a saddened expression, which, associated with her dress, led me to conjecture that she had lost a near and dear friend. But being a stranger I wisely retained my thoughts, and we went to rest indulging in but little conversation. The next day I particularly noticed that she was a favorite with all from the kindness with which she was treated, and the manner in which she was looked to for advice and assistance even by those older than herself. Lizzie Montgomery was not what the world calls beautiful, but "her soul spoke in her eyes," and her kindly smile and ready willingness to do good in every place, had so won the hearts of those around her that it would have seemed a desecration to call her aught than lovely. She was one to win the heart's best affections, and call out the purest feelings of the soul.

About three months after my entrance in school, as we were one evening seated in the parlor appropriated to our use, one of the young ladies handed Lizzie a volume of Mrs. Heman's poems—and requested her to read a piece of her own selection. In a clear and silvery voice she read that most beautiful poem, "The Bride of the Greek Isle," but scarcely had she finished ere every voice was raised to plead for one more. She selected "The Messenger Bird;" but her eye grew dim with tears as she proceeded, until at the fourth verse she paused, closed the book and left the room. I quickly followed, for I had become deeply interested in her sadness and determined if possible to dispel the gloom which darkened her young spirit. I paused at the door of our room and beheld Lizzie seated at the open window, weeping convulsively. Her long black tresses hung around her pale cheeks, and the soft wind of a summer evening played gently round her brow, seemingly to soothe her troubled spirit—but in vain. She would raise her eyes to the starry sky, but its calm and placid beauty soothed not her heart. I entered the room and kneeling by her side strove to calm her wild emotion. Like a weary child she listened, until I spoke of Heaven and its glories, when she exclaimed, "Oh, Nellie, my only hope is there; I shall not long remain to suffer here—my Heavenly Father is kind and he will take me to himself. You have often asked the cause of my deep dejection—you shall know all.

"Two years ago I was the child of wealthy parents—loved, caressed and most happy. If ever Angel-spirits dwell on earth in human form, I believe my mother was one. Oh, how I loved to set at her feet and listen as she told me of that home beyond the sky where she was soon going, and her Lizzie would then have no mother. Since my earliest recollection she was feeble and delicate. But my father would not, could not believe that she would brighten his pathway in life for so short a time, and rade forever from his endearing sight. All that medical skill could suggest was promptly executed, but all to no avail. Two years ago to-day they laid her in the cold bosom of the earth, to sleep her last, long sleep. One year after her death I entered this school. The kindness of Mrs. Arvington, our preceptress, rendered this a home, a rest to my weary heart after that mournful event, and as I seemed more content here than elsewhere, my father consented that I should remain until I had finished my studies. But Nellie, I fear there will never be a home of kindness for me elsewhere. In the pleasures of study I oftimes lose thought of my sorrow, but when alone the pent-up feelings of my yearning heart burst forth. I pause—but oh, the past year has been one of deep affliction. My father became suddenly acquainted with a lady of reputed worth, and, needing some person to take charge of his neglected household, offered his hand in marriage to Mrs Beverly. She was a widow, and has but one child—a little girl of five summers. Upon Ida is centered every affection of her heart. Four months ago, I for the first time since their marriage, visited my early home. Without, it wore the same appearance as in former days,—but within how changed! A stranger hand had arranged my mother's apartments so widely different that I scarce felt I was at home. I was at first cordially received by my step-mother, but in a few days she ceased to notice me at all, and I was left to my own will. One morning I stepped into the parlor to look once more at my mother's piano. It was a birth-day gift from father one year after marriage. I had never opened it since her death, and it seemed that it would be a relief to my feelings once more to awaken its well-known tones. I seated myself and accompanied its soft, sweet music with my voice in a familiar melody, but scarcely had I finished when looking up I perceived my step-mother at my side, wrath kindling in every feature of her face. She stood a moment, and exclaimed, 'Miss Montgomery, I request that this may never be repeated. This piano is not to be used until Ida is a young lady. I design it expressly for her, and would be obliged to you if you would consider that this is now my house, and these parlors are not designed as a morning resort for a school-miss. If you cannot adhere to my request you can go where you are more welcome.' I shrank from repeating this to my father, for I well knew it would grieve him and call up again the memory of 'the loved and lost.' In silence I retained my heart-bursting anguish and returned shortly after to my beloved teacher and schoolmates, for in their kindness I find a balm for my afflicted heart." As Lizzie concluded her affecting narrative she took from a casket a small gold locket—enshrined within was the image of her mother. "There, Nellie," said she, "is all I have left to care for now." I wonder not that she carefully cherished the memory of so beautiful a being.

About midnight I was aroused by Lizzie calling for water. I immediately arose and found her very ill. A physician was summoned, but he gave us no hope, and when the morning dawned our Lizzie was in Heaven. Pure spirit. I look back to that death-bed scene and the tear starts—

—"to my dim sunken eye,
For thoughts of the bright past never can die."

I recall her look as she turned to me and, taking from her finger a diamond ring—a gift from her mother—bade me keep it and "remember Lizzie." She is at rest by her mother's side. She was too pure for earth, and the angels came and wafted her spirit to their own bright land. I was present when they laid her down in the silent grave. It was one of Nature's most beautiful days. The soft wind and singing birds seemed chanting a sad requiem to the memory of the departed. Years have passed since then; I have wandered through the world—have mingled in festive throngs where bright eyes shone and merry laughter rang—but never amid earth's gayest scenes can I forget my early friend.

She has gone to the land of the blest,
The land where the weary repose;
Safe moored in that harbor of rest,
No longer affliction she knows.

WIT AND HUMOR.

Another Doctor.—The patient of a "root and herb" medicine man got the following prescription from him for a bad cold:—"Putcher feet in hot wotter, gotobed and drink a pint of loot." The patient brought the enigma to us in despair. "I can make out the first part well enough," he said. "Put your feet in hot water, go to bed, and drink a pint—that is plain enough. But what is loot?" We were embarrassed at first, but a happy inspiration struck us. L—oo—t, ell—double o—tee, elder-blow tea. And that turned out to be the explanation.

The following is published in an exchange as a "Widow's Recipe to Get a Husband:"—"Invite a nice young man to tea, set him a laughing every five minutes during the evening, let him have six kisses, and you'll be his wife after twenty similar operations." If the recipe should fail in making the "nice young man a husband, it may, at least, put him on almost as familiar a footing."

There is a boy down East, who is accustomed to go out on a railroad track and imitate the steam whistle so perfectly as to deceive the officer at the station. His last attempt proved eminently successful; the depot master came out and "switched" him off.

It was not intended as a joke when a person in New York declaring he would not write a line—fact or fiction—for any "Journal," "Day-Book" or "Ledger," under the "Sun," received from a clergyman the quiet reply, "Nor-wood—I."

"Where are you going?" asked a little boy of another who had just slipped and fallen down on an icy pavement. "Going to get up" was the blunt reply.

The Best and Cheapest Horse and Cattle Medicine in the World!

WALTER R. SLOAN'S IMPROVED
CONDITION POWDER
THE GREAT STANDARD MEDICINE
For Horses and Cattle.

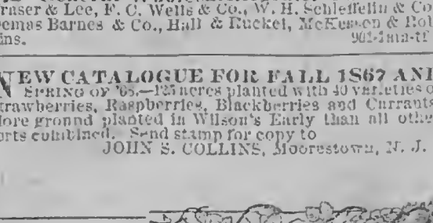
Used throughout the United States and Canadas during the last 23 years.

For the cure of the various Diseases to which Horses and Cattle are subject; such as Founder, Distemper, Hide Bound, Loss of Appetite, Inward Strains, Yellow Water, Fistula, Poll Evil, Scratches or Grease, Mange, Inflammation of the Eyes, and Fatigue from Hard Labor; also, Rheumatism, (commonly called Stiff complaint), which proves fatal to so many valuable horses in this country.

SLOAN'S CONDITION POWDER

Has the largest sale of any Horse and Cattle Medicine in this country. It is composed of herbs and roots, and for mildness, safety, certainty and thoroughness, stands pre-eminently at the head of the list of *Horse and Cattle Medicines.*

It carries off all gross humors, prevents horses from becoming stiff or foundering, purifies the blood, loosens the skin, and gives it a smooth and glossy appearance cleanses the water and strengthens every part of the body. It is also a safe and certain remedy for coughs and colds, which generate so many fatal diseases.



The Cow requires to be supplied with an abundance of food—not to make her fat—this is not desirable, but to keep up a regular secretion of milk, and all owners of cows will find by giving them

SLOAN'S CONDITION POWDERS

twice a week, a large increase in quantity and quality of milk and cream. It carries off all fever and impurities of the blood. The effect is seen throughout the season by a rich and abundant flow of milk.

The farmer is beginning to be aware of the valuable properties of **Sloan's Condition Powder**, in promoting the condition of his sheep and preventing many of the diseases of all the domesticated animals.

☞ A fifty cent package of **Sloan's Condition Powder** put into a barrel of swill is better than a bushel of corn to fatten a hog, and is a certain preventive of Hog Cholera, Blind Staggers, and other diseases common among hogs.

CAUTION.—To protect ourselves and the public from being imposed upon by worthless imitations, the genuine will bear the *fac simile* signature of the proprietors on the wrapper.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

MANURING CORN GROUND IN AUTUMN.

WE suppose that by far the largest part of the corn crop, at least that grown in the regions east of the Prairie States, is planted on sod ground. It is also a very prevalent custom to manure this sod land before it is plowed, generally with barnyard manure in its long or unfermented condition, and the most common practice is to draw it from the yards in the spring, spread it, and immediately plow it under. Now the planting of corn on sod is a very good practice, and it may be questioned whether any rotation of crops for this region can be adopted, better than the one which makes corn follow grass; but the method of manuring the sod in the spring is not well fortified either by theory or facts against attack.

A writer in the RURAL some years since stated as his belief that a heavy coat of long manure put on sod ground in the spring was not only no benefit to the crops planted on it but a positive injury, *in case the season following was very dry.* His argument to maintain this position was that in a drouth the sources of moisture for the plant to draw from were a deep, well-worked soil, which admitted the roots to moist layers underneath the surface, and the atmosphere which conveyed some moisture into loose earth. A thick coat of long, strawy manure plowed under with the sod late in the spring would not decay immediately in case a drouth prevailed, and its position, in conjunction with the sod and the air space around them, would arrest the rising of moisture from below, and render the depth of soil which the plow inverted much dryer than it would be if it had good connection with the earth below. This state of the soil would retard the growth of the young corn until sufficient rain fell and render the crop much later in its period of ripening. This theory every farmer has, doubtless, seen substantiated by facts, to the extent at least that thick sod has proved injurious when early drouths occurred. On the contrary, in seasons sufficiently wet, the sod and manure prove highly stimulating and beneficial to the corn, and heavier yields result than would from stubble or fallowed ground. In case the corn crop does not appropriate all the nutriment contained in the sod and manure, it is not lost to the straw crop which usually follows in the succeeding year, but it seems apparent that circumstances may combine to render long manure put on a thick sod in the spring and plowed under for corn, really a detriment instead of a benefit to that particular crop.

In no case, we think, can the results from manuring sod ground in the spring for corn equal those of manuring in the autumn. In the latter instance the manure is in a more decomposed state and its elements are more immediately available, but the greatest benefit comes from the effect which the moisture has on the fertilizer and the soil—that of extracting the soluble matter and imparting it to the ground where it is in exactly the right condition to nourish the plant as soon as its roots begin to demand sustenance. This is the result which comes from spreading manure on sod ground in the fall, and another very important one is that the grass is also invigorated and starts early and strong the next spring, furnishing either early feed for sheep and young cattle, or, better still, an increased amount of vegetable substance to plow into the soil. There is, probably, no better way of heading off the destructive cut worm, than to manure in the fall, allow the grass to grow large in the spring and plow it under as quickly preceding planting as possible. The worms will feed on the grass and let the corn alone until it gets large enough to successfully withstand their attacks.

It may be urged that manure wastes by long exposure to the weather when thus spread in an undecomposed state. This is not the case largely, at least during the late fall, winter, and early spring months, when the weather is cool and rain and snow plentiful. Nor is it probable that manure loses its valuable elements to the extent which is popularly believed, even at any season, by exposure on the surface of the ground if it is spread out thin so as to avoid undue fermentation; its effects as a mulch are compensatory.

THISTLES FOR FODDER.

A COMMUNICATION appeared in a late number of the N. E. Farmer in defense of Canada thistles as a farm crop. The writer says:—"I am in favor of the thistle. I never had too many of them on my tillage land. They make good fodder for any kind of stock. They want as much drying as hay and no more." If this be true one-half of the primal curse is changed to a blessing. When the penalty attached to the transgression in the garden was announced, thistles were evidently regarded as among those things which would prove detrimental to the husbandman, and not a desirable commodity or a source of profit. But this aside. This apologist for thistles says, in substance, that if people are determined to destroy the thistle, the right time to mow them is late in the season, as the stalks will then be hollow, and getting full of water will rot and kill out the roots.

RURAL FARMERS' CLUB.

Hens—Setting and Cross Breeding.

"J. W.," West Rupert, Vt., writes:—"Much has been said and written about hens setting, and the means used to prevent them. In the RURAL of November 2d, I notice an article on that subject, in which the 'Ohio man' recommends tying them up. I have been through the antidotes recommended to cure the hens setting, and up to date I have not tried one that I believe to be a sure cure in all cases. A few weeks since I was told 'Aunt NABBY'S' method, which she avers is a *clincher*, and no mistake. She says, 'put one pail of water in a tub, or cover the bottom about two inches deep, put in Miss Biddle and cover it; let her remain twenty-four hours, and the setting fever is cured. It may be worth trying.'

"My advice to those wishing to produce eggs only is to get *pure* Black Spanish stock and keep them till four or five years old, and they will not be troubled with hens setting, and if properly fed and cared for, will have plenty of large, nice eggs from the amount kept. I have tried a variety, and have never found their equal. I have taken some pains to inform myself on the subject of keeping and raising fowls, and my experience is the crossing of breeds does not improve the bird for producing eggs—but for purpose of table use I think the large coarser breeds mixed with the old native yellow leg is an improvement. Will some one of experience give their results, and what improvements can be made, if any, by crossing breeds?"

Killing Canada Thistles.

"CHIEL" writes us that he "killed a patch of Canada thistles 'once on a time' in an old pasture by persistently salting them. When I went out with my measure of salt for the stock I visited the thistle patch and gave the cattle and sheep a chance to touch noses with the prickly nuisances to get a lick of salt. This patch soon disappeared; it was in a sort of hollow where the soil was naturally rich, and a thick, tough sward formed on it. I imagined that tough, compact sward might have something to do with the death of the 'Canadas,' and to try an experiment I manured, on the surface, another patch which was situated on a very poor knoll. The thistles were rampant, and I had cut them faithfully several times without damaging them very much. Well, the manuring soon caused a tough, rich, thick sward of June grass and white clover to cover the knoll, which, with the aid of one or two more cuttings, caused the thistles to disappear. I am convinced that a heavy, rich sod and a little 'top manuring' will kill Canadas, and it is perhaps the easiest way of any."

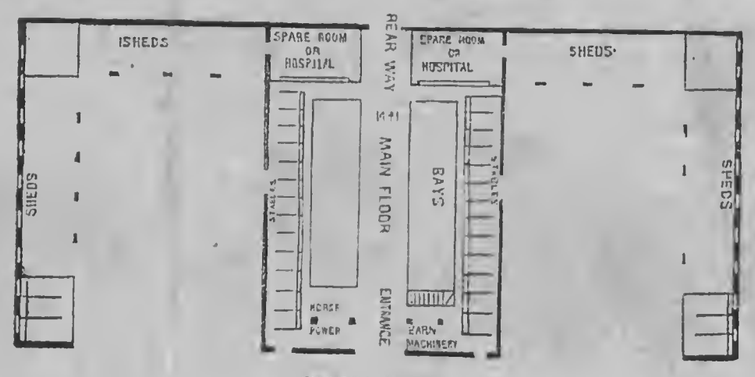
Rats in Corn Cribs.

A CORRESPONDENT asks for a specific to keep rats away from corn cribs. There is none probably within easy reach of the majority of farmers; something may be done to effect the object in the way of poisoning and trapping, or if a weasel could be induced to make his abode in or near the cribs the rats would speedily leave the ground or be destroyed. The best way is to make the corn crib rat proof, which may be done by elevating it about three feet from the ground on posts capped with large tin pans. If nothing is inadvertently left leaning against the cribs whereby the vermin can enter, then the grain will not suffer from their depredations.

A COMPLETE STOCK BARN.—ELEVATION.

IN answer to inquiries about Stock Barns, we refer all seeking information to back volumes of the RURAL, in which several excellent plans will be found. To meet the wants of many thousand new subscribers, however, we will here re-publish illustrations and a condensed description of the barn and sheds erected by Hon. LEWIS F. ALLEN, on his Grand Island Farm:

The body of the main barn is 100 feet long by 50 feet wide, the posts 18 feet high above the sill, making 9 bents. The beams are 14 feet above the sills, which is the height of the inner posts. The position of the floor and bays is readily understood from the plan. The floor, for a *grain* barn is 14 feet wide, but may be contracted to 12 feet for one exclusively for hay. The area in front of the bays is occupied with a stationary horse-power and with machinery for various farm operations, such as thrashing, shelling corn, cutting straw, crushing grain, &c., all of which is driven by bands from drums on the horizontal shaft overhead, which runs across the floor from the horse-power on the other side; this shaft being driven by a cog wheel on the perpendicular shaft round which the horses travel.



GROUND PLAN.

A passage four feet wide extends between the bays and the stables, which occupy the two wings. This extends up to the top of the bays down which the hay is thrown for feeding, which renders this work as easy and convenient as possible.

The floor of the main barn is three feet higher than that of the stables. This will allow a cellar under it, if desired—or a deeper extension of the bays—and it allows storage lofts over the cattle with sufficient slope of roof. A short flight of steps at the ends of each passage admits easy access from the level of the barn floor.

The line of mangers is two feet wide. A manure window is placed at every twelve feet. The stalls are double; that is, for two animals each, which are held to their places by a rope and chain, attached to a staple and ring at each corner of the stall. This mode is preferred to securing by stanchions. A pole or scantling, placed over their heads, prevents them from climbing with their feet into the mangers, which they are otherwise very apt to do.

The sheds, which extend on the three sides of the barn, and touch it at the rear end, are on a level with the stables. An *inclined plane*, from the main floor through the middle of the back shed, forms a rear egress for wagons and carts, descending three feet from the floor. The two rooms, one on each side of this rear passage, 16 by 34 feet, may be used for housing sick animals, cows about to calve, or any other purpose required. The stables at the front ends of the sheds are convenient for horses or oxen, or they may be fitted for wagon horses, tool houses, or other purposes. The rooms, 16 feet square, at the inner corners of the sheds, may be used for weak ewes, lambs, or for a bull stable.

Racks or mangers may be fitted up in the open sheds for feeding sheep or young cattle, and yards may be built adjoining, on the rear, six or eight in number, into which they may run and be kept separate. Barred partitions may separate the different flocks. Bars may also inclose the opening in front, or they may, if required, be boarded up tight. Step ladders are placed at convenient intervals for ascending the shed lofts.

A granary over the machine room is entered by a flight of stairs. Poles extending from bay to bay, over the floor, will admit the storage of much additional hay or grain. As straw cannot be well kept when exposed to the weather, and is at the same time becoming more valuable as its uses are better understood, we would suggest that the space on these cross poles be reserved for its deposit from the elevator from thrashing grain, or until space is made for it in one of the bays.

A one-sided roof is given to the sheds, (instead of a double-sided,) to throw all the water on the *outside*, in order to keep the interior of the yards dry. Eave-troughs take the water from the roofs to cisterns. The cisterns, if connected by an underground pipe, may be all drawn from by a single pump if necessary.

An important advantage of placing the stables in the wings of the barn is, that it obviates the common objection that liquid manure from the stalls rots the sills—the stable sills being comparatively easily replaced if not under the main barn.

The RURAL has frequently given illustrations of such a style of building. Granaries for storing shelled grain can readily be made rat and mouse proof, and every farmer should possess such. It don't pay to feed vermin.

Feeding Rusty Straw.

SAYS a correspondent from Wyoming Co., N. Y.—"Tell your Club readers to beware of feeding rusty straw to their stock. I had some experience in this line last winter with three colts, which had free access to a stack of rusty spring wheat straw. They came near dying; their coats were rough and staring, swellings filled with thin pus or water appeared on their limbs and some parts of their bodies, and they also seemed to have a difficulty in the head and nostrils. Change of feed and good care alone got them through to grass, but they were much injured. I have also seen cattle do very poorly when feeding on rusty straw, though they were stabled and fed hay, &c., nights and mornings. I think farmers should be careful in feeding or allowing their stock to eat this; the best use for it is to bed with."

Build an Ice House.

IF you can get a supply of good ice within five miles of your premises build an ice house and fill it this winter. Sometimes it is convenient to make one in the cellar if the walls are high and room is plenty. A room twelve feet square will be large enough for ordinary farm purposes, and that much space is required to bulk enough ice together for it to keep well. In a cellar the most important points are ventilation and drainage; the former should always be from the outside, and the latter must be free and perfect. The usual layer of tanbark, sawdust or charcoal must be put around the walls. But the most satisfactory ice houses are above ground.

Heifers Losing their Milk.

J. ATWATER writes us from Cayuga Co., N. Y., stating a somewhat curious case, and asking for information from some of the contributors to our Club. "Two heifers, owned by different men, came in and for two or three weeks looked and were apparently doing well. They had a fair average flow of milk and their udders were healthy. At the end of that time the flow of milk began gradually to diminish until they were entirely dry, and have so continued. Their feed was good and they have apparently done well in every other respect. Now this 'beats my time,' and if any of your readers can explain I should like to hear them."

Self-Milking Cows—Preventive.

J. A. BINCHARD, Windham, Ohio, writes us that "the best way to prevent a cow from sucking herself is to confine her in the stanchions, take her tongue in the left hand, and drive a sharp, narrow bladed knife with your right through the center of the tongue about one inch back from the end. Then with a down and outward stroke draw out the knife so as to split the tongue. I have tried this method, and it is a sure preventive of the bad habit of self-milking."

Killing Hogs.

DON'T kill hogs until the weather is cool and clear. When dressing open them from the tail to the snout and rinse freely with cold water. Prop them open as far as possible with a stick so that they may cool quickly and thoroughly. Let them hang until completely cool, and then keep the sun from them when taking to market. Cut the pork for packing as soon as it is cold, and if the weather is warm salt immediately.

FISH GUANO—SEA ROCK WEED.

IN the olden time Menhaden fish, ycleped moss bunkers in New York, were seined at the Newport beaches. I well remember how animating it was to me to see the fish swim in the long, extended wave just as it was toppling over into a white wreath of foam. But all that is changed now; boats take out the seines into deep water and surround the running school of fish, closing in their united seines until they have the menhaden, dog fish and all, with sometimes a small shark, into a *cul de sac*. The boats are then loaded with the finny spoils, which are taken on shore to the trying works. After the oil, which is of economial but no manurial value, is taken off, the flesh and bones are boiled down to guano, which sells readily at $20 the ton. It is said to be much cheaper than Peruvian guano, and no wonder, for it is of the same animal origin, rich in nitrogen, and the multitude of its fine bone are nearly pure phosphate of lime. But the farmers and gardeners of the Island say that fish alone are not a permanent soil amendment; they must have some stable manure, sea weed, or other carbonaceous manure to continue the soil's fertility. This is perhaps owing to the mechanical effect of the manure, as well as to its superior richness in potash and soda.

At Newport many of the fishing boats bring home with their fish and lobsters, a good pile of fleshy coriaceous rock weed, cut from the outlying rocks at low tide. This is fine manure for the gardens so numerous about that highly favored town; like the sea weed that is driven to the beach by heavy gales on shore, this rock weed is much enriched by marine insectivora, although less abounding in minute crustacea than sea weed. This green, all arable, seagirt Island, with its invigorating sea air, can beat champaign Western New York in summer pasturage, as summer droughts are the exception here, while they are the rule in grain-growing

New York. The dent corn which yields one hundred bushels shelled to the acre on highly manured land in the West, will hardly perfect itself in the cool, moist atmophere of south New England's sea coast. It is often said in Western New York how fast the corn grows when the mercury reaches 90° in the shade by day and 80° at night; they have no such days or nights at Newport. S. W.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

NATIONAL WOOL GROWERS' ASSOCIATION.

The National Wool Growers' Association will hold its Annual Meeting in Pittsburg, Pa., on Wednesday, Nov. 27th, at 12 o'clock, M. The Executive Board are requested to meet at the Monongahela House.

HENRY S. RANDALL, *President.*

WM. F. GREER, *Secretary.*

ANNUAL MEETING OF THE NATIONAL WOOL GROWERS' ASSOCIATION.

The call for the annual meeting of this Association was not issued until last week, owing to our inability to fix upon a time when the attendance of several prominent representatives of States could be secured. Nor did we consider a long previous public notice very essential, as, although an attendance of wool growers beyond the members of the Executive Board is highly desirable for the purpose of more extended consultation, the primary object of the present meeting will, we take it, be the transaction of official business. In our view, a popular demonstration—a great mass meeting or convention of the wool growers of the country—should be held at the most appropriate point, say Chicago; but such a convention can act more understandingly and far more effectually, after the free traders of Congress have matured and presented their plans—after all the tariff or anti-tariff bills or amendments of the next Session are placed before the country—and the time for action on them approaches. This period will probably occur about next May. And we would propose to invite all the wool manufacturers of the United States to join us in this demonstration. Another feature would add surpassing interest to the occasion. Why not make it an "*Exposition*" of the sheep and of the raw and manufactured wool products of the country? A grand display of all our choice breeds of sheep, with their unshorn and shorn fleeces, and a similar display of every description of American woolen goods by the manufactures would, we believe, surprise the country, and it would show both the country and Congress not only the vast extent, variety and excellence of the materials and products of our wool and woolen industries, but also the vast magnitude of the interests which clamorous theorists and selfish speculators are laboring so assidnously to destroy.

We speak of course but the views of an individual, but we have thought it would be well to mention in advance so important a measure, which will be proposed at the Pittsburgh meeting, to the end that those who attend that meeting may come prepared not only to express their own matured conclusions in regard to it, but the views and feelings of the constituencies they represent.

NATIONAL ASSOCIATION OF WOOL MANUFACTURERS—ANNUAL REPORT.

As we have previously stated, the National Association of Wool Manufacturers held its third annual meeting at New York, Oct. 2d, 1867. Hon. ERASTUS BIGELOW of Mass., was unanimously re-elected President; T. S. FAXTON of N. Y., THEODORE POMROY, of Mass., ARCHIBALD CAMPBELL of Pa., Vice Presidents; and JOHN L. HAYES of Boston, Secretary. We have already published the resolutions passed at the meeting. Were they not a complete guaranty that the Association stands up with perfect good faith to the letter and spirit of their friendly compact with the Wool Growers, the re-election of these officers would afford that guaranty.

Mr. BIGELOW is one of the ablest men of our country. As an inventor his name ranks with that of the WHITNEYS, WATTS and ARKWRIGHTS. His writings on financial topics and especially on Tariffs are marked by a boundless familiarity with facts and by a profound and statesmanlike depth. By the practical application of such powers to business concerns he has risen from narrow means to a princely fortune. He was among the first, if not the first of our great manufacturers to discover that the ultimate and real success of the manufacturing industry of the Nation lay not in depressing the wool growing interest, but in fostering it equally with the manufacturing interest. He has steadily supported this policy, and his great influence among his associates has done much to wipe out the traditions and prejudices which stood in the way of its adoption.

Messrs. FAXTON, POMROY and CAMPBELL belong to the same school, and they are all men of high practical sagacity and ability, of the most unblemished integrity, earnest, straightforward, perfectly sincere men, whose good faith can be relied on in every emergency. Mr. HAYES' zeal, talent, faithful services and dashing executive ability, as manifested in many a juncture while the wool tariff was under consideration in Congress, have already been commented on in these columns.

We have not space here to enumerate the Directors and Standing Committees of the Association, embracing such well-know names as J. WILEY EDMANDS of Boston, N. KINGSBURY of Hartford, and many more of the most prominent manufacturers of the United States.

The Annual Report of the Association commences with an interesting history of the passage of the Wool Tariff; and it pays a due meed of praise to the zealous and able services of the acting Tariff Committee of the Wool Growers in Washington—Messrs. MONTGOMERY, POTTLE and GARLAND—and to the outside labors of members of the Committee who were detained from attendance. This is handsomely and liberally done, but we will remark in passing, that in justice to the acting Commille, a formal report of their proceedings ought to be drawn up by themselves, published and made a part of the archives of the National Wool Growers' Association.

The Report next gives a history of the adoption of the Tariff samples by the joint committees of the Wool Growers and Manufacturers, at Boston, May 22d, 1867. The facts will be found embodied in a statement published in this paper June 8th, 1867. To show the opinions of the Wool Growers of the country in regard to the present Wool Tariff, articles are quoted from the "RURAL NEW YORKER," portions of Mr. BOARDMAN's pungent letter in the "Prairie Farmer" of August 31st, 1867, and the "Boston Journal's" report of the discussion on wool at the Vermont State Fair, September 13th. These of course are intended as mere samples of similar expressions in agricultural journals. The Report might have included such expressions from others of quite equal zeal and ability, such as the "Ohio Farmer," the "New England Farmer," the "Western Rural," &c., &c., and also from the recent resolutions of the Ohio Association, and the addresses of Presidents GARLAND and STILSON.

The Report closes in the following vigorous strain, in which though Secretary HAYES speaks in the first person, his statements were unanimously adopted by the Association:

"The above extracts show how utterly preposterous it is to suppose that the British doctrine of free-trade in raw materials which can be produced here, still adhered to by some few manufacturers, can ever be engrafted upon our tariff policy; and they further show, that, with fidelity on our part to the principles adopted by this Association as a body, we shall have a stability in our tariff legislation never known before. Upon the assurance of this stability, there will grow up confidence in the investment of capital; new branches of manufacture, not undertaken before only for want of that confidence, will spring up; and the era of wise and just arrangements between the two great branches of the woolen interest will be the dawn of an epoch of unparalleled prosperity.

A result of the recent tariff on wool and woolens, which cannot fail to be encouraging to the wool-producing interests of the country, is the appreciation which it has tended to produce of our domestic wools. The effect of the recent tariff, in directing attention to American wools, is greater than ever anticipated by manufacturers. In all establishments where foreign wool was formerly largely used, manufacturers have been induced to make new applications of domestic fleece which they would never have dreamed of but for the change in the wool duty. Some indication of the extent to which American wool has been substituted, is shown by importations at the port of New York, given from official sources. For the first six months of 1866, the clothing wool entered at New York amounted to 23,692,043 lbs.; and for the first six months of 1867, 4,366,183 lbs.* To come to more direct illustrations: I am informed by a manufacturer of worsted yarns, consuming 10,000 lbs. of wool per week, that, before the imposition of the duty on Canada wool, he made use of that material exclusively for his fabrics, as it was supposed to be indispensable. After the imposition of the duty, he experimented with American wools, selecting from lots brought principally from Kentucky; and for months he has made use of no other wool, which he finds perfectly adapted for yarns of numbers not exceeding 35. For the higher numbers, the admixture of wools of pure English blood is found necessary. The manufacturer and introducer of the admirable cloakings, of which I shall speak elsewhere, informs me, that, upon commencing this new fabric, it was supposed that the most expensive Silesian wools would be required to equal the Austrian fabrics, which first suggested these styles. In the early stages of his manufacture, he made use of Silesian wools, costing, washed, two dollars per pound. These fabrics are now all made of American wool, without the slightest admixture of foreign material, and exhibit probably the most beautiful textures that have ever been produced from American flocks and looms. In many mills producing fine-face goods, foreign wools were formerly used for both warp and filling. Since the change of duty, American wool, in all these establishments, is substituted for the warp, even of the finest broadcloths, constituting two-fifths of the texture. The testimony which I have from manufacturers is universal,—that, by careful selection, the economical application of American wools may be greatly extended. Instances are not wanting in other countries of a distinctly marked national manufacture being developed in consequence of the necessity of resorting to the products of domestic flocks. The high duty in France upon foreign wools, which was fixed at 30 per cent in 1826, compelled the French manufacturers of woolen dress goods to resort to the fleeces produced on their own soil. The protection given to the agriculturists of France encouraged them to develop the merino races supplied by the flocks of Rambouillet, until they produced sheep of extraordinary size, and with a length and fineness of fibre hitherto unattained. To the exclusive possession of these fleeces do the French manufacturers ascribe the unparalleled excellence of their merino-dress fabrics,—the most perfect of all known textures of wool. So high became the excellence, and so great the appreciation, of this wool, that it no longer required protection, as it was without a foreign competitor; hence the abolition of the duty on wool, which took place in 1860, was assented to freely by the French agriculturists. It was in memory of this boon, which the flock of Rambouillet had conferred upon France, that, upon its threatened dispersion, the Empress Eugenie, in 1851, pledged herself to preserve the flock under her august protection.†

Let me by no means be understood to say, that our flocks can at present supply us with all the requisite material for our manufactures. The wools of the third class, or carpet wools, the coarse product of barbarous flocks, can never be produced here, for we might as well undertake to breed buffaloes for their robes. We are still greatly deficient in very fine short-fibred wool adapted for filling for broadcloth or lace-goods, as well as in combing wool of English blood for worsteds. Both of these varieties can be advantageously grown in this country, and their production will be greatly favored by the existing duties. These wools should be produced, not in place of but as additions to, the wools now mainly grown, and which will be always chiefly in demand. The principal means of encouraging the growth of the required fine wools, is for the manufacturers to *discriminate* in their prices; and to be willing to follow the example of one of the most eminent manufacturers of fine opera flannels, who informs me that he has paid from 75 cents to a dollar per pound, while ordinary wools were worth but 50 cents, for brook-washed fleeces of this character of wool grown in Ohio. There are localities, particularly in the Middle States, where this wool can be grown to great advantage. With adequate prices, the peculiar passion for fine wool will be developed in this country, as it is in Silesia and Hungary, where the culture of noble wools, as they are denominated, is prosecuted as the most fascinating of agricultural pursuits. We notice with pleasure, that eminent flock-masters, like Mr. Chamberlain of New York, have been within the last few months adding to their importations of Silesian sheep. The infusion of this admirable race—possessing equal fineness and shortness of fibre, but of greater size, yield, and stronger constitution, than the delicate Saxons—would be an invaluable addition to our agricultural resources. The value of sheep of English blood producing the combing wool for worsteds, is being rapidly appreciated. They are exhibited in all our agricultural fairs. Their fitness for the neighborhood of large markets,—as in such situations profit is furnished from three sources: wool, mutton, and lambs,—and their adaptation for dairy and wheat farms where small flocks can be advantageously kept, render the necessary supply of this variety of wool only a question of time. There is no question that this wool, long claimed by the English as the exclusive product of their island, can be equally well produced here. The specimens of the Leicestershire wool exhibited by Dr. Townshend of Ohio, during the recent examination of the wool samples, were pronounced by English wool-sorters to be equal to the choicest locks of England. In regard to these wools, Dr. Townshend says, in a recently published essay, 'Should the demand for combing wool continue or increase, it can be produced in this State (Ohio), and other States on the Northern border, as cheaply and as good in every respect as it can be produced in Canada; and it cannot be good policy to import our combing wools, when they may be so readily grown at home.'‡

In reporting upon the condition of our own department of the woolen industry, the most important question to be answered is, To what extent have we, as manufacturers, fulfilled the obligations to the country imposed upon us by the favorable national legislation extended to us since 1862? How far have we conformed to the spirit of the resolution passed by the Government of our body,—"that the most appropriate means of testifying gratitude (for favorable legislation) is for the manufacturers to strive for the utmost perfection and soundness in their fabrics, so that consumers may recognize the benefits of protecting American industry through the increased excellence of its products?" This question we are not ashamed to answer. For a period of about five years, we have felt the influence of a protective tariff. Its operation has only been temporarily checked by the high internal revenue taxes, and by excessive importations at one period growing out of the abnormal condition of affairs consequent upon the close of the war. Sufficient time has not elapsed until the present period, to demonstrate the effects upon the public interest of the protection which the woolen manufacturers have received. Comparing our progress as indicated by the character of goods now upon the market, it is confidently asserted, that we have made more progress in the great department of clothing goods, in variety, excellence, and economy of production, than has been made here in any twenty years before. This applies to cloths in their infinite variety, shawls, flannels, blankets, knit goods, &c. With the single exception of the fine-faced goods, and some varieties of shawls,—an exception due solely to our deficiency in the finest wools,—our goods of clothing wool compare favorably to-day in excellence and cheapness with those of the oldest manufacturing nations. This point is difficult of demonstration, without ocular comparison of domestic and foreign goods; but a few facts may tend to illustrate it. Early last fall the Department of State requested me, as the official representative of this Association, to urge our members to contribute samples of woollen fabrics to the then approaching Paris Exposition. With this view I distributed extensively the circulars of the Department, containing the necessary instructions. A general indisposition was manifested by our manufacturers to exhibit their goods, as they evidently were doubtful of competing successfully with the old establishments of Europe. With some difficulty I persuaded the representatives of the Washington Mills, having a larger number of sets of machinery, and making a greater variety of fabrics than any other American establishment, to consent to send to the Exposition specimens of their ordinary fabrics, with the express statement that the goods were not made especially for the Exhibition, but were the daily products of the mill. One of the proprietors of this establishment having been appointed a commissioner to the Exposition, objection was made by the Department of State to the transmission of the products of this mill. To obviate this objection, with the approval of the State Department, I took upon myself, as Secretary of this Association, to exhibit over thirty distinct varieties of fabrics produced by this single establishment. They were forwarded, with a statement that they were intended to show the average styles and quality of woolen goods now being made in the United States. To each sample a card was affixed, showing the selling price in this country. These fabrics received, in my name, the award of a silver medal, being a medal of the highest class given to any individual or establishment manufacturing carded wool. I am informed by a member of the jury, consisting of representatives from all the manufacturing nations in the world, that the jury in making this award, had regard to the excellence, variety, and fitness for general consumption of these fabrics, and also to the reasonableness of the prices at which these goods were afforded in this country. Such an award is conclusive proof, that the American manufacturers in this department are discharging their obligations to the consumers of this country. Upon the question of prices, I will repeat here what I have said in a recent publication, entitled, "Protection a Boon to the Consumer;" "A careful inquiry among the most experienced and oldest dealers justifies the assertion, that cloths, as a whole, have never been so cheap in this country as at the present time. It is the opinion of the oldest dealer whom I have consulted, that in certain styles where comparison can be made, such as black broadcloths and cassimeres, the prices of American cloths are much less than foreign cloths of the same quality forty years ago. The present great reduction of prices may be temporary; as many goods are doubtless offered below the cost of production, and the want of protection to other branches of industry doubtless diminishes the demand. In any view of the case, there can be no question that the cost of cloth, to the great class of American consumers, has been materially diminished by the domestic manufacture."

During the war, the standard of excellence in our goods was undoubtedly far too low, and discredit was thrown upon our national production. Home competition, the inevitable result of protection, is now for excellence; and the vast improvement exhibited the present year is the subject of universal comment and surprise with the leading merchants. The leading organ of the dealers in dry goods—the Economist, 'a well known free-trade advocate—declares as follows:—'It can be truly said of our manufacturers this season, 'they have made wonderful progress over last year.' Such continued improvements in the manufacturing of woolen goods will soon place us beyond the name of rivals, and cause our products to be imitated the world over; as our most choice styles and salable patterns are the result of American ingenuity, both in coloring and in style.' As the admissions of an opponent are legitimate testimony, we may fairly quote in this connection the declaration of the same organ, that 'a great impulse has been given to domestic manufacturers under the influence of the high tariff, and the result is seen in the splendid display made by our woolen mills.'

Our progress has not been limited to improvements of old fabrics in style or economical production. Many new fabrics have been successfully achieved. Among the notable examples of recent introduction, may be specified the silk-mixed cloths, having threads of silk incorporated with both the warp and filling; adding strength to the texture, and giving agreeable neutral shades to the surface. It is admitted that the American products of these goods, which are largely consumed, fall short in no respect of their German prototypes. The introduction of these goods is interesting, as aiding in the development of a kindred branch of American manufactures, all the silk used in these goods being spun in this country. The consumption of silk is by no means inconsiderable, that consumed by one manufacturer, for this class of goods, exceeding annually $80,000 in value. The silk and wool manufactures are united in another fabric of great beauty, largely made in Connecticut,—the Irish poplin, composed of worsted filling, which is covered completely by a warp of silk. This beautiful addition to our products of luxury, it is hoped, is the harbinger of a broader extension of the silk manufacture, which needs only sufficient protection to take its place in this country with the manufactures of wool and cotton.

The great perfection which we have attained within the last two years in the manufacture of the class of cloths styled Esquimaux beavers, for overcoatings, is worthy of especial commemoration. Five years ago, all the goods of this class, consumed in this country, were imported. The cheapness and excellence of the goods of this class recently fabricated here, have led to the exclusion of the foreign product. The goods of this class, manufactured by the Germania Mills, exhibited at the Paris Exposition, received the award of a medal of high class.

Marked improvements have been made within the last year or two in the production of knit goods. Until quite recently, the manufacture of shaped stockings, shirts, and drawers, made abroad wholly on hand machines, has not been attempted here. An American machine now performs automatically the narrowing and widening of the best class of knit goods, which is done elsewhere by hand. A great difficulty in the manufacture of knit goods has been the seaming, which, when done by hand, involved the distribution of the work to the homes of the skilled women by whom the work was finished at great cost. Within the last year, a machine has been perfected by American ingenuity for seaming automatically. In one establishment, a hundred little girls are employed on these machines, earning from a half a dollar to a dollar a day, and accomplishing the seaming more perfectly than it was ever done by hand. Thus a completely shaped knit article is produced entirely by power, equal in all respects to the goods of the most celebrated English makers; while the American goods are afforded at materially reduced prices.

Of recent novelties in our manufacture, the fabrics which have attracted most admiration are the cloakings, so largely introduced during the present season. Even experienced manufacturers are astonished by the new range which is given to the application of woolly fibre, by the surprising variety of styles and effects obtained, and that they are capable of being produced by machinery. The models which gave the idea of the fabrics produced here, originally conceived and executed in Austria, under a protective system of over 70 pr. ct. first appeared at the London Exposition in 1862, and were regarded as marked features of the Exposition. To the genius and enterprise of a young manufacturer of Rhode Island, is due the conception of re-producing the Austrian inventions in this country. He was able to carry his conception into practical execution, by personal observation and actual labor in the Austrian mills. Not content with imitation, he introduced new styles and textures adapted to American wools; and the goods now produced by him, and by other manufacturers who have followed his example, although purely American in design, are in no respect inferior to the foreign models; while they are sold at from two to three dollars less than the price at which the imported goods can be afforded,—the American goods being woven by machinery, while the Austrian goods are woven by hand.

While, in the department of clothing-wool fabrics, every field seems to have been explored in this country, that of combing-wool is still limited by the want of raw material. We have encouragement in this direction, from the successful working of mills in Rhode Island and elsewhere, producing Italian cloths; and the establishment of another in Lawrence, within the last year, for the manufacture of styles of worsted dress goods not before attempted. I am confirmed, by the opinions of several manufacturers, in the belief, that there is a favorable opening for a new application of our longest-fibred American merino wool, in the production of the fine all-wool merino dress-stuffs, produced at present only in Europe; but so largely produced there, that, in a single establishment in Reisenberg, Bohemia, 12,000 persons are employed in this manufacture. As these goods are admirably adapted for printing, the introduction of this manufacture would be greatly favored by the perfection to which the art of cotton and delaine printing has attained in Rhode Island and Massachusetts.

Before closing this Report, it is proper that I should consider, very briefly, the direction in which improvement in our industry should be sought. In practical manufacture, I am led to believe that the great field for improvement is in the selection, adaptation, and preparation of wool. All are aware of the vast economy which is now effected by the saving in stock, as compared with the practices thirty years ago. One of our number, who visited a great manufactory of the finest-faced goods, at Aix La Chapelle, states, that, in that vast establishment, they find it economical to wash in two months all the wool worked during the year, thus losing the interest on their stock for a large part of the year; for the simple reason, that the softness of the water during those particular months favors thorough cleansing. In the same establishment, the manipulation of every lock of the wool, to remove even the least foreign matter, is carried to a degree which would seem excessive here. Another manufacturer states, that his recent observations in a great worsted establishment of Roubaix,—the centre of the combing-wool industry of France,—as to the refinement of care and skill exercised in the selection, adaptation, washing, and preparation of the wool before spinning, led him to believe that the most important economy in this country was to be found in the same direction.

Without presuming to make any other practical suggestions, I will refer to one other direction in which improvement is desirable. The manufacturers of woolens, as a class, to acquire the highest excellence, need more persistency of purpose, and devotion to one material adopted line of fabrication. Our manufacturers are too often seduced by the importunity of their selling agents or the impatience of stockholders, to be diverted from the field of production which they have first occupied to some other in which a fellow-manufacturer appears to be gathering a richer harvest. The result is an evil of which all complain,—an over-production in certain classes of goods; an evil which has no relief, as in Europe, by sending overplusses abroad. As the changes are usually made without requisite skill and experience, the rivalry too often is not in excellence, but in cheap production, or in the sale of goods without regard to profit. Another result, therefore, is the lowering of the standard of goods. Unless this tendency is checked, it is impossible to have that national excellence to which we should aspire. All the experiences of common life show, that persistency of purpose in any judiciously considered pursuit is certain to be crowned with success. In the production of all the standard goods, there are still higher skill to be developed, economies to be introduced, delicate judgment to be cultivated, and, more than all, a reputation to be won; which effects are sure to result from persistency of purpose in one line of manufacture. It is only by such persistent labor that we *develop* manufacturing, instead of simply pursuing it, so that the country and the world advance by our efforts. I need not mention, for you will all recall them, the men and establishments in our country that have achieved fortunes and added to the national honor by persistent following of an unattained ideal. But I may refer with propriety to the great European names in our department,—such as Liebig and the Tinkers of Bohemia, Zschille of Saxony, Simmonds and Bolley of Vervais, Bauer of Brno, Chevreiere and Legrip of Elbeuf, Salt of Saltaire, and Norton of Huddersfield,—who take rank with the princes of Europe, not because they are manufacturers simply, but creators of manufactures, founders of industries which occupy the people and enrich the world. Let such men, at home and abroad, be the examples of this Association, and it will be worthy of the name it bears, and be honored as a truly 'national' institution."

* Statement of editor of "Sheep Husbandry" in "RURAL NEW-YORKER," Aug. 17, 1867.

† "In 1854, the idea was suggested to the Emperor of sending the flock to Sologne or elsewhere. Her Majesty did not fancy this proposition, and went, in company with M. Fould, to visit the merinos, and condescended to take the establishment under her august protection."—*Note of Baron Daurier, Flint's Agriculture of Massachusetts*, 1863, p. 136.

Rural Spirit of the Press.

Potatoes—Experiments.

W. S. LUNT, Fostoria, Seneca Co., Ohio, writes the Institute Club of New York concerning an experiment made by him, with several varieties of potatoes, during the past season. They were planted in drills—seed, single eyes—on the 19th day of April, and received the same cultivation. The result was as follows:—Goodrich Early, 1 lb. seed gave 15 lbs. product; or, allowing 12 bush. seed per acre, the product would be 180 bush. per acre. Pinkeye Rusty Coat, 1 lb. yields 17¼ lbs., or 210 bush. per acre. Flukes, 1 lb. seed gave 19 lbs., or 228 bush. per acre. Garnet Chili, 1 lb. seed yields 21 lbs., or 252 bush. per acre. Cuzco, 1 lb. gave 41 lbs., or 486 bush. per acre. Harrison, planted a few days later, and on better soil, gave at the rate of 450 bush. per acre, while the quality is far superior to the Cuzcos. These results are obtained in one of the dryest seasons known for 20 years. Thus far no rot appears in any of these kinds.

A Farm in Kentucky.

THE West and South publishes a communication from a gentleman who paid a visit to the farm of Mr. ALEXANDER, at Woodburn, Woodford Co., Kentucky. The farm consists of 3,100 acres, and is mainly devoted to the raising of horse stock—imported and thoroughbred. The value of this stock is over one million of dollars. Among the old and famous turf horses, finding home and shelter here, are "Lexington," now blind; "Asteroid," lame; and "Australian." There are one hundred and twenty brood mares, of thorough blood, ranging the pastures, one hundred cows, and eight hundred sheep of the most approved varieties. The buildings for stock and dairy purposes are in keeping with the magnitude of the investments made in stocking the plantation.

Southern Clover.

THE Aken Press, Ga., gives an account of the new plant, Japan Clover, which has found its way mysteriously into the middle regions of Georgia and South Carolina. It is ascertained to be a native of China and Japan, but by what means it was conveyed to the region in question is yet unexplained. The Press is of the opinion that this clover will prove of vast importance to the planters of the South in the renovation of the soil so much exhausted by continuous cotton cropping. The plant is perennial, and supplies excellent pasturage for stock and a rich mass for turning under on cultivated ground.

Not So Much Cotton.

THE Southern Cultivator urges the planters of the Cotton States to diversify their crops more than they have done hitherto. When they have provided a sufficiency of grain, stock and vegetables for home consumption, they may profitably close the circle of production by the cultivation of cotton. This course, it is argued, will make the South self-sustaining and promote the interest of that section of the country.

Rural Notes and Items.

THE RURAL IS MAILED PROMPTLY AND REGULARLY to all its subscribers. We claim that no newspaper establishment in the country has a better system, or exercises more care in this important matter. The mailing machine we have used for many years is so nearly perfect that a mistake rarely if ever occurs. As evidence that the RURAL is, in this respect, in advance of leading journals in the Atlantic cities, we may here state that we introduced the present system of mailing several years before it was adopted by the New York Tribune, Harper's Weekly, and other prominent journals in New York, Boston and Philadelphia—and that the journals named consulted us before deciding to use the same. To show the perfection of our system of mailing we will here quote what a subscriber in Kent Co., Mich., says in a recent letter, viz.:—"I am happy in saying that fourteen years ago this day (Oct. 14,) I subscribed for the RURAL and *have never missed a copy.*"

—It is proper to add that papers for trial subscribers (those who have remitted for this quarter only,) are not mailed by machinery, but by hand, and in separate packages. However, when they subscribe for next year, (as we are confident all will,) their names will be placed in type and their papers mailed by our long-tried system—after which, if there is any failure it may be attributed to some cause not traceable to the publication office. Indeed, after a person's name and money reach us, it is a pretty *sure thing* that he or she will receive the RURAL regularly in return until the subscription term expires.

REAL ESTATE SALE.—We learn that Ex-Mayor MOORE of the RURAL NEW-YORKER has purchased of John E. Cole, agent for Mr. James Bond, the property (including stores and shops) between the Rochester Savings' Bank and Free Academy, fronting the Court House, and extending from Fitzhugh street to School alley. It is understood that Mr. MOORE purposes erecting a fine block on the premises, mainly for the accommodation of his present newspaper business and the addition of a book publishing establishment. The location is an admirable one for the business, and a fine building there will be an improvement to the city.—*Rochester Daily Democrat, Nov. 9.*

The locality above named, as many of our readers are aware, is not only central, but in some other respects the best in the city for an extensive newspaper and book-publishing establishment. If nothing unforeseen occurs we hope to have the RURAL domiciled in new and fine quarters during the ensuing year, with conveniences and facilities never before possessed by it or any similar journal in this country.

MOORE'S RURAL NEW-YORKER.—This model Farm and Fireside Weekly seems to distance every competitor that appears on the course—and now, so far as we know, it has the track to itself, being *the* Agricultural and Horticultural Weekly Newspaper of America. Merit wins; and Mr. MOORE has raised his RURAL to the summit by unremitting industry, and tact and talent well applied. Success to the RURAL!—*Attica Atlas.*

BROTHER FOLSOM, we doff our beaver,—of the latest, broad-brimmed style,—in acknowledgment of your truthful and complimentary recognition of the RURAL. As you have watched our craft from its first launching, nearly nineteen years ago,—and are moreover familiar with other agricultural journals, their style, contents, &c.,—you *know* whereof is above affirmed; and yet tens of thousands of good people all over the land do *not know* that the cost and labor bestowed upon the RURAL are far greater than those devoted to the editing, illustrating and printing of any other journal of its class.

TAXES ON MANUFACTURES, PRODUCTIONS, &C.—An effort is being made to induce Congress to repeal the internal taxes on manufactures and productions, except luxuries. It is proposed to hold a National Convention of Manufacturers (of all kinds) at Cleveland, O., Wednesday, December 18th, to plan for joint action for the early repeal by Congress of internal taxes on manufactures and productions, except luxuries. This step is taken to meet a wide desire for the relief of our productive industry from heavy burthens which are deemed wholly unnecessary. This, it is claimed by the movers, can be done by simplifying our tax list. Capt. E. B. WARD of Detroit, Mich., is Chairman of the Committee which makes the call for a Convention, and also issues the following petition:

To the Senate and House of Representatives of the United States, in Congress assembled:—The undersigned would respectfully yet earnestly urge the importance of a repeal of the internal taxes on manufactures and productions, except luxuries, with such simplifying and changing of the tax list as shall remove burthens wholly unnecessary, and thus relieve and stimulate the productive industry of the country.

ROAD MAKING.—At a recent meeting of the Herkimer Co. Farmers' Club the discussion opened with the subject of making and repairing roads. Mr. WHITMAN of Little Falls, lead off in favor of a change of the present laws with regard to roads—changing assessments from labor to cash, collectable the same as other taxes, and placed under the control of a superintendent of roads who should be made responsible for their good condition. Under the present system much of the labor assessed is never performed, while what is done is often of little or no benefit to the public. By placing the matter in charge of a responsible road surveyor, with the necessary means under control to meet sudden exigencies, a great saving to the public would be the result, while the roads would be placed in a much better condition than they are under the present or labor system. Substantially the same change was suggested and urged in the RURAL NEW-YORKER, years ago, and we hope it may be adopted.

MIND YOUR P'S AND Q'S.—In remitting money for newspapers it is always best to *be sure you're right.* Aforetime we have cited many cases of carelessness and stupidity, and cautioned our readers not to "go and do likewise." Here is another: A month or more ago we received $3 in an envelop from a post-office in Wisconsin, and nothing else—neither name nor directions. Of course we could only credit the money to profit and loss and await developments. And lo! here they are, in a letter stating that "some four or five weeks since" the writer sent us $3 in the name of ——, &c., &c., "from which nothing has yet been heard," &c.; and then follows the frigid inquiry whether we "have received the said remittance." Oh, yes, dear sir, we have, and now that we are advised whence it came the RURAL shall be forthgoing. But please don't—you nor anybody else—do so again. Send us name, post-office address, &c., and save vexation at both ends of the line.

N. Y. STATE AG. SOCIETY'S JOURNAL.—The issue of this Journal for the months of September and October, has been received. It contains, in full, the premium awards at the late State Fair held in Buffalo.

FRIENDS OF THE RURAL will please note that Show-Bills, Premium Lists, Specimens, &c., are promptly sent free to all disposed to aid in extending its circulation—and that we give "Good Pay for Doing Good."

HORTICULTURAL.

THE PEACH TRADE IN NEW YORK, &c.

As is generally known before the trade began this fruit was very plenty, consequently it sold for a low price, and considering the poor quality of the fruit we are not surprised that it sold as low as it did. It is generally conceded by all dealers with whom I have conversed that peaches never were known to be as poor as they have been this season.

The first peaches received were two crates from Savannah, Ga., on June 15th, and being in poor condition sold for $7.00 per crate. The second arrival, June 17th, and up to the 22d inclusive, were all in poor condition and sold from $3.00 to $6.00 per box. July 10th some peaches were received from the vicinity of James River, Va., and they also being in poor condition sold for $5.00 per crate. Large quantities of fruit now began to arrive, mostly from this section of country, and all in very bad condition, much of it not paying the expenses of freight and cartage. The most of this fruit was bought up by outside operators who expected to make a handsome profit by so doing, but like many others they came to grief, losing heavily. Peaches from Delaware began to arrive about August 1st, by Adams' Express. On August 10th the regular peach train started which we consider the commencement of the trade. The more Southern fruit being plenty prices ruled very low, say from one dollar to one twenty-five per basket, and did not vary much from this price all the season for the common qualities. On Monday, Aug. 14th, we had one of the worst days ever known in the trade. There was an arrival of eighty car loads, and with the exception of those shipped on Sunday morning, the whole train was one mass of rotten fruit, and it was sold from 10 cts. to 50 cts. per basket. One dealer sent back one section of a car just to show the owner the condition they were in. On September 6th prices gave way under a train of eighty-three cars and one steamer loaded to its utmost capacity, prices ranging from 75 cts. to $1.00 per basket. On Friday the trains arrived very late, and the dealers felt very blue over the prospects, and offered to sell to arrive at 75 cts. per basket. To add to the depression it commenced to rain just before the train arrived, but it soon cleared when trade sprang up, and fruit sold to the satisfaction of parties concerned. On September 12th, the arrivals were quite light, and the dealers became somewhat excited about the trade, and fruit advanced from 25 cts. to 37 cts. per basket. On the 13th it again advanced 25 cts. per basket and sold rapidly. White peaches now began to arrive, and the weather being quite cool they sold rapidly at the above prices. But these prices were maintained only for a short time, when down they went to the old figures and there they remained until the close of the season. Extra fruit of course sold higher than the above quotations, but that being scarce was always in demand.

The total number of cars that arrived from Delaware by the regular peach train was two thousand and fifty-six. Averaging these at four hundred and fifty baskets per car would make a total of nine hundred and twenty-five thousand two hundred (925,200.) Calculating those brought by Adams' Express I think will make a grand total of ten hundred thousand baskets brought on the cars. The largest number of cars that arrived in one day was one hundred and five, the average number per day during the fall trade was from 75 to 80.

The depot of the Delaware peach train is at Jersey city, N. J., just opposite of this city, and all the fruit is carted from there to the market, the owner of the fruit paying the cartage which is four cts. per basket and eight cts. per crate. The mode of contracting for the transportation of this fruit is of a singular character. Each dealer is required to have an agent at the station from which he is to receive his fruit; this agent must contract for the number of cars he wishes per day, and pay a premium of $3.00 on each car for ten days in advance; then a charter price per car, said car not to contain over four hundred baskets, all over that amount to be paid for extra pro rata. Should a car remain over at the station without being loaded, that also must be paid for. Each dealer must have his or his agent's name and station painted on the car, and all loss in transportation falls on the owner of the fruit. No care of the car is taken by the company on arrival of the train.

The quantity of peaches which has been stolen from the cars is almost incredible; from the time the cars leave their station until the fruit is delivered on the stands of the dealers it is the object of theft. At every station that the cars stop they are attacked, and every ventilator that will give way to the force of an ax must give way; even the ventilators on the roof which are covered with strong iron gratings are often broken in order to get at the fruit, and in this case it is not only the loss of the fruit that is stolen, but they pull the baskets from their place in order to get the fruit, and by so doing will often cause the whole tier of baskets to become disarranged and upset, thus spilling much of the fruit on the bottom of the car that becomes soiled and of little value. This mode of stealing is no doubt practiced by those having the cars in their charge, for most certainly no other person could get on the top of a car and make a noise sufficient to break this grating without being heard. The most successful plan was carried on just outside of the R. R. yard, when the engine that brought the train became detached and another was placed on the rear in order to run it in the yard ready for unloading. At this spot the cars were standing in the rear of a number of low dwellings, and persons would knock open a car and throw the fruit in the yards without being discovered. One morning one of the brakesmen was seen to break open a car and enter it with a paper in his hand just as if he was a dealer, but the fraud was discovered too late to arrest the thief. One of our dealers lost fourteen crates in this way in one morning. When the cars stop, unless it is too early in the morning, they are surrounded with men, women and children, and unless closely watched they will steal from the carts while loading; then every cross walk is watched, and even on the Ferry boats many persons make it a practice to cross the river frequently in order to steal the fruit. Some of your readers will say why don't you stop it? Sure enough, why don't somebody stop it? Just this. Those in charge of train, or the R. R. Co. don't care, they do not pay for the loss; the police do not care, its all one to them, in fact one of the policemen was caught stealing one morning disguised as a citizen; only his shield saved him from a good beating,—it ought not to have done it. The Ferry Company do not care, it makes good picking for their hands, and so it goes. One morning on opening the doors of a car one of our dealers found five boys fastened in it, they had been caught stealing in the cars at West Philadelphia, and the door being closed on them they were brought on to Jersey City to find their way home as best they could. Speaking of the Ferry Company reminds me of a very mean thing they did, and that was to raise the price of ferriage on the peach carters exclusively, the excuse was that the carman carried such heavy loads, that they were obliged to run extra boats to accomodate them. Most certainly that was to their advantage. You may imagine the extra business when you consider the large numbers of car loads to be carted, and all of it done before eight A. M.

Perhaps the mode of carting this fruit will be interesting to some of your readers. Most of it is carted on trucks drawn by one or two horses; each truck is arranged with three floors or tiers for baskets, the top tier is piled high up in the middle, the space made by the top of the baskets on the first row is filled with the bottom of the baskets in the next row, and so on to the third row, making the load firm and the fruit riding without injury. A one-horse truck contains from 80 to 100, and a two-horse truck from 128 to 150 baskets. A cart contains from 60 to 75. The arrangement of a peach car is as follow: The car is divided in four sections with strong shelvings the height of a basket, each section contains 100 baskets, making 400 baskets to a car; if a larger number is sent, they make an additional platform in the center of the car. In addition to the cars there was a line of steamers running each day from Delaware.

The Jersey peach crop was light, the heavy rains causing the early fruit to drop. The later varieties were very good, excepting the Smocks, which were very small and poor.

NOW AND THEN.

New York, Nov. 1, 1867.

THE IONA GRAPE AND THE GRIFFITH PATENT.

NORTH EAST, Oct. 27th, 1867.

EDS. RURAL NEW-YORKER:—Allow me to explain regarding what I said of the Iona grape, at Hammondsport. I did say that the grapes shown were not up to "the manifesto," as that fruit had been represented; but I did not intend to say that I was disappointed in the Iona grape. I did not intend to praise it, as it has already been sufficiently indulged in that regard, and I felt that the fruit should speak for itself. In fact I really did not feel inclined to try to lessen the complaint made about the fruit on exhibition, even though I thought it for the most part over-drawn. I told Mr. MCDOWELL, on our way to his place after the discussion, that the test of the must of the grapes, advertised to take place the next day, would doubtless show us all to have estimated it below its deserts; and so it turned out.

I regard the Iona as well adapted to the district in which all the specimens of grapes shown at Hammondsport were grown; and as the best grape yet produced in America. My own vineyard of this variety is the most promising of any I have, and I am in high expectation regarding its future; am counting confidently on a fine crop next year. Do not regard me as finding fault with your reporter's article. I am aware of his uniform correctness in this respect, and am in no doubt about his being impressed with the idea that I felt disappointed about the Iona; but I really was not thus impressed.

Should this grape come short of my estimate, I shall of course be obliged to realize it; and also to feel that I have no right to expect the confidence of good judges in my ability to estimate the value of varieties hereafter; but I am as much as ever inclined to place a very high estimate on the Iona. A must weighing 90°, (the samples at Hammondsport averaged 89½,) and liable to no damaging feature, *fine in flavor*, is all that wine growers can ask, and with the productive habit already established, and its healthy foliage, the Iona—where *it is at home*—is a treasure.

A word regarding my method of growing vines, *in open ground*, from single buds, to which you refer, briefly, in a former number of the RURAL. This improvement was the result of much experimental labor, continued for fifteen years, and is doubtless of great importance; at least it is so regarded by all who have had an opportunity of examining it.

I obtained a patent for this discovery, mainly with a view to get it re-patented in Europe, where I have reason to expect I can realize at least a remuneration for my outlay and labor. It is not my purpose to sell rights in this country, but I shall hold my franchise until all my patents are granted in Europe, and shall permit no one to infringe upon my legal rights. I could sell my entire interest in this patent (to parties who wish to use it in our own country, sell rights, &c.,) for a large sum, but this is not in keeping with my purpose in taking out a patent.

I am preparing an essay or description of my method, to be sent to propagators, with permission to test it by growing each 1,000 buds for two years. I do this for the purpose of letting the public know what estimate will be placed upon my discovery by those most competent to determine. At the end of two years I propose to rescind my franchise in America, allowing all our grape growers to use it as I stated at the U. S. Pomological Meeting at St. Louis.

WM. GRIFFITH.

HORTICULTURAL GLEANINGS.

The Scuppernong Grape.—J. VAN BUREN writes from Georgia to the Country Gentleman:—"My Scuppernong vines, six years transplanted, bore an average of three bushels clean grapes each, some of the berries measuring one and a quarter inches in diameter, and the clusters ranging from two to twenty berries each; this grape differs from all others, in that the berries alone are picked or shaken from the vine and not the clusters. It is a very distinct variety, entirely unlike any other grape in vine, leaf and fruit. The Mustang grape of Texas resembles it somewhat in vine and leaf, but not in fruit. The Scuppernong is the sweetest of all grapes, while the Mustang is the most acid. The vines which produced three bushels the present year will probably produce six bushels each next year, and thus go on doubling annually for several years to come, as it is a variety not subject to any disease in vine, leaf or fruit. It blooms from the middle to the last of June, and ripens the first of October." Yes, if each one goes on doubling for six years it will then produce about two hundred bushels. Another "wild goose" estimate.

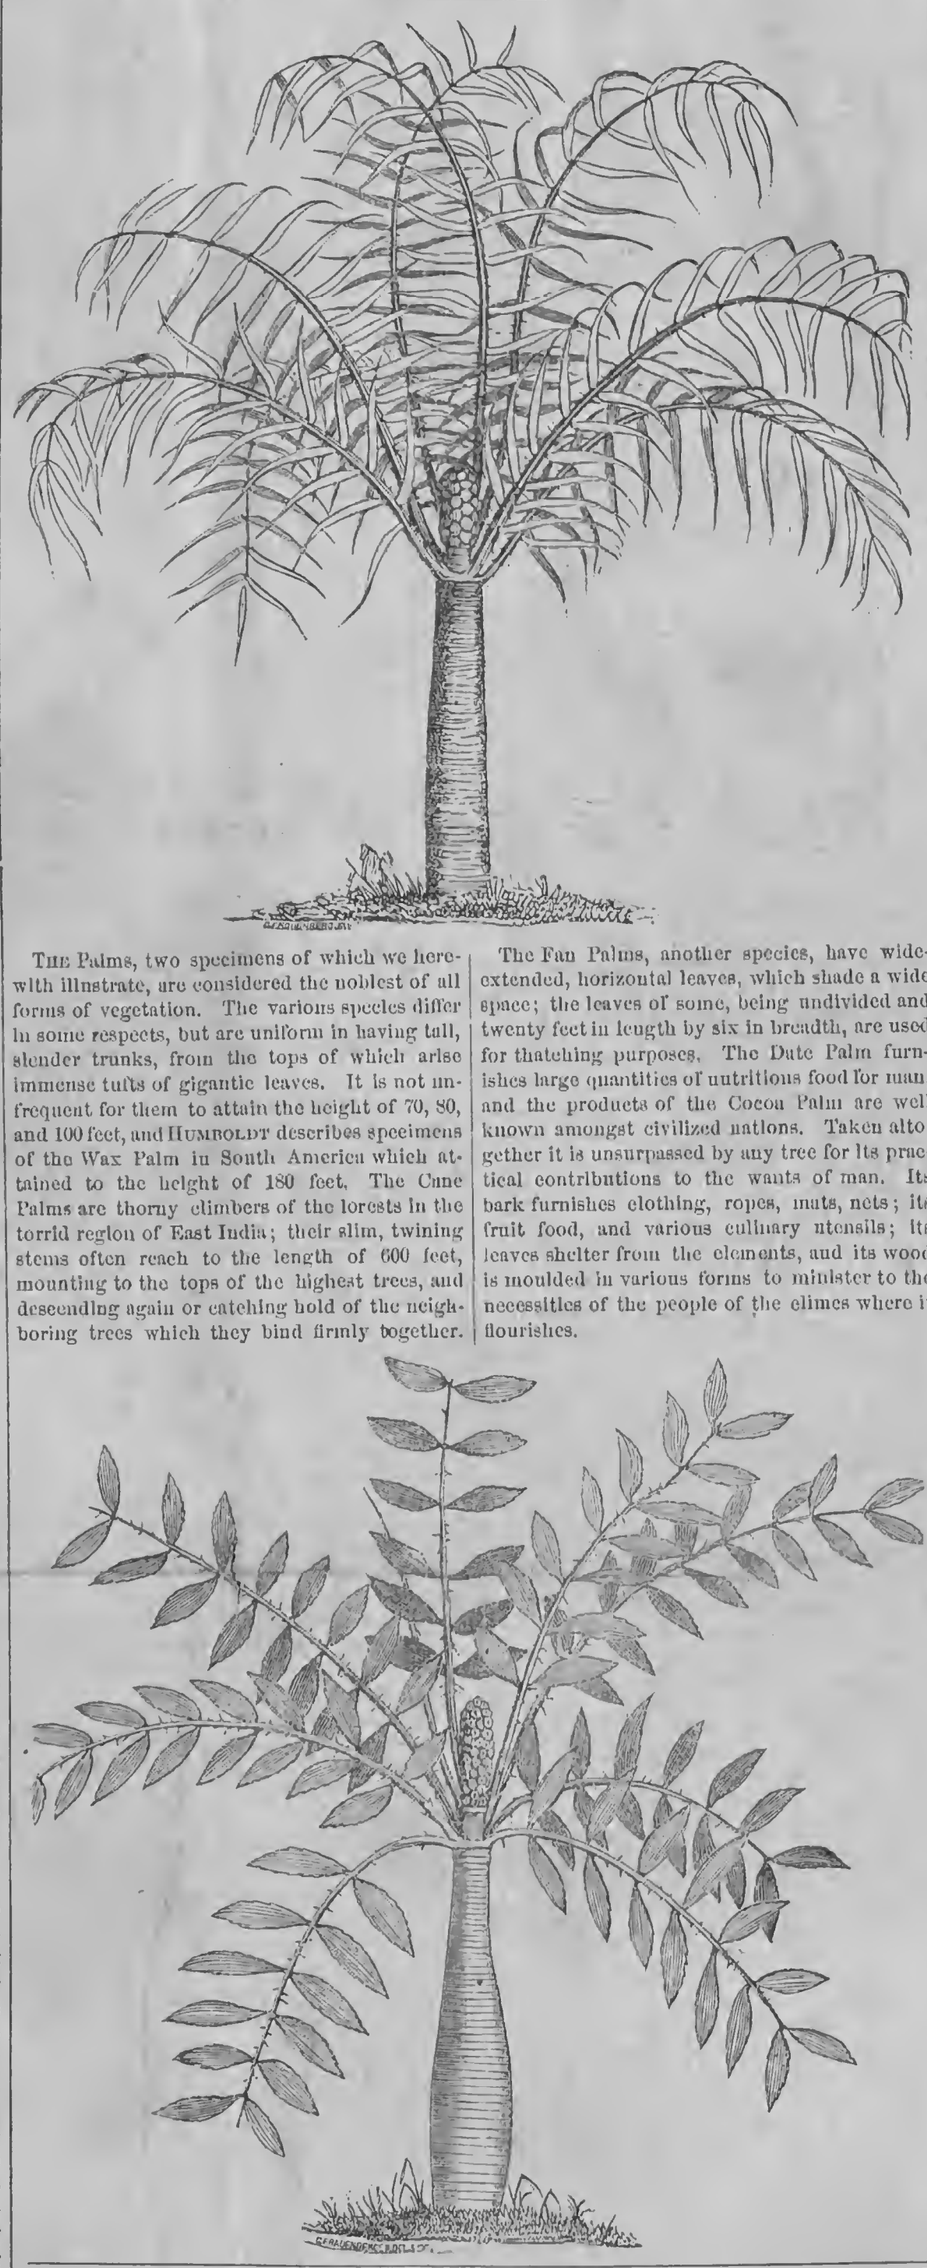
Southern Pines.—We copy the following extract from the letter of a correspondent of the Phrenological Journal. It is written from Georgia:—"OUR pines have never had justice done them as living trees. They have been appreciated only as *lumber!* We have treated them as we treat our greatest and best men—have abused them while living and praised them when dead. Our pines are of the species called by the botanists *Pinus palustris*, and popularly known as the long-leaved pine—a magnificent tree—the monarch of the Southern forest. They grow from eighty to a hundred and twenty feet in height; are often very straight, and sometimes with trunks free from limbs to within twenty feet of the top. The branches are crooked, often drooping, and terminated by bunches of long straw-like leaves (called here *pine-straw*) grouped in threes in long sheaths. When young, these trees have a palm-like appearance which reminds one of the Orient. The cones are very large, nearly cylindrical, and from six to eight inches long. The seeds are large and very nutritious, and are the delight of squirrels, wild birds, and poultry, which grow fat on them in their season."

Arbor Vitæ grow readily from the cuttings. The best way is to cut them into lengths of about three inches, insert them so as just about to touch one another, in shallow boxes of sandy soil, in October, and put in a moist green-house where the temperature can be kept above 55 deg. all the winter. They will then be rooted nicely by spring, and may in May be set out in a piece of rich soil.

Yellow Bellefleur Apple.—A correspondent o the Prairie Farmer says that this variety of apple when root grafted roots freely from the cion and becomes in a measure established on its own roots and that in this condition it produces but little fruit, but top-graft it on a slow growing stock and it becomes a prolific tree.

Shade for the Roadside.—The Committee on Forest Tree Planting, in the Michigan Legislature, recommend that special privileges be granted to farmers who will plant trees along their highways.

PALM TREES.



THE Palms, two specimens of which we herewith illustrate, are considered the noblest of all forms of vegetation. The various species differ in some respects, but are uniform in having tall, slender trunks, from the tops of which arise immense tufts of gigantic leaves. It is not unfrequent for them to attain the height of 70, 80, and 100 feet, and HUMBOLDT describes specimens of the Wax Palm in South America which attained to the height of 180 feet. The Cane Palms are thorny climbers of the forests in the torrid region of East India; their slim, twining stems often reach to the length of 600 feet, mounting to the tops of the highest trees, and descending again or catching hold of the neighboring trees which they bind firmly together.

The Fan Palms, another species, have wide-extended, horizontal leaves, which shade a wide space; the leaves of some, being undivided and twenty feet in length by six in breadth, are used for thatching purposes. The Date Palm furnishes large quantities of nutritious food for man, and the products of the Cocoa Palm are well known amongst civilized nations. Taken altogether it is unsurpassed by any tree for its practical contributions to the wants of man. Its bark furnishes clothing, ropes, mats, nets; its fruit food, and various culinary utensils; its leaves shelter from the elements, and its wood is moulded in various forms to minister to the necessities of the people of the climes where it flourishes.

PREPARING APPLES FOR MARKET.

As Baltimore is becoming an important market for the fruit of Western New York, I have thought a few suggestions might be of service to such of your readers as are growing fruit, especially apples.

In the first place the apples should be hand-picked and laid in a pile for ten days or two weeks before they are barreled. This little precaution will add at least one dollar to the value of them in this and other Southern markets. They should then be carefully sorted from the pile and the different sorts put separate. Large and small apples of the same variety should not be put into the same barrel. One class of buyers want all large, sizeable apples; another prefer the smaller ones. Therefore a much better sale is effected when they are all of a uniform size. Apples that come South should always be allowed to sweat a few days on the pile before they are barreled.

If these simple precautions be observed and none but smooth, sound apples sent, there will be no end to a profitable cultivation of apples in Western New York. T. C. P.

Baltimore, Md., Oct., 1867.

The above should have been published some weeks ago, but was mislaid.

Domestic Economy.

VARIOUS RECIPES—SELECTED.

BOILED ONIONS.—Take the outside skin from white onions as uniform in size as possible, lay them in cold salt and water one hour, boil them in milk and water until thoroughly tender; lay them in a deep dish, and pour over them melted butter.

CIDER—TO KEEP SWEET.—A. M. Ward, New Britain, Ct., informs the N. Y. Farmer's Club that if cider as it comes from the press is brought to a gentle *scald*, only, barreled, and bunged tight, it will keep sweet, and the last drawn is as good as the first.

TO PROTECT DRIED FRUIT FROM WORMS.—It is said that dried fruit put away with a little sassafras bark (say a large handful to a bushel) will save for years, unmolested by those troublesome little insects which so often destroy hundreds of bushels in a season. The remedy is cheap and simple.

MAKING PICKLES.—If "C. A. M.," of Leroy, N. Y., will moderately scald her pickles, (not so hot but that she can bear her hand in it,) adding a small piece of alum; then obtain good cider vinegar, and not on any account use the vile manufactured article, which will surely spoil any kind of pickles, she will not be troubled with scum.

TO CLEAN CIDER BARRELS.—The Scientific American says that cider barrels may be cleaned by putting lime water and a common trace chain into the barrel through the bung hole, first tieing a strong twine to the chain to draw it out with. Shake the barrel about until the chain wears off the mould or pomace, then rinse well with water.

CRANBERRY WINE—SCROFULA.—Cranberry wine, taken internally and applied externally, is announced as a cure for scrofula. To make the wine, take the ripe berries, mash them in a mortar to a fine pulp, put into a stone jar, add one quart of water to two quarts of berries, stir it well, set away and let it stand a week; then strain it through cotton, and you have a beautiful wine, which, with a little sugar, makes a wholesome drink, at once cooling and palatable. It does not ferment.

SPICED VINEGAR FOR PICKLES.—A correspondent of the Germantown Telegraph gives the following directions:—"For every pint of spiced vinegar it is intended to make, take one ounce of black pepper, half an ounce of salt, half an ounce of ginger, a quarter of an ounce of allspice, and if desired to be hot, add also a quarter of a drachm of Cayenne, or a few capsicums. Bruise the whole of these materials in a mortar and put them into a jar or wide-mouthed green glass bottle, tied over with a bladder. Place this in a saucepan of water, and keep it hot for three or four days, shaking it now and then. If the maker has an enamel saucepan, this operation can be facilitated by simmering the ingredients together. Spiced vinegar is used hot for walnuts and cold for cabbage.

CURING MEAT.—The editor of the Germantown Telegraph gives the following as the ingredients for a pickle for meat:—1 gallon water; 1½ lbs. salt; ½ lb. sugar; ½ oz. saltpeter; ½ oz. potash. Observing this ratio the pickle can be increased to any quantity desired. Boil these together until all the dirt from the sugar rises to the top and is skimmed off. Then throw it into a tub to cool, and when *cold*, pour it over your beef or pork, to remain the usual time, say four or five weeks. The meat must be well covered with pickle, and should not be put down for at least two days after killing, during which time it should be slightly sprinkled with powdered saltpeter, which removes all the surface blood, &c., leaving the meat fresh and clean. Some omit boiling the pickle, and find it to answer well; though the operation of boiling purifies the pickle by throwing off the dirt always to be found in salt and sugar.

Ladies' Department.

"GOING ALONE."

With curls in the sunny air tossing,
With light in the merry blue eyes,
With laughter so clearly outringing—
A laugh of delight and surprise;
All friendly assistance disdaining
And trusting no strength but his own,
The past fears and trials forgotten,
The baby is "going alone!"

What woeful mishaps have preceded
This day of rejoicing and pride!
How often the help that he needed
Has carelessly gone from his side!
He has fallen while reaching for sunbeams
Which just as he grasped them have flown,
And the tears of vexation have followed,
But now he is "going alone."

And all through his life he will study
This lesson again and again;
He will carelessly lean upon shadows,
He will fall, and weep over the pain.
The hand whose fond clasp was the surest,
Will coldly withdraw from his own,
The sunniest eyes will be clouded,
And he will be walking alone!

He will learn what a stern world we live in,
And he may grow cold like the rest;
And just keep a warm sunny welcome,
For those who seem truest and best;
Yet chastened and taught by past sorrow,
And stronger and manlier grown,
Not trusting his all to their keeping,
He learns to walk bravely alone.

And yet not alone, for Our Father
The faltering footsteps will guide,
Through all the dark mazes of earth-life,
And "over the river's" deep tide.
Oh! here is a helper unfailing,
A strength we can perfectly trust,
When all human aid unavailing
"The dust shall return unto dust."

TREASURES THAT SHINE.

Not wondrous diamond-glow, nor wealth of pearls, nor crowns all lit with glory's stars, waiting to gem brows proud and white,—no, no, these all grow dim when placed beside the brightness that kindles about earth's truest, purest wealth. And where shall we find these treasures that dim not? Go ask the wandering soul whose brow is all darkened with the dust of the earthly, if it has found them glimmering up thro' the world's hollow mockery—ask that soul whither it looks for earth's holy of holies,—and it will turn with outstretched arms toward the paradise of home, and amid the smoke and din of the world's conflict it will see the calm brows of the olden time, it will hear the holy voices, and clasp the loving hands that clasped so closely around home's hallowed altar.

I wonder not that earth has thrilled with the words "sweet home"—I wonder not that eyes become misty with unshed tears, because of their holy melody,—that far away over the later years, which have been all shadowed with sorrowing and weariness, there comes a murmur stealing up from the place where you and I were wont to kneel in childhood. O weary hearts, say not that earth is *all* darkness, *all* sin—there are words of purity and blessedness, falling soft and holy, like the whispers of angels—there are beacon-lights shining out from the darkness, even as the stars gleam out from the deep blue above,—the light of love's watchfires by home hearthstones. How the young, untried soul goes forth to life's sterner contest, clasping the precious memories more closely than the miser clasps his gold—folding each prayer and blessing of home-love away in the heart, where, when the shadows come, it may go and read the blessed words over and over again.

O! ye upon whose high brows gleams a coronet of worldly honor, are not the crowns heavy? Do ye not sometimes sigh for the hand that used to lay there so lovingly, away back in the days of your guileless childhood? And ye who have listened so long to earth's meaningless words, do ye not yearn sometimes to hear the blessed ones you were wont to hear at nightfall in your homes of long-ago? Ye go out into the dusty pathways of the world—ye may soil your garments with sin, but ever a sweet voice seems calling you—wooing you away from the hollow, to the true and the blessed.

Home—home! What wonder that hearts stir with strange, deep yearnings at the mention of the word for no heart is impervious to its holy influence. Sweet and soothing as the murmur of waters, it flows into our lives, binding them to purity and God. The weary laborer brushes the dust of toil from his brow, and a strange light plays there as he sees far in the distance the home-lights gleaming to welcome him. How his heart leaps for gladness when he clasps his treasures so closely. Ah, these are shining ones—these are wealth that rusts not. Cling to the treasures of the hearthstone, ye loving ones—home-love is better than riches of silver and gold.

Not *all* homes have the priceless gem; too many, alas, are shadowed with sin and crime. There are mocking words where there should be loving ones, and cruel blows where hands should fall in blessing, for the tempter often creeps into this sweet holy of holies. Guard ye your homes then, dear ones; God hath blessed you richly in these precious, priceless gifts. The world has cruel thorns, and selfishness, and mockery that wound those whom ye love so well. Let your blessed words of truth, your lovings hands and lips fall tenderly above the aching hearts and burning brows. Fling sunlight and smiles along the dark pathways of the world. Yes, drop the healing balm of love into the weary heart, reach out your kindly hands to erring ones—they have need of it all—but let the blessed dews fall most softly around your homes. On the home altar lay your richest gifts—they are treasures that will never dim before the searching eye of the All-loving One. The springs of love welling up there will become broader and deeper all thro' the earthly years, until in the unshadowed home above they shall be even as the river clear as crystal flowing from beneath the great white throne, and the clear shining waves will mingle and commingle at last in the ocean of God's infinite love.

Wellsville, N. Y., 1867.

THE AGED LOVER.

No longer a lover! exclaimed an aged patriarch; ah! you mistake me if you think age has blotted out my heart. Though silver hair falls over a brow all wrinkled, and a cheek all furrowed, yet I am a lover still. I love the beauty of the maiden's blush, the soft tint of flowers, the singing of birds, and, above all, the silvery laugh of a child. I love the star-like meadows where the butter-cups grow, with almost the same enthusiasm as when, with ringlets flying loose in the wind, years ago, I chased the painted butterfly. I love you aged dame. Look at her. Her face is careworn, but it has ever held a smile for me. Often have I shared the same bitter cup with her, and so shared, it seemed almost sweet. Years of sickness have stolen the freshness of life; but like the faded rose, the perfume of her love is richer than when in the full bloom of youth and maturity. Together we have wept over the graves. Through sunshine and storm we have clung together and now she sits with her knitting, her cap quaintly frilled, the old-style kerchief crossed, white and prim, above the heart that beat so long and truly for me, the dim blue eyes that shrinkingly front the glad day, the sunlight throwing a parting farewell kisses her brow and leaves upon its faint tracery of wrinkles angelic radiance. I see, though no one else can, the bright, glad young face that won me first, and the glowing love of forty years thrills through my heart till tears come. Say not again that I can no longer be a lover. Though this form be bowed, God imparted eternal life within. Let the ear be deaf, the eye blind, the hands palsied, the limbs withered, the brain clouded, yet the heart, the true heart may hold such wealth of love that all the powers of death and the victorious grave shall not be able to put out its quenchless flame.

GOSSIPY PARAGRAPHS.

Why are the Marys the most amiable of their sex? Because they can always be molly-fied.

The Savannah New Era says a half dozen young gentlemen of that place have entered into a compact to get married before the winter is over. They ought to get the same number of young ladies to enter into the compact.

"English ladies," says Erasmus, "are divinely pretty, and *too* good-natured. They have an excellent custom among them, that wherever you go the girls kiss you at intervening opportunities, and their lips are soft, warm and delicious." Pretty well that for a priest.

A bashful young man escorted an equally bashful young lady. As they approached the dwelling of the damsel, she said entreatingly: "Jehiel, don't tell anybody you beaued me home." "Sary," said he, emphatically, "don't you mind; I'm as much ashamed of it as you are."

A modern Amazon on her way to a convention, asked for a seat in a crowded car. An old gentleman, with keen eyes, inquired, "Be you one of the woman righters!" "I be," answered the undaunted heroine. "Do you believe that a woman has the same rights as a man?" "I do!" (emphatically.) "Well, then, stand up and enjoy 'em like a man!"

At the marriage of the daughter of Gov. Dennison of Ohio, recently, the officiating clergyman made a very ludicrous mistake. Placing himself in front of the groomsman, he came near uniting him and one of the bridesmaids in marriage, in place of the bride and groom. In fact, he had progressed half way through the ceremony before the mistake was discovered.

PERVERTED TASTES.

Our mental tastes are the subjects of diseased appetites, as well as our stomachs. We have flattered ourselves humanitarians when the bells have rung the alarm of fire, because our zeal attained extra locomotion, and have been conscious of knocking down various things animate and inanimate, valuable and valueless, in our path; but when we arrived at the place and found the fire extinguished, our disappointed and vexed feelings could hardly be called humane.

Neighborhoods and neighbors realize an uncomfortable sensation from the mountainous proportions a mole-hill of a story soon assumes. The greed and dexterity we show in the circulation of scandal would be more commendable and praiseworthy did not the wares we retail soil and burn our fingers. In order to show our zeal and sympathy for one party scandalized, or both, we must see well to it that not one iota of the original claim, neither any of its additions, are lost. The ease with which certain people display and vend their troublesome wares is best known to itching ears. It is always satisfactory if both parties have given a quit-claim of their possessions, real or imaginary.

How much more welcome, when sick, is that little note assuring us that we have one Father, and that He chasteneth whom He loveth, than the visit of some well-meaning person who gazes us out of countenance, and emphatically declares that we look miserable—she don't believe we will live a week. The habit of staring sick people out of countenance, is not quieting to feeble nerves, and tends more to gratify a morbid curiosity on our part than to enhance their comfort.

Many of the fashions of the day show a love of torture that would be commendable in the most devoted doer of penance; and this torture is not endured by us as a penalty for our sins. If nature had designed the daughters of Eve to outdo the Poland breed of hens in their huge top-knots, there would have been indications and arrangements made on the crown of the head to that effect before the nineteenth century, and chignons would have been invented that would admit the use of the lower jaw. We do not admire the size, comeliness nor beauty of the whale, because we patronize his bones so perseveringly. If they were used against pressure from without, instead of *pressing life out*, the use would be reasonable, and we should not add fashionable suicide to our other fallen graces. Would it not be well to follow fashion with an eye to comfort and health, and not become its declared subjects to the utter giving up of both?

Mary N. Pinckney.

South Onondaga, N. Y., 1867.

AUTUMN DAYS.

When autumn days come, Nature, like a retired merchant, changes its manner—from thrift and bustling industry to languid leisure and to ostentatious luxury. The sun rises later and sets earlier than when it had all the summer crops on hand and was playing universal husbandman. There is no nest-building now, and no bird-singing,—which is a purely domestic arrangement, designed on the birds' part to keep peace in the family while the children are being raised, and laid aside as soon as the young birds are off hands. Mornings come fleeced in mists, which hang over streams and low, moist places. The sun plays with them, but they perish in his arms.

A few belated flowers yet keep watch, but chiefly the asters, which fringe the fields, star the edges of forests, and, like a late-comer at a feast, seem bent upon making up lost time. At night crickets and katy-kids scrape their shrill viols, and fill the air with stridulous music. Over all the shrinking fields, the trees lift up their gorgeous foliage, and, like those who wait for the marriage-bell and the bridegroom, they shine out in glorious apparel.—*Beecher's Norwood.*

We have just enough religion to make us hate but not enough to make us love one another.

ALLITERATION.

Coleridge and De Quincey are rich in alliteration. De Quincey uses it with superb effect. In Coleridge's poems it is often the best note in the music. For instance, in the "Ancient Mariner," the repetition, in the following stanza, heightens the picture of the hapless mariner's ship:

"The *b*reezes *b*lew, the white *f*oam *f*lew,
The *f*urrow *f*ollowed *f*ree,
We were the *f*irst that ever burst
Into that silent sea."

And then again—

"His *b*ones were *b*lack with many a crack,
All *b*lack and *b*are I ween;
Jet *b*lack and *b*are, save where with rust
Of moldy damps and charnel crust
They were patched with purple and green."

Once more—

"And the coming wind did roar more loud,
And the *s*ails did *s*igh like *s*edge."

And again, with an indescribably exquisite cadence—

"To Mary, queen, the praise be given,
She *s*ent the gentle *s*leep from heaven,
That *s*lid into my *s*oul."

In fact, Coleridge is rich, almost beyond comparison, in euphonious and assonant alliteration. Much of the wild and weird effect of the "Ancient Mariner," and of the mastery of its spell, is due to the subtle interlinking of the sounds of letters. The fascination is intensified by the congregation and commingling of similar vocables, and the coloring is thereby deepened.

SOMETIME.

It is a sweet, sweet song, flowing to and fro among the topmost bows of the heart, and fills the whole air with such joy and gladness as the songs of birds do, when the summer morning comes out of the darkness, and the day is born on the mountains. We have all our possessions in the future, which we call "Sometime." Beautiful flowers and sweet singing birds are there, only our hands seldom grasp the one, or our ears hear, except in faint, far-off strains, the other. But oh, reader, be of good cheer, for to all the good there is a golden "Sometime!" When the hills and valleys of time are all passed, when the wear and the fever, the disappointment and the sorrow of life are over, then there is the peace and the rest appointed of God. Oh, homestead, over whose blessed roof falls no shadow even of clouds, across whose threshold the voice of sorrow is never heard; built upon the eternal hills, and standing with thy spires and pinnacles of celestial beauty among the palm trees of the city on high, those who love God shall rest under thy shadows, where there is no more sorrow, nor pain, nor the sound of weeping.

SAYINGS OF DEAN SWIFT.

If a man will observe as he walks the streets, I believe he will find the merriest faces in mourning coaches.

The reason why so few marriages are happy, is because young ladies spend their time in making nets, not in making cages.

The power of fortune is confused only by the miserable; for the happy impute all their success to prudence and merit.

Ambition often puts men upon doing the meanest offices; so climbing is performed in the same posture with creeping.

Small causes are sufficient to make a man uneasy, when great ones are not in the way; for want of a block he will stumble at a straw.

Every man desires to live long; but no man would be old.

Apollo was held the god of physic and sender of diseases. Both were originally the same trade, and still continue.

If a man makes me keep my distance, the comfort is, he keeps his at the same time.

Men are content to be laughed at for their wit, but not for their folly.

A man would have but few spectators if he should offer to show for three pence how he could thrust a red hot poker into a barrel of gunpowder, and it should not take fire.

How is it possible to expect that mankind will take advice, when they will not as much as take warning.

LIFE.

Say, what is life? Is it to spend
On earth a few short days?
To follow where the worldly throng
Lead on in pleasure's maze?

Is it to wrap our better thoughts
Far from the view of all,
And never bid the feeling heart
Respond to duty's call?

Is it to care and toil for self,
And seek its good alone;
And claims of suffering fellow man
Upon our time disown?

Is it to seek a fleeting name
That soon would be forgot,—
To treasure wealth whose shining stores
True happiness ne'er brought?

No, 'tis to suffer, and to bear
With man's short-comings here;
To help the needy; for the grieved
To wipe the bitter tear;

To cherish every noble thought
That to our souls is given;
By help of Him who died to save,
To fit ourselves for heaven;

To offer daily the sweet song
Of gratitude and love,
For all the blessings of our lot,
To God our Friend above.

Elkhorn, Wis., 1867. B. C. D.

COMPLAINING.

Stoicism is a rare quality in human nature. There are few persons who can receive whatever comes into their life, whether of good or bad fortune, with complete indifference. And there are few lives, however smoothly they may be fashioned, which are not often ruffled by vexatious circumstances that provoke to impatience and murmurings. Too frequently these provocations are yielded to. Too frequently are individuals and households rendered unhappy in consequence of such yielding.

"To suffer and be still" may sometimes exceed the limit of human patience. It may, even, come to be more than a Christian virtue. There are vexations and trials that would move the stoic himself. But they are not so numerous as many really good-intentioned people think. Properly regarded, the majority of annoyances incident to humanity would not, in the least, disturb the equanimity of any one. More than any others, however, are these minor circumstances the cause of complaint. It may seem strange, perhaps, that a nature which bears, with a calm fortitude almost heroic, the loss of fortune, or friends, should succumb to petty trifles of the hour, and give constant voice to complaining. And yet many such natures exist. They would bury their dead out of their sight—deep as the affliction might be—without a murmur, while the merest disappointment in the concerns of daily life would breed hours of fault-finding. The great trouble would be considered by them a dispensation of Providence, and therefore to be accepted with Christian resignation; the lesser ones would be treated as though hardly within the pale of Providence at all.

Resignation to great afflictions is not half so fruitful of happiness as is resignation to those of comparatively little moment. The former come, and, maybe, darken the life for a time, but they do not last always. The latter are continually coming, and if they produce any effect it is nearly or quite continuous. To complain of them is to embitter every day of life. To pass them by unheeding is to secure exceeding joy.

A contributor to the Rural writes thus pointedly of complaining:

Is it right or wrong? Are we ever, under any circumstances of life, justified in complaint? Every right thing tends to make us happy, and those around us, but does murmuring do this? Are we not glad to be rid of those who are constantly holding up to our view all the crosses of their life, even though they tell us how patiently they have borne them? Our Saviour never complained of his life, though "he trod the wine-press of suffering alone;" and after his resurrection he did not even repeat to his disciples the story of his death. He did not tell them how he felt that night in the garden when great drops of his blood bedewed the ground. He spoke not of the agony of the cross, nor told how patiently he endured all. His example stands out with no complaints in life or death. He knows our weak nature, for he has borne it himself. He was tempted in all points like as we are, yet without sin. He may have been sometimes tempted to murmur, but he never yielded to the temptation. His object was not to win the pity or applause of man, but the glory of God the Father in the salvation of a lost world; and he whose life comes nearest to the life of Jesus, does most for the glory of God, and will meet His approval at the last day.

NO FADING BEYOND.

Eternity has no gray hairs. The flowers fade, the heart withers, man grows old and dies; but time writes no wrinkles on eternity. Eternity! stupendous thought! The ever-present, unborn, undecaying and undying—the endless chain composing the life of God—the golden thread entwining the destinies of the universe. Earth has its beauties, but time shrouds them for the grave; its honors are but the sunshine of an hour; its palaces, they are but the gilded sepulcher; its pleasures, they are but bursting bubbles. Not so in the untried bourne. In the dwelling of the Almighty can come no footsteps of decay.

Blessedness is happiness transfigured.

The Traveler.

LOUNGINGS.

BY OLOFFE THE DREAMER.

III.--GOLD AND DROSS.

At the head of a pair or two of stairs on one of the streets leading off from the great Avenue of Finance, is a room of medium size, centered by a sparkling little fountain, and bounded on one side by a platform of one or two pulpit-like desks, where keen-eyed men sit, alternately looking and writing. Pressed close against an iron fencing which surrounds the playing water, all day, from nine o'clock till three, a crowd stand yelling to each other at the tops of their voices. Barely distinguishable in the tumult, one can catch occasionally words sounding like "Fifty—seven-eighths," or "Seventy—three-quarters," or "Hundred—half." All sorts of appearances are congregated here, more than one or two mere boys, whose shrill voices swell the great demon-chorus. In this twenty by thirty feet of space, where the little fountain ripples on unheard, and the clock shows not merely the hour, but three changing Arabic numerals and a fraction, a hundred millions of money may easily change owners in the six hours of assembly; for this is the great gambling saloon of New York—the Gold Room of the Exchange. We cannot pass beyond the railing just inside the door, for the quiet man who stands there watchfully knows every member of the "Ring," and will not allow you or I, ungilded as we are, to step within the boundaries. Yet, outside of the charmed circle, outside of the howling mass that seems almost to shake the floor-beams, I look on in sadness and pity at the madmen gambling away more than life itself. Around the Exchange are no quiet places where they may find respite or rest, but the spur of fiereest passion goads on everything before it,—the maelstrom of unbridled excitement swallows insatiately all that is beautiful and true, and leaves only what is worse than the husks which the swine eat,—the poison of ambitious covetousness. For those whom to-day sees on the top of fortune's wheel, stretching out puny hands from the Babel of ever-baffled desire, even to Heaven itself, to-morrow sees groveling in the dust, with the spirit of seven devils, each with bitterest enmity towards those who are up higher, each with the serpent's hissing, each with the envy almost of hell itself. It is a terrible picture, "KIMBALL'S "Undercurrents of Wall Street," but, more than a picture, it is a mirror of life that is an existence to be endured only by drinking to forgetfulness when the heavy strain of the day is a little eased.

So I pass out with a shudder—into the sunshine,—into the life which has a blue sky overhead,—which is better than yellow dust, purer than gold, dearer than all the lucre of the gamblers.

—THE CENTRAL PARK! What magnificent visions the name conjures! Long drives through the richly fringed avenues, almost like the labyrinth of Crete,—easy saunters along the edge of the tranquil water, coaxing the stiff-necked swans to feast from surplus dainties,—gliding in snugly-filled boats under the brown bridges, and where the declining sun glances its orange and amber from the glassy surface which is only just rippled by the oar-stroke. Fairy-Land of the year's summery days, where one never tires of the changing enjoyment, for it is like an old, old story, continually being listened to in newer dress.

It is Saturday afternoon that I have strolled up here, in no livery-driven coach, or heraldric landean or monogramed barouche, but in one of the sort of common blessings, perhaps never fully appreciated until deprivation teaches regret,—the ever-convenient horse-cars. And here the great city is forgetting itself, and, decked out in its holiday best, keeping the outer court of happiness. The pleasant faces of the smiling ones who have stolen a few hours for quiet pleasure, shine like glittering jewels, and one can roam over the grass, (not permitted *every* day,) sit beneath shady tents, or lie under languid trees, and sounding like a story of dreams, listen to the music of DODWORTH as it discourses of all that is beautiful and true.

And I follow my inclination, which is my "best company" to-day, resting under the drooping willow, or on the rustic benches just above the Mall, or cooling with something the larder of the "Terrace" furnishes,

"—soother than the creamy curd,"

looking at selfishness and chivalry, at pride and patience, at love and contempt, in the varying aspects of humanity.

Who has not read the marvelous stories of LABOULAYE, and how he says "the truest and sweetest things in life are not those which we see, but those of which we dream?" What can be more beautiful than the life of each heart's imaging, or hope's promises of the brightness and gloriousness of to-morrow? And yet somehow, the hard sternness of reality continually sweeps resistless through the fancies we weave in the ever-changing loom of vision, and the miraged splendor wherein we have built our castles with their glittering towers. But still transformedly new-created by our thought and trust, our inner existence is ever filled with just as wonderful stories as the Tales of the Genii, and we know the key which is to unlock the treasury of the king's glories, and the garden of the queen's lilies, is the glorious attainment of the trinity of excellence,—the true, the beautiful, and the good.

At almost every turn in the winding roads are substantial water-coolers, where one may quench thirstiness, but in no wasteful way—you are not permitted to turn the faucet yourself—solemn-faced men stand close to each, like the sentry at the door of his wooden shelter which serves for such inimitable caricatures.

NATIONAL CAPITOL AT WASHINGTON.

IN former numbers of the RURAL we have given illustrations and descriptions of several groups of statuary, paintings, etc., in and about the National Capitol, and we now give a fine view of this imposing structure itself, as seen from a north-eastern approach to it. The Capitol Building was constructed from plans and designs furnished by T. H. WALTER, Esq., and is the largest and most costly public edifice on the Western Continent. When completed and decorated as proposed, it will be one of the most magnificent capitol buildings in the world.

Everything seems adapted for the people's comfort, and the gray guardians of the peace keep sharp watch that no advantage is taken of the far-sighted, open-handed liberality, wherewith through the year's seasons the great Metropolis is kept in the kindest of humor with its unsurpassable Park.

—So the sun is beginning to disappear, and I think how Eternal Nature is ever smiling on the wrecks of all that makes life glorious, and not a sun that sets not somewhere on the silenced music—on the faded laurel.

A RIDE IN THE SEWERS OF PARIS.

BUT a few of the Americans who visit Paris know of the opportunity which may be offered them to visit the very extensive sewerage of Paris, and examine its system. Receiving cards of invitation, we stationed ourselves near the tower of St. Jacques, at an iron trap-door, and the party were soon called upon to descend. Not knowing of the *modus operandi* of getting into these dark regions below, we all felt as if we were going to "take a leap in the dark," but what was our surprise to find elegantly fitted up carriages or cars, lighted by four large globe lamps on each corner. These cars contained twelve persons each, and there were five of them, making sixty persons, which is the limit to the number invited at one time. Of course our ride was limited to the large tunnel or main sewer, which was about twenty feet high and fifteen feet wide. The cars run on a six-foot guage track, and are pushed on a down-grade by two men for each car.

The water sewerage or drain is below, and is from six to eight feet deep, so that small boats can be towed all the way, and has down grade enough to make quite a current. We rode by this train of cars across the Boulevard Sevastopool, to the head of Rue Rivoli, alongside of the palace and Tuilleries' gardens, to the Place Concord, a distance of more than three miles, where we disembarked into boats and sailed under the whole length of Rue Royale, coming out by the side of the Church of the Madeline. All along this main channel, are openings or trap-doors, covered with gratings at the head of each cross street, which are marked by the names of the streets on the side of the tunnel, by this means complete ventilation is secured. On the top of the tunnel are two large iron pipes in which pass through the fresh water supply for the city, one from the aequeducts and artesian wells, the other from the water pumped up from the river Seine.

There are also three lines of telegraph wires enclosed in lead pipes. It is well known that these great sewers are built for double purpose, and one is for the underground transportation of troops in the time of an insurrection or war. By this means, Napoleon can transport, secretly, troops from one part of the city to the other, suddenly appearing from the ground at almost any point. The telegraph would also be serviceable on such occasions. Besides this navigable sewer, which is fitted up especially for pleasure trips, there are smaller sewers running under twenty-five of the principal streets, and the whole length of the sewerage of Paris, large and small, including that under construction, I was informed, is over 300 miles in length, and by these means the drainage of Paris is affected on a magnificient scale, and far surpass the subterranean wonders of ancient Rome.—*Cor. Cleveland Herald.*

DON'T HAVE ANY CONFIDANTS.—Beware of intrusting any individual with small annoyances between your husband and yourself. Many seek to gain an ascendancy in families by winning the good opinion of young married women. Should any one presume to offer you advice with regard to your husband, or seek to lessen him by insinuations, shun that person as you would a serpent. Many a happy home has been rendered desolate by exciting coolness, or suspicion, or by endeavors to gain importance in an artful and insidious manner.

Various Topics.

THE LATE LORD GRAY.

A PARIS paper relates the following anecdote of Lord Gray, whose death has caused so much regret in the English society of that capital:—Lord Gray was one evening returning from his club, when he perceived the loss of his pocket-book, containing forty bank notes of 1,000f. each, (£1,600.) Lord Gray searched the pockets of his great coat, but in vain. He went quietly home. Next morning his servant went to his room at an early hour, and informed him that a lady in deep mourning wished to speak to him. Lord Gray desired that she should be shown into his drawing room. "My Lord," said his visitor, "you dropped your pocket-book containing 40,000f.; I bring it back to you." The voice was sweet and low, but so closely was the lady veiled that it was impossible to guess her age or appearance. "Madame," replied Lord Gray, "you have rendered me a service for which I heartily thank you. Allow me to ask if I may venture to offer you some remembrance of my gratitude." The lady then hesitatingly confessed that she had recently lost her husband, whose death had left her the charge of three little children, and that so utter was her destitution she had actually been tempted to keep the pocket-book. Lord Gray returned it to her, merely saying, "You are my creditor—you or your children will repay me later." Lord Gray received a visitor five years after this scene occurred, who appeared a total stranger to him. It was a lady. She handed him a velvet portemonnaie, on which his cypher and coronet were embroidered in gold; within lay forty notes of 1,000f. "You will allow me to retain the old purse in memory of your munificent generosity," she remarked.

THE MONT CENIS TUNNEL.

"WHILE awaiting," says the Italie, "for the piercing through of the Alps, the passage of Mont Cenis is of great interest, and we learn that a first attempt on the railway there has been made with success. In spite of the difficulties presented by the season, Mr. Fell did not hesitate to make a trial, and he was zealously seconded by Mr. Blake, the engineer, who has charge of the works. The ascent was made on the 25th of February, Mr. Fell being accompanied by Mr. Blake and Mr. Holland. The rails are only laid to the length of two kilometres (1¾ miles,) but they pass over the most difficult slopes in the Alps. Mr. Fell's locomotive ascended and descended the line many times which goes from Lans-le-bourg, and it answered in every way the most sanguine expectations of the inventor. We are informed that in a short time complete experiments will be made, and then will be solved that grand problem of the ascent of the Alps by means of steam, a problem so deeply interesting and important to Turin and the whole of Italy."

FACTS IN HUMAN LIFE.

The number of languages and dialects spoken in the world amounts to 3,064. The inhabitants of the globe profess more than 1,000 different religions. The number of men is about equal to the number of women. The average of human life is about thirty-three years. One-quarter die previous to the age of seven years; one-half before reaching seventeen; and those who pass this age enjoy a felicity refused to one-half the human species. To every one hundred thousand persons only one reaches one hundred years of life; to every one hunded only six reach the age of sixty-five; and not more than one in five hundred lives to eighty years of age. There are on the earth 1,000,000,000 inhabitants; and of these 33,333,333 die every year, 91,332 every day, 3,730 every hour, and sixty every minute, or one every second. These losses are about balanced by an equal number of births. The married are longer lived than the single, and, above all, those who observe a sober and industrious conduct. Tall men live longer than short ones. Women have more chances of life in their favor, previous to being fifty years of age, than men, but fewer afterwards. The number of marriages is in proportion of seventy-five to every one hundred individuals. Marriages are most frequent after the equinoxes; that is, during the months of June and December. Those born in the spring are generally more robust than others. Births and deaths are more frequent by night than by day. The number of men capable of bearing arms is calculated at one-fourth of the population.

WARLIKE MUSEUM.

THE Museum at Springfield, Massachusetts, is to be made a storehouse containing articles of great historical value. There will be an almost endless variety of guns, American and foreign, Federal and Confederate, muzzle and breech-loading. A valuable feature will be specimens of the scores of breech-loaders which were presented to the Commission for examining such arms which met in Springfield some time ago; also photographs of every part of each. Of course, war relics will comprise a prominent part of the collection. Blood-stained guns and swords from many a battle-field will be found there, with a large number of specimens of rebel gun, sword, and pike manufacture, which are so roughly finished as to show that the rebs were too hard pressed to stop for much "style" in making them, even if they had skilled workmen to do the work in better shape. The museum will be enlarged as relics of various kinds are sent among the old guns forwarded to the armory; and it cannot fail to become a collection of much interest and value.

THE PASSING OF LIFE.—If we die to-day the sun will shine as brightly and the birds will sing as sweetly to-morrow. Business will not be suspended a moment, and the great mass will not bestow a thought upon our memories. "Is he dead?" will be the solemn inquiry of a few as they pass to their business. But no one will miss us except our immediate connections, and in a short time they will forget us and laugh as merrily as when we sat beside them. Thus shall we all, now in active life, pass away. Our children crowd close behind us, and they will soon be gone. In a few years not a living being can say, "I remember him." We lived in another age, and did business with those who slumber in the grave. This is life! How rapidly it passes!

THE BIBLE AT THE EXPOSITION.—An interesting sight at the International Exhibition at Paris is that large octagon "Klosque," for Bible distribution, near the principal entrance. Its design is to supply the vast numbers of people who daily gather at the exhibition with the Word of God in their different languages. Nearly one million Gospels and Scripture portions have been issued. Since the opening of the exhibition there have been days in which no less than three thousand are distributed, in fifteen different tongues, and, as a general rule, they are received with thankfulness by the respective nations. The work is particularly among the Jews, Arabs, Spaniards, Italians, Russians, and French.

ILLINOIS AGRICULTURE.—An Illinois paper claims that that State stands second in the United States in the value of her agricultural productions. The aggregate of corn, wheat, oats, rye, barley, tobacco, potatoes, buckwheat, and hay, raised last year, is put down at $160,143,704. The other unenumerated products, including fruit, poultry, live stock, and garden products, amount to about as much more. Much of the State is still unimproved. The product of New York amounts to $209,886,669. Pennsylvania figures for $159,402,457, crop value. Ohio is set down for $141,265,754, and Indiana and Michigan follow these in the value of their products.

Reading for the Young.

WHAT?

BY KATE PUTNAM OSGOOD.

WHAT was it that Charlie saw, to-day,
Down in the pool where the cattle lie?
A shoal of the spotted trout at play?
Or a sheeny dragon-fly?

The fly and the fish were there, indeed;
But as for the puzzle,—guess again!
It was neither a shell, nor flower, nor reed,
Nor the nest of a last year's wren.

Some willows droop to the brooklet's bed;—
Who knows but a bee had fallen down?
Or a spider, swung from his broken thread,
Was learning the way to drown?

You have not read me the riddle yet.
Not even the wing of a wounded bee,
Nor the web of a spider, torn and wet,
Did Charlie this morning see.

Now answer, you who have grown so wise,—
What could the wonderful sight have been,
But the dimpled face and great blue eyes
Of the rogue who was looking in?

POOR PONTO.

ONE of the most affecting stories I ever heard about a dog was told me many years ago by an uncle of mine who once lived in Paris. My uncle was walking on one of the quays, when he saw a man approach, holding a dog by a chain. The poor animal was frightened, and yet did not attempt to struggle as he was being led along. He looked up piteously at his jailor, and every now and then tried to fawn about his feet, as if pleading with him. "Poor beast, he might know, seemingly, what was going to happen to him," said the man.

"What is going to happen?" inquired my uncle.

"Sir, I'm going to drown him; that is what will happen."

"But why, sir; are you his master?"

"I am certainly his master, and he is old—poor Ponto! I am sorry, but it must be."

The dog gave a low whine, and trembling, crouched close to his master.

"He does not seem so very old, and drowning is a hard death," remonstrated my uncle.

"Sir, he is quite useless."

While he was speaking the words, the man unmoored a little boat, lifted the dog in, and rowed to the middle of the stream. When he came to where the water was deepest, my uncle saw him lift up the dog suddenly, and throw him with great force into the stream.

If the master had thought that the dog's age and infirmities would prevent his struggling for life he was very much mistaken, for he rose to the surface, kept his head well up, and trod the water bravely. The man then began to push the dog away with an oar, and at last losing all patience, he struck out so far to deal the dog a blow that he overbalanced himself and fell into the river. He could not swim, and now began the generous animal's efforts, not to save his own life, but that of the master who was trying to drown him. The dog swam to him, and seizing fast hold of his coat-collar, held him up until a boat put off to his rescue and brought him, half drowned and wholly frightened, to the shore—his faithful dog barking, crying and licking his hand and face in the greatest excitement of affection. I remember still the look with which my uncle used to tell how he stepped forward and asked the man, "Do you still think him useless—this noble, generous dog?"

"I think he deserves a better master," said a gentleman who had witnessed the incident; and there and then he made an offer to buy Ponto: but the man, embracing the dog, said hoarsely:

"No, sir; no, I was wrong; as long as I have a crust, I will give half to my poor Ponto."

A woman who had a basket on her arm came up at the time and said, "I should think you would, indeed, or else you ought to be ashamed to look him in the face," and out of her basket took a piece of meat, and the dog was feasted and petted and made much of, and from that time, as long as my uncle staid in Paris, he often saw Ponto on the quay, and the story of his generosity to his master made him so many friends that the dog's keep was no longer burdensome. No one was suffered to molest him, and his old age was doubtless the happiest period of his life.

A HAPPY HEART.

A LITTLE boy came to me this morning with a broken arrow, and begged me to mend it for him. It was a very handsome arrow, and was the pride of his heart just then, so I did not wonder to see his lip quivering, and the tears come into his eyes.

"I'll try to fix it, darling," I said, "but I'm afraid I can't do it."

He watched me anxiously for a few moments, and then said, cheerfully:

"Never mind, mamma; if you can't fix it, I'll be just as happy without it."

Wasn't that a brave, sunshiny heart? And that made me think of a dear little girl, only three years old, whom I once saw bringing out her choicest playthings to amuse a home-sick cousin. Among the rest was a little trunk, with bands of silk paper for straps—a very pretty toy; but careless little Fred tipped the lid too far back, and broke it off. He burst out with a cry of fright, but little Minnie, with her own eyes full of tears, said:

"Never mind, Freddie; just see what a cunning little cradle the top will make."

Dear little Minnie went to live with the angels a few years ago, but we have a great many such sweet memories to keep of her.

Keep a happy heart, little children, and you will be like sunbeams, everywhere you go.—*Little Corporal.*

Our Fall Campaign!

A NEW QUARTER--VOLUME XIX.

A NEW QUARTER of the RURAL commenced Oct. 5, and Volume XIX will begin January 4, 1868. Now, therefore, is a good time to subscribe and form Clubs as subscriptions can begin with October or January or any time between. The 13 numbers of this (Oct. to Jan.) or any preceding Quarter of this year, will be sent on trial, or as specimens, for ONLY FIFTY CENTS.

GOOD PAY FOR DOING GOOD

All who form clubs, either to begin with the New Quarter (Oct. 5th,) or next Volume (Jan. 4, 1868,) will be substantially rewarded, as our inducements are extraordinary—more liberal than ever before. Specimen Numbers, Show-Bills, Premium Lists, &c., sent free to all disposed to act as club agents.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., NOVEMBER 16, 1867.

NEWS OF THE WEEK.

New York State Items.

THE election passed off very quietly on the 5th inst. Good order prevailed generally throughout the State. As usual, there were several disturbances in New York and Brooklyn during the day, and three or four men were reported killed. Many arrests were made there for illegal voting. The Democrats carried the State ticket by a large majority—nearly fifty thousand. They have also elected a majority of the members of Assembly. The Senate will stand: Republicans 18, Democrats 14. The Democrats therefore will have a majority on joint-ballot of the Legislature.

Frank King, under indictment for murder, Philip Harley and Samuel Gavitt, horse thieves, George Vanderbogart, indicted for assault with intent to kill, and Patrick Bradley, also indicted for assault, escaped from jail in Schenectady recently, and are still at large.

Revenue officers made a raid on a large distillery in New York city on Sunday, the 3d inst., finding it in full blast, with a capacity of 4,000 gallons.

From Washington.

THERE are now five good school houses for colored children in the District of Columbia, capable of accommodating about two thousand pupils.

The Postmaster General's report will this year show a deficiency instead of a small surplus.

The President has granted a pardon to James A. Seddon, Secretary of War of the Rebel Confederacy.

District Attorney Chandler is working very energetically in his preparations for the trial of Jefferson Davis, intending to be in readiness to commence the trial at the coming term of the Court, which commences on the 25th inst.

The receipts of internal revenue for the past week are $4,031,000.

Gen. Grant has ordered that leaves of absence be granted to officers of the Army in future only on application through the regular channels.

A Washington special says it is understood that a large portion of the forthcoming message will be devoted to the consideration of the National finances. In conversation with some gentlemen a few evenings since, Mr. Johnson said he regarded the finance question as the most important now before the country. He agrees with the opinions of Secretary McCulloch, and believes in the contraction of the currency and speedy return to specie payments.

It is expected that the President will during the present week appoint a successor to Mr. Stanton, as Secretary of War.

From the South.

MAJOR-GENERAL L. THOMAS, Adjutant-General of the United States Army, is on a tour of inspection of the soldiers' cemeteries, and has visited those of North Carolina. He reports the one at Salisbury in a very bad condition, that at Newbern very good, that at Raleigh passable, and that at Wilmington discreditable.

The Tennessee Senate has reconsidered the vote passing the bill prohibiting distinctions on account of color by railroads in the conveyance of passengers. A motion to amend requiring roads to provide cars, especially for colored persons, was passed.

Gen. Schofield has ordered a new election to be held in the case of the subscription to the Chesapeake and Ohio Railroad. In order to remove all doubt about the legality of the election, all qualified voters of Virginia and the United States will vote. This includes all disfranchised whites.

In the Reconstruction Convention of Alabama, the proposition to abolish the present Provisional State Government within twenty days, was, on a test vote, tabled by 45 to 42. An ordinance is pending to organize a new Provisional Government, vacating all important State offices on the first of January next; and a resolution has been referred proposing to disfranchise all persons implicated in the murder of Union men during the war.

Col. W. H. McCartle, editor of the Vicksburg Times, was, on the 8th inst., placed in confinement by order of Gen. Ord. The charges have not been made known, though it was for a personal denunciation.

The indications are that the Republicans will carry North Carolina in the coming election.

A Washington special says that Gen. Sheridan being assured of the good conduct of Gen. Hays in the future, telegraphed Gen. Grant recommending a disapproval of his removal as Sheriff at New Orleans. Mr. Bullitt then declined the appointment and Hays was restored.

From the West.

A HEAVY storm recently prevailed throughout the entire coast of California and Nevada.

The Annual Convention of the Western Associated Press assembled in St. Louis on the 5th inst., and continued in session two days.

A fire which broke out on the 6th inst. in Sedalia, Mo., destroyed several blocks of stores, and caused a loss of nearly $200,000. The Merchants' Union Express Company is a large loser.

At the election in Leavenworth, Kansas, on the 5th inst., Mrs. Stanton and Susan B. Anthony visited the polls of each ward and addressed the voters, probably the first occurrence of the kind in the country. Notwithstanding the efforts of these ladies in behalf of woman suffrage, the proposition to amend the Kansas Constitution by striking out the word "male" from the qualifications of voters, was lost.

The boilers in Morple's flouring mill, Chicago, exploded on the 10th inst., tearing the building to fragments. The iron roof was thrown, in an almost compact mass, one hundred feet. The building took fire immediately after the explosion and was entirely consumed. Loss estimated at $75,000. The engineer is believed to have been buried in the ruins.

A fire a few hours later destroyed an entire block between Wells and Lasalle streets, on the north side of Chicago river. A considerable amount of merchandize in store was burned. The loss is estimated at $70,000.

An Omaha dispatch says a full representation of the Northern Sioux, Cheyennes, Arrapahoes, and Crows will meet the Indian Commissioners at Fort Laramie.

Government officers recently seized about 3,000 barrels of highwines at Hennepin, Ill. The owners were attempting to defraud the Government. The value of the property seized is about $300,000.

Latest from Europe.

THE revolution in Italy is ended. On Sunday, the 3d inst., Garabaldi left his camp near Monte Rotondo, and moved forward to attack Tivoli, which was held by the Papal troops. He found the latter, to the number of 6,000 men, posted in a strong position, and supported by artillery. The Pontifical troops immediately opened fire with their batteries upon the approaching Garibaldians. A desperate conflict ensued, which lasted forty-five minutes, when Garibaldi retreated. The battle was renewed at Monte Rotondo. The insurgents fought with great obstinacy, and kept up the conflict at this point for two hours and a half, when, exhausted and overwhelmed, they gave way and were utterly routed. During the battle, Garibaldi brought into action ten thousand men. At one time during the day the Papal troops were beaten, and Garibaldi was gaining ground, when the French came up and turned his victory into a defeat. It is reported that the insurgents lost eight hundred killed and wounded, and two thousand taken prisoners. General Garibaldi was captured, and at last accounts was at Spezzia, a prisoner in the hands of the Italian Government. His son Menotti was among the wounded.

A serious bread riot occurred in Exeter, England, on the 4th and 5th inst. Every bread and meat shop in the city was sacked. Incendiary fires were started in different parts of the town. It was extended to Axminster, situated twenty-four miles east of Exeter, where the premises of the corn dealers were burned. Axminster contains the well-known carpet factories with buildings for the manufacture of woolen cloth and gloves, and has a very determined population of working men.

The Sultan of Turkey is making unusual military preparations. Fifty thousand needle guns have been purchased.

There have been serious riots incited by the party of action in different parts of Italy, and particularly at Milan, where it was found necessary to call out the troops to quell the disturbances. Many of the rioters were killed or wounded.

FROM NORTHERN MICHIGAN.

The Saginaw Valley; its Wealth, Progress and Prospects — Lumber, Salt, &c., — Railroads — Steam Navigation — Education, &c.

SAGINAW CITY, Mich., Nov., 1867.

EDITOR RURAL: — Your readers know something of the Saginaw Valley, and its river into which flow tributary streams, with 1,000 miles of raftable waters,—marshes along its banks for twenty miles up its course, not of dead water, but open to the ebb and flood of river and lake; level lands of great richness, and more undulating portions almost equally rich; belts of heavy pine, and forests of other kinds; farms well cultivated; trees rapidly falling before the keen axes of thousands of lumbermen; three towns or cities, of some 30,000 people in all; immense sawmills, some of which cut daily 100,000 feet; salt blocks along the river, street cars, hotels—like this "Taylor House" at which I stop—equal to the best in your city.

Such is this valley to-day, literally carved out of the wilderness in the last twenty years, and mostly in half that time. For business, the supply of the wants of men enough to get out 400,000,000 feet of lumber yearly, the workers in salt, machine shops, &c., and the tide of speculators and traders. For the farmers an excellent home market and an enterprise in manufactures which will make that market permanent. A railroad to Detroit is just opening from this place by Owasso to Jackson, Toledo and Chicago; the Flint and Pere Marquette Railroad is to open to Midland City, twenty miles northwest, this month, and pushing into the wilderness toward Lake Michigan—lumber giving it full freight as it goes on. Steamboats to Detroit, Goderich, Cleveland and Sarnia, and tugs by the score, with sailing vessels by the hundred, going to and fro. All these are the marvels wrought in this brief space by industry and skill.

The whirl of speculation is somewhat going by, although not gone yet. Education, culture and some permanent social life begin to exert their influences. Here is a school house going up to cost $75,000 for the *free* Union School. At East Saginaw, over the river, is a noble school building and a most accomplished teacher—Mr. Estabrook—formerly of Ypsilanti. I had the privilege yesterday of looking in on the Teachers' Institute of this and two other counties, and the intelligent aspect and appropriate fitness of the exercises, by both men and women present, compared well with similar gatherings "away down East."

—But enough; your pages are always full. Sometime a glimpse of some other regions, perhaps. S.

A TORNADO IN THE WEST INDIES. — Official dispatches from the Superintendent of the Royal Mail Steamship Company at St. Thomas, to the British Consul in Havana, says all the property of the company was destroyed by the tornado on the 29th of October. The steamer Rhone was lost on Peter Island, the Wye on Buck Island, the Conway on Tortola Island, the Derivant at St. Thomas, and the Salent and Tyne were dismasted. The town of St. Thomas is in complete ruins. Fifty vessels were driven ashore. The loss of life was very great, and the destruction of property immense. All the officers and engineers of the Rhone, and all others on board of her, were lost. From the Wye forty persons were saved, including Capt. Taylor and Mr. Hodgson. Of the passengers on board the regular steamer for Southampton, which had sailed with 150 passengers, only twelve were saved.

RIOT IN HAYTI. — At Port au Prince on the night of October 12th, the Assembly demanded of the Ministry that Leon Montez should be liberated, maintaining that he was unconstitutionally kept in shackles at Cape Haytien. A mob of 6,000 men and women surrounded the House of Assembly, who, however, managed to make good their escape. The mob kept firing on the palace, cheering all the while for Salnare, at whose instigation they threatened to sack the city. Salnare is taking every measure to secure himself in permanent occupancy of the Presidential chair.

MASSACHUSETTS ELECTION.—The election returns from 316 towns, nearly the whole State, give Gov. Bullock 95,589; Adams, 68,862; Bullock's majority, 26,727.

THE AMERICAN ORGANS manufactured by S. D. & H. W. Smith of Boston, Mass., are remarkably good and effective instruments. Their quality of tone is peculiar and most admirable, they have great power when played full, and possess a swell apparatus of more than ordinary excellence, by means of which a fine *crescendo* or *diminuendo* is obtained, and they also respond instantly to the touch. Choir leaders, societies, or musical students, who wish to procure something very satisfactory in the way of reed Organs, will certainly do well to examine these superb instruments.—*Providence Journal.*

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, November 12, 1867.

OUR local money market remains without material change. The banks have no surplus funds, yet are able to meet the wants of their regular customers.

There is very little change in the supply of money or rates of interest at the East. Call loans are made in New York at 6@7 per cent., and the best commercial paper goes at 7½@10 per cent. Gold is lower and for some time has been steadily though gradually declining. Sales were made Saturday at 128¾. The price yesterday was 139. The tendency of market now is to a still further decline, and the general opinion is that the fall will not be checked for some time yet. There are several circumstances, however, that may occur to affect the market in the next thirty or sixty days.

The stock market has been rather dull some days. There has been some activity in European stocks. A New England Express Company has been recently organized, which is to operate in connection with the Merchant's Union, which has strengthened the stock of the latter very materially.

WHEAT AND FLOUR were lower in New York at the close of last week. The price of red wheat in this city yesterday was $2,50@2,55, which is a decline. The tendency of the market is downward.

WOOL.—The sales in Boston last week were small, amounting to only 550,000 lbs. Prices were unusually low, ranging from 26 to 50c. for fleece. In reference to the present condition of the market the Boston Bulletin says:—"In the wool market, the long-continued dullness and depression remains unbroken and unabated. There is positively no demand for consumption in the present paralyzed condition of the goods trade, and the few current transactions recorded are the result of forcing the article upon an unwilling market, and hence the ridiculously low rates quoted."

Rochester Wholesale Prices Current.

WITHOUT Exception the Most Largely Circulated Agricultural Journal in the West.
THE WESTERN RURAL,
AN Illustrated, Double-Quarto Agricultural, Horticultural and Family Weekly, without expending extravagant amounts for advertising itself, has won its way to the first rank of papers of its class, and already exceeds in circulation any other Agricultural Journal west of New York. It is published at both Chicago and Detroit, two distinct editions. Terms: $2,50 per year, $2,00 in clubs of four or more. It gives Extraordinary Premiums for clubs, viz:—For only twenty-five (25) subscribers at $2,50 per year each, or forty (40) at $2,00 each, (one half of them new names,) a choice is given of a Wheeler & Wilson, a Howe, or a Willcox & Gibbs' Sewing Machine, or a Lamb Knitting Machine. Also, Premiums of Musical Instruments, Roper Four-Shooting Shot-Guns, Thunderbolt Rifles, Gold and Silver American Watches, Foster's Artificial Legs, Webster's Dictionaries, Full Gilt Family Bibles, Silver-Plated Ware, Barometers, Clothes Wringers, Photograph Albums, Books, etc., for clubs of various sizes. Or instead, handsome Cash commissions given if desired.
Full particulars of premiums, instructions to club agents, specimen copies, etc., will be forwarded on addressing H. N. F. LEWIS, Publisher Western Rural, 84 and 86 Dearborn Street, Chicago, Ill.
*** New subscribers receive the paper FREE for the remainder of 1867, from the time names are received.

— A child was born in Coburg, N. Y., recently, weighing only one pound. It is a girl, and is doing well.

Special Notices.

STUMPS COMING OUT.

A gentleman residing in Jasper, Steuben County, N. Y., who recently purchased a Stump Machine of W. W. Willis of this city, writes under date of Nov. 7th, as follows:—"I take this opportunity of informing you that we have pulled every thing in the shape of stumps and not even broke or straightened a hook. We have pulled stumps five feet across the top, giving the highest satisfaction to all who have witnessed the operation of the machine."

ITALIAN BRIGANDS.

Brigandage still exists in Italy. A poor priest fell into the hands of brigands some time ago. A large ransom was demanded, but as it came in slowly they cut off one of the priest's ears and sent it to his friends, one of the brigands having previously bitten off and eaten a portion of it. This unfortunate priest had been condemned to death from the moment of his capture, but was kept alive for a time that money might be extorted from his friends. At last, no money coming forward, they inflicted a hundred and one wounds upon his body, and then buried him alive under a heap of stones. *Apropos* of brigands, a most interesting narative, entitled, "Pierce Egan's Adventures Among the Brigands," has just been commenced in No. 129 of Frank Leslie's Chimney Corner, wherein are detailed the personal experiences of the author in a podestrian journey he had the temerity to attempt from Naples to Rome, through a region infested with brigands; with many facts and incidents which he subsequently collected. With No. 129 of the Chimney Corner is also given away a gift plate on a separate sheet (28 inches by 22), entitled, "The Monkey's Grip."

YOUNG MEN WANTED.

The Union Telegraph College, Oberlin, Ohio, has authority from Telegraph employers to receive students and *guarantee* them *good situations* upon graduation. This is the *only* school of the kind in the Union which has such support, and in point of numbers is the largest. Offices are secured to graduates by written contract. Our letters of authority for graduating can be seen by any who doubt our ability to promise employment. Operators receive from $45 to $125 per month. For full particulars address

Halsted, Corresponding Secretary, 68 Pearl St., New York. 927-4t

ESTABLISHED 1861.

THE GREAT AMERICAN TEA COMPANY

HAVE JUST RECEIVED

TWO FULL CARGOES

OF THE

FINEST NEW CROP TEAS.

22,000 HALF CHESTS by ship Golden State,
12,000 HALF CHESTS by ship George Shotton

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune district of China, which are unrivalled for fineness and delicacy of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade, (before the establishment of the Great American Tea Company,) we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in the country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Teas.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same prices, with the small additional expense of transportation, as though they bought them at our warehouse in the city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on the list, as seen in the club order published below, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members can divide equitably among themselves.

Parties sending Club or other orders for less than thirty dollars had better send Post-office drafts or money with their orders, to save the expense of collections by Express; but larger orders we will forward by Express, to "*collect on delivery.*"

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

Parties getting their Teas of us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

Oolong (Black,) 70c., 80c., 90c., best $1 ₱ lb.
Mixed (Green and Black,) 70c., 80c., 90c., best $1 ₱ lb.
English Breakfast, (Black,) 80c., 90c., $1, $1.10, best $1.20 ₱ lb.
Imperial (Green,) 80c., 90c., $1, $1.10, best $1.25 ₱ lb.
Young Hyson (Green,) 80c., 90c., $1, $1.10, best $1.25 ₱ lb.
Uncolored Japan, 90c., $1, $1.10, best $1.25 ₱ lb.
Gunpowder (Green,) $1.25, best $1.50 ₱ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

CLUB ORDER.

Edwards, St. Lawrence Co., N. Y., June 3, 1867.
The Great American Tea Company,
31 and 33 Vesey Street, New York.

Dear Sirs:—I herewith send you another order for Tea. The last was duly received, and gives general satisfaction. As long as you send us such good Tea, you may expect a continuation of our patronage. As a further evidence that the subscribers were satisfied, you will observe that I send you the names of all those that sent before who were near out of Tea, with a large addition of new subscribers. Accept my thanks for the complimentary package. Ship this as the other, and oblige

Your ob't servant, DAVID C. McKEE.

NOT A PATENT MEDICINE.

A SAFE, CERTAIN, AND Speedy Cure FOR NEURALGIA, AND ALL NERVOUS DISEASES.

Its Effects are Magical.

It is an *unfailing remedy* in all cases of Neuralgia Facialis, often effecting a perfect cure in less than twenty-four hours, from the use of no more than *two or three pills.*

No other form of Neuralgia or Nervous Disease has failed to yield to this *wonderful remedial agent.*

Even in the severest cases of Chronic Neuralgia and general nervous derangements,—of many years standing,—affecting the entire system, its use for a few days, or a few weeks at the utmost, always affords the most astonishing relief, and very rarely fails to produce a complete and permanent cure.

It contains no drugs or other materials in the slightest degree injurious, even to the most delicate system, and can *always* be used with *perfect safety.*

It has long been in constant use by many of our *most eminent physicians,* who give it their unanimous and unqualified approval.

Sent by mail on receipt of price, and postage.

One package,	**$1.00..**	**Postage 6 cents.**

WORTHY OF ATTENTION.

"Agriculture underlies every other pursuit of life, and the subject of FERTILIZERS underlies Agriculture."

"The Plant Must Have Food!"

To give the growing plant food and permanently improve the soil is just what

LISTER BROS.,
Fresh Bone Superphosphate of Lime,

Can and will continue uniformly to do. Try it and judge for yourself. LISTER BROTHERS,
918-tf 159 Front St., New York, Manufacturers.

THE ALBANY COTTON GIN MANUFACTURING CO.,
ALBANY, N. Y. (POST-OFFICE DRAWER 162.)
Office and Factory on Thacher St., near Broadway, North End of City.

Manufacturers of Agricultural Machinery and Implements of the best and most approved kinds and patterns in use, embracing

1st Premium "Star" Cotton Gins and Condensers,
1st Premium "Star" Railway & Lever Horse-Powers,
1st Premium "Star" Threshers and Cleaners,

Threshers and Separators, Circular and Dragg Saw Mills, Vegetable Cutters, Dog Powers, &c., &c.

Important improvements recently made in our Thresher and Cleaner (which we denominate the "*Star*" *Thresher and Cleaner* to distinguish it from all others,) enable us to claim for it, without fear of contradiction, a marked superiority over all others now made, as well in the quality and quantity of the work which it will do as in the perfection of its construction, insuring the durability of the Machine and the ease with which it may be operated.

THE "STAR" RAILWAY HORSE-POWER
AND
THE "STAR" LEVER HORSE-POWER,

Made by this Company, are fully approved by all who have used them, to stand unrivalled in all the qualities which a Horse-Power must possess to give it acceptance to the Farmer—as to durability, economical use of the strength of the horse (admitting an easy gait of the animal, with—in the Railway Power—a very moderate elevation of the platform,) facility of moving about, setting up, repairing, &c., &c. We solicit a continuance of the patronage hitherto so liberally bestowed.

Mr. Wm. B. Emery (survivor of Emery Brothers) gives his personal superintendence to all work got out by this Company. His long experience in manufacturing Agricultural Machinery affords the strongest guarantee of the superior character of the machines made by us.

☞ Our complete Illustrated Descriptive Circular and Price List will be sent *free of charge,* on application, and all information cheerfully furnished.

Agents, both Traveling and Local,

are wanted all over the country to sell our manufactures. To active and competent men liberal commissions will be paid. 924

THE GREAT PRIZE!
Exposition Universelle, Paris, 1867.
THE HOWE MACHINE COMPANY,
ELIAS HOWE, Jr., 639 BROADWAY, NEW YORK,
AWARDED OVER EIGHTY-TWO COMPETITORS,
THE HIGHEST PREMIUM,
THE ONLY CROSS OF THE LEGION OF HONOR

given to American Sewing Machines, per Imperial Decree, published in the "Moniteur Universal" (Official Journal of the French Empire,) Tuesday, 2d July, 1867, in these words:

ELIAS HOWE, Jr. { Fabricante de Machines a coudre exposant. Manufacturer of Sewing Machines, Exhibitor.

PLASTIC SLATE ROOFING
JOINT STOCK COMPANY,
OFFICE 157 [Room 19] *BROADWAY,*
NEW YORK.
W. C. POTTER, *Vice-Pres't.*
J. M. ALLEN, *Sec. & Treas.* **Licenses Granted.**

PLASTIC SLATE FOR
ROOFING & OTHER PURPOSES.

The process of reconstructing Slate Stone from a disintegrated state was Patented February 21st, 1865. It is a combination of

Pulverized Slate and Viscous Matter,

(the latter possessing qualities of geological and chemical affinity for the former,) and is a development of one of the simple but unalterable tendencies of nature.

AS A ROOFING MATERIAL IT STANDS UNRIVALLED.

A mastic it adapts itself to every shape and slope Non-combustable, impervious, non-expansive, and rude cayling.

FROST DOES NOT CRACK NOR HEAT DISSOLVE IT.

The only roofing material ever discovered that will resist the action of the elements as long as the structure it protects. Being susceptible of little, if any wear, from exposure, and

PERFECTLY FIRE-PROOF.

It is unequalled as a coating for Railroad and Farm Buildings, Fences, Bridges, bottoms of Vessels, Vaults, &c.

THE COLLINS AND SHATTUCK
Combined Clover Thrasher, Huller & Cleaner,
MANUFACTURED BY
GLEN & HALL, ROCHESTER, N. Y.

We beg to call the attention of Farmers to the superior characteristics of the Collins and Shattuck Clover Machine made by us, which we are now prepared to supply.

Our Machines have two hulls with counter reciprocating motion, which have proved *indispensable* in keeping the Machine still, preserving it from racking and preventing it from clogging. We will warrant them with proper management to Thrash, Hull and Clean Clover or Grass Seed at one operation, more rapidly and in a much better manner than any other Machine made. When thrashing grass seed they can in a moment be so arranged that the seed and chaff will pass directly from the hulls to the fanning mill without going through the huller—*an advantage possessed by no other machine.* The ratchet form of the upper bolt in our machine insures a thorough separation of the heads and seed from the straw before the latter is allowed to pass into the stack. Our machines are constructed of the best material, in the most thorough manner, handsomely painted and ornamented, and have in all cases given entire satisfaction. Persons purchasing these machines to do custom thrashing will find them even much more remunerative than Grain Thrashing Machines.

We are also prepared to supply Horse-Powers, Truck Waggons, &c., to be used with our machines, or they will be adapted to run with any other Horse Powers.

☞ Descriptive Catalogues, containing full information, with testimonials from persons using our Clover Machines, sent free to all applicants. Address GLEN & HALL, Rochester, N. Y., or Detroit, Mich. J. D. Easter, Gen'l Western Agent, Chicago, Ill. 921-10t

H. P. WESTCOTT'S ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the larges quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. Moore, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—Solon Robinson, *Ag't Ed. N. Y. Tribune.*

Mr. Robinson also named it first and commended it highest of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. Edwards Todd, *Ag't Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The Seneca Falls Churn Manufacturing Co is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the patented fixtures. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. Moore, Editor Rural New-Yorker.

☞ The Michigan Churn Manf'g Co., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

WHISKERS.—Dr. Lamontes Corrollin will force Whiskers on the smoothest face, or hair on Bald Heads. Never known to fail. Sample sent for 10 cts. Address REEVES & CO., 78 Nassau St., New York.

[Established 1848.] ☞ Consignments solicited.

Written for Moore's Rural New-Yorker.

LOVE IS LIFE.

BY A. A. HOPKINS.

Aye, love is life! There is no heart
So poor but has its little part
In riches love keeps e'er in store;
And though its part be large or small—
Though other hearts give it their all—
'Tis not content, but longs for more!

Aye, love is life! The world were dark
If never love's electric spark
Lit up with brightness all our ways;
And hope would ne'er so sweetly sing,
And faith would early take to wing,
And souls would give complaint for praise!

Aye, love is life! There is no yield
Of truth and trust 'till is revealed
Some portion of its betterness;
For truth and trust are but its fruit,
And life without them would be mute,
And void of every means to bless.

Aye, love is life! He cheats himself
Who thinks that from some paltry pelf
His living draws the good supreme;
On finer food life ever feeds,
And deeper depths supply its needs,—
It drinks from out a purer stream!

Aye, love is life! Its holy light
In every gloom is beaming bright,
To sweetly cheer and sanctify;
And when the sky is overcast
It sees the days—with darkness passed—
That gem the glorious By-and-By!

The Story Teller.

THE PRESERVE CLOSET.

"Upon my word, this is about the coolest proceeding I ever knew."

Colonel Templar sat in his bachelor sanctum where the rays of an April sunshine shone in lines of glittering gold among the Neapolitan violets in the window, and drove the little canary half wild with a silver-voiced delight—a sanctum crowded with a miscellaneous confusion of meerschaums, in different stages of color, dressing-gowns, cigar boxes, newspapers, and gorgeous velvet slippers—and contracted his brows moodily over a letter, whose pink paper and delicate scent of foreign perfume betokened a troublesome lady correspondent.

"Dear Sidney."—Yes, I'm always "dear" when Bertha wants a disagreeable commission executed—what hypocrites women are to be sure—"an eligible house, somewhere, in some nice locality, it surely can be no trouble to engage one for us." No trouble, quotha! that's just a woman's random idea! No trouble to rush from pillar to post house-hunting. Where's the indemnity of bachelorhood I'd like to know? I might as well be a married man in good earnest, if I'm to be saddled with all the responsibility of the thing. I won't be imposed upon—I'll write to Bertha at once and tell her——"

Colonel Templar gave his jet black mustache a savage jerk and pulled his writing desk resolutely forward. Then a softer mood seemed to draw athwart his mind—he hesitated, biting the handle of his pen meditatively.

"Poor little Bertha—she always was my pet cousin, and I suppose it is rather inconvenient for her to come all the way here to look for a house—and her husband will be in India till the middle of May, and well—the upshot of the whole matter is that I'm doomed to victimize myself, and the sooner it's over the better. Heigho! where's the newspaper? I'll just look over the 'To Lets' first and then I'll go to the estate agencies."

The sun was peeping from behind masses of flying clouds, like a shy beauty who alternately smiles and hides her face—the air was full of faint spring odors, even in this brick-and-mortar wilderness, when Colonel Sindey Templar sallied forth, armed and equipped with various references, directions and addresses, to engage in the momentous business of house-hunting.

He was not a handsome man—yet you would have turned involuntarily to look after him as he sauntered by, attracted by the deep smothered fire of his eyes, and the firm outline of his lips. No, Colonel Templar was not handsome, but he was what the ladies term "interesting." Moreover he carried an empty sleeve where the left arm should have been—an everlasting memorial of the red battle-clouds.

"It seems odd enough for me to go house-hunting," mused Templar, as he strolled onward through the dusty streets. "For me the solitary, homeless recluse of one-and-thirty years old. Four years ago things appeared differently to me—four years ago I might have dreamed of a home of my own with Marion Caryl's bright eyes to light up its hearthstone! Ah, me! this is a world of change! A careless word—a little misunderstanding—and here I am a crippled old soldier, while Marion is probably the sunshine of some other man's life. Hold on—I am getting maudlin and romantic—eh, Sidney Templar? This will never do, old fellow."

The Colonel gave his heavy black locks a backward toss, as if impatient at his own folly, and vigorously directed his attention to the list of eligible residences, in his pocket-book.

"No. 40 —— street; here's the very place. Want's painting badly on the outside, but may present a more promising appearance within. At all events we'll try."

He rang the bell, and after a brief skirmish of servants in the hall, a faded lady, in dyed silk, and hair in crimping pins, appeared.

"Is this house to let, madam?" inquired our Colonel, deferentially.

"Well, yes, it's to be let, but you can't see it now!"

"Can't see it now?"

"No," snarled the lady, vindictively. "Hours are between two and four."

"I'm quite sure," the female in the crimping pins is an old maid," declared the Colonel, mentally, "and she must have breakfasted off broken glass and cambric needles. I wonder if the people at No. 171 —— street will be any more affable."

A pretty blue-eyed woman in a torn wrapper and slippers down at the heel, answered the door bell.

"Can I see this house?" meekly questioned Colonel Templar.

"Could you call again in about an hour?" questioned the blue-eyed one. "My husband is out and we've been troubled with thieves and respectable looking agents who carried keys with them that—"

"Oh, I beg your pardon. Under the circumstances I will not intrude," said Col. Templar, with a comic elevation of the eyebrows. "Perhaps, however, you will be good enough to see that I leave the door-mat behind me, quite safe."

"It's well I didn't let him come in," was her mental comment. "He looks as if he might be a little crazed."

While Col. Templar stroked his mustache and pondered dubiously within himself: "I wonder if I do look like a rouge."

"Herbert! Bertie! don't you hear the door bell? Bertie, I say!"

The gentleman apostrophized as "Bertie," was sitting at an old-fashioned mahogany desk, absorbed in a pile of blotted manuscript, with dishevelled hair, and middle finger deeply stained with ink—evidently a young author, and very much in love with his profession. Directly before him stood the speaker, a young lady of twenty-two or thereabouts.

She was exceedingly pretty, with the innocent, dimpled beauty of a white kitten or a pet rabbit; blue-eyed, with a complexion where faint roses seemed to glow through the transparent skin, and a mouth like a dash of scarlet velvet, while her lovely golden hair was fastened straight back in a great lustrous twist. *En dishabille*, evidently, but quite pretty enough to excuse all defects of flour-sprinkled hands, and hair half loose.

"Door bell?" repeated the young man staring vacantly.

"Yes; some one to see the house, I suppose, and I such a figure. Do, please go to the door, Bertie; there's a jewel. Mary has gone to the grocer's, and see what a state I'm in."

She held up both dimpled hands and nodded archly in the glass at a huge floury patch on the peach bloom cheek.

"There it goes again! Do make haste, Bertie, and on your life, don't show any one into the kitchen. Tell 'em it's a gem of a kitchen, but don't let 'em in, for the cake is half made and the bread is half baked, and I'm half distracted; and the rolling pin and spice boxes and egg beaters are lying around loose, and—there."

And the young lady expedited matters with a push that left five white dots from her five finger ends on the back of Mr. Herbert's cashmere dressing gown.

"The dear absent minded goose!" she pondered as she fluttered down stairs into the kitchen; "if there's any mistake to be made he'll be sure to make it. The older he grows the more absent minded he becomes I do believe."

"Why, yes, this house is to let," said Mr. Bertie, in answer to the courteous inquiry of the tall stranger. "And I suppose you want to look at it?"

Colonel Templar smiled.

"I should like to inspect the rooms; that is, if it's quite convenient."

"Oh, quite—walk in. This is the hall and—I believe those are the stairs; and—oh! here are the parlors."

Sidney Templar glanced carelessly around the lofty rooms, thinking they would suit his ambitious little cousin very well, when suddenly a portrait hanging over the carved mantlepiece caught his eye.

"Marion Caryl!"

He did not articulate the syllables, but they sounded through his brain as if a thousand silver tongued bells had pealed them forth! Yes, it was Marion Caryl, with the bright golden ringlets floating away from her fair, blue-veined temples, and the rose-mouth ready to break into smiles that were answered by the dewy sparkle of her eyes.

"Marion Caryl!" he repeated vaguely to himself. "And this is Marion's house, and Marion's husband is leading me through the rooms. How dreamlike it seems."

"I'm afraid you're tired," said honest Bertie, looking compassionately at Sidney's ashen pale face, and wondering that he had not before noticed how colorless he was.

"A little tired," stammered Colonel Templar, feeling the hot blood rush to his brow once more. "But no matter, don't let me detain you. I believe you said the rent was—"

"I haven't the least idea. I believe it is either one hundred or eighty, or perhaps sixty. I know we paid fifty, but the landlord is going to raise it, and Marion and I are thinking of a furnished cottage somewhere."

"Marion's husband is not a man of business," thought Sidney.

"Marion's husband!" how the words cut to his heart.

"Well, I'll ask Marion—she knows," said Herbert. "Now, then, I'll take you down into the lower department."

Oh, Bertie, Bertie, had you already become oblivious of the words of caution heaped on your luckless ears?

Pretty Marion, screwing the top on to one of her spice boxes, heard the advancing of footsteps with a sudden thrill of apprehension.

"It can't be possible that that goose, Bertie, has forgotten what I told him," she thought. "He has, though, as sure as the sun is shining, and I'm caught."

Marion dropped her fragrant box of allspice, and looked with wide open eyes of dismay at her bib apron.

"They are coming," she stammered, turning alternately red and white. "There's no help for it, I shall have to hide in the preserve closet."

And our little heroine, ignominiously taking refuge in flight, ran lightly across the kitchen floor and hid herself among preserved strawberries, East India ginger and glimmering jars of cherries.

"If I don't lecture Bertie," said Marion, setting her little white teeth together like belligerent pearls, as the two gentlemen came into the kitchen, and she heard their voices discussing the relative merits of stoves and ranges.

"By the way," said Herbert suddenly, "I believe there are some nice closets down here, at least Marion says so, and—hallo! the door seems to stick!"

He gave it a jerk. Marion's two hands held resolutely on the door-knob on the other side. Another resolute pull full of well directed energy, and the two little hands succumbed.

The door flew open.

Bertie staggered back into the middle of the room, and Marion stood there among the preserves, woefully confused, yet laughing withal, like a marvelously pretty mouse in a new species of trap.

"Oh, Bertie, Bertie, I——"

She stopped suddenly as her shy glance met the eyes of the tall stranger. She stopped in the middle of the floor, checked in her instinct of flight by some still stronger instinct, and blushing like a pink moss-rose down to the very tips of her tapery floury fingers that were so tightly interlaced, while the blue eyes, half hidden by their white lids, were full of sparkling tears, and the mouth was breaking into a tumultuous smile; for Marion did not know whether she most wanted to cry or laugh.

"Sidney, oh, Sidney!"

He bowed gravely.

"Until you introduce me to your husband, Marion, I scarcely know by what name to address you."

"My husband?" repeated Marion, following the direction of Sidney Templar's eye. "Oh, you mean Bertie! But he isn't my husband; he's my brother! Herbert, this is Colonel Templar who fought so bravely."

Marion's face lighted up as she spoke; she had forgotten all about the preserve closet and the bib apron now.

"Colonel Templar, I'm glad to shake hands with you," said straightforward Bertie. "Marion has talked about you many and many a time—ay, and cried, too, when she talked of you."

"Bertie."

Now she colored indeed; deep, deep, crimson like the red heart of the pomegranate blossom open under tropical skies.

"But your husband, Marion?"

Bertie Caryl broke into a genial laugh.

"What fellows you soldiers are for sticking to one idea. Our Marion isn't married!"

"Not married? Oh, Marion!"

He took her hand and looked wistfully into her eyes.

"Marion, we were very foolish once, but I think we are both wiser now."

She did not raise her long lashes, and he went on.

"But, Marion, the crippled war-worn soldier dare not ask the question that the lover would have pleaded so earnestly once."

She looked up now with tears lying brightly on her flushed cheek.

"Then I will ask it. Sidney, do you care for me still?"

"Do I care for Heaven's sunshine? Do I care for the blessed life that beats within my own heart? Oh, Marion—mine, mine forever."

As he murmured the tender words close into her ear, Herbert Caryl, who had been abstractedly spinning the rolling-pin round, brought it down on the snowy pine table with a bang.

"I have it! Fifty pounds a year!"

"What is fifty pounds a year?" questioned his brilliant sister.

"Why, the rent to be sure."

"Never mind the rent just now, Mr. Caryl," said Colonel Templar, laughing good humoredly.

"Oh, but it really is fifty pounds a year," said Herbert, solemnly; "and—why, look here! what is this about?"

For Marion had led Colonel Templar up to him, and was smiling even while the tears hung on her wet eyelashes.

"Will you love him very much, Bertie? For I think he is going to be your own brother."

"Exactly like the last chapter in my novel," said Caryl, sagely. "Shake hands, Colonel. And now, Marion, you take care of him, for most of my writing is shockingly behind."

So it happened upon that sunshiny April day that Colonel Sidney Templar engaged not only a house for his cousin Bertha, but a wife for himself

"We'll take down the bill, Bertie," said Marion, demurely, "because Colonel Templar likes the house, and—and I don't exactly think showing rooms is your *forte*."

"Don't you?" retorted Herbert. "Now, only suppose Colonel Templar had gone away without seeing what a very convenient closet that was where the preserves are kept."

Marion made him no answer.

[Rural readers who have read the recent correspondence between Messrs. Bonner and Vanderbilt of New York, relative to the merits of their respective horses, ("Dexter" and "Mountain Boy,") will enjoy the following palpable hit from the last number of Frank Leslie's Illustrated Newspaper:]

THE BOASTING BOYS.

Little Vanderbilt—"Tel yer what, Bobby, your 'oss can't go as fast as mine, and I could have had your'n if I'd wanted it. You daresn't race—come now."

Little Bonner—"My ma wont let me race yer, but I know my 'oss can beat your'n for all that."

POETICAL ENIGMA.

There is a word of plural number,
A foe to peace and human slumber.
Now, any word you chance to take
By adding S you plural make;
But if you add an S to this,
How strange the metamorphosis!
Plural is plural then no more,
And sweet what bitter was before.

ANSWERS TO ENIGMAS, &c., IN No. 928.

Answer to Geographical Enigma:—So long as life remains to us our duties are unfinished.

Answer to Anagram:

Prayer is the incense of the soul,
The odor of the flower;
And rises as the waters roll
To God's controlling power!

Answer to Prize Rebus in No. 927:—*St. Peter's Keys are still held by the Pope.*

The first *correct* answer was from Mrs. H. Satterlee of Nunda, N. Y., to whom the premium offered is awarded. We have received about one hundred answers, or attempts, but less than one-fourth of them are strictly correct. Many are partly or nearly right, and others far astray—including some queer and amusing conceits. Regret that we have not space to give them.

AND NOW IS THE TIME TO *SUBSCRIBE FOR*

MOORE'S RURAL NEW-YORKER,

THE GREAT TOWN AND COUNTRY WEEKLY.

THE RURAL is the Leading and Largest-Circulating Newspaper of its Class on the Continent,—superior in Value and Variety of Contents and Beauty of Appearance. It embraces a greater and better variety of Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with many Engravings, than any other Journal in the English Language,—for it comprises Departments devoted to or including

Agriculture,	Choice Literature,
Horticulture,	Science and Art,
Sheep Husbandry,	Education,
Grazing, Dairying,	Youth's Reading,
Rural Architecture,	General News,
Domestic Economy,	Commerce, Markets,

With Illustrations, Tales, Essays, Music, Poetry, Rebuses, Enigmas, &c., &c.

The Rural New-Yorker is a *National Journal*, circulating in every State and Territory of the Union, and also in Canada, Europe, &c. It Employs the Best Talent in all Departments. Its corps of Editors, Contributors, &c., comprises many of the most experienced and successful Farmers, Planters, Wool Growers, Breeders, Graziers, Horticulturists, Gardeners, &c., and includes Authors, Scholars, Scientists, &c., of note and ability. In brief the Rural is *Ably Edited, Profusely Illustrated, and Neatly Printed—Practical, Scientific and Useful—Moral, Instructive and Entertaining.*

Whether located in Country, City or Village,

YOU WANT THE RURAL,
YOUR FAMILY WANT IT,
YOUR NEIGHBORS WANT IT,

For it is adapted to the wants of all, and has thousands of enthusiastic friends and admirers in Cities and Villages, aside from its immense circulation among the Rural Population. Remember that it is *not a monthly* of only 12 issues a year, but

A LARGE AND BEAUTIFUL WEEKLY OF 52 NUMBERS!

THE RURAL NEW-YORKER comprises Eight Double Quarto Pages—is published in superior style, with Copper-faced, Type, Good Paper, and more and better Illustrations than any other Journal of its Class. A Title Index, &c., at close of Volume, complete for binding.

TERMS—Only $3 a Year. To Clubs of ten, $2.50 per copy. A new Quarter begins Oct. 3, and Vol. XIX in January. *Now is the Time to Subscribe and form Clubs.* Great Inducements, Premiums, &c., to Local Club Agents, and one wanted in every town. Specimen Numbers, Show-Bills, Premium Lists, &c., sent free,—or we will send the 13 numbers of this (Oct. to Jan.) or any preceding Quarter of this year, on trial, or as specimens, for only Fifty Cents. Address

D. D. T. MOORE, Rochester, N. Y.

PURE WATER.

HEALTH AND ECONOMY. Patent Lead Encased Block-Tin Pipe—Recommended by the Croton Water Board of New York, and the Boards of Brooklyn, Philadelphia and Boston and by the most eminent medical men of the country. Costs less than Lead Pipe, and is much stronger. Recent improvements enable us to supply this Pipe at a *less* price per foot than common Lead Pipe. To give the cost per foot, please furnish the pressure or head of water, and bore of Pipe. Pamphlets sent FREE on application. Address THE COLWELL, SHAW & WILLARD MANUFACTURING CO., foot of West Twenty-Seventh Street, or Corner Pearl and Market Street, New York. We also manufacture and keep constantly on hand, all sizes and weights of Lead Pipe and Sheet Lead. 930-4t

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of Intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other Journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

SHALL STOCK BE SOLD OR FATTENED?

ONE of the most discouraging prospects before the farmer is when he has a large amount of live stock on hand at the opening of winter, the prospective value of which is decreasing while that of the grain and fodder which they must necessarily consume in order to thrive well is comparatively high and prospectively increasing. It is not pleasant business to fatten hogs, sheep or cattle for market with corn which the feeder knows would bring more money if sold in the bushel. With the teams, milch cows and young stock the case is somewhat different, for they are expected to make their returns at a further period in the future, and Time may set things even. However, there remains this consolation that the profits of feeding stock have been pretty large for the past few years, and our farmers are mostly able to stand one bad season; but every endeavor which forethought can suggest should be made to turn the balance as near the right side as possible.

The farmer who accompanies stock growing with grain raising, making it part of a system of mixed husbandry, has by far the best chance of success in times like these. On the one hand he has compensatory profits arising from different operations, and on the other he is more able to shift his plans somewhat and keep or sell as may seem best. Our advice to such farmers is *do not sacrifice your stock.* If you cannot afford to take the market price for your pork when it is well fattened, put it in the barrel and the smoke house and wait awhile; perhaps, if you have warm pens and other conveniences, and are well located, it will pay to hold over a few of the most thriving for the butchers in the spring. Neither will it pay to sell your two or three, or half-dozen steers, or your twenty-five or fifty wethers—the pick of your flock—at a low figure early in the winter for the sake of saving some grain and hay for market. A great many will do just that thing, and half fattened stock will therefore be crowded on the market and depress prices ruinously. You had better instead take very good care of such stock, make them comfortable through the winter, feed well and regularly, and sometime between next March and the middle of June those steers will fetch a good, paying price, and the wethers will shear heavy fleeces and be snapped up by butchers immediately after being shorn, leaving a fair profit in your pockets for your outlay of labor and food. By taking this course you will do just what the majority of farmers in your situation will omit—and make money by the operation. One of the successful farmers of this State has said that he made more money by feeding stock for market when grain was high and other people were afraid to pursue the same course. While weighing other considerations the making of manure should not be forgotten or lost sight of; if you receive that only as pay for the labor of feeding and caring for the stock be assured that it is very good compensation. The English farmers willingly take up with such a return, and we also are fast learning not to slight any means whereby the manure pile may be augmented.

A LITTLE BETTER TILLAGE.

FARMERS in general expect a yield of crops more in proportion to the surface of land occupied than to the depth of the soil whereon they grow. Yet it is obvious that if one should scatter seed over an acre of rock it would perish; if over the rock there was a layer of soil two or three inches in depth, the seed might reproduce itself; add as much more soil and an ordinary yield might result; and again, if this depth should be doubled, and made available to the plant, who doubts that proportionately larger profits would be derived? Suppose this layer of soil contained plant food plentifully, but was of a consistent, impervious nature, so that the tender roots could not penetrate it and make use of its fertility, it would then require loosening, pulverizing, aerating, in short, thorough cultivation, and according to the depth and thoroughness of that cultivation would be the amount of plant food made available, and consequently the yield of the crop.

This is practically the condition of most of our land; it contains plant food enough to double the average yield of crops, if it were only made available to them, but the unworked sub-soil is like rock, confining the roots of plants to the comparatively thin arable surface soil. Instead of coveting your neighbor's lands, and putting forth great efforts to secure more surface, is it not more profitable to cultivate deeper that which you already possess, and double its productiveness? With most of our farm crops the amount of roots determines the quantity of products, and roots will develop abundantly wherever there is room and food for them, but they cannot push their way into stony lumps, nor live in hardpan layers where there is no air.

On many farms under-draining lies at the foundation of improved culture. The stagnant water must pass off or air will not enter the soil, nor the latter remain loose any length of time after being stirred. Then comes a fair depth of surface plowing, followed by sub-soiling to any practicable depth. This way of preparing stubble ground for spring grain is excellent. Before sowing, cultivate deep across the furrows with a long toothed cultivator. A seed bed of finely pulverized earth, ten or twelve inches deep, can thus be obtained. We have seen oat stubble prepared for wheat by plowing to the depth of twelve inches, harrowing, rolling, then stirring the soil nearly to the bottom of the furrow by a long toothed wheel-cultivator, to which four horses were attached abreast, until all was finely pulverized. Such a chance for wheat on strong loam or clay land is better than most summer fallows.

Farmers, look to your possessions down in the ground; there are richer mines than those in the far mountains, and the patient worker thereof wins health, peace and competence.

MIXING SOILS.

MOST soils are deficient in some constituent, which, if added, would impart fertility, and many lack so obviously some of the commonest ingredients of the earth to work in them a favorable chemical or mechanical change, that it seems but the dictate of common sense to supply them. Thus, peaty soils contain too much vegetable matter; sandy soils are too light, open and porous, and clayey soils too hard and compact. It is easy to point out the remedy for these defects; any experienced farmer knows that peat will benefit both the sand and the clay; the possessor of a sandy farm is perfectly aware of the great value which a judicious admixture of clay would add to it, and the reverse is no less true.
